of this order and Docket Nos. G–19824 and RI61–369 shall be deemed severed from the Texas Gulf Coast proceedings, Docket No. AR64–2, and shall be deemed terminated, all without further order of the Commission.

(F) The acceptance by the Commission of Coates' offer of settlement, as conditioned herein, is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Coates' and is without prejudice to claims or contentions which may be made by Coates, the Commission staff, or any affected party hereto, in any proceeding, including area rate or similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

PACIFIC POWER & LIGHT COMPANY, PROJECT NO. 2082

ORDER DENYING PETITION FOR REHEARING

(Issued August 20, 1965)

On July 22, 1965, the California Department of Fish and Game (the Department) filed a petition "for rehearing or for any other appropriate form of relief" with respect to various Commission decisions and orders concerning fish facilities at Project No. 2082, owned by Pacific Power & Light Company (Pacific).[1] The prior proceedings with respect to the order on which rehearing is requested may be narrated briefly as follows:

On August 21, 1961, the State of California, acting by and through its Department of Fish and Game, filed a petition requesting that the Commission require the licensee to construct, operate and maintain a fish hatchery and appurtenant facilities, pursuant to Article 49 of the license for Project No. 2082 (25 FPC 579, 581). An answer to the petition was filed by the licensee on September 13, 1961. By order issued January 30, 1962, the Commission set the matter for hearing.

This Commission, in Opinion No. 381[2] and Opinion No. 381–A[3] required the licensee for Project No. 2082, Pacific Power & Light Company to construct a fish hatchery and certain fish-trapping and egg-taking facilities which were included in Article 50 of the license as it appeared at the time of the hearing (25 FPC 579, 581). The Commission also required the licensee to reimburse the California Department of Fish and Game for 80 percent of the expenses incurred in the operation and maintenance of such facilities.

On appeal to the Court of Appeals for the Ninth Circuit, the Court upheld the requirement that the licensee construct the fish hatchery and the fish trapping and egg-taking facilities, and the requirement that Pacific reimburse the Department of Fish and Game for 80 percent of the cost of operation and maintenance of the hatchery, but reversed the Commission's directive that Pacific reimburse the Department for 80 percent of the operation and maintenance costs of the fish-trapping and egg-taking facilities.[4] The Court's ground for reversal on the latter issue was a 1959 agreement between Pacific and the Department which,

---

[1] The licensee, Pacific Power & Light Company, filed on August 2, 1965 a motion to strike certain portions of the Department's petition for rehearing. However, since we here deny the Department's petition, we find it unnecessary to rule on Pacific's motion.

[2] 29 FPC 478, March 14, 1963.

[3] 30 FPC 499, August 19, 1963.

[4] *Pacific Power & Light Company* v. *F.P.C.*, 333 F. 2d 689 (9th Cir., 1964); Cert. denied 379 U.S. 969, January 18, 1965.

the Court held, contemplated operation and maintenance of the fish-trapping and egg-taking facilities by the Department, but did not reserve to the Department the right to demand payment by Pacific for operation and maintenance costs of such facilities.

In remanding the case to the Commission on the questions relating to the fish-trapping and egg-taking facilities, the Court also suggested [5] that the Commission might desire to clarify its requirement that the licensee pay 80 percent of the operation and maintenance costs of the fish hatchery. On June 23, 1965, 33 FPC 1282, the Commission issued an order clarifying the license for Project No. 2082 in this respect and this is the order on which rehearing is requested by the California Department of Fish and Game.

In its petition for rehearing the Department appears primarily to contend:

> (1) that Pacific Power should be required by the Commission to pay the entire cost of operation and maintenance of the fish hatchery and that the Commission erred in limiting Pacific's liability to only 80 percent of such costs; and
>
> (2) that the prior agreement between the Department and Pacific cannot and does not have the effect of absolving Pacific from liability to pay for any part of the fish-trapping and egg-taking facilities.

We are of the opinion that the Department's petition must be denied.

With respect to liability to pay the operation and maintenance costs of the fish hatchery, the Department shows us no good reason why we should depart from our past decisions and orders. The Department argues that this Commission's determination that Pacific should pay only 80 percent of the hatchery operation and maintenance costs is without foundation in substantial evidence. However, this question was disposed of by the Court of Appeals when, after a review of the law and the evidence supporting the Commission's determination, it held that the conclusion reached by the Commission was reasonable and should not be disturbed.[6]

The Commission, subsequent to the Court's decision, clarified the license provision with respect to the percentage of fish hatchery costs Pacific would be required to pay. The Department now contends that the license provision as clarified forces it, a state agency, to pay for 20 percent of the costs, and that such a requirement is unlawful. The Department made this same contention in the Ninth Circuit and that Court considered and disposed of this question also:

> There remains the Department's contention that the Commission could not require that it pay 20 percent of the cost of maintenance and operation of the hatchery. The Commission did not so order. It merely ordered that Pacific pay 80 percent.[7]

The situation remains the same. The Commission did not in its original determination require that the state pay any part of the operation and maintenance costs of the fish hatchery, and the order clarifying the license issued June 23, 1965 did not change this in any respect.

The Department's contention with respect to the costs of the fish-trapping and egg-taking facilities are equally insubstantial. The Court held that the 1959 agreement between Pacific and the Department excused Pacific from liability to pay for any part of the operation and maintenance costs of the fish-trapping and egg-taking facilities. The Department in its petition for rehearing concedes that the Ninth Circuit so held, but alleges that the Court erred. The Department then requests that the Commission somehow correct this alleged error. In effect, this is a request that the Commission review and modify the decision

[5] 333 F. 2d 689, 697.
[6] 333 F. 2d 689, 697.
[7] 333 F. 2d 689, 697.

of the Court which reviewed the Commission's decision pursuant to Section 313(b) of the Federal Power Act. This is an undertaking to which we could not aspire even if we were so disposed.

Although the Ninth Circuit remanded the case to the Commission for further proceedings relating to the operation and maintenance costs of the fish-trapping and egg-taking facilities there is in actuality nothing more for the Commission to do. The Court had held that the Commission could not disregard the agreement between Pacific and the Department which the Court interpreted as freeing Pacific from any obligation to pay the operation and maintenance costs of these facilities.

The Commission finds:

The petition for rehearing filed July 22, 1965, by the State of California Department of Fish and Game presents no question of fact or legal principle which has not been considered before, or which now having been considered would warrant any change or modification of our Opinions No. 381 and 381–A and our clarifying order issued June 23, 1965.

The Commission orders:

The petition for rehearing in the matter of Project No. 2082 filed by the State of California, Department of Fish and Game on July 22, 1965, is hereby denied.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, CP65–373; MARSHALL R. YOUNG DRILLING COMPANY, G–12245; THE TARPON OIL CORPORATION, CI60–582; THE TARPON OIL CORPORATION, CI65–1290; THE TARPON OIL CORPORATION, RI62–264; MARSHALL R. YOUNG DRILLING COMPANY AND J. C. TRAHAN, DRILLING CONTRACTOR, INC., RI64–722

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY, PERMITTING AND APPROVING ABANDONMENT OF SERVICE, AMENDING ORDER ISSUING CERTIFICATE, TERMINATING CERTIFICATE, TERMINATING PROCEEDING, AMENDING ORDER PROVIDING FOR HEARING ON AND SUSPENSION OF PROPOSED CHANGE IN RATE, AND ACCEPTING SUPPLEMENTS TO FPC GAS RATE SCHEDULES FOR FILING

(Issued August 20, 1965)

On May 25, 1965, United Gas Pipe Line Company (United) filed in Docket No. CP65–373 an application, as supplemented on June 1, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the acquisition, construction and operation of facilities and the sale of natural gas, all as more fully set forth in the application as supplemented.

United proposes (1) to acquire and operate approximately 16.6 miles of pipeline presently owned by The Tarpon Oil Corporation (Tarpon) in Hancock County, Mississippi; (2) to relocate its gas purchase meter station on said line; and (3) to construct and operate a sales meter station and to sell natural gas on a firm basis to United Gas Corporation for resale in a new community located near the National Aeronautics and Space Administration facility in Hancock County, Mississippi.

On June 7, 1965, Tarpon filed in Docket No. CI65–1290 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval of the Commission to abandon the sale of natural gas to United from the Ansley Field, Hancock County, Mississippi, due to depletion, and to abandon the transportation

service, together with related facilities, rendered to Marshall R. Young Drilling Company (Young) in said field, all as more fully set forth in the application.

The sale of natural gas and the transportation service by Tarpon were authorized in Docket No. CI60–582 and made pursuant to Tarpon's FPC Gas Rate Schedule Nos. 1 and 2, respectively. Tarpon has filed notices of cancellation of said rate schedules.

On June 7, 1965, Young filed in Docket No. G–12245 an application pursuant to Section 7(c) of the Natural Gas Act to amend the order issuing a certificate in said docket by changing the location of the delivery point for gas sold to United in Hancock County, Mississippi, all as more fully set forth in the application.

Young was authorized in Docket No. G–12245 to sell gas to United from the Ansley Field. This field is adjacent to the NASA community in Hancock County, Mississippi. In order to make its sale to United, Young built approximately 16.6 miles of 5½-inch and 6⅝-inch pipeline from the field to United's Lirette-Mobile transmission line, and United constructed a gas purchase meter station at the interconnection of these pipelines. Young sold gas to United at a rate of 21.0 cents per Mcf at 15.025 psia. Pursuant to authorization received in Docket No. CI60–582 Tarpon acquired the pipeline between the Ansley Field and United's pipeline. Young continued to sell gas to United and paid Tarpon a transportation charge of 1.5 cents per Mcf. No change was made in the 21.0-cent rate charged United. This 21.0-cent rate is in effect subject to the refund in Docket No. RI64–722. Inasmuch as United will acquire and operate the line from the Ansley Field, Young has filed a notice of change in rate to reduce the amount charged United by 1.5 cents per Mcf, an amount equal to the transportation charge heretofore paid to Tarpon.

Tarpon was also authorized in Docket No. CI60–582 to sell gas to United from the Ansley Field which sale it now proposes to abandon due to depletion. Tarpon filed a notice of change in rate for said sale which was suspended in Docket No. RI62–264 and has not been made effective. Accordingly, the rate proceeding will be terminated as moot.

In order to deliver gas to United Gas Corporation for resale and to continue its purchase obligations to Young, United will acquire the line presently owned by Tarpon and will relocate the gas purchase meter from the interconnection with the Lirette-Mobile pipeline to a point near the Ansley Field. United will also construct and operate a meter station for sales to United Gas Corporation at a point near the Ansley Field.

United Gas Corporation's estimated third year peak day and annual natural gas requirements for the new community are 920 Mcf and 80,123 Mcf at 14.9 psia, respectively. United will sell this gas to United Gas Corporation at 29.12 cents per Mcf pursuant to Rate Schedule G–J. United Gas Corporation has received a certificate of public convenience and necessity from the Public Service Commission of the State of Mississippi for the proposed distribution service and will invest approximately $154,326 in facilities therefor.

The proposed acquisition and construction by United is estimated at $110,971, which will be financed with funds on hand. United's estimated third year net income from the project is $494. At the end of nine years of operation the acquired facilities will be completely depreciated and the net income will be more substantial. In addition Applicant estimates that in the third year of operation of the proposed project it will save $5,764 which will not have to be paid to Young as a transportation charge by Tarpon. Hence it appears that the project is economically feasible.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been received.

At a hearing held on August 12, 1965, the Commission on its own motion

received and made a part of the record in this proceeding all evidence, including the applications, as supplemented, and exhibits thereto, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G–232 (3 FPC 863).

(2) The facilities hereinbefore described, as more fully described in the application in Docket No. CP65–373, will be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the acquisition, construction and operation of said facilities and the sale of natural gas by United Gas Pipe Line Company are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) United Gas Pipe Line Company is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The acquisition, construction and operation of facilities and the sale of natural gas by United Gas Pipe Line Company are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon United Gas Pipe Line Company's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d) and (e) of Section 157.20 of said Regulations.

(6) Applicant, The Tarpon Oil Corporation, is engaged in the sale and transportation of natural gas in interstate commerce and is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(7) The sale and transportation of natural gas, together with the facilities subject to the jurisdiction necessary therefor, proposed to be abandoned by The Tarpon Oil Corporation as hereinbefore described, as more fully described in the application in Docket No. CI65–1290, are subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(8) The abandonment proposed by The Tarpon Oil Corporation in Docket No. CI65–1290 is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

(9) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the certificate of public convenience and necessity heretofore issued to The Tarpon Oil Corporation in Docket No. CI60–582 for the sale and transportation of natural gas proposed to be abandoned in Docket No. CI65–1290 should be terminated.

(10) The proceeding pending in Docket No. RI62–264 is moot and should be terminated.

(11) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order issuing a certificate of public convenience and necessity to Marshall R. Young Drilling Company in Docket No. G–12245 should be amended by changing the delivery point for gas sold to United Gas Pipe Line Company.

(12) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the order providing for a hearing on and suspension of a

proposed change in rate in Docket No. RI64–722 should be amended by reducing by 1.5 cents per Mcf the proposed rate after increase.

(13) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the supplements to FPC gas rate schedules submitted by The Tarpon Oil Corporation and Marshall R. Young Drilling Company should be designated and accepted for filing as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to United Gas Pipe Line Company authorizing the acquisition, construction and operation of facilities and the sale of natural gas on a firm basis, as hereinbefore described and as more fully described in the application in Docket No. CP65–373, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon United Gas Pipe Line Company's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d) and (e) of Section 157.20 of said Regulations.

(C) The acquisition and construction of facilities authorized in paragraph (A) above shall be completed, said facilities shall be placed in actual operation, and the sale of natural gas to United Gas Corporation shall commence, as provided by paragraph (b) of Section 157.20 of the Regulations under the Natural Gas Act, within one year from the date of this order.

(D) Permission for and approval of the abandonment of the sale and transportation of natural gas, together with facilities subject to the jurisdiction of the Commission necessary therefor, by The Tarpon Oil Corporation, as hereinbefore described and as more fully described in the application in Docket No. CI65–1290, are granted.

(E) The certificate of public convenience and necessity heretofore issued to The Tarpon Oil Corporation in Docket No. CI60–582 is terminated.

(F) The proceeding pending in Docket No. RI62–264 is terminated.

(G) The order issuing a certificate of public convenience and necessity to Marshall R. Young Drilling Company in Docket No. G–12245 is amended by authorizing a change in the delivery point for gas sold to United Gas Pipe Line Company, and in all other respects said order shall remain in full force and effect.

(H) The order providing for a hearing on and suspension of a proposed change in rate in Docket No. RI64–722 is amended by reducing by 1.5 cents per Mcf the proposed rate after increase, and in all other respects said order shall remain in full force and effect.

(I) The supplements to FPC gas rate schedules submitted by The Tarpon Oil Corporation and Marshall R. Young Drilling Company are accepted for filing effective the date of this order and are designated as follows:

Docket No.	Applicant or respondent	Description and date of instrument	Designation	
			Rate schedule	Supplement
CI65-1290	The Tarpon Oil Corp.	Notice of Cancellation,[1] June 7, 1965	1	2
CI65-1290	do	Notice of Cancellation,[2] June 7, 1965	2	3
G-12245	Marshall R. Young Drilling Co.	Amendment [3] (undated)	1	4
RI64-722	do	Notice of Change,[4] June 4, 1965	1	5

[1] Cancels the Tarpon Oil Corporation FPC Gas Rate Schedule No. 1.
[2] Cancels the Tarpon Oil Corporation FPC Gas Rate Schedule No. 2.
[3] Deletes seller's dehydration obligation, changes delivery and gas measurement points, and reduces remaining periodic increased rates each by 1.5 cents per Mcf.
[4] Filed June 7, 1965, to reflect a decrease in rate from 21.0 to 19.5 cents per Mcf at 15.025 psia which will result in a total annual decrease of $5,625.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Carl E. Bagge.

WISCONSIN PUBLIC SERVICE CORPORATION, PROJECT NO. 2433

ORDER ISSUING LICENSE (MAJOR)

(Issued August 20, 1965)

Application was filed on December 19, 1963, and supplemented on October 26, 1964, by Wisconsin Public Service Corporation (Applicant) of Milwaukee, Wisconsin, for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2433, known as Grand Rapids Hydro Project, located on the Menominee River, in Marinette County, Wisconsin, and Menominee County, Michigan, between Ingalls and Wallace, Michigan. No lands of the United States are affected by the project.

Construction of the project was commenced in 1908 and completed in 1910 with 2 units in service by July of that year. Applicant acquired the project in 1922. Three additional units were installed, the last of which was placed in operation in 1923. There have been no major changes in the project since the latter date.

Applicant requests that any license issued for the project be for a period of 50 years, effective as of the date of its issuance, in view of the Commission's action of June 23, 1922, in DI-32 (Second Annual Report of the Federal Power Commission, p. 151), in which it declined to take jurisdiction over the Grand Rapids dam and powerhouse. In a proceeding on a declaration of intention filed on April 27, 1940 under Section 23(b) of the Federal Power Act, the Commission found and determined in its Opinion No. 94, dated July 27, 1943, that the Menominee River and its tributary the Michigamme River, are navigable waters of the United States (3 FPC 449). The 1943 decision reversed the 1922 decision with respect to the navigability of the Menominee River involved. The subject application was filed as a result of our April 25, 1962 decision concerning the Androscoggin River in Maine in which we invited the owners of all unlicensed projects to file voluntary applications for licenses (27 FPC 830). The application involves the same site and the same project as was proposed in the afore-mentioned DI-32, which was rejected by the Commission for want of jurisdiction. In the circumstances of this case, we are making the effective date of this license current with its issuance, but we deem it appropriate to fix the termination date as of December 31, 1993.

The Secretary of the Army and the Chief of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project certain conditions in the interests of fish and wildlife and recreation, including provision for minimum discharge of water into the Menominee River at the dam in the interest of fish life.

The Department of Health, Education, and Welfare has advised that it had consulted with the Michigan Water Resources Commission and the Wisconsin Committee on Water Pollution and both agencies indicated there is no water pollution problem existing near the Grand Rapids Dam. The Department made no recommendations to include conditions in any license for the project.

The Department of Conservation of the State of Michigan has advised that Applicant has been mindful of public recreational needs and has demonstrated its cooperation by providing for access to the reservoir. The Department requested that any license for the project include conditions pertaining to water

flow similar to those recommended by the Department of the Interior. However, in a subsequent report, the Department of Conservation suggested that we defer including at this time in any license for the project the Department's originally recommended condition in regard to low flow rates, in the interest of fish life below the project dam pending the results of agreement to test runs of water flow rates which will be studied jointly by fishery biologists of the Michigan and Wisconsin Department of Conservation. The Department also advised that arrangements for public access to the project reservoir and the river below the powerhouse have been made with Applicant.

The Wisconsin Department of Conservation recommended for inclusion in any license for the project a condition that a minimum flow through the dam gates be established to prevent the stranding of fish. This condition was recommended by the Department of the Interior and is included herein as Article 31.

Applicant filed a revised Exhibit R, designated Exhibit R–2 (FPC No. 2433–7), which identifies and locates three improved fishing and canoeing points, a canoe portage, four shoreline public fishing sites, a Boy Scouts Club cabin, and project lands open to hunting. Applicant is cooperating in providing for recreational needs with the States of Wisconsin and Michigan and with local agencies. The project lands designated on Exhibit R, as revised, for public hunting can be utilized in the future for additional reservoir and tailwater access sites and for other recreational needs that may arise. We are herein approving Exhibit R, as revised, as a part of this license.

With the exception of a substation, the application did not include any transmission facilities. In Article 32 herein we are reserving the right to the Commission to determine at a later date what additional transmission facilities, if any, should be included in this license as a part of the project works.

The Commission finds:

(1) The project affects navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the State of Wisconsin, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 9,360 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable.

(7) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of this license.

(8) The afore-mentioned Exhibit R–2 (FPC No. 2433–7) entitled "Recreational Utilization-Grand Rapids Hydro Electric Development", conforms to the

Commission's rules and regulations and should be approved as part of this license.

The Commission orders:

(A) This license is hereby issued to Wisconsin Public Service Corporation (Licensee) of Milwaukee, Wisconsin, under Section 4(e) of the Federal Power Act (Act) for a period effective as of August 1, 1965 and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2433, located on the Menominee River, a navigable water of the United States, in Marinette County, Wisconsin, and Menominee County, Michigan, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Grand Rapids Hydro Project No. 2433 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J & K: (FPC No. 2433-1) showing—General Map and Details of Project Boundary and Property Rights.

Exhibit K: (FPC No. 2433-2) showing—Detail Map of Project Works—Grand Rapids Hydro Electric Development.

Exhibit K: (FPC No. 2433-3) showing—Detail Map of Pond Areas Outside of Natural River Banks.

(ii) a dam with a 920 feet long earth fill section, a 208 feet long spillway section and a 160 feet long tainter gate section having 8 tainter gates 12 by 12½ feet; and a section of 122 feet including seven 14 by 14½-foot tainter gates; a reservoir with normal elevation of 126 feet and an area of 300 acres; a 165½ feet wide and 3,300 feet long canal; a reinforced concrete powerhouse 121 by 35 feet and 33½ feet high (with a 50½ feet by 16 feet extension on the south side and a 32 feet by 40 feet boiler room workshop extension on the east side) containing three 1,700 horsepower, one 2,240 horsepower and one 2,400 horsepower turbines connected to 5 generators with a total capacity of 7,020 kilowatts; a substation containing three 1,250 and four 1,333 kva transformers; and appurtenant electrical and mechanical facilities; the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed a part of the application for license and which are designated and described as follows:

Exhibit L: General Design Drawings of Grand Rapids Hydro Electric Development:

FPC No.	Sheet No.	Description
2433-4	1	Dam and canal bridge.
2433-5	2	Plan and elevation of power plant.
2433-6	3	Plan drawing of substation.

Exhibit M: Four typewritten pages, "General Description and General Specifications of Equipment", filed in the Commission December 19, 1963, as revised October 22, 1964.

(iii) all other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project

or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–3 (Revised August 1, 1964), entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States" (32 FPC 1114), which terms and conditions, designated as Articles 1 through 29, are attached hereto and made a part hereof, except for Article 25 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 30. The Licensee shall pay to the United States the following annual charge; effective as of August 1, 1965:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purpose is 9360 horsepower.

Article 31. The Licensee shall continue to discharge a minimum flow of 900 cfs (or the natural inflow to the reservoir, whichever is less) at all times from the reservoir to the Menominee River, provided that such flows may be adjusted by further order of the Commission, upon further studies and recommendations by the Wisconsin Department of Conservation and Michigan Department of Conservation, after notice and opportunity for hearing.

Article 32. The Commission reserves the right to determine at a later date what additional transmission facilities, if any, should be included in the license as part of the project works.

Article 33. On the application of any person, association, corporation, Federal agency, State or municipality, the Licensee shall, after notice and opportunity for hearing, permit such reasonable use of its reservoirs or other project works or parts thereof as may be ordered by the Commission in the interest of comprehensive development of the waterway or waterways involved and the conservation and utilization of water resources of the region for water supply for steam-electric, irrigation, industrial, municipal or similar purposes consistent with the primary objective of the project. The Licensee shall receive such reasonable compensation as may be appropriate for use of its reservoirs or other project works or parts thereof for such purposes, any such compensation to be fixed either by Commission approval of an agreement between the Licensee and the party or parties benefiting or by the Commission in the event the parties are unable to agree. Applications shall contain information in sufficient detail to afford a full understanding of the proposed use, including satisfactory evidence that the applicant possesses necessary water rights pursuant to applicable State law, or a showing of cause why such evidence cannot be submitted, and a statement as to the relationship of the proposed use to any State or municipal plans or orders which may have been adopted with respect to the use of such waters.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) The Exhibit R–2 described in finding (8) above is hereby approved as part of this license.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

AREA RATE PROCEEDING, ET AL. (SOUTHERN LOUISIANA AREA), DOCKET NO. AR61-2, ET AL.

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued August 23, 1965)

On July 30, 1965, The Jupiter Corporation (Jupiter) filed a motion for reconsideration [1] of the order issued July 2, 1965, 34 FPC 3, which denied the petition to intervene filed by Jupiter on May 5, 1965, in the above-designated proceedings.

In support of its motion, Jupiter refers again to the status of the above-designated proceedings, and seeks to explain its lack of timeliness in filing its petition. However, Jupiter has failed to make any persuasive showing of how it will be aggrieved by our denial of its petition. Moreover, whatever alleged benefit might accrue to Jupiter by its participation at this late stage in the proceedings (and Jupiter nowhere spells this out) is outweighed by the public interest which requires that the record be closed at the earliest possible date, and the case submitted for decision.

The motion seeks to explain in some detail Jupiter's reasons for not filing its petition in a timely fashion. In point of fact Jupiter knew as early as December 1963, that the staff was recommending that it be treated as a transporter. Jupiter has failed to make a showing of any extraordinary circumstances which prevented it from making an application which is more timely than the one here under consideration. Furthermore, Jupiter's general allegations that it has a substantial interest in these proceedings with respect to the applicability of an area rate to it are not adequately supported. Its allegations add nothing which would warrant reversal of our order denying intervention.

The Commission finds:

Jupiter has presented no facts or principles of law in its motion filed July 30, 1965, which were not considered by the Commission in its order issued July 2, 1965, or which having now been considered warrant any modification of that order.

The Commission orders:

The motion for reconsideration filed by Jupiter on July 30, 1965, is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NOS. CP64-270 AND CP65-181

ORDER DENYING APPLICATION FOR REHEARING

(Issued August 23, 1965)

On July 26, 1965 Atlantic Seaboard Corporation (Seaboard) filed an application for rehearing with regard to temporary authorization issued in these dockets to

[1] The document is styled "Application for Rehearing". As Section 1.30(e) of the Commission's Rules of Practice and Procedure prohibits the entertaining by the Commission of an application for rehearing until a final decision is reached, this filing has been accepted as a motion for reconsideration.

Transcontinental Gas Pipe Line Corporation (Transco) on June 25, 1965. Seaboard requests rehearing so that the temporary authorization to Transco can be either modified or clarified insofar as Transco was authorized to construct facilities allegedly required for the increased service to Consolidated Edison Company of New York, Inc. (Con Ed), which service was denied in the same temporary authorization.

The temporary authorization was issued because of our finding, based upon allegations by Transco, that an emergency exists within the meaning of Section 7 of the Natural Gas Act. Transco, by the authorization in question, was permitted to construct and operate pipeline loops, additional horsepower at existing compressor stations and miscellaneous extensions and meter and regulator stations in order to enable it to meet the expanding requirements of its existing customers during the 1965–66 winter season. In our grant of temporary authority we denied Transco's request to substitute 55,000 Mcf per day of firm CD–3 service for a previously authorized 55,000 Mcf of GSS storage service to Con Ed. While it is true that, because of our denial of permission to make a portion of the increased sales requested, excess pipeline capacity will be available from the facilities authorized,[1] this was allowed in order to permit a logical increment of expansion by Transco. Transco alleged in its supplement to its application for temporary certificate that additional storage capacity would have to be developed for the 1965–66 winter if the Con Ed CD–3 service were not to be permitted and that additional storage capacity woud be needed in succeeding winters. Transco pointed out, however, that such storage capacity would not be needed if the substitution of firm CD–3 service were ultimately to be approved. Furthermore, Transco pointed out that the additional pipeline facilities involved in this temporary authorization are main line facilities "which will be used and useful in the immediate future whether or not the Con Edison substitute service is ultimately approved * * *." We agree with Transco that the creation of excess capacity incidental to the expansion permitted is preferable to "the alternative of developing prematurely and unnecessarily this year additional storage capacity to eliminate the aforementioned storage deficiencies * * *."

Seaboard's complaint appears to be that since the excess capacity authorized by the temporary granted to Transco could be utilized in connection with Transco's application in Docket No. CP65–181 to serve Commonwealth Natural Gas Corporation (Commonwealth) and Washington Gas Light Company (Washington), which is competitive with Seaboard's application in Docket No. CP65–122 to increase sales to these distributors, the construction might prejudice the comparative proceeding now underway.[2] However, since these facilities will in any event be usable by Transco to serve the increased needs of its other customers commencing with the winter of 1966–67, there is no basis for any such fear. Nor do we believe that the possibility that such facilities might be available to Transco in seeking temporary authority to serve Commonwealth and Washington during the 1965–66 winter heating season militates against the grant. For whether Transco or Seaboard or both are authorized to make temporary sales to these customers pending the final decision in the comparative proceeding, such authorization will not be permitted to affect that decision.

The Commission orders:

The application for rehearing filed by Atlantic Seaboard Corporation on July 26, 1965 is denied.

---

[1] In a condition not material to this discussion, we denied permission to construct and operate a 16-inch lateral extending from Transco's mainline to Tryon, North Carolina.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP65-377

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING TARIFF SHEETS FOR FILING

(Issued August 24, 1965)

On May 27, 1965, Colorado Interstate Gas Company (Applicant) filed in Docket No. CP65-377 an application, as supplemented on July 1, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a meter station and the sale of natural gas, on an interruptible basis, to Michigan Wisconsin Pipe Line Company (Michigan), all as more fully set forth in the application, as supplemented, in this proceeding.

Applicant proposes to install a meter station at a point in Beaver County, Oklahoma, where its Mocane-Hooker 22-inch line intersects Michigan's 24-inch line which originates at the latter's Hill Compressor Station. Applicant will sell and deliver to Michigan such daily volumes of gas as Applicant may have available from time to time and which Michigan may wish to purchase at a flat rate of 17.5 cents per Mcf. The application indicates that Michigan may require approximately 4,000,000 Mcf during the remaining portion of 1965. The term of the proposed sale is for a period of one year from the date of initial delivery.

Applicant states that it has available a gas supply temporarily in excess of its system requirements and that the proposed sale will assist both Applicant and Michigan in meeting their respective supply and requirement obligations.

The estimated cost of the proposed facilities is $26,950, which cost will be financed from current working funds on hand.

Concurrently with the filing of the subject application, Applicant tendered for filing Original Sheet Nos. 118 through 124 to its FPC Gas Tariff, Second Revised Volume No. 2, covering the proposed sale to Michigan.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 19, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of June 5, 1945, in Docket No. G-294 (4 FPC 936).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) Applicant's tariff filings, hereinabove described, should be accepted for filing to become effective on the date this order issues.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Colorado Interstate Gas Company, to construct and operate the proposed facilities and to sell and deliver natural gas, on an interruptible basis, to Michigan for a period of one year from the date of initial delivery, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation and the sale of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 2 months from the date on which this order issues.

(D) The certificate issued is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

(E) Applicant's Original Sheet Nos. 118 through 124 to its FPC Gas Tariff, Second Revised Volume No. 2 are accepted for filing to become effective on the date this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black, and Carl E. Bagge.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP65-407

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 24, 1965)

On June 18, 1965, Colorado Interstate Gas Company (Applicant) filed in Docket No. CP65-407 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a meter station and the sale of natural gas, on an interruptible basis, to Reserve Pipeline, Inc. (Reserve) for resale, all as more fully set forth in the application in this proceeding.

Applicant will install a meter station on its Kansas Hugoton Field gathering system in Finney County, Kansas, and sell up to 3,500 Mcf per day, on an inter-

ruptible basis, to Reserve for resale in Kansas to farmers for irrigation purposes and to Century Refining Company for use as fuel. The application indicates that Applicant has available a gas supply temporarily in excess of its system requirements and that Reserve is willing to purchase a portion of such excess since its present source of supply is from various wells in the Hugoton Field, most of which are in a state of overproduction.

The proposed sale, pursuant to an agreement, dated May 26, 1965, will be for a term of three years from the date of initial delivery and will be at a rate of 15 cents per Mcf.

The total estimated cost of the proposed facilities is $4,180, which cost will be financed from current working funds on hand.

By letter, dated July 9, 1965, Applicant was issued a temporary certificate authorizing the construction and operation of the proposed facilities and the proposed sale of natural gas.

The State Corporation Commission of the State of Kansas filed a notice of intervention herein in support of the application.

After due notice, no petition to intervene, other notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 19, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of June 5, 1945, in Docket No. G–294 (4 FPC 936).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Colorado Interstate Gas Company, to construct and operate the proposed facilities and to sell and deliver up to 3,500 Mcf of natural gas per day to Reserve Pipeline, Inc., all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The certificate issued is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. CP66-18

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 24, 1965)

On July 19, 1965, Florida Gas Transmission Company (Applicant) filed in Docket No. CP66-18 an application for a certificate of public convenience and necessity pursuant to Section 7(c) of the Natural Gas Act authorizing the construction and operation of certain facilities and the sale of natural gas to Central Florida Gas Corporation (Central) for distribution and resale in the City of St. Cloud, Florida, all as more fully set forth in the application.

Applicant proposes to construct and operate 0.34 miles of 4-inch lateral pipeline extending from its 20-inch transmission pipeline at a point approximately one mile south of the City of St. Cloud, together with a metering station and related facilities, for the sale and delivery of natural gas to Central. Central proposes to distribute and sell natural gas to domestic and commercial consumers, as well as to the City of St. Cloud on an interruptible basis for use in its electric generating plant. Service will be rendered pursuant to Applicant's FPC Gas Tariff Rate Schedules "G" and "I."

The estimated total market requirements of Central for the City of St. Cloud are stated to be:

	First year	Second year	Third year
Annual (M2Btu)	213,000	304,050	353,100
Peak day (M2Btu)	900	1,001	1,122

The estimated cost of the facilities proposed by the Applicant is $29,000 and will be defrayed from current cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 19, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization, and upon consideration of the record,

The Commission finds:

(1) Applicant, Florida Gas Transmission Company, a Delaware corporation having its principal place of business in Winter Park, Florida, is a "natural-

gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued July 3, 1963, in Docket No. CP63-277 (30 FPC 27).

(2) The proposed construction and operation of facilities and sale of natural gas, as hereinbefore described and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and sale of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Florida Gas Transmission Company, authorizing the construction and operation of facilities and the sale of natural gas as more fully described in the application in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP65-404

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 24, 1965)

On June 16, 1965, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP65-404 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the transportation and sale of natural gas, all as more fully set forth in the application.

Applicant proposes to construct and operate a total of 114.7 miles of 30-inch loop pipeline at various points on its Gulf Coast line, an additional 23,200 horsepower at existing compressor stations on the Gulf Coast line, and 34.6 miles of 24-inch loop pipeline on its Amarillo line, near Volo, Illinois.

The proposed facilities will increase Applicant's pipeline design capacity by 104,650 Mcf per day.[1] Precedent agreements for daily volumes of gas totaling 74,479 Mcf have been executed by Applicant and four existing customers, namely Central Illinois Gas & Electric Company, Northern Illinois Gas Company, Iowa Electric Light & Power Company and Iowa-Illinois Gas & Electric Company. The remaining 30,171 Mcf per day of unallocated capacity represents 1.3 percent of Applicant's total 2,276,560 Mcf of pipeline capacity as now proposed, and will be used to meet Applicant's future market requirements.

The incremental rate of return applicable to the proposed facilities is estimated to be 8.4 percent in the third year of operation, and the project thus appears feasible.

Total estimated cost of Applicant's proposed construction is $21,644,000, and will be financed by means of interim borrowings from banks and from The Peoples Gas Light and Coke Company, parent company of Applicant. Permanent financing will be accomplished through the sale of stock and first mortgage bonds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 19, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) The proposed construction and operation of facilities and transportation and sales of natural gas by Applicant are subject to the requirements of Subsection (c) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities and transportation and sales of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Natural Gas Pipeline Company of America, authorizing the construction and operation of facilities and transportation and sales of natural gas hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation, and the transportation and sales of natural gas shall be undertaken, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within one year from the date on which this order issues.

[1] All volumes are 1,000 Btu per Mcf @ 14.65 psia.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-399

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 24, 1965)

On June 14, 1965, Northern Natural Gas Company (Applicant) filed in Docket No. CP65-399 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing (1) the construction and operation of 3.8 miles of 3-inch pipeline, a 2,000 Hp compressor unit at its Beaver Compressor Station, and a measuring station; and (2) the transportation of 2,200 Mcf of natural gas daily on a firm basis through its Peoples Division to Cominco Products, Inc. (Cominco) nitrogen fertilizer plant under construction near Beatrice, Nebraska, all as more fully set forth in the application.

Applicant's Peoples Division and Cominco under contract dated May 17, 1965, provided for the delivery of 2,200 Mcf of natural gas daily on a firm basis by Applicant to Cominco, at a contract price of 31.5 cents per Mcf, adjustable upward or downward as the 100% load factor rate in Zone 1 changes. The contract provides for additional deliveries above the 2,200 Mcf daily contract demand on an interruptible basis at 24.14 cents per Mcf. The minimum annual volume is 274 times the contract demand quantity. The primary term of the contract is for 10 years.

The total estimated cost of facilities proposed by Applicant is $675,500 (including branchline cost of $52,500) which will be defrayed out of cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 19, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The proposed construction and operation of facilities and transportation and delivery of up to 2,200 Mcf daily of natural gas by Applicant to Cominco Products, Inc. as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and transportation and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's

compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding, authorizing the proposed construction and operation of facilities and transportation and delivery of up to 2,200 Mcf daily on a firm basis of natural gas to Cominco Products, Inc., as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The certificate issued hereby shall not entitle the industrial customer to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in its requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

PACIFIC GAS & ELECTRIC COMPANY, DOCKET NO. E-7240

ORDER APPROVING HEADWATER BENEFITS SETTLEMENT

(Issued August 24, 1965)

On March 28, 1964, the Pacific Gas & Electric Company (Pacific) requested that the Commission approve an agreement with the East Bay Municipal Utilities District (District) insofar as the agreement related to settlement of headwater benefits in the Mokelumne River Basin, California. The agreement was filed pursuant to Section 13.1 of the Commission's Regulations which provide for such settlements in lieu of a headwater benefits determination under Section 10(f) of the Federal Power Act (16 U.S.C. 803(f)).

In the Mokelumne River Basin the District owns and operates the unlicensed Pardee project which is benefited by the operation of two upstream reservoirs owned and operated by Pacific. Pacific also owns and operates five hydroelectric power plants located upstream from the Pardee plant. Pacific's reservoir system and hydroelectric plants are operated under and licensed as Project No. 137. No Federal projects are involved.

The District has for a number of years contracted with Pacific or its predecessor Great Western Power Company for the sale of electric energy generated at the District's Pardee plant. The first such power purchase agreement was made November 13, 1929 between District and Great Western. It was then assigned to Pacific on September 13, 1933. Later power purchase agreements were made between District and Pacific on November 3, 1933, and October 1, 1945. The latter contract extended through September 30, 1955 when the contract of that date was made. Thus, with the "Revised Contract" of December 18, 1963, the entire period from 1931, the year Pacific's first power plants became operable, to the present is covered by agreements or contracts relative to the purchase of

power produced at the District's Pardee plant. At the request of the Commission Pacific has filed all of the above-mentioned agreements.

Pacific states that all contracts prior to the "Revised Contract" of December 18, 1963 were negotiated to prescribe "single package" payments considering all factors including any headwater benefits which either party might receive from the other, although such benefits were not specifically mentioned. The "Revised Contract" clarifies this by expressly providing that the negotiations have taken into account all benefits provided by either party and that neither party is entitled to any further consideration with respect to such benefits.

The Commission finds:

The aforesaid agreements constitute an effective and reasonable method for compensating Pacific and its predecessors for headwater benefits received by the District's Pardee project in the Mokelumne River Basin in California.

The Commission orders:

The aforesaid agreements are approved with respect to settlement of headwater benefits under Section 13.1 of the Regulations under the Federal Power Act in lieu of headwater benefits determinations under Section 10(f) of the Federal Power Act until a further order of the Commission is required due to changes in conditions.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP64-5; ALGONQUIN GAS TRANSMISSION COMPANY, DOCKET NO. CP65-340

FINDINGS AND ORDER AFTER STATUTORY HEARING AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 24, 1965)

On April 22, 1965, Texas Eastern Transmission Corporation (Texas Eastern) filed in Docket No. CP64-5 a petition, as supplemented July 1, 1965, to amend the order of the Commission issued in Docket No. CP64-5, *et al.*, on December 19, 1963, 30 FPC 1559, as amended by orders issued October 28, 1964, 32 FPC 1229, and April 5, 1965, 33 FPC 699. The above orders authorized Texas Eastern to undertake a four-year (1964–1967) system-wide expansion program in order to increase its peak day capacity by 408,010 Mcf. By the instant filing, Texas Eastern seeks authorization for the construction and operation of additional facilities and for authorization to accelerate its expansion by constructing during 1966 certain of the facilities previously authorized for construction during 1967. It seeks further authorization for the sale of additional volumes of natural gas to existing customers.

Texas Eastern proposes to construct and operate, in addition to facilities previously authorized, 156.11 miles of 30 and 36-inch pipeline loops on various portions of its system; a 36-inch crossing of the Muskingum River in Ohio; 32,500 horsepower of compression at three existing compressor stations; and 13 new wells and 6.5 miles of field lines in the Accident Storage Field, Garrett County, Maryland. It also requests authorization for the accelerated construction of 11 miles of 30 and 36-inch pipeline loops, and impeller changes in centrifugal compressors at various existing stations.

The proposed modification of facilities will provide an additional 155,116 Mcf of peak day capacity, for a total four-year increase of 563,126 Mcf per day in lieu

of the 408,010 previously authorized. By virtue of these facilities and increased capacity, Texas Eastern proposes to make, and seeks authorization for, the additional sales of 153,974 Mcf of natural gas per day to existing customers. Each of the customers scheduled to receive additional volumes has executed a precedent contract with Texas Eastern for the respective volumes involved.

The expanded facilities proposed herein will provide unallocated peak day capacity of approximately 87,000 Mcf after November, 1967. This represents approximately 2 percent of total system capacity of 3,691,000 Mcf, and will be utilized by Texas Eastern in meeting its future market requirements.

Texas Eastern's capacity to provide the proposed increased service authorized by this order will come, in part, through additional development and increased withdrawals from the Accident Storage Field. Texas Eastern has scheduled an increase in peak day withdrawals of 57,000 Mcf, which will require 13 additional wells and an increase in storage inventory of 3,407,000 Mcf from the presently authorized maximum of 48,401,000 Mcf.

For the first several years of operation of the enlarged facilities and service proposed, incremental return ranges from approximately 5.65 percent in 1966 to 5.90 percent in 1969. Texas Eastern's system-wide return for this same period ranges from 6.01 percent in 1966 to 6.03 percent in 1969. This is slightly less than the 6¼ percent rate of return allowed the company in recent rate settlements. However, in view of the minor difference between authorized and estimated return and since the facilities and service proposed are for meeting the increased requirements of existing customers, the project nevertheless appears feasible.

Total estimated additional cost of Texas Eastern's proposed facilities is $40,962,000, which will be financed through the sale of first mortgage pipeline bonds, debentures and preferred stock. Interim financing of up to $100,000,000 is also available until May 1, 1966, under a revolving credit agreement with various New York financial institutions.

On the same date that the above petition to amend was filed by Texas Eastern, April 22, 1965, Algonquin Gas Transmission Company (Algonquin) filed in Docket No. CP65–340 an application, as supplemented June 28, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the sale of natural gas, all as more fully set forth in the application.

Algonquin proposes to undertake a four-year system-wide expansion designed to increase its capacity by 153,000 Mcf per day. From this additional capacity, Algonquin proposes increased sales of natural gas over the four-year period (1966–1969) to 18 existing customers, commencing with the 1966–67 winter season, with such sales ultimately totaling 51,640 Mcf per day of F–1 (firm service) gas and 99,198 Mcf per day of WS (winter service) gas. Each of the customers has signed a precedent contract for the respective volumes involved.

Algonquin's four-year construction program is scheduled as follows: To effect the additional service proposed to commence November, 1966, Algonquin will construct and operate 72.3 miles of 10, 16, 24 and 30-inch loop and lateral pipeline on various portions of its system in Connecticut, Massachusetts and New Jersey; to effect proposed 1967 deliveries, it will construct and operate 22.3 miles of 20 and 30-inch loop pipeline on portions of its system in Massachusetts and New Jersey; to effect proposed 1968 deliveries, it will construct and operate 18.3 miles of 16, 20 and 30-inch loop pipeline in Connecticut and Massachusetts; and to effect proposed 1969 deliveries, it will construct and operate 5.6 miles of 30-inch loop pipeline in Connecticut and New Jersey. Pipeline construction totals 118.5 miles, and is estimated to cost a total of $25,913,000. Construction

costs will be financed with retained earnings, short-term bank loans and by the sale of securities to be issued during the summers of 1966 and 1967.

The additional volumes of gas required by Algonquin for its increased sales proposed through the 1967–68 winter season will be provided by Texas Eastern Transmission Corporation, pursuant to the authorizations granted by this order in its related proposal in Docket No. CP64–5. Texas Eastern therein proposes the sale of additional volumes to Algonquin. For the remaining two years of Algonquin's proposed expansion of facilities and service, Texas Eastern's proposal in Docket No. CP64–5 will supply only 20,029 Mcf of the 58,070 Mcf per day additional gas to be delivered by Algonquin during that period. The remaining 38,000 Mcf per day is to be supplied from a new storage service of Texas Eastern. Algonquin has entered into a precedent contract for such "SS" volumes, on the basis of an informal tender of such service by Texas Eastern to all its customers, and has included such purchases in its economic studies. Since Texas Eastern has not received Commission authorization for the proposed new storage service, it will be necessary herein to condition Algonquin's proposal to provide for that portion of its gas supply not yet committed. By letter filed June 28, 1965, Algonquin agreed to accept a certificate so conditioned.

On an incremental basis, the rate of return on the proposed facilities ranges from 4.48 percent in 1967 to 6.91 percent in 1969, and the project thus appears feasible.

After due notice, the Pennsylvania Public Utility Commission (Pennsylvania) on May 7, 1965 filed a notice of intervention; on May 26, 1965 Pennsylvania filed an amendment stating it did not seek formal hearing. No other protest to the granting of the petition or application has been filed.

At a hearing held on August 19, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the petition and application and exhibits and supplements thereto, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Texas Eastern Transmission Corporation and Algonquin Gas Transmission Company are "natural-gas companies" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate of public convenience and necessity issued to Texas Eastern in Docket No. CP64–5 on December 19, 1963 be further amended as hereinafter ordered and conditioned.

(3) The proposed construction and operation of facilities and sales of natural gas by Algonquin are subject to the requirements of Subsection (c) of Section 7 of the Natural Gas Act.

(4) The aforesaid construction and operation of facilities and sales of natural gas by Algonquin are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Texas Eastern and Algonquin are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

The Commission orders:

(A) The certificate of public convenience and necessity issued to Texas Eastern Transmission Corporation on December 19, 1963, in Docket No. CP64–5, as amended, is further amended by authorizing the expanded and accelerated construction and operation of facilities and additional sales of natural gas

hereinbefore described, as more fully described in Texas Eastern's petition to amend.

(B) The maximum reservoir inventory of the Accident Storage Field shall not exceed 51,807,000 Mcf of natural gas (@ 15.025 psia) without approval of the Commission.

(C) In all other respects the order issued in Docket No. CP64–5, *et al.*, on December 19, 1963, as amended, shall remain in full force and effect.

(D) A certificate of public convenience and necessity is issued to Algonquin Gas Transmission Company, authorizing the construction and operation of facilities and sales of natural gas hereinbefore described, as more fully described in the application in Docket No. CP65–340, upon the terms and conditions of this order.

(E) The certificate issued by paragraph (D) above and the rights granted thereunder are conditioned upon Algonquin's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) and (e) of Section 157.20 of such Regulations.

(F) The time within which the facilities to be constructed by Algonquin and authorized in paragraph (D) above shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, is fixed at four years.

(G) Algonquin's facilities required for the additional service authorized herein commencing in November, 1968, and November, 1969, shall be installed only if Texas Eastern Transmission Corporation has received Commission authorization to provide to Algonquin the "SS" service relied upon at rates that will support the cost of such gas, as shown by Algonquin in Exhibit N to its application in Docket No. CP65–340.

(H) The costs of construction and right-of-way for the facilities proposed to render the additional service commencing November, 1968, and November, 1969, shall not be included in Algonquin's rate base prior to the year in which they are used to provide the additional service authorized by this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

TEXAS GAS PIPE LINE CORPORATION, DOCKET NOS. G–20073 AND G–20315

ORDER ACCEPTING REVISED TARIFF SHEETS FOR FILING, APPROVING REFUNDS, AND EXTENDING THE SETTLEMENT AGREEMENT

(Issued August 24, 1965)

Texas Gas Pipe Line Corporation (Pipe Line) on July 9, 1965, tendered for filing a revised tariff sheet[1] to its FPC Gas Tariff, Original Volume No. 1. The proposed change would make effective as of July 1, 1965, a reduction in Pipe Line's Rate Schedule DGS–1 of 0.36 cents per Mcf, amounting to $68,194, based upon sales for the twelve-month period ended April 30, 1965, to Pipe Line's sole jurisdictional customer, Transcontinental Gas Pipe Line Corporation.

The proposed filing reflects a net reduction in Pipe's Line's purchase gas cost incorporating a rate decrease by Sun Oil Company, effective September 1, 1964, and contingent rate increases by Pan American Petroleum Corporation, effective

[1] Fifth Revised Sheet No. 4.

February 24, 1965, and Shell Oil Company, effective July 1, 1965.[2] Pipe Line will also make refunds to Transcontinental Gas Pipe Line Corporation for the period from September 1, 1964 to February 24, 1965, based on a unit reduction of 0.53 cents per Mcf (16.55 cents to 16.02 cents), and from February 24, 1965 to July 1, 1965, based on a unit reduction of 0.39 cents per Mcf (16.55 cents to 16.16 cents). Additionally, Pipe Line proposes to add the proceedings involved in Pan American (Docket No. RI65–178) and Shell Oil Company (Docket No. RI65–477) to the list of producer proceedings shown on Appendix A of the settlement agreement in these dockets and to reflect subsequent changes or settlements in those proceedings under the same terms and conditions as are applicable to all of the proceedings listed in that Appendix A.

On August 2, 1965, Philadelphia Electric Company filed its objection to Pipe Line's net reduction filing and Long Island Lighting Company filed a letter concurring in those objections. Those parties contend that the settlement agreement in these dockets does not provide for offsetting reductions in purchased gas costs with other supplier rate increases, and therefore Pipe Line should be required to reduce its rate by the 0.53 cents per Mcf reduction it received from Sun Oil. They further assert that if after such reduction, Pipe Line determines that it requires a rate increase to recover increased purchased gas costs, it can exercise its right to file under Section 4(e) of the Natural Gas Act.

Section 3 of the settlement agreement states that Pipe Line will reduce its jurisdictional rate if the rate filings of its suppliers result in reduction in its cost of gas equivalent to at least one-tenth (1/10th) of one cent per Mcf of sales to Transcontinental. It is our view that that provision does not preclude Pipe Line from offsetting supplier rate decreases with supplier rate increases.

We are not here determining that Pipe Line would in fact be required to file for an increase in rates under Section 4 of the Act if it were to reflect the reduction from Sun Oil without offset. However, contrary to the suggestion of the objecting parties, it is not in the public interest that Pipe Line be placed in the possible position of reducing its rate and immediately thereafter filing for a rate increase.

On basis of the foregoing, we deem the objections of Philadelphia Electric and Long Island Lighting to be without merit and find that Pipe Line's proposed rate reduction and flow through of refunds should be accepted as hereinafter provided.

The Commission finds:

The rate reduction and refund proposed by Texas Gas Pipe Line Corporation in its filing of July 9, 1965, and the revised tariff sheet submitted therewith are proper and in the public interest in carrying out the provisions of the Natural Gas Act, and such tariff sheet should be accepted for filing to be effective as hereinafter provided and ordered.

The Commission orders:

(A) The proposed Fifth Revised Tariff Sheet No. 4 is accepted for filing to be effective as of July 1, 1965.

(B) Texas Gas Pipe Line Corporation shall make refunds to Trancontinental Gas Pipe Line Corporation in accordance with directions contained herein.

(C) The refund and rate reduction obligations of the Settlement Agreement approved by our order issued July 24, 1963, 30 FPC 405, shall be extended to include the pending proceedings involving the rate increases of Pan American and Shell Oil (Docket Nos. RI65–178 and RI65–477).

[2] The Sun Oil rate decreases are under Docket No. G–19907, FPC Rate Schedule No. 41, and Docket Nos. RI61–39 and G–19944, FPC Rate Schedule No. 42. The rate increases were put into effect subject to refund regarding Pan American, in Docket No. RI65–178,and regarding Shell Oil Company, in Docket No. RI65–447.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

UNITED NATURAL GAS COMPANY, DOCKET NO. CP65-422

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 24, 1965)

On June 28, 1965, United Natural Gas Company (Applicant) filed in Docket No. CP65-422 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application.

Applicant proposes to replace two segments of 3-inch pipe totaling approximately 2.6 miles located in Williamsfield and Andover Townships, Ashtabula County, Ohio with equal segments of 6-inch pipe, and to use such pipe and approximately 2.2 miles of existing 4-inch pipe joining the new segments for the transportation of natural gas to Applicant's retail market in the Andover, Ohio area. The proposed replacement of facilities will result in the delivery of gas to Applicant's Andover distribution plant at an increased pressure which is required to render adequate, uninterrupted service to its present customers during the winter season.

Total estimated cost of Applicant's proposed construction is $81,762, and will be financed with funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 19, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Natural Gas Company, a Pennsylvania corporation having its principal place of business in Oil City, Pennsylvania is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1943, in Docket No. G-328 (3 FPC 959).

(2) The proposed construction and operation of facilities by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, United Natural Gas Company, authorizing construction and operation of the facilities hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the gen-

eral terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP66-14

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT

(Issued August 25, 1965)

On July 16, 1965, Cities Service Gas Company (Applicant) filed in Docket No. CP66-14 an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon certain facilities and for a certificate of public convenience and necessity authorizing the construction and operation of transmission facilities, all as more fully set forth in the application.

Applicant proposes to abandon and reclaim the existing metering and regulating facilities and approximately 1,794 feet of 2-inch pipeline presently serving the town of Tonganoxie, Leavenworth County, Kansas; and to construct approximately 3,360 feet of 4-inch pipeline from a point on its newly constructed Ottawa-Tonganoxie 26-inch pipeline to the town of Tonganoxie, together with new meter and regulating facilities to enable it to continue service to that community. Deterioration and excessive pressure drop in the present 2-inch service pipeline makes the new line necessary. No service will be terminated by the proposed abandonment of facilities.

The total estimated cost of the proposed facilities is $13,870, and will be defrayed from cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, has been filed.

At a hearing held on August 19, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G-298 (4 FPC 471).

(2) The facilities proposed to be abandoned by Applicant, as hereinbefore described and as more fully described in the application filed in this proceeding, are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and permission and approval therefor should be granted as hereinafter ordered.

(4) The proposed construction and operation of facilities as hereinbefore described and as more fully described in the application filed in this proceeding,

are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The aforesaid proposed construction and operation of facilities are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant, Cities Service Gas Company, of the facilities hereinbefore described, as more fully described in the application and exhibits filed in this proceeding, are granted.

(B) A certificate of public convenience and necessity is issued to Applicant, Cities Service Gas Company, authorizing the construction and operation of facilities, all as more fully described in the application, upon the terms and conditions of this order.

(C) The certificate issued by paragraph (B) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(D) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within ten days of such abandonment.

(E) The facilities hereby authorized shall be constructed and placed in actual operation, and the transportation of gas authorized in paragraph (B) above shall commence as provided in paragraph (b) of Section 157.20 of the aforesaid regulations within six months of the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, CP64-211, CP62-176; SOCONY MOBIL OIL COMPANY, INC., CI62-825; PHILLIPS PETROLEUM COMPANY, CI64-719; THE PURE OIL COMPANY, CI64-1085; THE ATLANTIC REFINING COMPANY, CI64-1130; GULF OIL CORPORATION, CI64-1153; SKELLY OIL COMPANY, CI64-1225; MIDWEST OIL CORPORATION, CI64-1429; DALCO OIL COMPANY, CI64-1442; W. WATSON LAFORCE, CI65-61; GEORGE T. ABELL, CI65-878; M. B. RUDMAN, ET AL., CI65-930

ORDER DENYING MOTION TO ALLOW THE ADDUCING OF SUPPLEMENTARY EVIDENCE OR, IN THE ALTERNATIVE, FOR A CONTINUANCE OF THE HEARING

(Issued August 25, 1965)

On August 4, 1965, Union Oil Company of California (Union Oil), successor in interest to The Pure Oil Company, filed a motion[1] for a "protective order"

[1] The following companies joined in the motion: Skelly Oil Company, August 4, 1965, Phillips Petroleum Company, August 9, 1965, Gulf Oil Corporation, August 10, 1965, and Socony Mobil Oil Company, Inc., August 6, 1965.

insuring the right to adduce supplementary evidence in light of the Permian Basin Area Rate Decision or, in the alternative, for a continuance of the hearing as well as a continuance of the date for service of prepared evidence[2] until 30 days after the issuance of the Commission's decision in the Area Rate proceeding, Docket No. AR61–1.

Union Oil (which filed its motion just prior to the issuance of the Permian Basin Decision) indicates that it is willing to take the first step of preparing "some evidence" before it makes a study of the Permian Decision, but only upon the condition that it be given an opportunity to adduce supplementary evidence thereafter. Therefore, it wishes an "explicit reservation" of the right to adduce supplementary evidence within a reasonable time after the issuance of the Commission's order at Docket No. AR61–1. Presumably, Union Oil wants an explicit direction by the Commission to the examiner to allow the submission of such evidence in light of the Permian Basin Decision.

Socony Mobil, which filed its motion subsequent to the decision in the Permian Basin proceeding, points out that although the Commission's decision in Docket No. AR61–1 has been issued, the respondents will not have had sufficient time to analyze such decision and to prepare evidence by August 12, 1965.[3]

As Union Oil contends, our issuance of Opinion No. 468 renders moot the "hold the line" technique we have previously adopted in producer certificate proceedings in the Permian Basin, for it is clear that the just and reasonable price for new gas in the Permian Basin has now been fixed. However, the parties should be offered an opportunity to present evidence designed to show cause why Opinion No. 468 should not apply to their proposed sales, and also the effect of the quality provisions in Opinion No. 468 upon the price proposed herein. The scope of this evidence, as well as the dates for the submission of any such evidence and further procedure in this case, are matters properly within the initial discretion of the examiner. These properly can and should be resolved at the prehearing conference.

There appears to be no valid reason why the prehearing conference should not proceed on August 26, 1965, in order to determine further proceedings in accordance with this order, including the date for commencement of cross-examination.

The Commission orders:

The motions filed by Union Oil and the other Applicants who have joined in its motion are hereby denied for the reasons indicated above.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP65–371

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued August 25, 1965)

On May 24, 1965, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP65–371 an application pursuant to Sections 7(b) and

---

[2] On July 21, 1965, the Commission issued an order herein prescribing August 12, 1965, as the date for service of evidence by Applicants and August 26, 1965, as the date for convening of a pre-hearing conference before a presiding examiner. On August 5, 1965, the Commission issued its decision in the Permian Basin Area Rate Proceeding. *Area Rate Proceeding, et al.*, Docket No. AR61–1, *et al.*, 34 FPC 159, Opinion No. 468.

[3] The following producers have already filed prepared evidence: Socony Mobil Oil Co., Inc., Gulf Oil Corp., The Pure Oil Company, Skelly and Phillips Petroleum Company.

7(c) of the Natural Gas Act for permission and approval to abandon an existing meter station in Duval County, Texas, used to receive gas purchased from Humble Oil & Refining Company (Humble) and for a certificate of public convenience and necessity authorizing the construction, acquisition and operation of certain facilities to receive gas purchased from Humble at a new delivery point, all in Duval County, Texas, all as more fully set forth in the application in this proceeding.

The application indicates that Humble desires to process at its Northeast Loma Novia processing plant the gas sold to Applicant under the gas sales contract, dated April 10, 1963. The proposed change in delivery point will require Applicant to abandon its existing meter station in the South Lundell Field, Duval County, and to construct and operate a meter station at the tail gate of the Loma Novia plant and a 6-inch tap on Applicant's Hagist Ranch lateral line. Humble will construct and then convey at no cost to Applicant approximately 6 miles of 6-inch lateral line connecting the proposed new tap and meter station. The line to be conveyed to and acquired by Applicant is in consideration of Applicant's agreeing to the change in delivery point. Applicant and Humble have entered into an amendatory agreement, dated April 1, 1965, providing for the change in delivery point.

The estimated cost of Applicant's proposed facilities is $17,700. Salvage value of the facilities to be abandoned and reused is approximately $7,600. Accordingly, Applicant will incur a net cost for the proposed construction of $10,100, which will be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 19, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G-235 (3 FPC 830).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction, acquisition and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The proposed construction, acquisition and operation of the subject facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) The facilities to be abandoned, as hereinbefore described are subject to the jurisdiction of the Commission and the abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(5) Such abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity and an order authorizing and approving same should be issued as hereinafter ordered.

(6) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d)(2) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Natural Gas Pipeline Company of America, to construct, acquire and operate the subject facilities, as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d)(2) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized to be acquired, constructed and operated shall be acquired, constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 4 months from the date on which this order issues.

(D) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, all as more fully described in the application in this proceeding, are granted.

(E) Applicant shall advise the Commission of the date of said abandonment within 10 days of the date thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

NORTH STAR NATURAL GAS COMPANY AND MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NO. CP65-159

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued August 25, 1965)

On December 1, 1964, North Star Natural Gas Company (Applicant) filed in Docket No. CP65-159 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Midwestern Gas Transmission Company (Respondent) to establish physical connection of its transmission facilities with the proposed facilities of and to sell natural gas to Applicant for resale and distribution in The City of Thief River Falls, Minnesota, and environs, all as more fully set forth in the application in this proceeding.

Applicant proposes to construct and operate approximately 28 miles of 4½-inch lateral pipeline connecting Respondent's main transmission line in Polk County, Minnesota, with the distribution system Applicant proposes to construct and operate in Thief River Falls.

The application shows Thief River Falls' estimated third year peak day and annual natural gas requirements to be 2,421 Mcf and 383,210 Mcf, respectively. 2,032 Mcf of the peak day requirements will be purchased from Respondent and the remaining 389 Mcf will be supplied by peak shaving.

The total estimated cost of the facilities is $1,444,190, which cost will be financed from the issuance and sale of first mortgage bonds and equity securities. Exhibit N of the application indicates that in the third year of service a 7.8 percent return will be realized on the project.

On December 11, 1964, Respondent filed an answer to the instant application. Respondent states that it will have adequate gas supply to render the requested service provided it receives the authorization requested by it in Docket No. CP64–308, *et al.*, to increase its maximum daily volumes of imports from Trans-Canada Pipe Line Ltd. On August 10, 1965, *supra*, p. 457, the Commission issued its Opinion and order in Docket No. CP64–308, *et al.*, authorizing, among other things, the increased importation of volumes of natural gas by Respondent.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on December 16, 1964 (29 F.R. 17857). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Respondent, Midwestern Gas Transmission Company, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued May 12, 1959, in Docket No. G–16841 (21 FPC 653).

(2) Applicant, North Star Natural Gas Company, is a corporation duly organized and existing under the laws of the State of Minnesota and is authorized to engage in the business of distributing and selling natural gas within said State.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 2,032 Mcf of natural gas per day to Applicant, as set forth in the application and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Respondent within one year from the date of issuance of this order.

(5) The requirement that Respondent serve Applicant, as proposed, will not place any undue burden upon Respondent nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Midwestern Gas Transmission Company is directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 2,032 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully set forth in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent within one year from the date of issuance of this order.

(C) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP65-369; NORTH CENTRAL OIL CORPORATION (OPERATOR), ET AL., DOCKET NO. CI65-815

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING THE ABANDONMENT OF THE SALE AND TRANSPORTATION OF NATURAL GAS

(Issued August 25, 1965)

On May 20, 1965, Transcontinental Gas Pipe Line Corporation (Transco) filed in Docket No. CP65-369 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain natural gas transportation service, all as more fully set forth in the application.

On February 18, 1965, North Central Oil Corporation (Operator), *et al.* (North Central), filed in Docket No. CI65-815 an application, as supplemented July 30, 1965, pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon the sale of natural gas to Trunkline Gas Company (Trunkline), all as more fully set forth in the application.

North Central sells natural gas to Trunkline from its production in the Sabine Pass Area, Jefferson County, Texas. Transco's lateral traverses North Central's production in this area, and enables Transco to transport gas for North Central to Trunkline a distance of approximately 86 miles through its lateral and mainline facilities to an interconnection with Trunkline's facilities in Beauregard Parish, Louisiana. Transco was authorized in Docket No. CP61-300 to provide the transportation and delivery of up to 3,000 Mcf of natural gas per day to Trunkline through its existing facilities. Transco herein seeks abandonment of the transportation service involved due to the proposed termination of the sale by North Central to Trunkline.

North Central requests permission and approval to abandon the sale of natural gas to Trunkline,[1] pursuant to an agreement between the parties dated June 16, 1964, and executed February 8, 1965, since Trunkline has refused to increase its take from the field or contract for the undedicated acreage of the field. Moreover, North Central states it has contacted all other interstate pipelines in the area and cannot procure an interstate market. The only market available to North Central for the undedicated acreage is a proposed intrastate purchaser who insists upon the further commitment of the reserves presently dedicated to Trunkline, estimated to be 20,000,000 Mcf as of January 1, 1965.

North Central estimates that, including the undedicated acreage, it can deliver approximately 10,000 Mcf per day from the field, as compared to the 2,000 Mcf per day it now sells to Trunkline.

North Central has requested that any order permitting and approving the abandonment of its sale to Trunkline be made effective 60 days after issuance by the Commission, in order to enable it to continue production from the wells involved pending commencement of deliveries to the proposed local market. By letter dated June 14, 1965, Transco states it has no objection to the effective date requested by North Central.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on August 19, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, includ-

[1] Authorized by Commission order issued September 8, 1961, in Docket No. CI61-1605, 26 FPC 475.

ing the applications and exhibits and supplements thereto, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Transco and North Central are "natural-gas companies" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) The natural gas transportation service proposed to be abandoned by Transco and the sale for resale of natural gas in interstate commerce proposed to be abandoned by North Central are within the jurisdiction of this Commission, and the abandonment thereof is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The aforesaid abandonments by Transco and North Central are permitted by the public convenience and necessity, and approval therefor should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Transco and North Central of the natural gas transportation service and sale of natural gas hereinbefore described, as more fully described in the applications in this proceeding, are granted.

(B) The abandonments permitted and approved by this order shall be effective 60 days after issuance of this order.

(C) North Central shall advise the Commission of the date of the abandonment of its sale to Trunkline within 10 days thereof.

(D) The Notice of Cancellation dated February 12, 1965, is accepted for filing effective 60 days after the date of issuance of this order and is designated as Supplement No. 2 to North Central's FPC Gas Rate Schedule No. 6.

(E) The certificate issued in Docket No. CI61–1605 is terminated, effective 60 days after issuance of this order.

(F) The certificate issued in Docket No. CP61–300 is terminated, effective 60 days after issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

UNITED FUEL GAS COMPANY, DOCKET NO. CP65–329

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued August 25, 1965)

On April 15, 1965, United Fuel Gas Company (Applicant) filed in Docket No. CP65–329 an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon certain natural gas facilities, and for a certificate of public convenience and necessity authorizing the construction and operation of certain other facilities, all as more fully set forth in the application.

Applicant seeks authorization for four separate and unrelated projects, as follows: (1) the modernization of 21.8 miles of 10, 12 and 20-inch pipeline west of Applicant's Cobb Compressor Station in Kanawha County, West Virginia. 17 miles of pipe will be replaced with various lengths of 2, 3, 4, 10 and 12-inch pipe; three miles of pipe will be retained; and 1.8 miles of pipe will be abandoned in place; (2) the abandonment of approximately 27.6 miles of 14-inch pipeline

extending westward from Lewis Junction through Roane and Kanawha Counties, West Virginia; (3) the retirement of eight 500 horsepower compressor units at Applicant's Hubball Compressor Station in Lincoln County, West Virginia, and replacement thereof with two 1,320 horsepower two-stage compressor units; and (4) the abandonment by sale to Applicant's affiliate, Columbia Gas of Kentucky, Inc., of approximately 9.9 miles of 4, 8, 10 and 12-inch pipeline located in Greenup and Boyd Counties, Kentucky.

The facilities to be replaced are old, of obsolete design, and require excessive maintenance for their continued operation. The facilities to be abandoned are no longer required in Applicant's operations.

No change in Applicant's delivery points, sales volumes, or existing natural gas service will result from the above projects.

Total estimated cost of Applicant's construction is $1,498,500, and will be financed through the issuance and sale of promissory notes and common stock to The Columbia Gas System, Inc., parent company of Applicant.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 19, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Fuel Gas Company, a West Virginia corporation having its principal place of business in Charleston, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 1, 1944, in Docket No. G-341 (4 FPC 534).

(2) The proposed construction and operation of facilities by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The proposed abandonment of facilities by Applicant is subject to the provisions of Subsection (b) of Section 7 of the Natural Gas Act.

(6) The aforesaid abandonment of facilities by Applicant is permitted by the public convenience and necessity, and approval therefor should be granted as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, United Fuel Gas Company, authorizing construction and operation of the facilities hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within one year from the date on which this order issues.

(D) Permission for and approval of the proposed abandonment of facilities by Applicant are granted.

(E) Applicant shall advise the Commission of the date of the abandonment of said facilities within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

WARREN PETROLEUM CORPORATION (OPERATOR), G–20478, RI63–486; KERR-MCGEE OIL INDUSTRIES, INC., G–20479, RI63–460; TEXACO INC., G–20451, RI64–69; CITIES SERVICE OIL COMPANY, RI63–485, RI65–269.

ORDER AMENDING ORDER, GRANTING EXTENSION OF TIME, AND DENYING, IN PART, PETITION TO AMEND ORDER

(Issued August 25, 1965)

On August, 9, 1965, Texaco Inc. (Texaco) filed a petition requesting amendment of the Commission's order issued herein on June 3, 1965, 33 FPC 1212, conditionally approving a rate settlement for the jurisdictional sales of natural gas in the above dockets.

Texaco requests that Ordering Paragraph (E) of the order be amended to provide Texaco and the other above-designated respondents an option to retain and commingle the refund amounts pending further order of the Commission at 4.5 percent interest per annum, in lieu of the 6 percent rate of interest now provided, the lower interest rate being provided under similar refund circumstances for Permian Basin area producers in Opinion No. 468, Area Rate Proceedings, *et al.*, Docket No. AR61–1, *et al.*, issued August 5, 1965, *supra*, p. 159 at p. 242.

Texaco further requests that it be granted an additional extension[1] of time up to and including September 15, 1965 without interest obligation to comply with the provisions of Paragraph (F) of said order. Texaco states, in effect, that the additional time requested is necessary for its management to reconsider its decision to place the refund monies in escrow should a lower commingled refund interest rate be made available.

We believe it appropriate that these respondents be permitted to retain these refund amounts with their general assets pending further order of the Commission and that the appropriate rate of interest shall be 4.5 percent, the prime rate established by the Federal Reserve Board. While we shall extend the time for compliance, we see no reason why interest should not commence on July 15, 1965, as required by our order of June 3, 1965.

The Commission orders:

(A) Paragraph (E) of the order of June 3, 1965 herein is amended so as to provide for an interest rate of 4.5 percent per annum in lieu of 6 percent.

(B) An additional extension of time is granted to and including September 15, 1965, within which respondents may comply with Paragraph (F) of the order of June 3, 1965.

(C) Texaco's petition to amend Paragraph (E) of said order so as to require interest only from September 15, 1965, is denied.

---

[1] By the Secretary's Notice issued July 1, 1965, an extension of time was granted to and including August 16, 1965 within which to comply with Paragraph (F) of the order issued June 3, 1965, and an additional extension was granted on August 16, until August 30, 1965.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Carl E. Bagge.

A. J. INDUSTRIES, INC., PROJECT NO. 2307

ORDER AMENDING LICENSE

(Issued August 26, 1965)

On June 21, 1965, A. J. Industries, Inc., licensee for Project No. 2307 requested modification of Article 35 of our order issued October 24, 1963, as modified by our order of December 23, 1963, 30 FPC 1064, 1570, issuing a license for Project No. 2307 located within the Tongass National Forest near Juneau, Alaska.

Article 35 requires both the initiation and completion by the licensee of a program for the repair and modification of the generating equipment and pertinent facilities of the Salmon Creek and Annex Creek developments. The repair and modification of the project is scheduled to be completed over a five year period beginning as of the effective date of the license. Under Item 1, Article 35, the licensee is required to drill and grout Salmon Creek Dam within the third year and to gunite and waterproof the Salmon Creek Dam within the fourth year. Due to the very short construction season and the high cost of mobilizing work forces and materials, the licensee now requests that the drilling and grouting be deferred to the fourth year or 1967. According to the licensee, this would allow it to complete the aforementioned items in one construction season and eliminate the need for lowering the Salmon Creek reservoir two consecutive years during the summer months.

The Commission finds:

It is appropriate and consistent with the public interest that our aforementioned orders issued October 24, 1963, and December 23, 1963, be modified as hereby provided.

The Commission orders:

(A) Article 35 of our aforementioned October 24, 1963, and December 23, 1963, orders is hereby modified to read as follows:

Article 35. The Licensee shall repair and modify the Salmon Creek and Annex Creek developments to make the structures safe and restore the project to a satisfactory operating condition in accordance with the following schedule, the period to begin as of the effective date of the license:

First year:

1. Installation of air vent in blowoff line at outlet of Annex Creek dam.

2. Initiation of a program for the repair and modification of the generating equipment and appurtenant facilities of the Salmon Creek and Annex Creek developments.

Second year:

1. General cleanup around Salmon Creek dam and in and around Salmon Creek reservoir.

2. Scale downstream face of Salmon Creek dam.

3. Replacement of supports for Salmon Creek penstock No. 1.

4. Initiation of the rehabilitation of the Salmon Creek flume.

5. Continuation of the program for the repair and modification of generating equipment.

Third year:

1. Repair saddle dams at Upper Annex Creek Lake.

2. Replacement of supports for Salmon Creek penstock No. 1.

3. Continuation of the rehabilitation of the Salmon Creek flume.

4. Clean and paint valves of outlets of Salmon Creek and Annex Creek dams.
5. Continuation of the repair and modification of generating equipment.

Fourth year:

1. Drill and grout Salmon Creek dam.
2. Gunite and waterproof upstream face of Salmon Creek dam.
3. Continuation of the rehabilitation of the Salmon Creek flume.
4. Check the plate thickness of all penstocks.
5. Continuation of the program for the repair and modification of generating equipment.

Fifth year:

1. Repair tailrace concrete at Annex Creek power plant.
2. Completion of the rehabilitation of the Salmon Creek flume.
3. Completion of the repairs and modifications to the generating equipment and appurtenant facilities of the project.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

AREA RATE PROCEEDING, ET AL. (PERMIAN BASIN AREA), DOCKET NO. AR61-1, ET AL.

ORDER DENYING STAY

(Issued August 26, 1965)

Texaco Inc., a respondent in this proceeding, acting also for a number of other producer respondents, has filed on August 19, 1965, a motion asking us to stay each of the ordering paragraphs of Opinion No. 468, *supra*, p. 159, until 60 days after the Commission passes upon the petitions for rehearing they expect to file, and, in the event one or more of the Movants files a petition for review, for an additional period extending 30 days after the Commission files the administrative record in the appropriate court of appeals. Under normal conditions we would defer passing on the motion until our consideration of the Movants' petitions for rehearing. In view of the motion's statement that "unless the Commission's orders are stayed, Movants will be required to comply with these orders not only before the Commission is required to act on applications for rehearing, but also prior to the statutory time provided for filing applications for rehearing"—a position which apparently is responsible for Movants' request that we act on this motion within seven days—we deem it appropriate to set forth promptly our reasons for rejecting the request and denying the motion as of this time.[1]

The thrust of the motion is that by ordering paragraph (N) of Opinion No. 468 we have set September 1, 1965 as the effective date of our orders. Contrary to Movants' contentions, however, with the exceptions discussed below, the fixing of this effective date does not require any action by respondents on or before September 1, 1965. Under the Natural Gas Act, orders issued pursuant to proceedings initiated under Section 4(e) or 5(a) of the Act normally are

[1] To the extent that a motion for stay filed on August 20, 1965, by counsel for Hunt Oil Company, and a number of related producer respondents also seeks action within a seven-day period, this order is equally applicable to that request. To the extent the Hunt motion goes beyond this, we shall consider it in connection with our review of the petitions for rehearing which are to be filed. Our holding herein is also applicable to the various other respondents who have filed motions similar to or concurring in the motions filed by Texaco or Hunt Oil Company.

effective as of the date of release of the Commission opinion and order. In the instant proceeding, however, we chose, as a matter of convenience to the respondents and their customers, to set an effective date some 26 days later at the beginning of a new monthly billing period, an action which had the effect of deferring for this additional period the effect of our decision with respect to those sales subject only to the prospective 5(a) determination.

We made clear, however, that no action on the part of respondents was required to effectuate any rate changes or refund requirements required by Opinion No. 468 on or by the September 1, 1965 effective date. On the contrary, ordering paragraph (E) expressly states that any reductions required to bring the respondents' rates down to the applicable base area rate need only be filed "within 45 days from the effective date"—*i.e.* by October 15, 1965.[2] Ordering paragraph (F) provides that quality differential statements need not be filed until 90 days after September 1, 1965—*i.e.* November 30, 1965, and that any reductions required thereby shall not be effectuated for at least 60 days thereafter. And ordering paragraph (I) provides that reports as to the appropriate refunds due in the consolidated 4(e) proceedings shall not be made until 120 days after September 1, 1965 (December 30, 1965), while paragraph (J) makes clear that the actual refund payments must await further order of the Commission. In short while all of these various rate changes will be effective *as of* September 1, 1965 nothing to implement them need be done by that date.

The only provisions of our orders which in terms are effective as of September 1, 1965 are the minimum rate provisions of paragraph (G) which authorize certain increased rate filings by some of the respondents (which obviously cannot aggrieve respondents, and will in any event be subject to suspension for thirty days after filing) and the provisions of ordering paragraphs (H) and (K) providing for moratoria on rate increase filings above the applicable area price ceilings. Assuming *arguendo* that these latter provisions might have an immediate impact upon one or more of the Movants, they have presented no reasons why we should suspend the effect of these provisions pending consideration of their prospective petitions for rehearing or court review actions and we know of none.

Accordingly, we shall deny the instant motion for stay. This conclusion is necessarily without prejudice to such action, if any, as may be appropriate in the light of the circumstances presented at the time we rule on the various petitions for rehearing which may be filed from Opinion No. 468.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

AREA RATE PROCEEDING, ET AL. (SOUTHERN LOUISIANA AREA), DOCKET NO. AR61-2, ET AL.

ORDER ON REVIEW OF APPEAL FROM PRESIDING EXAMINER'S RULING FIXING DATE FOR STAFF PRESENTATION

(Issued August 26, 1965)

On August 6, 1965, the Presiding Examiner in the above-entitled proceedings certified to us an appeal from his ruling establishing a September 1, 1965, deadline

[2] Since pipelines normally pay producers only pursuant to billings submitted at the end of the month, any such reductions could not be reflected in reduced payments until after November 1, 1965.

for the distribution of a revised rate design presentation by the staff. On August 12, 1965, Texaco Inc. and seven other respondents in the proceedings filed a document entitled "Response to the Presiding Examiner's Ruling of July 30, 1965, Certified to the Commission Under Rule 1.28" in which it is urged that the Commission modify the Examiner's ruling. In view of the disposition we are making of the appeal the contentions advanced by these respondents need not be discussed here.

It is apparent that the Presiding Examiner's ruling was motivated by a commendable desire to bring to a conclusion these already long drawn out hearings. We feel certain that with the guidelines set out in our recently issued Opinion No. 468, *supra*, p. 159, the achievement of this objective will be greatly accelerated. Opinion No. 468 became available to all parties, including staff members assigned to these proceedings, upon its issuance on August 5, 1965. Accordingly, in disposing of this appeal our order and the directions herein contained will apply equally to all parties, including the staff.

These proceedings were instituted by Commission order on May 10, 1961, 25 FPC 942, more than four years ago, and have been the subject of extremely lengthy hearings with a record which now exceeds the record in the Permian proceeding. The public interest would not be served by any unnecessary delays. Of course, to the extent that the record fails to contain factual data necessary to a determination pursuant to the cost-finding methods utilized in Opinion No. 468, additional evidence on such matters may be essential. In Opinion No. 468 we indicated several areas which we are interested in considering in the light of more comprehensive records developed in other proceedings. As to these areas, the Examiner is in the best position to evaluate the state of the record, but if on the basis of the extensive record already developed these areas have been adequately covered, no further direct testimony thereon should be permitted.

The Examiner has indicated that he has requested the staff to introduce a new rate design presentation on September 1, 1965, which would cover rate recommendations for all gas. We believe rate design need not be the subject of further expert testimony, and should be handled in briefs by the staff and the parties. We do not mean to suggest that such evidence is not generally appropriate, but the failure of any party, including the staff, to adduce expert testimony as to rate design questions does not justify delay in bringing the lengthy proceedings to an early conclusion; however, this does not preclude a party from taking any position on such matters as the evidence of record may permit. Our ruling permits the presentation of any factual data relating to rate design that may be necessary to complete the record in this case. We also intend that to the extent it may affect such further evidentiary presentations or examinations as may be required, parties and the staff should be required to state their positions on the appropriate rate design prior to briefing.

Our ruling with respect to rate design presentations effectively makes moot the Examiner's direction to the staff to distribute such a presentation by September 1. The staff as well as all others will address themselves on that date principally to the matter of the factual sufficiency of the record. Any presentations which are permitted to be made should be limited along the lines we have indicated.

Accordingly, the subject appeal from the Presiding Examiner's ruling is disposed of as above set forth.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

ATLANTIC SEABOARD CORPORATION, G–16401; HOME GAS COMPANY, G–16402; KENTUCKY GAS TRANSMISSION CORPORATION, G–16403; THE MANUFACTURERS LIGHT AND HEAT COMPANY, G–16404; THE OHIO FUEL GAS COMPANY, RP65–45

ORDER DENYING APPLICATION FOR LEAVE TO FILE OUT OF TIME A PETITION TO INTERVENE FOR LIMITED PURPOSES

(Issued August 26, 1965)

These consolidated proceedings involve proposed partial requirements (CDS–PR) rate schedules of the respondent Columbia companies. On July 6, 1965, Appalachian Power Company, Kentucky Power Company, Ohio Power Company and Wheeling Electric Company, subsidiaries of the American Electric Power System (petitioners) made application to file out of time a petition to intervene in these proceedings. Answers in opposition to petitioners' application and petition were filed by Lynchburg Gas Company on July 15, 1965, and by the Columbia companies on July 19, 1965.

In support of their application, petitioners state that they had no concern with these proceedings until June 24, 1965, when matters of "tremendous direct interest" allegedly became an issue. At the pre-hearing conference which was held on that date, the Presiding Examiner prescribed a procedure to be followed in these proceedings which would seek to ascertain how the question of the necessity of the respondents' PR rate schedules has been affected by the filing by Atlantic Seaboard of a restructured tariff on March 31, 1965,[1] and the proposed filing of such restructured tariffs by other respondents on or before September 1, 1965.

In their answers to petitioners' application, Lynchburg and Columbia maintain that the only issue in these proceedings is the necessity for the PR schedules, and point out that that issue is before the Commission on remand from the United States Court of Appeals for the District of Columbia. Lynchburg and Columbia contend that petitioners are concerned solely with issues which are irrelevant to these proceedings.

As the Commission understands petitioners' position, they are interested solely in the lawfulness of Columbia's restructured tariffs. Petitioners seek intervention in these proceedings on the basis of allegations that a decision on the question of Columbia's need for the PR schedules in the restructured tariffs "could work to eliminate later serious consideration of the lawfulness of the restructured rates."

These proceedings involve the lawfulness of Columbia's PR schedules. The restructed tariffs are the framework, and not the subject, of this inquiry. It appears that petitioners' interest is confined to the rate level of the restructured tariffs. Petitioners concede their lack of concern with the PR schedules, and by order issued today, *infra*, p. 593, we are allowing their intervention in Docket No. RP65–49, which involves the lawfulness of Seaboard's restructured tariff.

The Commission is not persuaded that anything in these proceedings will prejudice petitioners in proceedings concerned with the lawfulness of Columbia's restructured tariffs. There is no need, therefore, to inject into these proceedings issues which are extraneous to the PR question or to open these proceedings to wider participation. As petitioners have shown no justification for their

[1] Eighth Revised Volume No. 1, effective May 16, 1965, subject to refund.

intervention, we are denying their application to file out of time the petition to intervene.

The Commission orders:

Petitioners' application for leave to file out of time a petition to intervene is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

ATLANTIC SEABOARD CORPORATION, DOCKET NO. RP65-49

ORDER PERMITTING INTERVENTIONS

(Issued August 26, 1965)*

On April 19, 1965, a joint petition to intervene in this proceeding was filed by Coal Interests,[1] and on May 28, 1965, a petition to intervene was filed by Appalachian Power Company (Appalachian). Respondent, Atlantic Seaboard Corporation (Seaboard), has made no objection to the petition of Coal Interests, but filed an answer opposing Appalachian's petition on June 7, 1965.

Generally stated, both petitions to intervene assert that Seaboard's proposed restructured tariff will have an adverse impact on the consumption of competing fuels. The petitioners request the Commission to allow their intervention, because they may suffer competitive injury and the Appalachian area development program may be adversely affected if the tariff changes proposed herein are approved.

In its statement in opposition to Appalachian's petition, Seaboard argues at length that the Commission is not empowered to consider what effect Seaboard's rates may have on Appalachian. This argument is misdirected, however, for the question here is not the scope of the hearing which we have ordered, but the standing of the petitioners to intervene therein with respect to the matters which are properly in issue. As to this question, we reiterate our view, expressed in *United Fuel Gas Company*, Opinion No. 430, 31 FPC 1342, 1356-57, that the relevant cases make clear that parties who would be economically aggrieved by Commission approval of a proposed rate filing may intervene in the hearing thereon even though their economic aggrievement, as such, is not grounds for rejection of the proposed filing. Seaboard's arguments that the supporting judicial authority for this proposition is or should be confined to cases involving the certification of new service, rather than rate proceedings, is not persuasive. Where, as here, the rate proceeding involves issues of the relative level of demand and commodity portions of a pipeline's rates it is clear that the decision can have just as great an impact upon competing fuels as in a certification proceeding.

Since Seaboard has not challenged Appalachian's claims that it might in fact be competitively injured by a determination permitting the rates to go into effect and has not opposed the intervention of the Coal Interests at all, we do not have any question here as to whether we should provide for a preliminary hearing on the standing of the intervenors as we suggested in Opinion No. 430 might occasionally be appropriate. Nor do we believe it necessary or useful to attempt herein to prescribe the exact limitations on intervenors' participation.

*Reconsideration denied by order issued September 27, 1965, 34 FPC 970.

[1] Consisting of Fuels Research Council, Inc., National Coal Association, and United Mineworkers of America.

While it is clear that the effect upon petitioners of Commission approval of Seaboard's proposed rates is not, as such, relevant to the issue of whether the proposed rate schedule is just, reasonable, and nondiscriminatory, *Cf., Mid-America Pipeline Co.* v. *F.P.C.*, 330 F. 2d 226 (CADC), we leave it to the examiner to insure that any presentations or examinations by the intervenors are confined to matters which are relevant and material.

The Commission finds:

Intervention in the instant proceeding by Appalachian and the Coal Interests may be in the public interest.

The Commission orders:

The above-named petitioners are hereby permitted to intervene in this proceeding, subject to the rules and regulations of the Commission; *Provided, however*, that the participation of such petitioners shall be limited to matters relevant and material to a determination of whether the rate schedules filed by Seaboard meet the standards of Sections 4 and 5 of the Natural Gas Act; and *provided, further*, that admission of such intervenors shall not be construed as recognition by the Commission that they will be aggrieved by any order or orders of the Commission entered in this proceeding.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64-255 (PHASE I)

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 26, 1965)

On June 18, 1965, Northern Natural Gas Company (Applicant) filed in Docket No. CP64-255 (Phase I) an application to amend the order of the Commission issued on December 21, 1964, 32 FPC 1491, as amended on June 15 and June 18, 1965, 33 FPC 1264, 1271, which authorized the Applicant to construct and operate facilities to provide initial gas service to the Mesabi Iron Range Area of Minnesota. The said order among other things reserved 2,233 Mcf per day of mainline capacity for the plant of Hanna Mining Company located near Cooley, Minnesota.

By the application to amend the Commission's order of December 21, 1964 Applicant seeks (1) authorization to construct and operate approximately 10.6 miles of 30-inch loop line, 0.5 mile of 6-inch branch line and a measuring station and (2) through its Peoples Division to sell and deliver not less than 6,200 Mcf per day and not more than 7,000 Mcf per day, in accordance with the contract dated April 27, 1965, between Applicant, operating as Peoples Natural Gas Division and The Hanna Mining Company.

Under the contract Hanna will pay an initial price of 43 cents per Mcf for all gas delivered, with an annual minimum bill computed by using 237 times the effective contract demand volume (at least 6,200 Mcf per day) at 30 cents, provided, however, that Hanna shall never pay more than 50 cents per Mcf. Hanna reserves the right to cancel the contract if the initial rate exceeds 43 cents per Mcf as a result of a final Federal Power Commission order.

The minimum bill provisions assure that Northern will receive an adequate return on its investment in making the sale. The cost of construction of the proposed facilities is estimated to be $1,292,300.

Due notice of the subject application to further amend and opportunity for hearing has been given by publication in the Federal Register on July 8, 1965 (30 F.R. 8649). No protest, petition to intervene, or notice of intervention has been filed herein.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued in Docket No. CP64–255 (Phase I) on December 21, 1964, as amended on June 15 and June 18, 1965, be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued December 21, 1964, as amended on June 15 and June 18, 1965, in Docket No. CP64–255 (Phase I) is further amended so as to authorize the Applicant to construct and operate the proposed facilities and to sell and deliver up to 7,000 Mcf of natural gas daily on a firm basis to the Hanna Mining Company, subject to the condition that Hanna shall not be entitled to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

SOCONY MOBIL OIL COMPANY, INC. (OPERATOR), ET AL.

ORDER REJECTING RATE FILING

(Issued August 26, 1965)

Socony Mobil Oil Company, Inc. (Operator), *et al.* (Socony) on June 28, 1965, tendered for filing a proposed rate increase from 16¢ to 20.5¢ per Mcf for the sale of residue gas (from both gas-well gas and oil-well gas) to Transwestern Pipeline Company (Transwestern) under its FPC Gas Rate Schedule No. 260 from the Kermit Field, Winkler County, Texas (R.R. Dist. No. 8). Socony seeks to make the proposed rate effective as of September 1, 1965, the contractually provided effective date.

In Opinion No. 468 issued August 5, 1965, *supra*, p. 159, we determined, among other things, that the just and reasonable ceilings under Section 5(a) of the Natural Gas Act effective as of September 1, 1965, were 16.5¢ per Mcf for the sale of "new" residue gas (from gas-well gas) and 14.5¢ per Mcf for the sale of "new" residue gas (from oil-well gas),[1] subject to adjustment for quality differentials below the standards applicable to pipeline quality gas. The Section 5(a) determinations there made are applicable to all producer-respondents for all sales of natural gas made by them in the Permian Basin Area. Since Socony was a producer-respondent in Permian and the sale under its FPC Gas Rate Schedule No. 260 is and was being made in that area, the Section 5(a) determinations are applicable to Socony's sale. We also imposed in Opinion No. 468 a moratorium effective as of September 1, 1965, prohibiting any increased rate filing in excess of the just and reasonable rate ceilings determined there.

---

[1] Since the contract comprising Rate Schedule No. 260 was entered into on February 10, 1961, the gas is "new gas" under Opinion No. 468.

With respect to those increased rates for sales in Permian which were in effect, subject to refund, under Section 4(e) of the Natural Gas Act, but which were not consolidated in the Permian hearing the effect of our Section 5(a) determination in the area rate proceeding was to create locked-in refund periods ending August 31, 1965, since as of September 1, 1965 we had established the prospective just and reasonable ceilings for such sales. Accordingly our Show Cause order, *supra*, p. 424, issued simultaneously with Opinion No. 468 directs the respondents with respect to such sales to show cause solely as to why the Permian decision should not be made applicable in determining the refunds owing for the periods prior to September 1, 1965. The effectiveness of Opinion No. 468 insofar as future rates are concerned is certainly no less with respect to those proposed rates involved in Section 4(e) proceedings which are still under suspension or to those rate filings, like Socony's, where the thirty day period in which we can exercise our suspension powers has not yet expired. Neither of these latter two classes of rates are entitled to any special consideration insofar as tolling the effect of the Commission's Section 5(a) determination merely because they have not had an earlier opportunity to collect a rate higher than that we have found to be just and reasonable. Clearly in no situation can a natural gas company avoid the effect of a valid Section 5(a) determination by the filing of a Section 4 rate increase subsequent to the institution of the Commission 5(a) proceeding.

In the absence of moratorium provisions such as those contained in Ordering Paragraph H of Opinion No. 468, it may be that Socony and other producers similarly affected by the prospective rate order, either with respect to the charges for existing rates or those for which they had a contractual right to file, could file any contractually authorized increase subject to the procedures of Section 4(e) of the Act. For the reasons set forth in detail in Opinion No. 468 we have exercised our authority under Sections 5(a) and 16 of the Act to prevent any such filings until January 1, 1968, or such earlier date as the Commission may in its discretion authorize. Accordingly if Socony believes there are circumstances warranting a special exemption from the area rate for this particular sale or that the general area rate ceiling should be raised to a level which would justify the increase for which it filed its remedy is to follow the procedures for filing petitions for special exemptions from the area ceiling or for seeking to have the Commission exercise its discretion to reopen the Permian proceeding discussed in Opinion No. 468. Of course, Socony is free to seek rehearing or court review of that Opinion and Order or any part thereof, but in the absence of a stay of the effectiveness of that decision,[3] Socony may not file any increase to become effective on or after September 1, 1965 at a rate in excess of the applicable area base rates established therein.

The Commission orders:

For the reasons set forth above, the proposed increased rate of 20.5¢ per Mcf tendered by Socony on June 28, 1965, for sales under its FPC Gas Rate Schedule No. 260 is hereby rejected.

[3] We have this day denied a motion for stay of the ordering paragraphs of Opinion No. 468 filed by Texaco Inc., on behalf of Socony, among others *supra*, p. 589.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

TOWN OF SUMITON, ALABAMA AND SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-353

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND CONDITIONED SALE OF NATURAL GAS

(Issued August 26, 1965)

On May 6, 1965, the Town of Sumiton, Alabama (Applicant) filed in Docket No. CP65-353 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Southern Natural Gas Company (Southern) to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver natural gas to Applicant for resale and distribution in Sumiton, Alabama, and environs, all as more fully set forth in the application.

Applicant proposes to construct and operate a natural gas distribution system in Sumiton, Alabama, and approximately 10.83 miles of 3½-inch transmission line extending therefrom to a proposed point of connection on Respondent's Jasper lateral about 22 miles northwest of Birmingham, Alabama. The project appears to be economically feasible for the Town of Sumiton, as the debt service ratio based on third year leveling of sales is 1.75.

Total estimated volumes of natural gas required to meet Applicants annual and peak day requirements for the initial three-year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	67,115	72,087	76,802
Peak day (Mcf)	895	962	1,025

The total estimated cost of Applicant's proposed construction of transmission and distribution facilities is $490,000, which will be financed from the sale of revenue bonds.

Respondent filed an answer in this proceeding on May 13, 1965, stating it had no objection to the granting of the requested order for service, providing its pending application in Docket No. CP64-314 is granted. There Southern proposes, among other things, to construct additional main line facilities so as to meet increased requirements of existing customers. By our order of April 13, 1965, 33 FPC 729, Southern was granted temporary authorization in Docket No. CP64-314 for the construction *only* of a portion of the proposed facilities. The facilities authorized to be constructed will provide capacity in excess of the requirements of Southern's existing customers sufficient to meet the above-outlined needs of the Applicant. However, Southern is not now authorized to operate those facilities or to sell gas by the use thereof.

Until such time as Southern is either (1) authorized to render the service proposed from the facilities constructed under the above-mentioned temporary authorization, as fully outlined in its application in Docket No. CP64-314, or (2) granted a permanent certificate for the construction and use of the facilities which were the subject of the temporary grant, Respondent will not be able to institute deliveries to the Town of Sumiton. However, if and when such authorization is granted, Respondent should be required to institute such deliveries, provided Sumiton is prepared to receive natural gas from Southern. We shall so provide

in this order. Should neither of the foregoing conditions occur, it may be that Southern will petition the Commission for permanent authorization to operate that portion of the facilities necessary to institute service to the instant Applicant. In that event such service would be in the public interest.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on May 20, 1965 (30 F.R. 6880). No protest, petition to intervene, or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated October 6, 1942, in Docket No. G–296 (3 FPC 822).

(2) Applicant, Town of Sumiton, Alabama, having its principal place of business in Sumiton, Alabama, is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and when authorization is granted to operate the facilities involved, to render natural gas service to Applicant for distribution and resale as hereinbefore described and as more fully described in the application in this proceeding.

(4) Applicant should be prepared to receive natural gas from Respondent for distribution in the Town of Sumiton, Alabama, within one year from the date of the issuance of authorization to Southern in Docket No. CP64–314 to operate the facilities constructed under the above-discussed temporary authorization.

(5) The requirement that Respondent serve Applicant under the above-discussed conditions as requested, will not place an undue burden upon it or impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Southern Natural Gas Company, Respondent, is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as hereinbefore described, and under the above stated conditions, to render natural gas service to Applicant for transportation, distribution and resale as hereinbefore described.

(B) Respondent shall report to the Commission the date of commencement of service to Applicant within 10 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein in accordance with Finding (4) above.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

UNION ELECTRIC COMPANY, PROJECT NO. 2277

ORDER ISSUING LICENSE (MAJOR)

(Issued August 26, 1965)*

Application was filed on June 10, 1960, and supplemented on September 6 and December 7, 1960, by Union Electric Company (Applicant) of St. Louis, Mis-

*See order on rehearing issued October 18, 1965, 34 FPC 1169. Order modifying license issued March 3, 1966, 35 FPC 316.

souri, for a license under Section 4(e) of the Federal Power Act (Act) for Project No. 2277, known as the Taum Sauk Project, located on the East Fork of Black River at its confluence with Taum Sauk Creek, in Reynolds, Iron, Washington and St. Francois Counties, Missouri, in the vicinity of Lesterville, Missouri.

On June 24, 1960, Applicant advised that it had authorized its contractor to commence construction because of the need for the capacity of the project by the summer of 1963. By a decision dated May 3, 1965, the United States Supreme Court affirmed the Commission's findings and order asserting licensing authority over the Taum Sauk project by virtue of the effect of the project on the interests of interstate commerce by its utilization of non-navigable headwaters of a navigable stream to generate electric energy for an interstate power system (281 U.S. 90).

The Secretary of the Army and the Chief of Engineers have reported that the plans of the project structures are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project conditions in the interests of fish and wildlife and recreation. These conditions are included herein substantially as set forth in Article 10 of attached Form L–11, and Articles 31 and 32 hereof.

The Missouri Conservation Commission has advised that the wildlife interests of the State are adequately protected by an Agreement between the State Commission and Applicant.

The initial filling of the upper reservoir disclosed an excessive seepage condition. By Article 34 herein, we are requiring that the licensee make periodic reports on seepage from the upper reservoir and perform such remedial work as may be required in the future.

The Commission finds:

(1) The project affects the interests of interstate commerce.

(2) Applicant is a corporation organized under the laws of the State of Missouri, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of waterpower development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 467,000 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable.

(7) The exhibits designated and described in paragraph (B) following conform substantially to the Commission's rules and regulations and show the general characteristics of the project as it was constructed with respect to pool elevations, heights of dams, capacities of reservoirs, size of water passages,

capacity of generating units, and general design of structures, and should be approved as part of this license only insofar as they show these general characteristics. The licensee should as hereinafter provided, supply revised exhibits for Commission approval.

The Commission orders:

(A) This license is hereby issued to Union Electric Company (Licensee) of St. Louis, Missouri, under Section 4(e) of the Federal Power Act (Act) for a period of 50 years, effective as of July 1, 1960, for the construction, operation and maintenance of Taum Sauk Project No. 2277, located on the East Fork of Black River at its confluence with Taum Sauk Creek, in the State of Missouri, and affecting the interests of interstate commerce, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Taum Sauk Project consists of:

(i) all lands constituting the project area and inclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2277–1) Location Map, and

Exhibit K: (FPC No. 2277–2) Detail Map—Project Area

(ii) Project works consisting of a concrete gravity dam with a gated sluice and non-gated spillway section located on East Fork of Black River at the confluence of Taum Sauk Creek; a reservoir, known as the lower pool, with a maximum normal water surface elevation of 750 feet above mean sea level, usable storage of 4,360 acre-feet and a surface area of 370 acres; the upper pool created by a rockfill concrete faced dike, surmounted by a parapet wall, with a water surface which varies between elevation 1505 and 1597 feet m.s.l., storage of 4,360 acre-feet and an area of about 54.5 acres located on top of an adjoining mountain; a tunnel and penstock leading from the upper pool to a powerhouse located on an open channel connecting to the lower pool; a powerhouse containing two reversible pump-units, each having a rated generating capacity of 175,000 kilowatts; step-up transformers and switchyards; a double-circuit 138-kv transmission line extending from the switchyard to the Rivermines Substation, a distance of about 30 miles, and appurtenant electrical and mechanical facilities, the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L:

(FPC No. 2277–3)-------	Lower Dam, Site Plan and General Design;
(FPC No. 2277–11)------	Upper Pool Plan and Sections;
(FPC No. 2277–5)-------	Pressure Tunnel & Channel Profile & Cross Sections;
(FPC No. 2277–6)-------	Pumping & Generating Station, Site Plan; and
(FPC No. 2277–7)-------	Pumping & Generating Station, Plans & Sections.

Exhibit M: One typewritten page entitled, "General Description of Mechanical, Electrical and Transmission Equipment," filed in the Commission June 10, 1960.

(iii) all of the structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area,

including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–11 (July 1, 1965) entitled "Terms and Conditions of License for Unconstructed Major Project Affecting the Interests of Interstate or Foreign Commerce", *infra*, p. 602 which terms and conditions, designated as Articles 1 through 25, are attached hereto and made a part hereof, except for Articles 3, 4, 5 and 16 thereof, and subject to the following special conditions set forth herein as additional articles:

Article 26. The Licensee shall pay to the United States the following annual charge, effective July 1, 1960:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purpose is 467,000 horsepower.

Article 27. Except when emergency shall require for the protection of navigation, life, health, or property, no substantial alteration or addition not in conformity with the approved plans shall be made to any dam or other project works under the license without the prior approval of the Commission; and any emergency alteration or addition so made shall thereafter be subject to such modification and change as the Commission may direct. Minor changes in the project works or divergence from such approved exhibits may be made if such changes will not result in decrease in efficiency, in material increase in cost, or in impairment of the general scheme of development; but any of such minor changes made without the prior approval of the Commission, which in its judgment have produced or will produce any of such results, shall be subject to such alteration as the Commission may direct. The Licensee shall comply with such rules and regulations of general or special applicability as the Commission may from time to time prescribe for the protection of life, health, or property.

Article 28. Within six months of the date of issuance of this license, the licensee shall file with the Commission for approval revised maps, plans, specifications, and statements insofar as necessary to show any divergence from or variations in the project area and project boundary as finally located or in the project works as actually constructed when compared with the area and boundary shown and the works described in the license or in the maps, plans, specifications, and statements approved by the Commission. Such revised maps, plans, specifications, and statements shall, when approved by the Commission, be made a part of this license under the provisions of Article 2 hereof.

Article 29. The operation and maintenance of the project and any work incident to additions or alterations shall be subject to the inspection and supervision of the Fort Worth Regional Engineer, Federal Power Commission, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative. The Licensee shall also furnish to said representative such further information as he may require concerning the construction and operation, and shall notify him of the date upon which work will begin on any substantial alterations or additions to the project works as far in advance thereof as said representative may reasonably specify, and shall

notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. The Licensee shall allow him and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 30. The Licensee shall dispose of all temporary structures, unused timber, brush, refuse, or inflammable material resulting from the clearing of the lands or from the construction and maintenance of the project works. In addition, all trees along the margins of the reservoirs which may die during the operation of the project shall be removed. Clearing of lands and the disposal of the material shall be done with due diligence and to the satisfaction of the authorized representative of the Commission.

Article 31. The operations of the Licensee, so far as they affect the use, storage and discharge of water from the project reservoirs, shall at all times be controlled by such reasonable rules and regulations as the Commission may prescribe for the protection of life, health, and property, and in the interest of the fullest practicable conservation and utilization of such waters for power purposes and for other beneficial public uses, including recreational purposes; and the Licensee shall release water from the lower reservoir of the project at such rate in cubic feet per second, or such volume in acre-feet per specified period of time, as the Commission may prescribe for the purposes hereinbefore mentioned and as the Commission herein prescribes in Article 32 herein.

Article 32. The Licensee shall release water over and/or through the lower dam continuously at a rate wherein the total flow from the lower pool is approximately equal to the measured natural inflow into the lower pool, except as modified by the Commission pursuant to Article 31 above.

Article 33. The Licensee shall, within one year from the date of this license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared in conformance with Section 4.41R of the Commission's Rules and Regulations under the Federal Power Act.

Article 34. The Licensee shall submit a report on the methods employed for controlling seepage from the upper reservoir, and shall submit semi-annually a supplemental report on the seepage flows as measured daily. The licensee shall cause such remedial work as found necessary from time to time by the Licensee or by the Commission, provided that any major remedial work shall first have been approved by the Commission.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license to the extent indicated in finding (7) above.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

FORM L–11

(July 1, 1965)

TERMS AND CONDITIONS OF LICENSE FOR UNCONSTRUCTED MAJOR PROJECT AFFECTING THE INTERESTS OF INTERSTATE OR FOREIGN COMMERCE

Article 1. The entire project, as described in the order of the Commission, shall be subject to all the provisions, terms, and conditions of the license.

Article 2. No substantial change shall be made in the maps, plans, specifications, and statements described and designated as exhibits and approved by the

Commission in its order as a part of the license until such change shall have been approved by the Commission: Provided, however, that if the Licensee or the Commission deems it necessary or desirable that said approved exhibits, or any of them, be changed, there shall be submitted to the Commission for approval amended, supplemental, or additional exhibit or exhibits covering the proposed changes which, upon approval by the Commission, shall become a part of the license and shall supersede, in whole or in part, such exhibit or exhibits theretofore made a part of the license as may be specified by the Commission.

Article 3. Said project works shall be constructed in substantial conformity with the approved exhibits referred to in Article 2 herein or as changed in accordance with the provisions of said article. Except when emergency shall require for the protection of navigation, life, health, or property, no substantial alteration or addition not in conformity with the approved plans shall be made to any dam or other project works under the license without the prior approval of the Commission; and any emergency alteration or addition so made shall thereafter be subject to such modification and change as the Commission may direct. Minor changes in the project works or divergence from such approved exhibits may be made if such changes will not result in decrease in efficiency, in material increase in cost, or in impairment of the general scheme of development; but any of such minor changes made without the prior approval of the Commission, which in its judgment have produced or will produce any of such results, shall be subject to such alteration as the Commission may direct. The Licensee shall comply with such rules and regulations of general or special applicability as the Commission may from time to time prescribe for the protection of life, health, or property.

Article 4. The construction, operation, and maintenance of the project and any work incident to additions or alterations shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of the project. Construction of the project works or any feature thereof shall not be initiated until the program of inspection for the project works or any such feature thereof has been approved by such representative. The Licensee shall also furnish to said representative such further information as he may require concerning the construction, operation, and maintenance of the project, and of any alteration thereof, and shall notify him of the date upon which work will begin, as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. The Licensee shall allow him and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 5. The operations of the Licensee, so far as they affect the use, storage and discharge from storage of waters affected by the license, shall at all times be controlled by such reasonable rules and regulations as the Commission may prescribe for the protection of life, health, and property, and in the interest of the fullest practicable conservation and utilization of such waters for power purposes and for other beneficial public uses, including recreational purposes; and the Licensee shall release water from the project reservoir at such rate in cubic feet per second, or such volume in acre-feet per specified period of time, as the Commission may prescribe for the purposes hereinbefore mentioned.

Article 6. The actual legitimate original cost of the original project, and of any addition thereto or betterment thereof, shall be determined by the Commission in accordance with the Act and the Commission's rules and regulations thereunder.

Article 7. After the first twenty (20) years of operation of the project under the license, six (6) percent per annum shall be the specified rate of return on the net investment in the project for determining surplus earnings of the project for the establishment and maintenance of amortization reserves, pursuant to Section 10(d) of the Act; one-half of the project surplus earnings, if any, accumulated after the first twenty years of operation under the license, in excess of six (6) percent per annum on the net investment, shall be set aside in a project amortization reserve account as of the end of each fiscal year, provided that, if and to the extent that there is a deficiency of project earnings below six (6) percent per annum for any fiscal year or years after the first twenty years of operation under the license, the amount of such deficiency shall be deducted from the amount of any surplus earnings accumulated thereafter until absorbed, and one-half of the remaining surplus earnings, if any, thus cumulatively computed, shall be set aside in the project amortization reserve account; and the amounts thus established in the project amortization reserve account shall be maintained therein until further order of the Commission.

Article 8. The Licensee shall install additional capacity or make other changes in the project as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing.

Article 9. The Licensee shall, after notice and opportunity for hearing, coordinate the operation of the project, electrically and hydraulically, with such other power systems and in such manner as the Commission may direct in the interest of power and other beneficial public uses of water resources, and on such conditions concerning the equitable sharing of benefits by the Licensee as the Commission may order.

Article 10. The Licensee shall, for the conservation, and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the fish and wildlife agency or agencies of any State in which the project or a part thereof is located, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 11. Whenever the United States shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its own expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interest in lands, reservoirs, waterways and project works as may be reasonably required to complete such facilities or such improvements thereof. In addition, after notice and opportunity for hearing, the Licensee shall modify the project operation as may be prescribed by the Commission, reasonably consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United States under the provisions of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish and wildlife facilities or to relieve the Licensee of any obligation under this license.

Article 12. The Licensee shall construct, maintain and operate or shall arrange for the construction, maintenance and operation of such recreational facilities including modifications thereto, such as access roads, wharves, launching ramps, beaches, picnic and camping areas, sanitary facilities and utilities, as may be prescribed hereafter by the Commission during the term of this license upon its own motion or upon the recommendation of the Secretary of the Interior or other interested Federal and State agencies, after notice and opportunity for hearing and upon findings based upon substantial evidence that such facilities are necessary and desirable, and reasonably consistent with the primary purpose of the project.

Article 13. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: Provided, that the Licensee may reserve from public access, such portions of the project waters, adjacent lands and project facilities as may be necessary for the protection of life, health, and property and Provided further, that the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain as required by the license.

Article 14. The Licensee shall be responsible for and shall minimize soil erosion and siltation on lands adjacent to the stream resulting from construction and operation of the project. The Commission upon request, or upon its own motion, may order the Licensee to construct and maintain such preventive works to accomplish this purpose and to revegetate exposed soil surface as the Commission may find to be necessary after notice and opportunity for hearing.

Article 15. No lease of the project or any part thereof whereby the lessee is granted the occupancy, possession, or use of the project, or any part thereof, shall be made without prior written approval of the Commission; and the Commission may, if in its judgment the situation warrants, require that all the conditions of the license, of the Act, and of the rules and regulations of the Commission shall be applicable to such property so leased to the same extent as if the lessee were the Licensee: Provided, that the provisions of this article shall not apply to leases of land or buildings or other property while not required to achieve the purposes of the license.

Article 16. Upon the completion of the project, or at such other time as the Commission may direct, the Licensee shall submit to the Commission for approval revised maps, plans, specifications, and statements insofar as necessary to show any divergence from or variations in the project area and project boundary as finally located or in the project works as actually constructed when compared with the area and boundary shown and the works described in the license or in the maps, plans, specifications, and statements approved by the Commission, together with a statement in writing setting forth the reasons which in the opinion of the Licensee necessitated or justified variations in or divergence from the approved maps, plans, specifications, and statements. Such revised maps, plans, specifications, and statements shall, if and when approved by the Commission, be made a part of the license under the provisions of Article 2 hereof.

Article 17. In the construction and maintenance of the project works, the Licensee shall place and maintain suitable structures and devices to reduce to a reasonable degree the liability of contact between its transmission lines, and telegraph, telephone, and other signal wires or power transmission lines constructed prior to its transmission lines and not owned by the Licensee, and shall also place and maintain suitable structures and devices to reduce to a reasonable degree the liability of any structures or wires falling and obstructing traffic and endangering life on highways, streets, or railroads. None of the provisions of this article is intended to relieve the Licensee from any responsibility or requirement which may be imposed by other lawful authority for avoiding or eliminating inductive interference.

Article 18. There is reserved to the appropriate department or agency of the United States, or of the State or county involved, the right to take over, maintain, and supervise the use of any project road as a public road after construc tion of the project works is completed.

Article 19. The Licensee, its successors and assigns shall, during the period of the license, retain the possession of all project property covered by the license as issued or as later amended, including the project area, the project works, and all franchises, easements, water rights, and rights of occupancy and use; and none of such properties necessary or useful to the project and to the development, transmission, and distribution of power therefrom will be voluntarily sold, transferred, abandoned, or otherwise disposed of without the approval of the Commission: Provided, that a mortgage or trust deed or judicial sales made thereunder, or tax sales, shall not be deemed voluntary transfers within the meaning of this article. In the event the project is taken over by the United States upon the termination of the license, as provided in Section 14 of the Act, or is transferred to a new Licensee under the provisions of Section 15 of the Act, the Licensee, its successors and assigns will be responsible for and will make good any defect of title to or of right of user in any of such project property which is necessary or appropriate or valuable and serviceable in the maintenance and operation of the project, and will pay and discharge, or will assume responsibility for payment and discharge, of all liens or incumbrances upon the project or project property created by the Licensee or created or incurred after the issuance of the license: Provided, that the provisions of this article are not intended to prevent the abandonment or the retirement from service of structures, equipment, or other project works in connection with replacements thereof when they become obsolete, inadequate, or inefficient for further service due to wear and tear, or to require the Licensee, for the purpose of transferring the project to the United States or to a new Licensee, to acquire any different title to or right of user in any of such project property than was necessary to acquire for its own purposes as Licensee.

Article 20. For the purpose of determining the stage and flow of the stream or streams from which water is diverted for the operation of the project works, the amount of water held in and withdrawn from storage, and the effective head on the turbines, the Licensee shall install and thereafter maintain such gages and stream-gaging stations as the Commission may deem necessary and best adapted to the requirements; and shall provide for the required readings of such gages and for the adequate rating of such stations. The Licensee shall also install and maintain standard meters adequate for the determination of the amount of electric energy generated by said project works. The number, character, and location of gages, meters, or other measuring devices, and the method of operation thereof, shall at all times be satisfactory to the Commission and may be altered from time to time if necessary to secure adequate determinations, but such alteration shall not be made except with the approval of the

Commission or upon the specific direction of the Commission. The installation of gages, the ratings of said stream or streams, and the determination of the flow thereof, shall be under the supervision of, or in cooperation with, the District Engineer of the United States Geological Survey having charge of stream-gaging operations in the region of said project, and the Licensee shall advance to the United States Geological Survey the amount of funds estimated to be necessary for such supervision or cooperation for such periods as may be mutually agreed upon. The Licensee shall keep accurate and sufficient record of the foregoing determinations to the satisfaction of the Commission, and shall make return of such records annually at such time and in such form as the Commission may prescribe.

Article 21. If the Licensee shall cause or suffer essential project property to be removed or destroyed or to become unfit for use, without replacement, or shall abandon or discontinue good faith operation of the project for a period of three years, or refuse or neglect to comply with the terms of the license and the lawful orders of the Commission mailed to the record address to the Licensee or its agent, the Commission will deem it to be the intent of the Licensee to surrender the license, and not less than 90 days after public notice may in its discretion terminate the license.

Article 22. Whenever the Licensee is directly benefited by the construction work of another Licensee, a permittee, or of the United States of a storage reservoir or other headwater improvement, the Licensee shall reimburse the owner of the headwater improvement for such part of the annual charges for interest, maintenance, and depreciation thereon as the Commission shall determine to be equitable, and shall pay to the United States the cost of making such determination as fixed by the Commission. For benefits provided by a storage reservoir or other headwater improvement of the United States the Licensee shall pay to the Commission the amounts for which it is billed from time to time for such headwater benefits and for the costs of making the determinations pursuant to the then current Commission Regulations under the Federal Power Act within 60 days from the date of rendition of a bill therefor and, upon failure to do so, shall thereafter be subject to the payment of the penalties specified in the then current Regulations. The Licensee shall have the right to pay such amounts under protest within the 60-day period and to reconsideration of the amounts billed or a hearing as provided by the then current Regulations under the Act.

Article 23. On the application of any person, association, corporation, Federal agency, State or municipality, the Licensee shall, after notice and opportunity for hearing, permit such reasonable use of its reservoirs or other project works or parts thereof as may be ordered by the Commission in the interest of comprehensive development of the waterway or waterways involved and the conservation and utilization of water resources of the region for water supply for steam electric, irrigation, industrial, municipal or similar purposes, consistent with the primary objective of the project. The Licensee shall receive such reasonable compensation as may be appropriate for use of its reservoirs or other project works or parts thereof for such purposes, any such compensation to be fixed either by Commission approval of an agreement between Licensee and the party or parties benefiting or by the Commission in the event the parties are unable to agree. Applications shall contain information in sufficient detail to afford a full understanding of the proposed use, including satisfactory evidence that the applicant possesses necessary water rights pursuant to applicable State law, or a showing of cause why such evidence cannot be submitted, and a statement as to the relationship of the proposed use to any State or municipal plans or orders which may have been adopted with respect to the use of such waters.

Article 24. Upon abandonment of the project the Licensee shall remove all buildings, equipment and power lines from the stream and restore said stream to a condition satisfactory to the Commission's authorized representative and shall fulfill such other obligations under the license as the Commission may prescribe.

Article 25. The terms and conditions expressly set forth in the license shall not be construed as impairing any terms and conditions of the Federal Power Act which are not expressly set forth herein.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

UNITED STATES DEPARTMENT OF THE INTERIOR, SOUTHWESTERN POWER ADMINISTRATION. DOCKET NO. E-6943

ORDER CONFIRMING AND APPROVING RATES AND CHARGES

(Issued August 26, 1965)

The Secretary of the Interior, acting on behalf of the Southwestern Power Administration (SWPA), on June 7, 1965, filed a request that the Commission extend its confirmation and approval, pursuant to the provisions of the Flood Control Act of 1944 (58 Stat. 887), for the period beginning July 1, 1965 and ending June 30, 1970, of contractual rates and charges applicable for the sale of the total output of power and energy developed at the Narrows Dam Project to the Tex-La Electric Cooperative, Inc. (Tex-La). Such rates and charges are set forth in Contract No. 14-02-0001-921 between the United States of America and Tex-La dated May 10, 1960.

The Narrows Dam Project, located on the Little Missouri River in Southwestern Arkansas in the service area of Southwestern Electric Power Company (Southwestern), is isolated from SWPA's main integrated system, and Southwestern has constructed the only transmission line connecting the project. At present two 8,500 kw generating units are in operation at the project. A third 8,500 kw unit is now being installed and expected to commence operation during the fiscal year 1968. The project now provides 14,000 kw of dependable capacity, 18,400,000 kwh of primary energy and 10,000,000 kwh of secondary and dump energy. Installation of the third generating unit will increase the project's dependable capacity to 21,000 kw, and the secondary and dump energy to about 11,000,000 kwh.

The rates and charges for which extension of the Commission's approval is requested are those previously approved by the Commission in its order issued September 23, 1960, 24 FPC 518, in this docket. Approval of those rates and charges expired June 30, 1965. The rates and charges are set forth in the contract between SWPA and Tex-La dated May 10, 1960, referred to above, which provides that SWPA will sell the entire output of the project to Tex-La for an annual consideration of $300,000. After the addition of the third unit Tex-La will pay $367,992 per year.

Tex-La is an organization of rural electric cooperatives and municipalities in eastern Texas and Louisiana and, having no transmission system of its own, entered into a companion contract with Southwestern, concurrently with its contract with SWPA, for the scheduling and receipt by Southwestern of all power and energy purchased by Tex-La under the SWPA contract. The Tex-La-Southwestern contract provides for Tex-La to sell and deliver to Southwestern all the electric power and energy generated at the Narrows Dam. Southwestern

credits the account of Tex-La, each month, by an amount equal to the total compensation owed by Tex-La to SWPA. For the services it receives from Tex-La, Southwestern in turn fulfills the total electric power requirements of all of Tex-La's members. Both contracts are for a term ending June 30, 1985.[1]

A study by our staff confirms the statement of the Secretary of the Interior that the annual revenues to be received under the proposed arrangement represent the top market price for such power in the project area.

In comparison with the payout charges accumulating under the present arrangement, it is estimated that the proposed annual revenues of $367,992 following the installation of the third generating unit at the project will provide funds for the amortization of the project.

Notice of the request for approval of the proposed rates and charges was sent to state officials and other interested parties and published in the Federal Register on June 22, 1965 (30 F.R. 8020), stating that any person desiring to make comments or suggestions for the Commission's consideration should submit same on or before June 30, 1965. No comments or suggestions were received.

The Commission finds:

The proposed rates and charges for the sale of the total output of the Narrows Dam Project by SWPA to Tex-La, all as set forth above, for the period from the date of this order through June 30, 1970, will not be inconsistent with the provisions of the Flood Control Act of 1944.

The Commission orders:

The proposed rates and charges for the sale of the total output of the Narrows Dam Project by SWPA to Tex-La, all as filed with the Commission on June 7, 1965 and referred to above, hereby are confirmed and approved for the period from the date of this order through June 30, 1970.

[1] The Tex-La-Southwestern contract has been filed with the Commission pursuant to the rate filing requirements of Section 205 of the Federal Power Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

AREA RATE PROCEEDING, ET AL. (HUGOTON-ANADARKO AREA), DOCKET NO. AR64-1; AREA RATE PROCEEDING, ET AL. (TEXAS GULF COAST AREA), DOCKET NO. AR64-2

ORDER DENYING APPEAL FROM EXAMINER'S RULING ON REQUEST FOR ADDITIONAL EVIDENCE

(Issued August 27, 1965)*

A group of parties[1] including a number of Hunt interests (Appellants) has requested that we require the producer Respondents in these two proceedings to submit a breakdown of the data already received by us in response to our all-area questionnaire. Specifically, Appellants want lease production expenses and

costs from leases where all the wells were completed after December 31, 1954, and all production during 1962 originated at depths below 10,000 feet. They want investment costs, operating expenses, depletion, depreciation, and amortization, and related production volumes as reported in the questionnaire for Continental U.S., Texas Railroad Districts 2, 3, 4 and 10, and the Oklahoma Panhandle, Oklahoma Anadarko and Kansas areas.

In essence what Appellants are seeking is information upon which to predicate an argument that our area determinations should prescribe a separate price for gas derived from deep wells at any given date as against gas derived from shallow wells.

Appellants originally made their request at a joint prehearing conference on January 27, 1965, but their request was denied by the Presiding Examiners, Max L. Kane and Dyer Justice Taylor, in Docket Nos. AR64–1 and AR64–2 respectively. The basis of the ruling was that the state of the record did not afford any cogent basis or acceptance for the date or the depth limitations. The examiners added that the information sought would not produce evidence which was either relevant or material, was designed to establish an individual company cost of service, would not be representative of costs below the depth cut-off, and the burden of obtaining the information would not be commensurate with its value. The examiners refused to certify the question to the Commission, since they found no "extraordinary circumstances" requiring prompt decision by the Commission in accordance with Section 1.28(a) of the Rules.

On June 25, 1965, Appellants filed an appeal from the Examiner's Ruling with the Commission, and on July 12, 1965, the Commission issued an order inviting the parties and the staff to reply to the appeal as to whether "extraordinary circumstances" existed and whether the request for data should be granted. Replies were filed by Sun Oil Company, Forest Oil Corporation, Humble Oil & Refining Company,[2] Amerada Petroleum Corporation, Texaco Inc. (adopting Humble's response), Associated Gas Distributors and our staff.

Appellants argue that the depth of exploratory and development wells has increased substantially since World War II, and that the greater depth has more than proportionately increased the cost of drilling. Appellants say that the data requested will provide the first opportunity to measure the difference in the cost of producing new deep gas as opposed to old and shallow gas.

Appellants' request would obviously entail additional delay and expense since many leases would have to be examined by the producers, and we should not accede to it unless the data would have a reasonable chance of making a useful contribution to the record. To make use of the data requested would also require additional cost separations and classifications of property involving complicated determinations based on judgment. Furthermore, the data would not provide a complete representation of the deep well costs because those on leases with shallow wells would not be included and because, as the examiners concluded, there is no basis for accepting as meaningful either the date or depth limitations contained in petitioners' data request. It is no answer to say, as Appellants do, that they are agreeable to still further breakdowns. These would only proliferate the record and increase the burden on other producers and the delay in bringing these cases to a conclusion.

As indicated, Appellants are in effect contending that we should superimpose separate ceilings for gas from deep and shallow wells upon the two-price system

[2] For themselves and seven other producers: Phillips Petroleum Company, Sinclair Oil & Gas Company, Continental Oil Company, Socony Mobil Oil Company, Inc., Gulf Oil Corporation, Pan American Petroleum Corporation, and Warren Petroleum Corporation.

we adopted in Permian. The contention, however, that deep wells cost more than shallow ones, even if it could be statistically demonstrated, its meaningless by itself unless we can also know whether the cost per Mcf of gas reserves added is significantly greater in one case than the other. Appellants' data request, if granted, would not give us this information nor have they suggested that such information could feasibly be secured were we to attempt to broaden the scope of their proposed inquiry. Correspondingly, nothing has been suggested to us which would indicate that (considering quantity and quality differences in deep as compared with shallow wells) the higher costs of drilling deep wells have in fact had an inhibiting effect upon the increasing activity at such deeper depths or that failure to establish such a price differential would inhibit deeper drilling in the future. In short there is no basis for believing that producers' decisions as to whether to drill shallow or deep at any given time reflect cost factors divorced from expectations as to the likelihood of success in terms of the amount and kind of gas at various elevations. When these factors are added to the deficiencies of the particular data request before us, indicated above, we believe there is no basis for our overruling the judgment of the examiners in these proceedings that on the present state of the record there has been an insufficient showing of both the materiality and relevance of the material sought to be secured.

The Commission orders:

Appellants' appeal from the Presiding Examiners' denial of their request for additional data is denied.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP65-410

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 27, 1965)

On June 21, 1965, Cities Service Gas Company (Applicant) filed in Docket No. CP65-410 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the sale, on an interruptible basis, of up to 317 Mcf (14.73 psia) of natural gas per day to Consolidated Utilities, Inc. (Consolidated) for resale, all as more fully set forth in the application in this proceeding.

Applicant will tap its Pampa 20-inch pipeline in Gray County, Texas, and construct and operate meter and appurtenant regulator facilities in order to sell and deliver gas to Consolidated for resale for irrigation fuel and incidental farm purposes to Consolidated's customers in the same general area. The sale will be made under Applicant's proposed Rate Schedule IRG-1.

Consolidated's estimated third year peak day and annual natural gas requirements are 317 Mcf and 52,812 Mcf, respectively.

The total estimated cost of the proposed facilities is $2,206, which cost will be financed out of funds on hand. The application indicates that net income of $237 will be realized on the project in the third year of operation.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 25, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Cities Service Gas Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation and the sale of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

(D) The certificate issued is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

CONSOLIDATED GAS SUPPLY CORPORATION AND UNITED FUEL GAS COMPANY, DOCKET NO. CP65-394

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued August 27, 1965)

On June 9, 1965, Consolidated Gas Supply Corporation (Consolidated) and United Fuel Gas Company (United) filed in Docket No. CP65-394 a joint application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval for United to abandon certain compressor facilities, and for a certificate of public convenience and necessity authorizing the construction and operation of certain measuring and regulating facilities and the exchange and delivery of natural gas, all as more fully set forth in the application.

Pursuant to their agreement of December 10, 1963, Consolidated and United propose the following exchange of natural gas: (1) Consolidated for the account of United, will deliver into the available system of Gas Transport, Inc., whose lines traverse those of Consolidated in Jackson County, West Virginia, not in excess of 1,000 Mcf per day of natural gas gathered by Consolidated; (2) United will deliver into the available system of Consolidated in Raleigh County, West Virginia, not in excess of 2,000 Mcf per day of natural gas gathered by United; (3) Consolidated will deliver to United at an existing interconnection of their respective systems in the Diamond-Belle area of Kanawha County, West Virginia, sufficient volumes of natural gas to make up the difference in volumes exchanged in Jackson and Raleigh Counties, as described above, less 20 percent thereof, which is to be the cost of transportation. If the occasion arises whereby United is required to deliver deficiency volumes to Consolidated, the parties will at such time establish a mutually agreeable delivery point, subject to the approval of the Commission.

In order to implement the proposed exchange, United will construct and operate the necessary measuring facilities at the delivery points in Jackson and Raleigh Counties, West Virginia. Consolidated will construct and operate the necessary measuring facilities at the delivery point in Kanawha County, West Virginia. Total estimated cost of United's construction is $4,800, and that of Consolidated is $3,000. All such costs will be financed with funds on hand.

In addition to the foregoing, United requests permission and approval to abandon its Wingrove Compressor Station in Raleigh County, consisting of one 300 horsepower compressor unit, presently operating solely for the purpose of handling gas herein proposed for exchange with Consolidated. Commission authorization for the proposed exchange will eliminate the necessity for this facility. Consolidated's Lee Compressor Station, a nonjurisdictional field gathering facility located in Jackson County, West Virginia and consisting of one 180 horsepower compressor, will also be rendered unnecessary by the proposed exchange.

Under the proposed arrangement, both parties will operate in a more efficient manner, and will save annual operating expense of the Lee and Wingrove stations, which are approximately $13,600 and $21,300 respectively. There is no abandonment of service proposed by either Consolidated or United.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 25, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Consolidated and United are both "natural-gas companies" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) The proposed construction and operation of facilities and exchange of natural gas by Consolidated and United are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities and exchange of natural gas by Consolidated and United are required by the public convenience and necessity, and a certificate therefor should be issued, as hereinafter ordered and conditioned.

(4) The proposed abandonment by United of its Wingrove Compressor Station is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(5) The aforesaid abandonment of facilities by United is permitted by the public convenience and necessity, and approval therefor should be granted as hereinafter ordered.

(6) Consolidated and United are able and willing properly to do the acts and to perform the service proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Consolidated Gas Supply Corporation and United Fuel Gas Company authorizing the construction and operation of facilities and exchange of natural gas hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon the compliance of Consolidated and United with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation and the exchange of natural gas shall be undertaken, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within 3 months from the date on which this order issues.

(D) Permission for and approval of the proposed abandonment of facilities by United are granted.

(E) United shall advise the Commission of the date of said abandonment within 10 days thereof.

(F) Consolidated and United shall file their Exchange Agreement dated December 10, 1963, with this Commission as a new rate schedule of their respective FPC Gas Tariffs within 60 days from the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP65-419

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 27, 1965)

On June 28, 1965, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP65-419 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain compressor facilities in Wise County, Texas, all as more fully set forth in the application.

Applicant proposes to construct and operate at its Station No. 115 in Wise County, Texas, two 1,040 Hp turbine powered compressor units, to provide required compressor capacity for additional volumes of natural gas becoming available to it in the Jack-Wise County Area in Texas. Reserves in this area have recently been increased by 165,625 MMcf through revisions of reserve estimates under existing contracts and by reason of new contracts and amendments to existing contracts dedicating additional reserves. Station No. 115 is presently powered by three reciprocating compressor units totaling 1,980 Hp.

The total estimated cost of the proposed facilities is $394,000 and will be defrayed from Applicant's current funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At the hearing held on August 25, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) The proposed construction and operation of facilities by Applicant as hereinbefore described, and as more fully described in the application, in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Natural Gas Pipeline Company of America authorizing the construction and operation of facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided in paragraph (b) of Section 157.20 of the aforesaid Regulations within 12 months of the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

THE OHIO FUEL GAS COMPANY, DOCKET NO. CP66-5

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 27, 1965)

On July 9, 1965, The Ohio Fuel Gas Company (Applicant) filed in Docket No. CP66-5 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of additional points of delivery for the sale of natural gas to Columbia Gas of Ohio, Inc. (Columbia), for resale and distribution in Sullivan and Iberia, Ohio and environs, all as more fully set forth in the application.

Applicant proposes to construct and operate a tap and measuring station in Sullivan Township, Ashland County, Ohio, and a tap and measuring station in Washington Township, Morrow County, Ohio, together with valves, fittings and incidental facilities, for delivery of natural gas to Columbia for service to the two communities involved.

The estimated third year annual and peak day requirements of Sullivan are 39,941 Mcf and 328 Mcf respectively; estimated requirements of Iberia are 23,440 Mcf and 186 Mcf respectively, for a total of 63,381 Mcf annually and 514 Mcf on the peak day.

Applicant's present contractual commitments with Columbia are adequate to provide initial service to the prospective market, and consequently no increase in contract demand is requested. Service by Applicant to its other customers will not be impaired.

Applicant's estimated rate of return in the third year based on incremental costs and revenues is 31 percent, and the project thus appears feasible.

Total estimated cost of Applicant's proposed construction is $10,110, and will be financed with funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 25, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, The Ohio Fuel Gas Company, an Ohio corporation having its principal place of business in Columbus, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) The proposed construction and operation of facilities by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, The Ohio Fuel Gas Company, authorizing construction and operation of the facilities hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation and the delivery of natural gas shall be undertaken, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within one year from the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP65-416

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 27, 1965)

On June 25, 1965, Texas Gas Transmission Corporation (Applicant) filed in Docket No. CP65-416 a "budget-type" application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities which may be necessary for the definition, development and testing of prospective gas storage reservoirs, all as more fully set forth in the application.

Applicant requests authorization herein to test and develop additional natural gas storage facilities in the Kentucky, Ohio and Indiana area, close to its northern markets and to the sites of previous exploration. Authorization is sought for the 36-month period from August 28, 1965 to August 28, 1968.[1]

Total volumes of gas to be injected into the prospective storage fields will not exceed 10,000,000 Mcf or 2,000,000 Mcf for any single project. Only off-peak

[1] Applicant's presently effective storage budget certificate authorization was granted August 28, 1964, 32 FPC 672, in Docket No. CP64-266, and expires August 28, 1965.

gas will be used and there will thus be no impairment of Applicant's ability to meet the requirements of its existing customers. No new sales or service are involved.

Total estimated cost of Applicant's proposed storage development program is not to exceed $3,000,000, with expenditures in any year not to exceed $1,000,000. Applicant will finance such costs with funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 25, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) The proposed construction and operation of facilities by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued, as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Texas Gas Transmission Corporation, authorizing construction and operation of the facilities hereinbefore described, as more fully described in the application in this proceeding, for the testing and development of prospective natural gas storage reservoirs during the period from August 28, 1965 to August 28, 1968, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations, and the provisions of subsection (d) of Section 157.7 of such Regulations.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP65-424

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued August 27, 1965)

On June 30, 1965, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP65-424 an application pursuant to Section 7(b) of the

Natural Gas Act for permission and approval to abandon certain natural gas facilities, as more fully set forth in the application.

The facilities to be abandoned are (1) 3.37 miles of 4-inch pipeline, a 265 horsepower booster compressor station and metering and dehydration equipment in the South Clara Driscoll Field, Nueces County, Texas, and (2) a 344 horsepower booster compressor station attached to the Albert West Unit Well No. 2-A in the Oakville Field, Live Oak County, Texas.

The subject facilities were originally utilized by Applicant to take into its system gas purchased from certain acreage in the South Clara Driscoll and Oakville Fields. This gas was dedicated under contracts with Banquete Gas Company, Inc., now Texas Gas Producing Company (Texas Gas) and Western Natural Gas Company, now Sinclair Oil & Gas Company (Sinclair). These facilities are no longer needed since production from the acreage has ceased and the reserves have been depleted.

Texas Gas has agreed to cancel its contract with Applicant and file for the requisite abandonment authorization. Sinclair received partial abandonment authorization on April 15, 1965, but did not terminate the contract as other acreage dedicated under its contract with Applicant is still productive.

The pipeline will be abandoned in place, the compressors are to be held as spare equipment and the other facilities are to be salvaged for future use or sale.

Due notice of the filing of the application was published in the Federal Register on July 14, 1965 (30 F.R. 8867). No petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 25, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 28, 1950, in Docket No. G-1277 (9 FPC 32).

(2) The facilities to be abandoned, as hereinbefore described and as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission and abandonment of such facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment, as hereinbefore described and as more fully described in the application in this proceeding, is permitted by the public convenience and necessity and an order approving same should be issued as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Transcontinental Gas Pipe Line Corporation of the facilities hereinbefore described, as more fully described in the application in this proceeding, are granted.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities within 10 days thereafter.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

UNITED FUEL GAS COMPANY, DOCKET NO. CP64-164

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued August 27, 1965)

On January 24, 1964, United Fuel Gas Company (Applicant) filed in Docket No. CP64-164 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain natural gas storage and compressor facilities, all as more fully set forth in the application.

Applicant requests permission and approval to abandon its Storage Field X-19, consisting of two storage reservoirs, "Area A" and "Area B", located in Smithfield District, Roane County, West Virginia, and its 600 horsepower Epling Compressor Station at the same location.

The proposed abandonment is requested because Applicant has incurred substantial losses of stored gas in the operation of the field. In addition, the field has low-pressure, low-capacity characteristics inconsistent with Applicant's emphasis on high-pressure transmission and storage operations. Epling Compressor Station will be abandoned since its sole purpose was the injection and withdrawal of gas in Storage Field X-19. Withdrawal of stored gas from the field has been completed.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on August 25, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Fuel Gas Company, a West Virginia corporation having its principal place of business in Charleston, West Virginia is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 1, 1944, in Docket No. G-341 (4 FPC 534).

(2) The proposed abandonment of facilities by Applicant is subject to the provisions of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The aforesaid abandonment of facilities by Applicant is permitted by the public convenience and necessity, and approval therefor should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, as more fully described in the application in this proceeding, are granted.

(B) Applicant shall advise the Commission of the date of the abandonment of said facilities within 10 days thereof.

OPINION NO. 471

MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. RP60-9

OPINION AND ORDER ON DEFERRED ISSUES

(Issued August 30, 1965)*

Syllabus

1. In a pipeline zoning case initial question to be decided is whether company's present rate structure is unduly discriminatory or preferential. P. 634.
2. Burden of proving that system-wide rates are discriminatory and unfair is upon party alleging same; here such showing has not been made. PP. 624; 635.
3. Since all of pipeline's customers benefit substantially from facilities of entire system, imposition of zone rates would be unjust and unreasonable. P. 624.
4. In determining whether a zoning should be ordered, a case turns on the particular facts involved. P. 640.
5. *Distinguishing Northern Natural*, Commission *concludes* that Michigan Wisconsin's present system-wide rates are not unduly prejudicial or preferential and should be continued on its system as presently constituted. PP. 624; 627; 639.
6. Rate differentials between customers of different pipelines is not a valid consideration in determining proper rates applicable to customers of a single pipeline. P. 625.
7. A consistent and predictable course of conduct of supplier affecting its financial relationship with the consumer is a "practice" subject to Commission's tariff filing requirements. P. 626.
8. Since Michigan Wisconsin's 10-cent formula affects gas rates and has been consistently applied to relatively short laterals, it must be included in its tariff. P. 626.
9. Since instant decision has industry-wide application, Commission will initiate a rule-making proceeding to determine whether all natural gas companies should be required to include statement of lateral line policies in their tariff. P. 626.
10. In a proceeding under Section 4 of the Natural Gas Act, Commission *denies* request for establishment of rate zones and zone rates on Michigan Wisconsin's system and *requires* pipeline to file statement of its 10-cent formula for inclusion in tariff.

Charles V. Shannon and *Louis Flax* for Michigan Wisconsin Pipe Line Company.

Ned Willis for North Central Public Service Company.

Charles R. S. Anderson for Iowa Southern Utilities Company.

John F. Gaston for Iowa Electric Light & Power Company.

N. E. McManus for Keokuk Gas Service Company.

Eugene E. Threadgill and *Justin R. Wolf* for California Chemical Company.

John J. Goen and *Dick A. Witt* for Iowa State Commerce Commission.

Albert J. Feigen for American Gas Company.

Reuben Goldberg and *George Spiegel* for Michigan Gas and Electric Company.

William E. Torkelson for Public Service Commission of Wisconsin.

*Initial decision appears on p. 627. Opinion No. 471–A and order issued October 21, 1965 denying rehearing and stay, 34 FPC 1188.

Glen H. Bell and *Charles P. Seibold* for Wisconsin Fuel and Light Company.

N. J. Lesselyoung and *Glen H. Bell* for Milwaukee Gas Light Company.

John F. Zimmerman and *Glen H. Bell* for Wisconsin Michigan Power Company and Wisconsin Natural Gas Company.

Eugene O. Gehl and *Glen H. Bell* for Wisconsin Power and Light Company.

Seymour Tabin and *Glen H. Bell* for Wisconsin Public Service Corporation.

H. J. O'Leary and *Glen H. Bell* for Madison Gas and Electric Company.

Frank J. Kelley and *Hugh B. Anderson* for Michigan Public Service Commission.

Samuel H. Olson, Aloysius J. Suchy and *David R. Kaplan* for the County of Wayne, Michigan.

Richard M. Merriman, Harry A. Poth, Jr., and *Peyton G. Bowman, III* for Michigan Gas Utilities Company.

Jerome J. McGrath for Fuels Research Council, Inc.; National Coal Association; United Mine Workers of America; Mid-West Coal Producers Institute, Inc.; and Upper Lake Docks Coal Bureau, Inc.

Arthur R. Seder, Jr. for Michigan Consolidated Gas Company.

Julius C. Meier for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

BLACK, *Commissioner:*

In our Opinion No. 387, American Louisiana Pipe Line Co. and Michigan Wisconsin Pipe Line Co., 29 FPC 932, 948, 952 (May 16, 1963), we prescribed rates for Michigan Wisconsin Pipe Line Company (Mich Wisc), ordered refunds and reserved two issues for subsequent determination. These issues, presently before us for decision, are (1) whether prospective zone rates should be established for the Mich Wisc system; and (2) what should be the terms and conditions under which Mich Wisc would provide new and additional service from branch or lateral lines, and whether such terms and conditions should be inserted in its tariff.

Hearings on these questions began on April 20, 1964, and were concluded on September 23, 1964. A number of towns, utilities and other organizations presently served by Mich Wisc in Missouri, Iowa, Michigan and Wisconsin, as well as the State Commissions of Iowa, Wisconsin and Michigan intervened. The Examiner issued his decision on March 1, 1965, holding that (1) the existing system-wide rates were not discriminatory and that the zone rate system advocated by the Iowa-Missouri customers was not necessary; (2) there was inadequate evidence in the record upon which to base a determination of just and reasonable lateral extension policies; and (3) Mich Wisc's 10-cent formula and any other lateral extension policy need not be included in Mich Wisc's tariff.

We agree with the Examiner that the Mich Wisc system need not be subject to zone rates and that the record does not support a determination regarding fair and reasonable lateral policies. We disagree, however, with his finding that the 10-cent formula need not be inserted in the tariff. Since this formula has been a consistent practice of Mich Wisc, it comes within the ambit of Section 4(c) of the Natural Gas Act and Section 154.1 of Commission Regulations and must, therefore, be included in the tariff. We make no finding with regard to other formulas or policies which may be adopted in the future.

Before proceeding to discuss the reasons for our findings, we note that Iowa Southern Utilities Company and other companies in Iowa and Missouri have requested oral argument and that Mich Wisc opposes such a request. Since the questions under consideration have been fully covered in the briefs, we do not believe oral argument would serve a useful purpose. The request is denied.

ZONE RATES

A better understanding of the issues involved necessitates a brief description of the Mich Wisc system. This system has the configuration of the letter "Y". The bottom leg is 795 miles in length and consists of a looped main transmission pipeline and compressor stations running in a northeasterly direction from the Hugoton-Anadarko Field, Texas to Compressor Station Number 10 near Millbrook, Illinois. Smaller lateral lines bring gas from this main line to several communities in Missouri and Iowa.

At Station 10 the pipeline splits into two segments forming the arms of the "Y". The right arm is a 22-inch main transmission pipeline, now looped with a 30-inch line, extending for 256 miles in a northeasterly direction to the Austin Storage Field near Grand Rapids, Michigan. This arm also connects with the American Louisiana Pipe Line Company's (American Louisiana) line near Bridgman, Michigan. Lateral lines connected to this arm extend service to smaller storage fields and to customers in Indiana and Michigan. The left arm is comprised of a 22-inch line, looped with a 24-inch line which extends 229 miles at successively reduced diameters in a northwesterly direction to Green Bay, Wisconsin. Laterals off this arm provide service to a number of Wisconsin customers and interconnect with Northern Natural Gas Co. (Northern) and with Midwestern Gas Transmission Co. (Midwestern) in southern and central Wisconsin, respectively.

Mich Wisc receives gas not only from the Anadarko Basin but also from the three pipelines with which it is interconnected. The record indicates that 63.81 percent is taken from Hugoton-Anadarko, 12.10 percent from American Louisiana, 17.11 percent from Midwestern, and 6.98 percent from Northern.

Most of the time gas flows northeasterly through the Texas-Illinois leg into the pipeline branches supplying Wisconsin and Michigan. During non-peak periods excess gas is stored in the Michigan storage fields. At peak demand periods the flow reverses. Gas from American Louisiana and the storage fields flows southwesterly towards Station No. 10 to service Michigan and Illinois consumers. Often the demand is so great that this gas is sent past Station 10 up into the Wisconsin branch in order to service Wisconsin customers.

The customers of Mich Wisc in Iowa and Missouri contend that they are significantly nearer the gas supply than the Michigan and Wisconsin customers. Consequently, the Mich Wisc system should be divided into two rate zones in order to reflect different transmission costs. Zone 1 would be the section of pipeline south of Station 10 and Zone 2 would encompass the two branches north of Station 10 that extend into Wisconsin and Michigan. Their argument is premised upon the fact that the weighted average commodity haul of the Southwest gas to the Iowa-Missouri customers is about 620 miles, while the average length of haul from Mich Wisc's various sources of supply to the customers in Wisconsin and Michigan is 926 miles. The Iowa-Missouri group also argues that the proposed Zone 1 comprises a distinct market area, that the flow of gas through the zone is that of a typical long-line pipeline, that zone pricing is used by most long-line pipelines, and that the Iowa-Missouri communities are at a serious cost disadvantage because of the discriminatory rate structure of Mich Wisc's tariff.

Mich Wisc, a group of Wisconsin distributors, the Public Service Commission of Wisconsin, the Michigan Public Service Commission, and the staff oppose the establishment of zone rates and urge the retention of the present system-wide rates. While their arguments vary in several minor respects, they all point out that the Mich Wisc system is an integrated whole with the benefits of one part enuring equally to all of its customers. The system-wide rates are,

therefore, not discriminatory. In support of this contention it was argued that (1) the Mich Wisc system's varied sources of gas benefit all customers either directly or by displacement; and (2) the Missouri-Iowa customers benefit from the increased concentration of customers in the proposed Zone 2 and the storage facilities since these factors enable the entire line to operate at maximum capacity with a resulting lower unit cost.

Adopting, in general, the arguments made by the opponents of zoning, the Examiner found that the Mich Wisc system is operated as a grid with natural gas entering the system at divergent points. This gas regardless of its source is used to supply the over-all system requirements. Since the proponents have failed to establish that the system-wide rates are unduly preferential or prejudicial, he disallows the request for rate zones and concludes that system-wide rates are desirable and equitable.

As pointed out by the Iowa-Missouri group, this Commission has approved the establishment of zone rates. In *Northern Natural Gas Co.*, 14 FPC 11 (1955), aff'd. 236 F. 2d 372 (CA8), certiorari denied 352 U.S. 967, we discussed the governing criteria and concluded that zone rates should be established whenever system-wide rates were discriminatory and unfair. The burden of proving such discrimination is upon the party or parties alleging it.[1] We agree with the examiner that the Iowa-Missouri group has not made such a showing. On the contrary, the record discloses that the imposition of zone rates would be unjust and unreasonable since all of Mich Wisc's customers benefit substantially from the facilities of the entire system.

The Iowa-Missouri group has argued that the Mich Wisc system is similar to that involved in the *Northern Natural* case. There we found that the varying distances between the customers and sources of gas resulted in different transmission costs and that it was discriminatory to have those relatively close to the source of gas, shoulder the transmission costs of customers far from the source. There is no question that the Mich Wisc system presently under consideration is in many respects similar to the Northern pipelines. Nevertheless, we agree with the examiner that there are differences between the two systems and conclude that the system-wide rates of Mich Wisc should be applied to the Mich Wisc system as it is presently constituted. Future changes in the system may require a different conclusion but we make no finding in that regard.

One of the most important distinguishing circumstances between the two situations is the fact that all of Mich Wisc's customers benefit from the Michigan storage fields. During the days of maximum demand, gas flows from the storage fields and American Louisiana southwesterly to Station 10 and through Station 10 commingled with Southwestern gas into the Wisconsin branch of the system. Although the storage gas does not physically reach the Iowa-Missouri customers, it benefits them by providing gas to the customers in Wisconsin and Michigan at times of peak load so that more gas may be diverted from Mich Wisc's main line in Iowa and Missouri. This use of storage gas also enables Mich Wisc to make greater use of its main line from the Southwest throughout the year. In fact, the summer transportation of gas to the storage fields enables the leg between the Hugoton-Anadarko fields and Station 10 to operate at a greater capacity during July than during the winter at the time of the peak demand of the Iowa-Illinois customers.

Furthermore, the purchases of gas from American Louisiana, Midwestern and Northern made north of Station 10 also benefit the entire system although this

[1] *City of St. Charles* v. *Illinois Commerce Commission*, 21 Ill. 2d 259, 28 PUR 3d 85, 89, 172 N.E. 2d 353, 356; *North Carolina ex rel Utilities Commission* v. *Carolina Power & Light Co.*, 250 N.C. 421, 29 PUR 3d 358, 366, 109 S.E. 2d 253, 261; *Phinney Bay Water District* v. *City of Bremerton*, 39 PUR 3d 410, 413, 362 P. 2d 358, 361.

gas also does not physically reach the Iowa-Missouri customers. This is so because by certifying the sales by these three companies to Mich Wisc for use upstream from Station 10 we released pipeline capacity in Iowa and Missouri for additional use by customers in such states and in fact allocated additional quantities of gas to Mich Wisc's customers, including the Iowa-Missouri group.[2]

Another factor which must be given weight is the high load concentration at the northern end of the Mich Wisc complex. The original pipeline, as authorized in Docket No. G-669 (5 FPC 953) was constructed to transport gas from the Southwest to markets in Michigan and Wisconsin and to the Austin Storage Field in Michigan. The large northern loads here are clearly advantageous to the Iowa-Missouri customers. Since the unit cost of transporting gas decreases in proportion to the increasing size of the pipeline, the Iowa-Missouri customers presently share in the economics of a system with a load factor of 54 percent while their load factor is only 38 percent. The needs of these customers considered alone would not support a pipeline having the inherent benefits of the line presently serving them.

The Iowa-Missouri customers attempt to dismiss this distinguishing feature by pointing to other pipelines having major loads at or near the end of the lines whose systems have been zoned either upon the initiative of the company or this Commission. We have carefully examined each such instance cited by the Iowa-Missouri group and find that the Examiner has properly distinguished these examples from the present case. We agree with the Examiner that these cases are not governing and adopt his rationale.

The Iowa-Missouri group also argues that Mich Wisc's rates resulted in the loss of industrial sales to the economic detriment of the areas of Iowa and Missouri serviced by Mich Wisc. This contention was supported by evidence that some municipal bodies serviced by other pipelines were able to purchase gas at a rate lower than that charged the Iowa-Missouri group by Mich Wisc. However, rate differentials between customers of different pipelines is not a valid consideration in determining proper rates applicable to customers of a single pipeline. This is so because rates are designed to equitably distribute costs among line customers.

LATERAL LINE POLICY

Questions have also been raised as to (1) whether the Commission should prescribe the terms under which Mich Wisc shall build long and short laterals to service additional customers; and (2) whether such terms should be included in Mich Wisc's tariff.

Over a number of years Mich Wisc has consistently applied a 10-cent formula in determining how much it will pay for its relatively short lateral lines.[3] Under this formula, which is still being utilized, Mich Wisc will shoulder the cost of a lateral up to 10 cents per Mcf. The customer must pay for any additional costs. In computing 10 cents per Mcf ceiling, the annual cost of the lateral is estimated

[2] *American Louisiana Pipe Line Co.*, 16 FPC 897, (September 4, 1956) which provided for deliveries of gas to Bloomfield and Lamoni, Iowa, and Aledo, Illinois, upon certifying additional supplies for the system from American Louisiana; *Midwestern Gas Transmission Company, et al.*, 22 FPC 775, 790 (October 31, 1959) which require additional allocations to Mich Wisc customers (including Iowa-Missouri customers) after certificating purchases of Canadian gas from Midwestern; and *Northern Natural Gas Co.*, 25 FPC 1234, 1237, which resulted in allocations among Mich Wisc's then existing customers on a pro rata basis after certificating sales by Northern Natural.

[3] *American Louisiana Pipe Line Co., Michigan Wisconsin Pipe Line Co., et al.*, 27 FPC 967, 908–81; *Michigan Wisconsin Pipe Line Co.*, 21 FPC 552, 557–59; 22 FPC 566; *Midwestern Gas Transmission Co.* and *Michigan Wisconsin Pipe Line Co.*; 22 FPC 775, 797–98; 24 FPC 33, 35–36; *Michigan Wisconsin Pipe Line Co.*, 24 FPC 177, 181, 183–87.

to be 15 percent of the construction costs. This annual cost figure is in turn divided by the firm third year gas requirement in order to get the cost per Mcf.

As the Examiner points out the record does not afford an adequate basis upon which to judge whether the formula is just and reasonable. The record is also devoid of evidence regarding a proper formula for computing the cost allocation of longer laterals. Consequently, we make no finding regarding the propriety of the existing 10-cent formula and do not establish guidelines for the formulation of future lateral policies.

The final question to be determined is whether lateral formulas must be included in Mich Wisc's tariff. The controlling provision is Section 4(c) of the Act which provides in part:

> Under such rules and regulations as the Commission may prescribe, every natural-gas company shall file with the Commission * * * and shall keep open in convenient form and place for public inspection, schedules showing all rates and charges for any transportation or sale subject to the jurisdiction of the Commission and the classifications, practices, and regulations affecting such rates and charges * * *.

Section 154.1 of the Commission's Regulations further provides for the filing of rates and charges "and the classifications, practices, rules, and regulations affecting such rates, charges, and services." The examiner confined the word "practices" to things of the general class, such as "schedules," "classifications," "regulations," and "contracts," and would, thereby preclude the insertion of such company policy determinations.

We disagree with the Examiner. A consistent and predictable course of conduct of the supplier that affects its financial relationship with the consumer in our opinion is a "practice" subject to the filing requirements. The filing of such a procedure as part of the pipeline tariff is not only consistent with but furthers the purpose underlying the filing and posting requirements of rate schedules. A pipeline tariff announces not only what the pipeline has done in the past but the terms and conditions upon which it would, as a matter of policy, provide service to new customers meeting the tariff's eligibility requirements. Even if the tariff were viewed as merely an informational description of existing service obligations, this description of the pipeline's actual practice would be of real benefit to both existing and potential customers, for it would show them, as well as the Commission, the terms by which gas would be sold upon completion of Section 7 proceedings.

Since the 10-cent formula affects gas rates and has been consistently applied by Mich Wisc to its relatively short laterals, it must be included in Mich Wisc's tariff. The longest lateral to which Mich Wisc has applied the 10-cent formula has been about 37 miles; we conclude that Mich Wisc should apply the formula to any laterals not exceeding 40 miles in length. The pipeline may, of course, if it wishes, specify a longer cut-off mileage, and it might even adopt the 10-cent formula or some other formula or procedure for longer laterals. In such an event, it must file an amendment to its tariff to reflect this action.

The record includes a statement of the 10-cent formula as proposed by the staff for inclusion in Mich Wisc's tariff. While we find no fault with the statement, we shall not prescribe it because we believe that it would be more appropriate for Mich Wisc to express its own formula.

Recognizing the industry-wide application of this decision, we shall initiate a rulemaking proceeding with a view toward requiring all natural gas pipeline companies to include a statement of their lateral line policies in their tariffs.

The Commission further finds:

(1) The Iowa-Missouri Group, proponents of the proposed zones and zone rates have failed to sustain the burden upon them of proving that Mich Wisc's present rates are unduly preferential or unduly discriminatory.

(2) The evidence affirmatively establishes that Mich Wisc's present rates are not unduly preferential or unduly discriminatory, and that system-wide rates should be continued.

(3) Zones and zone rates should not be established on the Michigan Wisconsin system.

(4) The 10-cent formula, as applied to short laterals, should be made a part of Michigan Wisconsin's tariff.

(5) No other lateral or extension policies should be set forth in Michigan Wisconsin's tariff.

The Commission orders:

(A) The proposal and request of the Iowa-Missouri group that rates zones and zone rates be established on the Michigan Wisconsin system are denied.

(B) Within sixty days of the issuance of the order and subject to the approval of the Commission, Mich Wisc shall file for inclusion in its tariff a statement of its 10-cent rule which shall be applicable to lateral pipelines not longer than 40 miles.

(C) The proposal and request of Michigan Gas and Electric Co. and the Staff that a long-line extension policy of Michigan Wisconsin be made a part of Michigan Wisconsin's tariff are denied.

(D) The pending Presiding Examiner's decision insofar as it relates to zoning and is consistent with this opinion and order is adopted as part of this opinion.

(E) Exceptions not specifically granted are denied.

(F) The requests for oral argument are denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER ON ISSUES DEFERRED IN OPINION AND ORDER PRESCRIBING RATES ISSUED MAY 16, 1963

(Issued March 1, 1965)

PURDUE, *Presiding Examiner:* In the consolidated rate proceedings, *American Louisiana Pipe Line Co. and Michigan Wisconsin Pipe Line Co.*, 29 FPC 932, 948, 952, the Commission reserved two issues for subsequent hearing and determination in the above numbered proceeding. These issues, now presented for decision, are specified in the Commission's order of February 20, 1964, herein, providing for the subsequent hearing, *viz.:*

1. The terms and conditions under which Michigan Wisconsin would provide new and additional service from branch or lateral lines, and whether such terms and conditions should be reflected in its tariff; and

2. Whether zone rates, to be effective prospectively, should be established for the Michigan Wisconsin system.

Most of the evidence adduced at the hearing, and most of the argument in the briefs, concern the second of these issues. Hence, in treating of the two issues, they will be transposed.

This phase of the rate proceeding, following a prehearing conference, came on for hearing before the Examiner on April 20, 1964, and concluded on September 23, 1964, consuming 16 hearing days. The following companies, commissions, and municipalities intervened in the proceeding and entered an appearance at the hearing: North Central Public Service Co., Iowa Southern Utilities Co.,

Iowa Electric Light & Power Co., Keokuk Gas Service Co., California Chemical Co., Iowa State Commerce Commission, American Gas Co., Allerton Gas Co., City of Bethany, Missouri, City of Bloomfield, Iowa, City of Lamoni, Iowa, City of Stanberry, Missouri, St. Joseph Light & Power Co., Wapello Light Co. (all of the aforesaid companies and municipalities and said commission being referred to collectively as the "Iowa-Missouri group"), Wisconsin Fuel and Light Co., Milwaukee Gas Light Co., Wisconsin Michigan Power Co., Wisconsin Natural Gas Co., Wisconsin Power & Light Co., Wisconsin Public Service Corp., Madison Gas and Electric Co. (said companies being referred to collectively as the "Wisconsin group of gas utility companies"), the Public Service Commission of Wisconsin, the Michigan Public Service Commission, the County of Wayne, Michigan, Michigan Gas and Electric Co., Michigan Gas Utilities Co., Fuels Research Council, Inc., National Coal Association, United Mine Workers of America, Mid-West Coal Producers Institute, Inc., Upper Lake Docks Coal Bureau, Inc., and Michigan Consolidated Gas Co.

At the hearing, evidence both oral and documentary was introduced by the Iowa-Missouri group, Michigan Wisconsin, the Wisconsin group of gas utility companies, Michigan Gas and Electric Co., and the Staff of the Federal Power Commission. Cross-examination of witnesses was conducted by said participants, the Public Service Commission of Wisconsin, and the County of Wayne, Michigan. The Iowa-Missouri group, Michigan Wisconsin, the Wisconsin group of gas utility companies, the Public Service Commission of Wisconsin, the Michigan Public Service Commission, the County of Wayne, Michigan, Michigan Gas and Electric Co., and Michigan Gas Utilities Co. filed briefs after the conclusion of the hearing; and the issues were submitted for consideration and decision.

PRELIMINARY STATEMENT OF FACTS

The evidence (including Commission orders of which official notice is taken) establishes the following facts:

As originally completed in 1949, the Michigan Wisconsin system consisted of a 24-inch main transmission pipeline extending from the Hugoton Field, Texas, in a northeasterly direction for a distance of 795 miles to a junction near Millbrook, Illinois, where its Compressor Station 10 is located, together with lateral lines to serve certain markets in Missouri and Iowa. From Station 10, a 22-inch main transmission pipeline extended northeasterly for a distance of approximately 256 miles to the terminus of such line at the Austin Storage Field near Grand Rapids, Michigan (about 1051 miles from the point of commencement of the system), together with lateral lines to serve certain markets in Michigan. A main transmission pipeline, commencing as a 22-inch line and successively reducing to 14 inches, 12 inches, 10 inches, and 8 inches, extended in a general northerly direction from Station 10 approximately 229 miles to the terminus of such line at a point near Green Bay, Wisconsin (about 1024 miles from the point of commencement of the system), together with branch lines to serve various other Wisconsin markets. Michigan Wisconsin leased from Michigan Consolidated Gas Co. (an affiliated company in the American Natural Gas Company system), and operated, extensive storage fields, the Austin and Goodwell fields, at and near the terminus of its main Michigan transmission pipeline. Michigan Wisconsin purchased its original gas supply from Phillips Petroleum Co., the gas being produced by Phillips in the Hugoton Field. From time to time, Michigan Wisconsin expanded the capacity of its pipelines (including loops and additional compressor facilities on its aforementioned 24-inch line, and continuous loops between Station 10 and Austin Storage Field), and leased and operated additional large storage fields near the terminus of its pipeline in

Michigan. Michigan Wisconsin now operates the pipeline system and storage fields as expanded.

In 1956 Michigan Wisconsin started purchasing supplies of natural gas at and near Bridgman, Michigan from American Louisiana Pipe Line Co. (another of its affiliates in the American Natural system), American Louisiana having constructed a pipeline from the Gulf Coast to Detroit, Michigan. In 1959 Michigan Wisconsin commenced purchasing supplies of gas from the Laverne area in Oklahoma, which it transmitted to its main pipeline in a supply lateral. In 1960 Michigan Wisconsin constructed a 24-inch line connecting its existing facilities near Appleton, Wisconsin, with the terminus of a pipeline of Midwestern Gas Transmission Co. at Marshfield, Wisconsin, and additional pipelines to serve various new markets in Wisconsin; and commenced purchasing supplies of natural gas from Midwestern. The Wisconsin portion of the Michigan Wisconsin system as thus extended terminates about 290 miles north of Station 10. The Midwestern gas originates in the Province of Alberta, Canada, being transported thence by Trans-Canada Pipelines, Ltd. and sold to Midwestern at the Canadian-United States border near Emerson, Manitoba. In 1962 Michigan Wisconsin commenced purchasing natural gas from Northern Natural Gas Co., which Northern delivers into Michigan Wisconsin's system at a point in southern Wisconsin. Michigan Wisconsin also makes relatively small purchases of gas in Kansas and elsewhere in Oklahoma. In 1962 (the latest period for which figures were available at the time of a study made by a staff witness), the percentage of Michigan Wisconsin's gas supply from its various sources was as follows: Anadarko Basin (Texas, Oklahoma, and Kansas), 63.81%; American Louisiana, 12.10%, Midwestern, 17.11%; and Northern, 6.98%.

Michigan Wisconsin has 33 customers, consisting of 25 distribution companies in Michigan, Wisconsin, southern Iowa, northern Missouri, and western Illinois; and 8 small municipalities in the 3 latter states. Michigan Wisconsin's principal customers are its affiliate Michigan Consolidated Gas Co. which serves the Detroit metropolitan area and certain other communities in Michigan, and Milwaukee Gas Light Co. (another affiliate of Michigan Wisconsin in the American Natural system) which serves Milwaukee and certain other communities in Wisconsin.

Michigan Wisconsin's rates have historically been uniformly available throughout its system. Originally Michigan Wisconsin's gas tariff had a straight rate for all gas delivered. In 1959 this tariff was replaced by a gas tariff containing rate schedules (each available throughout the system) providing for three services; *viz.*, annual contract quantity service, small general service, and overrun service.

Respecting the question of zone rates, the Iowa-Missouri group of intervenors propose that for rate making purposes two zones be established on Michigan Wisconsin's system, the dividing line to be Station 10. Zone 1 would lie upstream from (south of) Station 10; and Zone 2, downstream therefrom. The customers in proposed Zone 1 consist of 12 distribution companies in southern Iowa, northern Missouri, and western Illinois, and the eight small municipalities in these localities. The rates that the Iowa-Missouri group of intervenors seek would reduce the cost of gas to the customers in proposed Zone 1 by approximately $1,000,000 per annum, and increase the cost of gas to customers in proposed Zone 2 by substantially the same amount. Michigan Wisconsin, the Wisconsin group of gas utility companies, the Public Service Commission of Wisconsin, the Michigan Public Service Commission, the County of Wayne, Michigan, Michigan Gas Utilities Co., Michigan Gas and Electric Co., and the Staff of the Federal Power Commission, oppose the zoning of the system.

Respecting the lateral line question, the Staff contend that "Michigan Wisconsin's lateral line policy should be reflected in its tariff"; and introduced evidence through an expert witness that said company's policy concerning its so-called 10-cent formula, applicable to short laterals, be included in the tariff. Michigan Gas and Electric Co. urges that a plainly stated extension policy in Michigan Wisconsin's tariff is required both for short and long lines. Michigan Wisconsin opposes the inclusion of any lateral line extension provision in its tariff. Michigan Wisconsin is supported by the Michigan Public Service Commission, the County of Wayne, and Michigan Gas Utilities Co. The other intervenors take no position on this issue.

QUESTION OF ESTABLISHMENT OF ZONE RATES

The proponents of the zoning (hereinafter referred to as "the proponents") contend that the Iowa-Missouri-Illinois customers "are significantly closer to their source of gas supply than the Michigan and Wisconsin customers are to any gas supply area from which the pipeline obtains its gas"; that consequently the system-wide rates are unduly discriminatory against the customers in proposed Zone 1 and unduly preferential to the customers in proposed Zone 2; and that a reduction in the rates to the customers in proposed Zone 1 as shown by a zone cost allocation sponsored by their expert witness is necessary in order to remove the undue discrimination and preference.

In the zone cost allocation, the proponents' expert witness functionalized Michigan Wisconsin's cost of service for the test year, ended August 31, 1960, between production, storage, and transmission costs. He allocated production costs between Zones 1 and 2 on the basis of annual volumes of sales; storage costs, on the basis of peak-day and annual volumes; and transmission costs, by employing a Mcf-mile study. A Mcf-mile study is a procedure used to divide transmission costs between customers or groups of customers on a pipeline system on the basis of volumes delivered at each point and distance of transmission; *i.e.*, on the basis of peak-day and annual Mcf-miles. In his initial presentation, the witness employed three alternative methods. In Method A, he treated all the gas on Michigan Wisconsin's system as if it came from the southwest, on the theory that Michigan Wisconsin had the "alternative" of going to the southwest "to seek" additional gas to supply the increased requirements of its customers instead of obtaining such gas from American Louisiana and Midwestern. The transmission cost element thereby calculated in the charges paid to American Louisiana and Midwestern was allocated by the witness between proposed Zone 1 and proposed Zone 2. Method B differs from Method A in that the Mcf-miles of the haul of Midwestern gas on Michigan Wisconsin's system were reflected and charged to Zone 2. In Method C, for which the witness expressed a preference, the Mcf-miles of haul on the Trans-Canada and Midwestern systems were also reflected and charged directly to Zone 2. Under Method C, based upon the revenue for the test year, the Iowa-Missouri-Illinois customers would contribute $1,050,613 less per annum toward meeting the Michigan Wisconsin over-all system cost of service, while the Michigan Wisconsin customers would contribute $1,038,593 more per annum.

The opponents of the zoning argue (1) that no discrimination or preference exists and that the system-wide rates should be continued, and hence that there is no reason or occasion for a Mcf-mile allocation; and (2) that in any event the Mcf-mile study is erroneous in several respects.

All of the gas physically delivered to the Iowa-Missouri-Illinois customers comes from the southwest, in the looped 24-inch pipeline leading to Station 10. As correctly computed in the Mcf-mile study, the weighted average commodity

haul to these customers is about 620 miles. According to the study, the length of haul from Michigan Wisconsin's various sources of supply to serve the customers in Wisconsin and Michigan is 926 miles—306 miles, or about 50%, more.

As testified to by the proponents' expert witness, "The 926 miles is the weighted average miles of haul of Southwest gas 783 miles through Michigan Wisconsin's mainline to Station 10, American Louisiana gas 1,053 miles to Bridgman, and Midwestern gas 1,141 miles on the Midwestern and Trans-Canada system plus 138 miles average haul of Midwestern gas on Michigan Wisconsin's system." The mean Iowa-Missouri-Illinois delivery point to Station 10 is about 198 miles. The Mcf-mile study does not include the purchases of gas from Northern inasmuch as Michigan Wisconsin did not commence making these purchases until after the test year. The witness testified, however, that "Northern Natural's system originates in the same Southwest Area as does Michigan Wisconsin's and roughly parallels the Michigan Wisconsin system. Introduction of Northern Natural gas, therefore, in no way disturbs the use of distances from this Southwest Area as indicators of costs incurred and services rendered." Except for the Midwestern gas, the study excludes the hauls in the system north of Station 10, whether made directly to distributors, made to storage, or made to distributors from storage. The witness stated that his purpose in this exclusion was to derive a "simple" and "conservative" statement, inasmuch as in such portion of the system "reversals of flow" (due to winter conditions differing from summer conditions) and "other complicating factors" occur. The computations made by the witness in arriving at the length of haul, as thus defined and limited, of gas transmitted to Wisconsin and Michigan are correct.

The evidence establishes, and the Examiner finds, as follows:

The Michigan Wisconsin pipeline system was so designed that the storage fields at the terminus of the Michigan line are an integral and essential part of the operations of the system. The design of the system enables the 24-inch looped pipeline from the southwest supply area, and the looped pipeline from Station 10 to the storage fields to be operated at nearly a 100% load factor, with most of the gas from such source being injected into these fields during the nonheating season and withdrawn in the winter to meet space-heating and other firm loads. The transportation of the off-peak gas to storage and the delivery of peak-day withdrawals to customers were achieved by the system being designed and operated as a highly unified and interdependent system. Such a large portion of the company's annual supply of gas is required for placement in storage that the Michigan Wisconsin tariff limits each customer to 190 times the customer's maximum daily quantity on an annual basis.

The 24-inch line south of Station 10 is not sized to accommodate the volume requirements of the Iowa-Missouri-Illinois market or the distance gas is transported to serve such market. Instead, the controlling factor in sizing this line (as looped) and the looped line on to the storage fields is the volume required for injection into storage during off-peak months. In these pipelines, the volumes of gas transported in the summer months are larger than in the winter, and such facilities are fully utilized only during the summer. Hence, volumes equivalent to the sales to the Iowa-Missouri-Illinois customers could be delivered instead at the terminus of the Michigan line, with the present facilities.

Michigan Wisconsin's ability to meet the winter demands on its system and the wants of all its customers is dependent on the supply of gas from storage. During the five-month heating season, most of the storage withdrawals is absorbed near the storage fields in deliveries to Michigan Consolidated for the Detroit-area market. During such season, the remainder of the storage withdrawals, flowing southwesterly at times, is consumed in markets between the

storage fields and Station 10, except small volumes of such gas which at times flow northerly from Station 10 into Wisconsin for consumption. A substantial part of the requirements of all of Michigan Wisconsin's markets during the winter period, and nearly one-half of its peak winter demands, are supplied from the storage fields, either directly or by displacement.

"Delivery by displacement," as correctly defined by one of the expert witnesses, is "delivery of gas to a customer or customers in a portion of the system in a manner which permits increases in deliveries to all other customers or to certain other specific customers from other existing gas supplies." During the heating season, the Iowa-Missouri-Illinois customers receive gas by displacement from the storage withdrawals, with no transportation entailed for most of the distance from the storage fields back to the points of delivery from the main line to the customers south of Station 10. Michigan Wisconsin thereby effects major savings of investments for transmission facilities and savings of transmission expenses that would otherwise be necessitated. Storage gas is also delivered to other customers on the system by displacement, with attendant savings of like nature.

On the peak day in the year ended August 31, 1960, the storage-field withdrawal amounted to about 43% of the total delivery; and on the peak day in 1962, to 47.3% of the total delivery. Thus, by the use of storage and deliveries by displacement, Michigan Wisconsin has nearly doubled the peak-day capacities of the system. The present deliverability from storage is some 740,000 Mcf per day. To obtain that peak-day capacity from a pipeline would require an investment much greater than that invested in the storage fields.

Moreover, from the outset an unusually large proportion of Michigan Wisconsin's market has consisted of low load factor customers. By its utilization of the storage fields, Michigan Wisconsin operates its system at an unusually low sales load factor—in 1962 the system sales load factor was only 46.12%. Michigan Wisconsin thereby avoids the necessity of selling large volumes of gas at dump rates. Also, such use of storage enables Michigan Wisconsin to purchase gas at a high load factor with consequent substantial savings and ability to make purchases which it otherwise could not make.

The large loads on the Michigan Wisconsin system are concentrated north of Station 10, in Wisconsin and Michigan. In the twelve months ended August 31, 1960, the Wisconsin and Michigan loads accounted for 95.8% of the annual sales on the system; and in the year 1962, for 95.39% of the system annual sales. In the twelve months ended August 31, 1960, the load factor on the facilities south of Station 10 was 91.6% and throughout the years has been correspondingly high. The large loads in Wisconsin and Michigan economically justify the 24-inch main line and its loops, and such loads together with the storage fields make possible the high load factor operation of this line. Because of the load concentration in Wisconsin and Michigan, the customers in Iowa, Missouri, and Illinois receive the benefit of the lower unit costs of the large diameter pipeline; and, because of such load concentration and the storage fields, receive the further benefit of operation of the pipeline at a high load factor.

The system as now operated is a grid, with supplies of natural gas from the several sources entering the system at divergent points; and the gas from all the sources is used to supply the over-all system requirements. The gas supplies purchased from American Louisiana are delivered into the system in the northeasterly portion thereof, relatively near the storage fields. The gas supplies purchased from Midwestern are delivered into the system at a point in the extreme northwesterly portion thereof. The gas supplies purchased from Northern are delivered into the system at a point in the westerly part of proposed Zone 2.

In the nonheating season, a large portion of the purchases from American Louisiana is delivered to storage and the remainder flows directly to markets in proposed Zone 2. In the heating season, the American Louisiana gas flows to markets in proposed Zone 2 relatively near the points of entry of this gas on the system; and, on winter peak days, a small volume of such gas flows as far southwesterly as Station 10 and thence northerly into Wisconsin.

None of the supplies from Midwestern or Northern reaches the storage fields or even Station 10, all of it being absorbed in Wisconsin market. In general, on an annual basis Midwestern gas supplies all of the requirements of the markets north of Wisconsin Station B (which is 145 miles north of Station 10), and 32% of the requirements of the city of Milwaukee (which is 102 miles north of Station 10) and towns between Milwaukee and Wisconsin Station B. In general, on winter peak days, such gas supplies all of the requirements north of Wisconsin Station B. The gas from Northern is consumed at and relatively near Madison, Wisconsin.

The Midwestern and Northern purchases, however, materially affect the storage operations; and the customers supplied with gas from such sources are materially affected by the storage operations. These purchases make available by displacement, additional volumes for delivery to storage. On the other hand, due to the storage, requirements of such customers are supplied during the winter period by displacement; and these customers, as well as the other customers on the system, receive the benefits of the low sales load factor operation and the purchase of gas at a high load factor.

In the degree and nature of the dependence of the Michigan Wisconsin system upon storage in its operations, and the benefits derived thereby, the system is unique.

In the heating season, gas supplies from American Louisiana, Midwestern, and Northern are delivered to the customers south of Station 10, and to various other customers on the system, by displacement. These deliveries by displacement, as in the case of the deliveries from storage, effect major savings because of the avoidance of installation and operation of additional transmission facilities that would otherwise be necessitated.

The Iowa-Missouri-Illinois customers benefit from each and all of the aforementioned increments of the gas supply of the system, and from Michigan Wisconsin's operation of the added storage fields, by receiving additional allotments of gas by displacement. In the proceeding, Docket No. G–2306, *et al.*, wherein American Louisiana was first authorized to sell natural gas to Michigan Wisconsin, six of the customer companies that are now proponents of the zoning sought and received additional supplies of gas (including supplies for new markets) which more than doubled the then existing gas supply to the Iowa-Missouri customers. The petition of Iowa Electric in such proceeding recited that the supply of gas from American Louisiana would enable Michigan Wisconsin "to meet demands of its utility customers, including Iowa Electric, for additional supplies of natural gas." Later, existing customers and new customers south of Station 10 received allocations of gas in proceedings involving Michigan Wisconsin's receipt of supplies from the Laverne area. In December 1959, in Docket No. G–18312, 22 FPC 1166, more gas from American Louisiana was divided among Michigan Wisconsin's customers in accordance with a then recently approved demand-commodity tariff (filed in November 1958), which provides that increments of gas are to be divided among Michigan Wisconsin's customers in proportion to their respective maximum daily quantity volumes. The percentage thus received by customers south of Station 10 was 4.9%. In the proceeding involving the purchase of gas from Midwestern, Docket No. G–18316, then exist-

ing and new customers south of Station 10 sought and received 9.5% of the Midwestern supply, nearly twice the volume to which they would have been entitled on a strict pro rata basis. In a "statement" filed by Iowa Southern in a related proceeding (Docket No. G–18240, *et al.*), said proponent of the zoning herein referred to the Commission having ordered Michigan Wisconsin to deliver and sell to Iowa Southern volumes of gas "from the additional supply of Canadian gas." In the proceeding involving the application by Michigan Wisconsin for a certificate authorizing it to construct and operate facilities enabling it to purchase 75,000 Mcf of gas per day from Northern, and authorizing it to transport and sell such gas to its existing customers (Docket No. G–20572), a number of Iowa-Missouri customers supported the application, including three of the present proponents of zoning. Iowa Electric's petition to intervene in such proceeding seeking an allocation of natural gas described Michigan Wisconsin's application as one for authorization "to purchase 75,000 Mcf per day from Northern Natural at a point near Janesville, Wisconsin and to transport and sell such gas to Michigan Wisconsin's existing certificated markets." The Commission allocated the volume of gas from Northern among Michigan Wisconsin's customers on a pro rata basis. In 1962 in a proceeding (Docket No. CP62–212) wherein Michigan Wisconsin sought and received authorization to lease and operate two additional storage fields in Michigan, two of the zoning proponents in the instant proceeding sought and received allocations of gas to serve new markets, and three Section 7(a) applicants received supplies of gas for towns south of Station 10.

In a well considered opinion, *Northern Natural Gas Co.*, 14 FPC 11, affirmed 236 F. 2d 372, the Commission laid down rules and criteria concerning the question whether zones with rate differentials should be established on a pipeline system. The Commission there said: "The initial question to be decided * * * is not whether any of the zoning proposals are feasible, but, rather, whether the present rate structure of Northern is unduly discriminatory or preferential." (p. 18.)

The Examiner is of the opinion that the proponents have failed to establish that the system-wide rates are unduly preferential or prejudicial. The Examiner is further of the opinion that the evidence presented and the applicable precedents require a determination that the present system-wide rate structure of Michigan Wisconsin is not unduly discriminatory against the Iowa-Missouri-Illinois customers, or unduly preferential to the Wisconsin-Michigan customers; and hence that the system-wide rates should be continued. The reasons for these views are treated of under four subheads next ensuing.

Failure to Meet Burden of Proof.—A Mcf-mile study—certainly the one introduced by the proponents—is unsuitable and improper for the Michigan Wisconsin system and yields misleading results. The design of the pipeline system for extensive and indispensable dependence on the large storage fields at the terminus of the Michigan line, and the highly unified and interdependent operation of the system in accordance with such design, coupled with the multiple sources of gas supply, provide great benefits which cannot be measured on the basis of miles. These benefits accrue to all customers on the system, including the Iowa-Missouri-Illinois customers. Therefore, in allocating costs of hauling the gas on the Michigan Wisconsin system, mileage, or distance from source of gas supply, is not the sole or governing consideration.

The Mcf-mile study in evidence does not reflect the benefits and savings that the customers, including those in proposed Zone 1, receive from the pipeline operations in conjunction with storage—perhaps no Mcf-mile study could reflect these benefits. Specifically, the Mcf-mile study in evidence does not reflect the large savings in reduction of pipeline facilities and reduction of pipeline operat-

ing expenses because of the utilization of the storage and the deliveries from storage by displacement. The true mileage effect of the deliveries by displacement perhaps cannot be shown by a Mcf-mile study; at least no attempt to do so has been made here. Nor does the Mcf-mile study in evidence reflect the savings that accrue from the operation of the system at an unusually low sales load factor, from the purchase of gas at a high load factor, and from the high load factor operation of the 24-inch main line.

As to the gas purchased from other pipelines, such supplies are sources of gas for the Iowa-Missouri-Illinois customers as well as the southwest gas. For these customers receive gas from such pipelines by displacement. The Canadian gas, delivered by Midwestern, of course comes from the opposite direction than the other supplies purchased by Michigan Wisconsin, which come from the southwest and south. Also, the Iowa-Missouri-Illinois customers are farther from the Province of Alberta, where the Canadian gas originates, than any other customers on the Michigan Wisconsin system except those at the extreme northeastern section of the system. Yet the proponents' type of Mcf-mile study fails to give effect to these facts. Furthermore, none of the deliveries by displacement of the gas from the other pipelines, and the attendant major benefits, are reflected in the Mcf-mile study.

By like token, for the foregoing reasons, distance of transmission from the Hugoton Field does not correlate with transmission costs.

In rebuttal, proponents' expert witness presented another variation in his Mcf-mile study, Method C–1, purporting to show the effect of measuring mileage of transmission of storage volumes to and from the storage fields. Under this method the witness reached substantially the same conclusions as under Method C. The opponents of the zoning contend that Method C–1 is defective for several reasons which have not been mentioned herein concerning the witnesses' Mcf-mile study, and that correction for such asserted errors increases substantially the percentage of transmission costs allocated to the Iowa-Missouri-Illinois customers under such method. But this question need not be passed upon. Method C–1 is wanting in all the respects above considered in which the other methods used in the Mcf-mile study are wanting.

The proponents have failed to meet the burden of proof—*i.e.*, have failed to "satisfy our minds" (*Transcontinental Gas Pipe Line Corp.*, 11 FPC 94, 97), or exactly speaking, have failed to satisfy the Examiner's mind—that they are prejudiced or discriminated against by the system-wide rates. Therefore, the proponents' request that zone rates be established for the Michigan Wisconsin system must be denied.

Concentration of Sales in Proposed Zone 2 Countervails against Distance Factor.—In the *Northern* case, *supra*, the Commission had before it for consideration a typical unidirectional pipeline system without unusual operations in conjunction with storage. The Commission recognized that "markets closer to the source of gas supply involve lesser transportation expense than more remote markets, and, therefore, are entitled to a lesser rate—unless it be shown that factors other than distance off-set the differences in transportation mileage and related costs." (14 FPC at p. 17.) The Commission said, "It is a simple economic fact that the delivery cost of natural gas increases in close proportion to the length of the transmission line of any given size." (p. 20.) But the Commission likewise recognized and expressed "the generality" that "for any given length of pipe line, with any given load factor, the larger the line the lower the unit delivery cost of gas." "This results from the fact," the Commission said, citing the *Smith-Wimberly Report*, page 240, *Natural Gas Investigation*, Docket No. G–580, "that, while the cost increases approximately in proportion with the

diameter, the capacity increases more than the area, so that the capacity of a 24-inch line, for example, is about three times that of a 16-inch line." (pp. 20–21.) The Commission also recognized that in determining whether rate zones should be prescribed, "factors other than distance of required transmission should be considered, such as load distribution, volumes of gas sold, and load factor of sales, * * *." (pp. 16–17.)

In the instant case, most of the gas in the 24-inch line south of Station 10 is not transmitted directly to market, but to storage; and in the heating season, gas is delivered to the customers south of Station 10 by displacement. But it is also true that the large diameter line would not be justified, nor could the high load factor of 91% at which it is operated be achieved, without the markets in proposed Zone 2 (Wisconsin and Michigan) that account for 95% of the annual sales of the system. Just as where there is a unidirectional pipeline, the customers in proposed Zone 1 benefit from the low unit costs attendant upon the large diameter line here involved and its high load factor operation. Hence, the criteria laid down in the *Northern* case for determining whether rate zones should be prescribed apply here.

In the *Northern* case, eight municipal areas accounted for 71% of the total jurisdictional sales, and the miles of transportation required to effect the deliveries at these eight points ranged from 448 to 803. With these facts before it, the Commission found that "there is no such concentration of sales in a single area of the system as would countervail" against the argument that the distance of transmission was the controlling factor; that 37.5% of the jurisdictional sales were made at or near the terminus of the system; that "the distribution of the remainder of these sales along the system is such as to foreclose a finding that sales at the farthest points of the system are so predominate as to be of controlling consideration rather than the distance factor." (p. 22.) Here, the fact that 95% of the sales are made in the proposed Zone 2 area justifies a finding that these sales are so predominate as to offset the distance factor substantially; and the Examiner so finds and concludes.

The proponents note that the system does not end at Station 10; that the Michigan Wisconsin load is not concentrated at the terminus of the line; that there is no major load at the Wisconsin terminus; and that "at the present time, the load at the Michigan end of the line is only about 3 times the size of the Iowa-Missouri load"; and aver that "Michigan Wisconsin, by modern standards, is not a large line." These circumstances make no material difference. The facts remain that 95% of the sales are made in the area beyond the confines of proposed Zone 1; that only a line of much smaller diameter than the 24-inch line would be economically feasible were it not for these sales (the peak-day requirements of the Iowa-Missouri-Illinois market in the test year utilized less than 50% of the certificated capacity of Michigan Wisconsin's main line); and that even the smaller line would be operated at a low load factor without the very large sales in proposed Zone 2.

Benefits from Pipeline Operations in Conjunction with Storage and Deliveries by Displacement Countervail against Distance Factor.—The evidence that five of the customers south of Station 10 have sought and received allotments of gas because of newly added storage fields points up the reality of the deliveries to the Iowa-Missouri-Illinois customers by displacement.

The large savings in pipeline facilities and pipeline operating expenses by reason of the deliveries of storage withdrawals and pipeline purchases by displacement; and the major savings, due to the storage, from the operation of the system at a low sales factor, the purchases of gas at a high load factor, and the high load factor operation of the pipeline from the southwest, offset the distance factor. These benefits, coupled with the concentration of sales in proposed Zone

2, compel the conclusion that the customers south of Station 10 sustain no undue prejudice by being charged under the same rate schedules as are the customers north of Station 10.

In 1950, soon after the commencement of deliveries by Michigan Wisconsin, the Commission rendered an opinion in a proceeding involving the respondent company where the evidence showed that all the gas to be delivered from storage would go to Michigan Consolidated. The Commission rejected contentions of customers other than Michigan Consolidated that all of the cost of storage service should be charged to Michigan Consolidated, "found that all customers of Michigan Wisconsin will benefit from its operation of" the Austin and Goodwell storage fields, and concluded "that a uniform rate should be charged for the service to be provided." *Michigan Wisconsin Pipe Line Co.*, 9 FPC 127, 131, 132. Here, similarly, the evidence shows that the benefits to all of the customers on the system from the operations in conjunction with storage and from the deliveries by displacement are so great that uniform rates should be charged.

In *Colorado Interstate Gas Co.* v. *Federal Power Commission*, 324 U.S. 581, 591, the Commission, in allocating between jurisdictional and nonjurisdictional sales the cost of service of a combined transmission pipeline of Colorado and Canadian River Gas Co. extending from the Texas Panhandle to Denver, treated the transmission line as a unit. The Supreme Court, in sustaining the Commission, said:

> * * * judgment and discretion control * * * the allocation of costs when it is sought to reduce to its component parts a business which functions as an integrated whole. The Commission found that but for the direct industrial market at Pueblo, Colorado and the wholesale market at Denver, the pipeline would not have been constructed. It is therefore obviously fair to determine transmission costs for the pipeline as a whole and not to compute them on a mileage demand basis. In that way the beneficiaries of the entire project share equitably in the cost. To allow the costs to accumulate the closer the gas gets to Denver would be to assume that the extension to Denver was a separate project on which the earlier customers were in no way dependent. These circumstances illustrate that considerations of fairness, not mere mathematics, govern the allocation of costs. What we have said also answers Canadian's complaint that the wholesale sales in Texas for consumption in the towns of Dalhart, Hartley, and Texline, Texas, are burdened with too large a share of transmission costs. We can see in this situation no difference between those customers and the ones located at more distant points on the pipeline.

And in an accompanying footnote:

> So far as appears Canadian presented no evidence showing the cost of these intrastate sales.

In the instant case, likewise, the evidence establishes that the Michigan Wisconsin pipeline would not have been constructed had it not been for the large markets in Michigan and Wisconsin; and upon the authority of the *Colorado* case this fact alone may justify denial of the zoning proposal. However, the Examiner prefers to rest his decision upon the facts hereinbefore set out. Since the construction of the pipeline, the annual sales south of Station 10 have increased from 966,800 Mcf (firm sales) in 1951 to 11,231,100 Mcf (total annual volumes) during the test year. If the physical transportation of gas were to be given predominant and controlling weight, in might be that the volumes now sold south of Station 10 have increased to the point where the cost of compressor fuel to transport these volumes is sufficiently less than the cost of fuel to transport like volumes to markets north of Station 10, as to

warrant a zone. But under the facts hereinbefore found, it is "obviously fair," as in the *Colorado* case, "to determine transmission costs for the [system] as a whole and not to compute them on a mileage demand basis." Here, as in the *Colorado* case, "considerations of fairness, not mere mathematics," should "govern the allocation of costs."

In *El Paso Natural Gas Co.*, 22 FPC 260, the Commission fixed the rates of El Paso, which historically had maintained differentials in rates between five sales zones on its far-flung system. (p. 275.) In allocating the transmission costs among groups of customers on the system, the Commission declined to employ the Mcf-mile method, but reflected distance as a factor by maintaining the zone differentials. Its reasons for rejecting the Mcf-mile method are apt:

> * * * the various parts of El Paso's system support each other by displacement.
>
> Futhermore, * * * it is not distance which is the more controlling factor in cost but load factor. The distance of haul, as reflected in the demand-commodity-miles method, is offset substantially by the volume of sales to California customers, concentrated at the end of the line and by the high annual load factor associated with those sales. (p. 277.)
>
> * * * El Paso's system is an integrated one. Not only does gas pass from the Southern Division to the Northern Division, but either Division, in effect, bears loads that would have to be carried by the other one. Therefore, there is little logic in computing the exact distance that gas travels from the various producing sources to the various customers. Furthermore, to attempt to determine just what gas goes to each of the several customers would lead to a result discriminatory in application and inherent with discrimination. An appropriate method of regulating this system therefore is to treat it as a unit, and in the first instance to allocate costs irrespective of the source of the gas and irrespective of the distance traveled and then if necessary, as we shall show below, provide differences in rates as applied to the various zones. (p. 278.)

In holding that distance should be reflected in accordance with the past zone differentials, the Commission said:

> The rates were designed on the basis of historical differentials. These differentials give effect to the factor of distance but give the factor of distance with respect to the California customers less than its full effect. (p. 281.)

In the instant case, the unique character of the Michigan Wisconsin system, the load concentration, and the savings and benefits springing from the deliveries by displacement and the high degree of utilization of storage, more than offset the factor of distance here involved.

The Examiner finds and concludes that the customers south of Station 10 sustain no undue prejudice by being charged the same rates as those north of Station 10. The Examiner also finds and concludes that, conversely, the customers north of Station 10 are accorded no undue preference by being charged the same rates as those south of Station 10.

Benefits to Iowa-Missouri-Illinois Customers by Deliveries from Pipelines.— It has been seen that the Iowa-Missouri-Illinois customers receive not merely supplies of gas from the southwest, from which area the gas that they consume is physically delivered, but also supplies sold to Michigan Wisconsin by the three pipelines—American Louisiana, Midwestern, and Northern. To be sure, the supplies from these pipelines are delivered to the customers south of Station 10 by displacement; but this means of delivery, itself, is an advantage, since it entails savings in which the Iowa-Missouri-Illinois customers share. In each instance when the question of adding to the Michigan Wisconsin system a supply of gas

from a pipeline was before the Commission, the Iowa-Missouri-Illinois customers recognized that they were potential recipients of increased or new allotments from such supply, by seeking allowances of gas. So real and concrete are the benefits to the Iowa-Missouri-Illinois customers from the deliveries to Michigan Wisconsin by the pipelines that such customers by Commission order received specific allotments of gas following the addition of each increment of the gas supply. The Iowa-Missouri-Illinois customers obtained their full pro rata share of the additional gas, and in one instance nearly twice as much as their pro rata share.

"He who derives a benefit from a thing ought to bear the disadvantages attending it." Since the Iowa-Missouri-Illinois customers have received their full share of the benefits from Michigan Wisconsin's purchases of gas from American Louisiana, Midwestern, and Northern, and should bear a proportionate share of the burdens thereof, the distance of haul of these deliveries is irrelevant. Hence, there is no reason or justification for a zoning because of such deliveries. For this additional reason, the Examiner finds and concludes that Michigan Wisconsin's present system-wide rates are not unduly prejudicial to the customers in proposed Zone 1 or unduly preferential to the customers in proposed Zone 2, and that there is no reason or justification for a zoning of the system.

The findings and conclusions set out under the four foregoing subheads are supported by the testimony of three expert witnesses, for Michigan Wisconsin, the Wisconsin group of gas utility companies, and the Staff, respectively.

In view of the Examiner's findings and conclusions, it is unnecessary to consider the claim of opponents of the zoning that the Mcf-mile study is erroneous in several respects which have not been treated of herein.

Response to Miscellaneous Arguments.—The proponents assert, "Except for Michigan Wisconsin there is no major independent pipeline over 500 miles long which does not in some manner give some effect to differences in transportation distance." The relevance of the adjective "independent" is not specified. At any rate, proponents' assertion is erroneous. Colorado Interstate Gas Co. is a "major independent pipeline" now over 700 miles long. This pipeline is not zoned and, so far as the record discloses, gives no effect in any other way to "differences in transportation distance."

Furthermore, qualifications in proponents' assertion are significant. Natural Gas Pipeline Co. of America is a "major independent pipeline over 500 miles long," and is unzoned. To be sure, Natural has a separate schedule for a few small customers in Kansas and Nebraska who take less than 5000 Mcf per day; but this circumstance is inconsequential. Another "major independent pipeline over 500 miles long" is Florida Gas Transmission Co. Florida has separate schedules covering gas it transports for others, giving effect to differences in distances of transportation; but its sales for resale and direct interruptible sales are made under uniform system-wide rates. *Houston Texas Gas and Oil Corp.*, 17 FPC 303, 304–05; *Florida Gas Transmission Co.*, 27 FPC 1123, 1125. Trunkline Gas Co., a major pipeline over 500 miles long as originally constructed, did not have any rate zones until it installed a major extension of its system from Tuscola, Illinois to the Indiana-Michigan border to serve Consumers Power Co. *Trunkline Gas Co.*, 21 FPC 704, 711–12.

Proponents note that "Pipelines with explicit zone rates include [those of]: Northern Natural Gas Company, Texas Eastern Transmission Corporation, Transcontinental Gas Pipe Line Corporation, Texas Gas Transmission Corporation, Tennessee Gas Transmission Company, El Paso Natural Gas Company, Southern Natural Gas Company, Trunkline Gas Company, Panhandle Eastern Pipe Line Company, United Gas Pipe Line Company, New York State Natural Gas Corporation, Hope Natural Gas Company, East Tennessee Natural Gas

Company, Atlantic Seaboard Corporation, Cities Service Gas Company." In their reply brief, proponents also cite the pipeline of Kansas-Nebraska Natural Gas Co., Inc., which, too, is zoned. Of the foregoing pipelines, those of Northern, El Paso, and Trunkline have already been considered.

In the case of the Hope pipeline, the distance element was not a factor leading to the zoning. The purposes of the zoning was to obtain a reasonable spread of costs between the interstate sales for resale and the intrastate business. *Hope Natural Gas Co.*, 10 FPC 583, 618–19. In a previous proceeding, the Commission had reflected differences in Hope's cost of service by prescribing different rates to some of its customers; but no distance element was involved. *Ibid.*, 3 FPC 150, 190–91.

The record discloses that Panhandle established the three zones on its system prior to the adoption of the Natural Gas Act. The zone boundaries coincide with state lines, and the existence of the zones is explained by the history of the pipeline. *Panhandle Eastern Pipe Line Co.*, 3 FPC 273, 277; *Ibid.*, 4 FPC 1081, 1082. Approximately the same rate differentials between zones have been maintained. *Ibid.*, 4 FPC 1093, 1095; *Ibid.*, 10 FPC 185, 192–93, 202; *Ibid.*, 13 FPC 53, 110. From such research as the Examiner has been able to do, with the aid of a memorandum of citations furnished by proponents in response to the Examiner's request at the prehearing conference, it seems that Atlantic Seaboard and Southern established their zones early in their development; and that Cities Service's zones, also, were made voluntarily and without Commission approval. On the systems of Atlantic Seaboard and Southern, the boundaries between the zones are state lines. About the most that can be said respecting the zones on these four pipelines is that the Commission has not seen fit to disturb existing rate relationships.

Although the record and Commission orders which the Examiner has officially noticed are not entirely clear, it seems that the Commission has approved the zonings on the remaining pipelines, either expressly or impliedly, generally attendant upon approval of rate-case settlements, or upon certification of pipelines and pipeline extensions.[1] In *Kansas-Nebraska Natural Gas Co., Inc.*, 25 FPC 448, 456–58, the Commission, itself, created two rate zones.

Whether the zonings on the aforementioned systems were unapproved, approved, or created by the Commission, does not affect the result reached herein. In determining whether a zoning should be ordered, a case turns on the particular facts involved; and material and controlling differences between the other systems and Michigan Wisconsin are readily apparent.

Particular mention will be made only of the cases or systems that proponents emphasize in their briefs. *Kansas-Nebraska Natural Gas Co., Inc., supra*, is not applicable. There, the Commission established two rate zones on a system located in western Kansas, the northeastern tip of Colorado, and in Nebraska. The opinion shows that there are two principal sources of gas for the system—the Hugoton Field in Kansas and the Julesburg Basin in western Nebraska and Colorado. A pipeline from the Hugoton Field extends in a northerly direction to a point of connection in southwestern Nebraska with a line extending from the Julesburg Basin in an easterly direction. A third source of gas is the Unruh Field in Kansas. A pipeline from this field proceeds northerly and connects with the rest of the system at points in Kansas and western Nebraska. The flow of

[1] See, *e.g.*, *Tennessee Gas and Transmission Co.*, 6 FPC 114, 116–17; *Tennessee Gas Transmission Co.*, 8 FPC 276, 285; *Ibid.*, 13 FPC 623, 629, 631; *Texas Eastern Transmission Corp.*, 10 FPC 908; *Transcontinental Gas Pipe Line Corp.*, 9 FPC 32, 54; *Ibid.*, 12 FPC 1084, 1471, 1474; *Texas Gas Transmission Corp.*, 10 FPC 731, 781; *New York State Natural Gas Corp.*, 13 FPC 1058, 1059, fn. 2, 1065, 1067; *East Tennessee Natural Gas Co.*, Docket No. CP64–21, Examiner's decision issued April 27, 1964, 32 FPC 158 at pp. 194–196, and Commission Opinion No. 435, adopting such decision as modified.

the gas on the system is in a general northeasterly direction. There are no storage fields and no concentration of load. Sixty percent of the sales are made in Zone 1; and 40%, in Zone 2. Manifestly the facts are unlike those here.

Proponents cite the system of New York State Natural Gas Corp., which extends from southwestern Pennsylvania to the vicinity of Albany, New York, and has four zones. There are substantial differences between that system and the Michigan Wisconsin system which preclude the Commission's implied approval of the zoning of that system from being applicable here. The evidence shows that New York Natural utilizes several storage fields, from which a substantial portion of its peak requirements are delivered. However, the record shows that two of these fields are located near the commencement of its system and the remainder are near the middle thereof; that consequently the flow of peak-day gas from storage to market requires the use of extensive large-diameter transmission lines to reach such important markets as Rochester, Syracuse, Utica, Schenectady, and Albany; and that, unlike Michigan Wisconsin with its storage fields near the Detroit area, there is no big concentrated market which can be served right out of storage. Obviously, greater capacity of these lines of New York Natural is required to meet its peak-day requirements than if the storage fields it utilizes were located at the terminus of its system. For example, on the Michigan Wisconsin-Michigan Consolidated combined system, the pipelines entering Woolfolk station from the southwest, that deliver gas to storage, are a 24-inch line and a 22-inch line; whereas the pipelines of Michigan Consolidated that take gas from storage in the heating season for the Detroit-area market consist of two 24-inch lines and a 30-inch line.

The record further shows that pipeline companies other than New York Natural deliver most of the gas put into the storage fields, and that the transmission facilities of New York Natural are used relatively little in bringing gas to storage. Hence the capacity of such transmission facilities is sized very closely in relationship to the market requirements and is not sized for the purpose of putting gas into storage. The evidence further shows that in Zone 1 on New York Natural's system, the line capability is limited to the amount of gas which the company sells in that region; and that the capacity of the system progressively increases in the other zones. It is not possible to move an additional volume of gas equivalent to that sold in Zone 1 through the facilities in any of the other zones. The customers upstream from the storage fields buy gas at a high load factor. So far as appears, gas does not flow into the system from sources that are in opposite directions.

Thus the system of New York Natural is not analogous to that of Michigan Wisconsin: (a) The storage fields are not near the terminus of the transmission system and are not near the major markets on the system. Hence, in order to have the capacity to handle the peak-day withdrawal from storage, the transmission facilities are designed larger, over the long distance from storage to main markets, than if their function were to move gas to storage during the nonheating season. Furthermore, the system cannot operate at a high load factor in the sale of gas in low load factor markets. (b) In the New York Natural system, transmission facilities having large capacity from the commencement of the system to the storage fields have not been installed to move off-peak gas to storage during the nonheating season. (c) To make peak-day Zone 1 deliveries to Zones 2, 3, or 4 would require more capacity in the latter zones than has been installed. (d) New York Natural's high load factor sales upstream from the storage fields is a situation that does not obtain on the Michigan Wisconsin system. (e) Apparently, the gas flowing into the New York Natural system does not have its sources in opposite directions; and hence, in such respect the

312-270—69——44

system is not inappropriate for a Mcf-mile study. (f) In the respective zones, starting with the beginning of the system, the transmission costs become materially higher; and generally speaking, distance along such system correlates with transmission costs.

Proponents point to *Transcontinental Gas Pipe Line Corp.*, 9 FPC 32, 54, where the Commission directed Transcontinental to sell natural gas to some small communities in Georgia, Alabama, and Louisiana. The total daily contract demands for firm service of these customers came to only 12,155 Mcf, whereas the daily contract demands for firm service of Transcontinental's markets to the northeast, chiefly in New York and Pennsylvania, were 408,100 Mcf, 97.12% of the total. (pp. 59–60.) Also, Transcontinental was to transport 60,000 Mcf per day to Philadelphia for Sun Oil Co.; and certain of the distributing companies in the east were to use natural gas for underfiring boilers in electric generating plants. (pp. 29, 33.) Manifestly, of the total annual volumes to be transported in the system, the volumes to be delivered to the aforementioned small communities were but a minuscule portion. Transcontinental had initially proposed a uniform rate to its resale customers. *Trans-Continental Gas Pipe Line Co.*, 7 FPC 24, 38–39. In the later opinion, the Commission said:

> We are directing Transcontinental to serve several interveners with relatively small loads.
>
> Considering the facts in this case, including testimony of company witnesses, it appears to us that a zoned rate schedule containing lower unit prices for deliveries in areas closer to the source of gas supply involving lesser transportation expense would be equitable. (9 FPC at p. 54.)

Respecting the one feature of load concentration in major markets, the *Transcontinental* case is analogous to the situation here. But the *Transcontinental* opinion antedated that of the Commission in the *Northern* case, *supra*, and the question of the effect of load concentration at and near the terminus of the Transcontinental line was not even raised. "Questions which merely lurk in the record, neither brought to the attention of the court nor ruled upon, are not to be considered as having been so decided as to constitute precedents." *Webster* v. *Fall*, 266 U.S. 252, 256. The same rule applies to Commission opinions.

Tennessee Gas Transmission Co., 27 FPC 202, cited by proponents, presented a question, not as to whether a system should be zoned, but as to the proper allocation of costs among zones. There, the Commission rejected the zone-by-zone method of allocating costs, and held that transmission costs should be allocated by taking rolled-in system-wide costs and dividing them among zones by a modified Mcf-mile method. The Commission noted, *inter alia*, that the system "is now operated in conjunction with storage facilities which, although located in Pennsylvania, affect the costs of pipeline operation in all zones and benefit every customer in an indeterminate amount"; and said that utilization of the system-wide average of costs was necessary "in order to reflect the unity of operation and interdependence of service on an integrated pipeline of this type." (pp. 208–09.) The Commission also pointed out that "the low unit costs of the facilities in the Southern zone are largely attributable to the very large volumes transported through that zone for sale further downstream and to the very high load factor operation of these facilities made possible by the use of storage in conjunction with the main-line facilities downstream"; and stated that the zone-by-zone method "would give the customers in those [upstream] zones an undue share of the economies realized from the operation of the system as a whole." (p. 210.) The Commission also stated: "This is not to say that differences in costs over a system as large as Tennessee's should be completely ignored by adopting the 'postage stamp' concept of rate-making. Such use of the average

cost method without zone differentials would, in the circumstances of the present case, result in undue discrimination." (p. 209.)

The *Tennessee* case does not militate against a denial of the proposal for a zoning in the instant case. There, the Commission supported its ruling that an allocation of costs should be based on system-wide costs and mileage, by facts of the same nature as some of those here employed in support of the denial of a zoning proposal. The difference is one of degree. There, the facts warranted a minimizing of differentials in zone rates; here, evidence of a similar nature to some of that in the *Tennessee* case is sufficiently strong and controlling to warrant a rejection of the proposal for a zoning.

Southern Natural Gas Co., 29 FPC 323, next cited by proponents, involved not a question of zoning, but a question of allocating transmission costs between jurisdictional and nonjurisdictional sales. (p. 341.) The Commission, in holding that the Mcf-mile method of allocation was properly used in allocating to zones the transmission costs attributable to jurisdictional sales, said, "* * * there are no circumstances here presented which outweigh the importance of the distance factor in making a fair allocation of the costs of transmission." (pp. 344–45.) In the instant case, respecting the question whether the Michigan Wisconsin system should be zoned, circumstances are presented which outweigh the importance of the distance factor.

The Commission also said, in speaking of gas purchased by Southern from United, "Ideally, the portion of the cost of the United gas relating to transmission should be separated out and broken down between demand and commodity, and as so classified should be included in Southern's transmission costs for the purpose of allocating them on the Mcf-mile basis." (p. 346.) Such a procedure was followed by the proponents' allocation witness in his Mcf-mile study. In the preparation of the Mcf-mile study, an allocation of the transmission cost element included in the charges paid to another pipeline is proper. But here, since a zoning of the system is not warranted, there is no reason or justification for a Mcf-mile study.

Proponents argue, "It is without logic to suggest that an upstream storage location is compatible with a mileage weighted allocation of transmission costs, but that a downstream location of storage requires a system-wide non-mileage weighted allocation of transmission costs." The opponents of the zoning make no such "suggestion." The facts here presented are (1) vast storage fields located near the terminus of the system in Michigan, coupled with (2) the system's major market being near such fields, coupled with (3) Michigan Wisconsin's markets being low-load factor markets.

Proponents recognize that "the location of storage may affect the overall economies of a transmission system," but assert that the benefits to the system which result from a particular storage location "are reflected in the total transmission cost to be assigned to all customers." This assertion is correct, but to say that the system should therefore be zoned is a non sequitur. The fact that the savings from the operation of the system in conjunction with storage are reflected in total transmission costs, to the benefit of all the customers, is one reason for not zoning the system. *Cf. Michigan Wisconsin Pipe Line Co.*, 9 FPC 127 (p. 637, *supra*).

Proponents correctly say that in their allocation study storage costs are allocated to all customers, irrespective of location, in proportion to peak and annual requirements. But such allocation does not give effect to the savings and benefits from the operation of the transmission facilities in conjunction with storage.

Proponents argue that Michigan Wisconsin in opposing the zoning is motivated by a desire to protect and benefit its affiliates, Michigan Consolidated and Mil-

waukee Gas. Whatever be Michigan Wisconsin's motive, the facts and the law justify its opposition to the zoning.

Proponents assert that Michigan Wisconsin "could have acquired additional reserves along its main line to meet its normal requirements." This assertion is contrary to the evidence.

Proponents complain in their briefs that the American Natural system formed American Louisiana Pipe Line Co., and contracted for "high-cost" Louisiana Gulf Coast and Midwestern supplies of gas, to the end of favoring its subsidiary Michigan Consolidated "at the expense of" the Iowa-Missouri-Illinois customers. There is a dearth of evidence that the contracts in question were improvident, or that the Iowa-Missouri-Illinois customers sustained any prejudice by reason of the acts and transactions in question. At the hearing, counsel for the proponents recognized that the decision of the American Natural system "to go to the Gulf Coast" instead of the southwest for new gas supplies was "a management decision"; and that, "we are not challenging that." Their expert witness testified, "I am sure that the American Natural management had perfectly good, cogent, and intelligent reasons" for not obtaining additional gas supplies in the Hugoton area"; and, "I wouldn't presume to criticize these reasons or criticize what they did." As to the Midwestern gas, the evidence shows that at the time such gas was contracted for, there were no available reserves in the southwest of the size required.

The proponents complain of rulings of the Examiner rejecting certain evidence, such as testimony, which was not the best evidence and for which no foundation was laid by the qualifications of the witness (Tr. 3050–51), that the customers in proposed Zone 1 were receiving gas of lower Btu quality than that delivered to customers in proposed Zone 2; and make arguments on the basis of rejected evidence. A decision cannot be based upon "evidential facts not spread upon the record." *Ohio Bell Telephone Co.* v. *Public Utilities Commission*, 301 U.S. 292, 300.

Michigan Wisconsin distorts the decision of the Supreme Court in *Colorado Interstate Gas Co.* v. *Federal Power Commission, supra*, 324 U.S. 581, 591–92. Michigan Wisconsin asserts,

> In the *Colorado Interstate* case, in which the Supreme Court said it was "obviously fair to determine transmission costs for the pipeline as a whole and not to compute them on a mileage demand basis," the loads at the Pueblo-Denver end of the line were some 66% of the total (Ransom, T. 3557).

Michigan Wisconsin argues, upon the strength of this purported authority for its position, that the concentration of loads in proposed Zone 2 on the Michigan Wisconsin system rules out the zoning proposal.

This argument is fallacious. No such figure as 66%, or any other percentage of the total load involved in the *Colorado* case, appears in the decision of the Supreme Court. The percentage of the total load at and near the terminus of the line was not a material consideration. If it had been, the Supreme Court would have set out in its opinion what the percentage was. Hence, the decision of the Supreme Court in that case is not authority for the proposition that the concentration of loads in proposed Zone 2 rules out the zoning. The language of an opinion must be construed in connection with the facts under consideration by the court. *Kirk* v. *Lynd*, 106 U.S. 315, 318; *White* v. *Aronson*, 302 U.S. 16, 21; *Armour & Co.* v. *Wantock*, 323 U.S. 126, 133. Compare *Goode* v. *Gaines*, 145 U.S. 141, 154, where a previous court in an opinion had not referred to a statute concerning the general subject under consideration, and it was held that such fact did not justify an assumption that the statute had been overlooked, but instead

justified an inference that the previous court concluded that the statute had no bearing on the specific question.[2]

Questions of Competition Between Communities for Industrial Development, and More "Balanced" Load on Michigan Wisconsin System

The Iowa-Missouri group adduced evidence that application of the system-wide rates places them at a competitive disadvantage with other communities in Iowa and Missouri (served by Natural Gas Pipeline Co. of America or Northern Natural Gas Co.) in attracting industry. The opponents of the zoning dispute such claim.

It is unnecessary to pass upon this question of fact. At the outset of the hearing, the opponents of the zoning made a motion to strike the foregoing evidence. The proponents, after being afforded opportunity to prepare points and authorities as to the admissibility of the evidence, took the position that such evidence was admissible (a) to show that Michigan Wisconsin's claimed undue discrimination against the Iowa-Missouri customers results in prejudice to them in the loss of industrial sales; and (b) to assist in the designing of rates in proposed Zone 1 should undue discrimination be established. (Tr. 3015–16.) The evidence was admissible only for these purposes; and undue discrimination not having been established, the evidence becomes irrelevant.

In particular, evidence of this nature cannot justify preferential rates to customers on one part of a pipeline system at the expense of those on another part of the system, in order to aid particular communities. This proposition is supported by decisions construing the Interstate Commerce Act, from which the Natural Gas Act was derived.[3] Prior to 1935 and 1938, the times of adoption of the Federal Power Act and the Natural Gas Act, the Supreme Court had held:

> * * * carriers * * * may not adjust their rates with the motive of * * * aiding a shipper, * * * or a locality, for so to do is to depart from the transportation standard, conformity to which the Act contemplates, and substitute others which are prohibited. *Texas & Pacific Railway Co.* v. *United States*, 289 U.S. 627, 637.
>
> The Act does not attempt to equalize fortune, opportunities or abilities. *Interstate Commerce Commission* v. *Diffenbaugh*, 222 U.S. 42, 46.

Also, the Interstate Commerce Commission had repeatedly held that:

> Carriers may adjust their charges to meet competition, or may decline to do so, as they see fit; and if their policy is to make no special concessions

[2] The 66% was a figure testified to by an expert witness for Michigan Wisconsin, without objection, in commenting on the Supreme Court's opinion in *Colorado;* and the witness was cross-examined, *inter alia,* concerning such opinion. At a later stage of the hearing, it developed that the figure was not contained in the court's opinion, but had been computed by the witness from the Commission's opinion in such proceeding. When the proponents of the zoning offered in evidence material culled from the record of the *Colorado* proceeding, in rebuttal of the testimony of the Michigan Wisconsin witness based upon the 66%, Michigan Wisconsin declined to agree that the testimony of its witness concerning such figure might be stricken out. The Examiner, therefore, received such rebuttal evidence, in view of the rule that "if a party interjects in a case incompetent and unrelated facts, the opposite party has the right to give his version of them if otherwise he would be prejudiced." *Twactman* v. *Connelly,* 106 F. 2d 501, 506. (Tr. 4568–70.) The result is that the record is cluttered up with incompetent and irrelevant evidence concerning *Colorado;* and if the Supreme Court were to read the argument in the briefs in the instant proceeding, it is doubtful if the Court would recognize its own opinion.

[3] The legislative history of the Natural Gas Act shows that Section 4(b) is essentially the same as Section 205(b) of the Federal Power Act, and that both were derived from Section 3(1) of the Interstate Commerce Act. Hearings, House Committee on Interstate and Foreign Commerce, on H.R. 5423, 74th Cong., 2d Sess., pp. 392, 2170; Hearings, House Committee on Interstate and Foreign Commerce, H.R. 11662, 74th Cong., 2d Sess., pp. 10, 46. *Cf., Federal Power Commission* v. *Natural Gas Pipeline Co.,* 315 U.S. 575, 584.

to attract traffic, shippers who would be benefited by the establishment of competitive rates have no lawful grounds of complaint. Sharfman, *The Interstate Commerce Commission*, Vol. III–B, p. 580, and cases cited in fn. 459.

To meet competition and to hold or develop traffic, the carriers have been allowed voluntarily to establish rates designed to direct its flow, * * *. But the Commission has not felt free to compel the carriers to establish such adjustments as they might be permitted to adopt in their own interest; * * *. *Ibid.*, pp. 658–59, and cases cited in fn. 608.

The rule applies, therefore, that

* * * where provisions of one statute have been adopted by another, the interpretation which has been authoritatively placed upon the former applies to the latter also. *Hope Natural Gas Co.* v. *Federal Power Commission* (CA4), 196 F. 2d 803, 807.

Proponents also aver that the establishment of zone rates will permit the development of a more "balanced" load on the Michigan Wisconsin system. This is not a valid reason for according preferential treatment to the customers in proposed Zone 1.

QUESTIONS RELATIVE TO EXTENSIONS OF FACILITIES

Terms and Conditions of Providing Service

In passing on the terms and conditions under which Michigan Wisconsin is to provide service to new communities, the Commission draws a distinction between short laterals and long laterals. *Midwestern Gas Transmission Co. and Michigan Wisconsin Pipe Line Co.*, 22 FPC 775, 795; *Ibid.*, 22 FPC 1157, 1158–59 (affirmed *Michigan Gas and Electric Co.* v. *Federal Power Commission*, 290 F. 2d 374, 375). The so-called "10-cent" formula, devised by Michigan Wisconsin in 1956, has been employed by said company and the Commission to determine the amount of the investment to be incurred by Michigan Wisconsin for relatively short laterals in providing new service to small communities located near Michigan Wisconsin's existing pipeline facilities.

The components and operation of the formula as initiated by Michigan Wisconsin are as follows: The estimated annual cost per Mcf of a lateral is arrived at by assuming that the annual operating expenses are 15% of the construction cost. The 15% is made up of the following items and estimates: return 6%; income taxes, 3%; general taxes, 1.5%; depreciation, 3½%; and operation and maintenance, 1%. The estimated construction cost of a lateral is accordingly multiplied by 15%. The resulting dollar amount is then divided by the estimated third-year firm requirements of the community or communities to be served through the lateral. Michigan Wisconsin adopts a 10-cent figure as the standard to determine how much Michigan Wisconsin will spend on a particular lateral. Under the formula, if the estimated annual cost of the entire lateral is 10 cents per Mcf or less, Michigan Wisconsin bears the full cost. If the estimated annual cost of the entire lateral is more than 10 cents per Mcf, Michigan Wisconsin bears so much of the cost of the lateral as results in a cost to Michigan Wisconsin of no more than 10 cents per Mcf.

Where the annual cost of the lateral exceeds 10 cents per Mcf, the portion of the construction cost to be borne by Michigan Wisconsin is determined by multiplying the estimated third-year firm sales volume by 10 cents and dividing by 15%. Such portion of the construction cost is the equivalent of the third-year firm sales times $0.66⅔ (because 0.10 divided by 0.15 equals 0.66⅔). For

example, if the estimated third-year firm sales are 100,000 Mcf, the portion of the construction cost to be borne by Michigan Wisconsin under the formula is $66,667.[4]

The evidence shows that Michigan Wisconsin has applied the 10-cent formula in the construction of at least 35 laterals that have brought service to some 58 communities.[5]

In numerous instances, the construction of the entire lateral by Michigan Wisconsin has fallen within the formula.

In numerous other instances, Michigan Wisconsin, by application of the formula, has constructed only a portion of the lateral. Thus, in supplying gas to Northern Illinois Gas Co. for serving Earlville, Illinois, Michigan Wisconsin, under the formula, constructed 1.5 miles of a 2-mile lateral. (21 FPC 552, 557.) In supplying gas to Bethany, Missouri, Michigan Wisconsin, under the formula, constructed 8.81 miles of a 16.5-mile lateral. (22 FPC 566, 567–68; Ex. 99.) In supplying gas to Central Missouri Gas Co. for serving Lancaster, Queen City, Greentop, and Kirksville, Missouri, Michigan Wisconsin, under the formula, constructed 13.94 miles of a lateral some 37 miles long. (24 FPC 33, 35, 36; Ex. 99.) In supplying gas to Wisconsin Public Service Corp. for serving Valders and Brillion, Wisconsin, Michigan Wisconsin, under the formula, constructed 6.72 miles of 17.3-mile lateral. In supplying gas to Michigan Gas Utilities Co. for serving Wayland, Michigan, Michigan Wisconsin, under the formula, constructed 4.02 miles of a 15-mile lateral. In supplying gas to said distributor for serving Berrien Springs, Michigan, Michigan Wisconsin, under the formula, constructed 4.34 miles of a 6-mile lateral. In supplying gas to said distributor for serving Fennville, Douglas, and Saugatuck, Michigan, Michigan Wisconsin, under the formula, constructed 5.51 miles of a 13.62-mile lateral. In supplying gas to Stanberry, Missouri, Michigan Wisconsin, under the formula, constructed 4.40 miles of an 8-mile lateral. In supplying gas to Wapello Light Co. for serving Wapello, Iowa, Michigan Wisconsin, under the formula, constructed 4.10 miles of a 6.64-mile lateral. In supplying gas to Wisconsin Southern Gas Co. for serving Sharon and Clinton, Wisconsin, Michigan Wisconsin, under the formula, constructed 2.35 miles of a 12.27-mile lateral. In supplying gas to American Gas Co. for serving Fairfax, Tarkio, and Rockport, Missouri, Michigan Wisconsin, under the formula, constructed 8.66 miles of a 26-mile lateral. (24 FPC 177, 180–81, 184–87, 189; Ex. 99.) In supplying gas to North Central Public Service Co. for serving West Point, Iowa, Michigan Wisconsin, under the formula, constructed one-third of a 4.6-mile lateral. (27 FPC 967, 981.) In supplying New Boston,

[4] The Commission has refined the formula somewhat in various opinions, but it remains essentially the same as initiated by Michigan Wisconsin. The cost of the measuring station is excluded, and the formula is not applied so rigidly as to locate the station at an inconvenient point. *Michigan Wisconsin Pipe Line Co.*, 21 FPC 552, 558; same-styled case, 24 FPC 177, 181. The formula should be applied to individual laterals, and not to the roll-in of several laterals for one distributor: "otherwise discrimination will occur in the rendering of service to the various towns along the route of the pipeline." *Michigan Wisconsin Pipe Line Co.*, 24 FPC 177, 181. Interruptible sales under a 10-year contract can be taken into account along with firm sales. *Idem.*, and case cited. Michigan Wisconsin's estimate of the cost of the proposed lateral is frequently used rather than that of an applicant under Section 7(a) of the Act or an intervenor seeking service from the lateral. *Idem.* The minimum size of pipe to be installed is 4 inches in diameter. *City of Grant City, Mo.*, 29 FPC 754, 757.

[5] *American Louisiana Pipe Line Co., Michigan Wisconsin Pipe Line Co., et al.*, 16 FPC 897, 899, 900–01; *Ibid.*, 27 FPC 967, 980–81; *Ibid.*, 28 FPC 41, 47; *Michigan Wisconsin Pipe Line Co.*, 21 FPC 552, 557–59; *Ibid.*, 22 FPC 566; *Midwestern Gas Transmission Co. and Michigan Wisconsin Pipe Line Co.*, 22 FPC 775, 797–98; *Ibid.*, 24 FPC 33, 35–36; *Michigan Wisconsin Pipe Line Co.*, 24 FPC 177, 181, 183–87, 189; *City of Grant City, Mo.*, 29 FPC 754, 756; *City of New Boston, Ill.*, 30 FPC 1603; *Wisconsin Power & Light Co.*, Docket No. CP64–161, order issued April 2, 1964, 31 FPC 767; *Illinois Power Co.*, Docket No. CP64–181, order issued May 15, 1964, 31 FPC 1259.

Illinois, with gas, Michigan Wisconsin, under the formula, constructed 1.5 miles of a 3-mile lateral. (30 FPC 1603, 1604.)

Turning to the consolidated proceedings *Midwestern Gas Transmission Co. and Michigan Wisconsin Pipe Line Co.*, 22 FPC 775; *Ibid.*, 22 FPC 1157, 1159, the Commission, at page 1159, observed that the 10-cent formula does not constitute, "a Commission-approved lateral policy so fixed and established that there can be no variation from it or refusal to apply it without constituting discrimination *per se*." And further, that "factual differences and varying policy considerations could well affect the extent to which the formula properly applied in other cases." The Commission there held that the 10-cent formula was not applicable to laterals constructed on the "Central Wisconsin project." This project called for the construction of a large diameter pipeline into Central Wisconsin, primarily to obtain gas from Midwestern, and branch lines extending therefrom. In so holding, the Commission pointed out:

> This pipeline would traverse the Central Wisconsin area and logically should serve that area. Also this region provides relatively assured and diversified markets, which augurs favorably for the economics of the project and its contribution to the Michigan Wisconsin system and the consumers it serves. (p. 795.)

Respecting another phase of the consolidated *Midwestern* and *Michigan Wisconsin* proceedings, the evidence in the instant proceedings shows that Michigan Wisconsin unlawfully established an unreasonable difference in facilities and services between the locality supplied with gas from its Columbus and Waterloo, Wisconsin, lateral facilities (served by its affiliate Milwaukee Gas Light Co.), and the other localities supplied with gas from Michigan Wisconsin laterals; and that thereby Michigan Wisconsin has unlawfully discriminated in favor of its affiliate Milwaukee Gas. Natural Gas Distributors, Inc., a party to such consolidated proceedings, sought an order therein, under Section 7(a), directing Michigan Wisconsin to extend laterals to Columbus and Waterloo, and to sell certain volumes of natural gas to it for serving such area. This project called for a combined 26-mile lateral from Madison to Columbus, and a 3.7-mile offshoot from such lateral to Waterloo. The communities to receive service were Columbus, Waterloo, Sun Prairie, and Fall River. In its opinion, issued October 31, 1959, the Commission specified that the cost of these laterals "will be borne by Michigan Wisconsin within the limits of its 10-cent formula * * *. Under this formula, Michigan Wisconsin * * * will pay only a part of the cost of the laterals to supply Natural Gas Distributors, Inc., * * *." *Ibid.*, p. 798. In its accompanying order, the Commission required that, "The cost of making physical connection with the facilities of [Natural Gas Distributors] shall be borne by Michigan Wisconsin within the limits of its 10-cent formula." *Ibid.*, p. 804.

Later, Michigan Wisconsin's affiliate Milwaukee Gas acquired the properties, and became the owner, of Natural Gas Distributors; and upon or shortly after the construction of the Columbus-Waterloo lateral facilities, became the customer of Michigan Wisconsin supplied with gas from such facilities. Significantly, the vice president of Michigan Wisconsin could not recall whether or not Milwaukee Gas acquired Natural Gas Distributors before the line to Columbus was constructed. The inference is justified that either the acquisition had taken place before such time, or else that the consummation of the acquisition was so imminent that it was regarded as a *fait accompli*, and that Michigan Wisconsin was dealing with Natural Gas Distributors as though it were already owned by Milwaukee Gas. If at the time the line was constructed, Michigan Wisconsin had been dealing with Natural Gas Distributors as an independent company, surely the vice president of Michigan Wisconsin would have recalled

such fact and would have been able to say that the acquisition had not taken place by such time.

The evidence establishes that proper application of the 10-cent formula allowed Michigan Wisconsin to make an estimated investment of only $552,700 (related to estimated firm third-year requirements of 829,207 (Mcf) toward the construction of the 26-mile lateral to Columbus and the 3.7-mile offshoot therefrom to Waterloo. The evidence further establishes that, nevertheless, Michigan Wisconsin bore the entire cost of these facilities, an amount of about $703,811.[6]

Michigan Wisconsin, in attempted justification of its action, notes that under Natural Gas Distributor's interpretation of the formula as presented at the hearing involving the Columbus-Waterloo facilities, Michigan Wisconsin could make an estimated investment of $629,300 toward the construction of this lateral and offshoot. Michigan Wisconsin then points out that the $703,811 it spent is only $77,300 in excess of such estimate. These facts do not excuse Michigan Wisconsin's action, either wholly or partially. The figure of $629,300 calculated by Natural Gas Distributors as the estimated investment to be borne by Michigan Wisconsin is patently erroneous, as Michigan Wisconsin well knew (In lieu of the 10-cent formula component, estimated third-year firm requirements, Natural Gas Distributors employed estimated maximum-day requirements multiplied by a factor of 160, the then existing relationship between maximum daily quantity and annual contract quantity under the Michigan Wisconsin tariff). Michigan Wisconsin further well knew that under the formula, properly applied and as applied by it in all other instances, the estimated investment that Michigan Wisconsin could make was no more than $552,700.

There is an absence of showing that factual differences from the many instances where the 10-cent formula has been applied, or any other considerations, warranted the action of Michigan Wisconsin in bearing the investment in the Columbus-Waterloo facilities beyond the limits of the formula. Michigan Wisconsin avers that it "considered" the Columbus-Waterloo extension "part of the Central Wisconsin project." This inference is without basis in fact, and is contrary to fact. The Central Wisconsin project is in central Wisconsin, and is limited to the main pipeline for transporting the Midwestern gas, and to the laterals extending therefrom. 22 FPC 778, 789, 795. On the other hand, Columbus and Waterloo are in southern Wisconsin; and the lateral to Columbus (with the offshoot to Waterloo) extends, not from the pipeline transporting the Midwestern gas, but from a pipeline, constituting part of the original construction of the Michigan Wisconsin system, that extends from the Wisconsin-Illinois border to Madison. The Commission recognized this plain distinction by ordering the application of the 10-cent formula to the Columbus-Waterloo facilities.

The Examiner finds and concludes that Michigan Wisconsin willfully violated the Commission order of October 31, 1959, directing it to bear the cost of the lateral to Columbus and the offshoot therefrom to Waterloo, only within the limits of the 10-cent formula. The Examiner further finds and concludes that Michigan Wisconsin unlawfully established and maintains an unreasonable difference in service and facilities between localities, and unduly discriminated in favor of its affiliate Milwaukee Gas, and imposed an undue burden upon the other customers of Michigan Wisconsin. *Natural Gas Act*, Sec. 4(b); *Michigan Gas and Electric Co.* v. *Federal Power Commission*, 290 F. 2d 374; *Michigan*

[6] Michigan Wisconsin's vice president testified that the $703,811 "probably includes some reinforcing" of "existing facilities," but Michigan Wisconsin made no showing that the reinforcing represented a substantial sum.

Wisconsin Pipe Line Co., 9 FPC 127, 135; *cf. Otter Tail Power Co.*, 2 FPC 134, 145.

In the case of two other short laterals, constructed by Michigan Wisconsin pursuant to authorization under Section 7(c), Michigan Wisconsin did not apply the 10-cent formula. The laterals were a 20-mile extension to Tomahawk, Wisconsin, involving an estimated construction cost of $531,000, and a 19.3-mile extension to Denmark, Wisconsin, involving an estimated construction cost of $545,000. Instead of the formula, Michigan Wisconsin used an incremental test for determining feasibility under its interpretation of the Commission's *Regulations under the Natural Gas Act*, Sec. 157.14(a)(16). The evidence shows, however, that each of these extensions could have been justified under the 10-cent formula.

Commenting on the fact that Michigan Wisconsin did not apply the 10-cent formula in the case of these 20-mile and 19.3-mile laterals, Michigan Gas and Electric says with some justification: "The record provides no rational choice by Michigan Wisconsin other than its own fancy." Michigan Wisconsin's vice president testified that these lines "involved substantially more money than we generally apply to a 10-cent formula case." But under the formula, Michigan Wisconsin bore the entire investment of $345,225 in a 17.5-mile lateral. *American Louisiana Pipe Line Co., Michigan Wisconsin Pipe Line Co., et al.*, 16 FPC 897, 900. And the Commission, without objection by Michigan Wisconsin, ordered that Michigan Wisconsin apply the formula to the 29.8-mile Columbus lateral and Waterloo offshoot, the company thereby being required to expend $552,700.

The evidence is insufficient to enable the Examiner to determine, as specified in the order directing the hearing herein, "the terms and conditions under which Michigan Wisconsin should provide new and additional service from its" short "branch or lateral lines"—other than the fundamental prohibition, already embodied in Section 4(b) of the Act, against undue preference and undue prejudice. Specifically, the record affords no adequate basis for determining whether Michigan Wisconsin's 10-cent formula is just and reasonable.

Michigan Wisconsin's vice president testified that the formula is "very generous" and "does not make Michigan Wisconsin whole." On the other hand, the evidence shows that before the formula was adopted, Michigan Wisconsin made an investment in a 20-mile lateral representing $1.54 per Mcf of anticipated third year sales, as distinguished from its investments under the formula—$0.66⅔ per Mcf of anticipated third year sales. In *Michigan Wisconsin Pipe Line Co., supra*, 21 FPC at page 558, the Commission, treating of the formula, raised, but did not decide, the question of "the accuracy of the variables employed (*viz.*, 10 cents and 15%)." The Commission pointed out:

> The major question is whether the 10-cent figure conforms to Michigan Wisconsin's past and future practice and is required by the public interest rather than representing an arbitrary choice of a criterion. Neither on this record nor on any other record has this question been fully explored.

The Commission reserved judgment on this question because of urgent requirements of Section 7(a) applicants, but said, at page 599:

> * * * we are prepared to reject the variables in this formula if it fails to meet the pragmatic test of experience.
>
> We believe that future 7(a) applications may bring to light difficulties in practical application of the formula that will require substantial revision in the public interest * * *. Perhaps additional experience in the application of this formula may point in the direction of initiating a further study by the Commission's staff.

Even assuming that 15% of the construction cost was originally a reasonable approximation of the total annual operating costs of a given lateral, operating costs have changed in the intervening years. The tax rate and the rate of return are different; and the vice president of Michigan Wisconsin said that the items of general taxes and operation and maintenance expense require a study. Furthermore, the 10¢, admittedly, is a judgment figure; and there is no direct mathematical correlation between the 10¢ and the assumption that 15% of the construction cost is a justifiable figure for annual operating costs. Given the latter assumption, it is the relationship between construction costs and third-year volumes which determines the indicated over-all lateral cost per Mcf. The 10¢ is merely a standard, and could still be used as a standard if it were assumed that the annual lateral costs per Mcf were 12% or 18% of the construction cost.

The Examiner is unable to find on the basis of the record that the formula is reasonable. A staff study, and such additional evidence from Michigan Wisconsin and the other parties as they may choose to present, will be required in order to make a determination of this question.

Respecting the long-line lateral construction, facts set out in *Northern Natural Gas Co. and Michigan Wisconsin Pipe Line Co.*, 25 FPC 1234, raise a suspicion that in its proposal for a 48.4-mile Baraboo lateral, Michigan Wisconsin was attempting unlawfully to discriminate in favor of its affiliate Milwaukee Gas, and also in favor of Wisconsin Power and Madison Gas—the customers to be served through such lateral. The Commission rejected the portion of Michigan Wisconsin's application involving this project, and pointed out:

> * * * the line which Michigan Wisconsin now says it can construct to Baraboo will be considerably more expensive per Mcf of gas proposed to be sold in this proceeding than the line Michigan Wisconsin has constructed to provide service to the Upper Peninsula. (p. 1241.)

The Commission went on to say:

> In view of Michigan Wisconsin's insistence on rigid application of its 10-cent formula for short laterals we agree with staff and Michigan Gas that it must also show an acceptable formula for determining the feasibility of longer laterals. Any other holding would clearly be unfair to existing and potential customers of Michigan Wisconsin and would open the door to unlimited discrimination. (p. 1242.)

In the instant record, however, there is no evidence as to what would be "an acceptable formula for determining the feasibility of longer laterals." Michigan Wisconsin takes the position that such a formula is not feasible, and that the long laterals—the construction of major facilities—must be handled on a case-by-case basis.

Question Whether Extension Policies Should Be Set Out in Tariff

The Staff and Michigan Gas and Electric contend that Section 4(c) of the Act[7] requires a statement of Michigan Wisconsin's extension policies, pertaining both to short laterals (as represented by the 10-cent formula) and to long laterals, to be filed as part of its tariff. The Staff argue that the application of Michigan

[7] Section 4(c) provides: "Under such rules and regulations as the Commission may prescribe, every natural-gas company shall file with the Commission, within such time (not less than sixty days from the date this act takes effect) and in such form as the Commission may designate, and shall keep open in convenient form and place for public inspection, schedules showing all rates and charges for any transportation or sale subject to the jurisdiction of the Commission, and the classifications, practices, and regulations affecting such rates and charges, together with all contracts which in any manner affect or relate to such rates, charges, classifications, and services."

Wisconsin's 10-cent formula is a "practice" which "affects" its "rates" within the meaning of Section 4(c). Michigan Gas and Electric argues that to the prospective purchaser, the place of delivery by Michigan Wisconsin is one of the "classifications, practices, and regulations affecting" Michigan Wisconsin's "rates" within the purview of such section. We do not agree.

Anent the Staff's argument, it is true that in a broad sense every construction or extension of facilities actually or theoretically "affects" rates. For the investment incurred and additional operating expenses enter into the cost of service; and the company's gross revenues are customarily increased. However, for reasons stated below, the 10-cent formula cannot be said to be a "practice" affecting Michigan Wisconsin's rates within the meaning of Section 4(c).

Anent Michigan Gas and Electric's argument, obviously a place of delivery is not a "classification" or "regulation," as contended by that company. Nor is a place of delivery a "practice affecting" Michigan Wisconsin's rates, because Michigan Wisconsin's rates are the same irrespective of the point of delivery. But assuming for the purpose of the discussion that a place of delivery is a "practice affecting" Michigan Wisconsin's rates, the place of delivery cannot be said to be a "practice" affecting Michigan Wisconsin's rates within the purview of Section 4(c).

It does not follow either from the fact that the formula broadly is a practice affecting rates, or from the assumption that a place of delivery is a practice affecting rates, that a statement of the policy (if any) of a natural-gas company relating to the construction of laterals or extensions must be filed with the Commission under Section 4(c). In the first place, it is axiomatic that the meaning of words in a section of a statute is limited by their context. The Supreme Court has repeatedly held that the word "practice" as used in the Interstate Commerce Act (from which the Federal Power Act and the Natural Gas Act were derived[8]) applies to acts or things belonging to the same general class as those meant by the words of the law that are associated with it. *Baltimore & Ohio R. Co.* v. *United States*, 277 U.S. 291, 299; *United States* v. *Pennsylvania Railroad Co.*, 242 U.S. 208, 229–300; *Missouri Pacific R. Co.* v. *Norwood*, 283 U.S. 249, 257. In so holding, the Court in the *Baltimore & Ohio* case, said,

> The word "practice," considered generally and without regard to context, is not capable of useful construction. If broadly used, it would cover everything carriers are accustomed to do. Its meaning varies * * * widely and depends * * * upon the connection in which it is used * * *.

Likewise, here, it seems clear that "practices" in Section 4(c) applies only to things of the same general class as encompassed in the terms "schedules," "classifications," "regulations," and "contracts."

In the second place, Section 4(c) pertains to rates and charges to customers, not to the construction of facilities. The section pertaining to the construction of facilities is Section 7. In the *Pennsylvania Railroad* case, *supra*, the Court in holding that the refusal to furnish tank cars is not a "practice" within Section 15 of the Interstate Commerce Act, said that if the section had been intended to cover such conduct, "there would have been explicit declaration of the intent." So, here, if there had been an intent in employing the term "practices" in Section 4(c) to go from the field of regulation of rates into the field of regulation of construction of facilities, there would have been explicit declaration of such intent.

---

[8] See citations, note 3, *supra*.

The Staff cite Section 154.1 of the *Regulations under the Natural Gas Act*,[9] with particular reference to the language that a natural-gas company shall file schedules showing the practices "affecting such * * * services." This section of the rules does not support the Staff's position. "Such" in the phrase just quoted refers back to the earlier phrase, "any transportation or sale of natural gas subject to the jurisdiction of the Commission." Hence the word "services" means services consisting of the transportation or sale of natural gas—not the construction of facilities.

Section 154.1 of the Regulations implements the rate filing and posting requirements of Section 4(c) of the Act, and nothing else. In the proceeding wherein the Commission issued such rule and other rules pertaining to rate schedules and tariffs, the Commission set out that the proceeding was initiated "under Sections 4 and 16 of the Natural Gas Act to amend its regulations governing the form, composition and filing of schedules of rates and charges for the transportation and sale for resale of natural gas in interstate commerce"; and that it was "acting pursuant to authority granted by the Natural Gas Act, particularly Sections 4 and 16 thereof." The Commission did not mention Section 7 of the Act. Order No. 144, 13 F.R. 6371–72, Oct. 30, 1948.

In the period of over 16 years that have elapsed since the prescribing of Section 154.1 of the Regulations, the Commission has never attempted to require a pipeline company to include a lateral extension provision, or any other extension provision, in its tariff. Furthermore, in the period of nearly 27 years since the adoption of the Natural Gas Act, no pipeline company has voluntarily filed any such tariff provision.[10] It is true that a footnote to a Commission opinion involving Michigan Wisconsin recites that, "consistent with proper regulatory practice, it would be desirable for the [Michigan Wisconsin] tariff to contain a statement of line extension policy, * * *." *Midwestern Gas Transmission Co. and Michigan Wisconsin Pipe Line Co.*, 22 FPC 1157, 1160. This statement was dictum. Also, the Commission did not say that the Act or the tariff regulations require the filing of such a statement. It is a customary regulatory practice for the tariff or rate schedules of a local distributing company to set out the terms and conditions under which the company will provide service to a new customer in such matters as the length of the line it will run from the street to a house. But it has been seen that such a practice is not followed by, and under the Natural Gas Act cannot be required of, natural-gas pipeline companies.

Even if Michigan Wisconsin's extension policy embodied in its 10-cent formula were a "practice" within the purview of Section 4(c), the evidence is insufficient for the Commission to require that the tariff contain a statement spelling out what the formula is, and under what conditions it is to be applied. The Commission can prescribe provisions of a rate schedule and require a company to file the same. *Mondakota Gas Co.* v. *Montana-Dakota Utilities Co.*, 5 FPC 64, 76–77, 81–84. But manifestly rate schedule provisions should not be prescribed unless the evidence establishes that they are reasonable. It has been seen

[9] Section 154.1 of the Regulations provides: "On and after December 1, 1948 every natural-gas company shall file with the Commission and post in conformity with the requirements of this part, schedules showing all rates, and charges for any transportation or sale of natural gas subject to the jurisdiction of the Commission and the classifications, practices, rules and regulations affecting such rates, charges and services, together with all contracts in any manner affecting or relating thereto: *Provided, however*, That all such presently effective schedules filed with the Commission before the aforesaid date shall be restated as set forth in § 154.82 to conform with the following rules and regulations, and filed and posted on or before the dates specified in § 154.83."

[10] Atlantic Seaboard Corp. makes a separate "facility charge" to cover the cost of laterals it constructs. A provision for the payment of this charge in monthly amounts is a part of its tariff, and properly so.

(page 651, *supra*) that such evidence is lacking here. The staff witness who sponsored a suggested section respecting the formula for inclusion in Michigan Wisconsin's tariff, stated, "The reasonableness of the 10-cent formula was not part of my study."

Respecting long laterals, no proposed tariff provisions were submitted. The Examiner is unable to find that proposals which may be advanced in the future, and which are unknown to him, will be reasonable.

Furthermore, the Examiner agrees with, and adopts as part of this decision, the following passage in Michigan Wisconsin's brief:

> The construction of major facilities must be handled on a project basis with a showing of public convenience and necessity in each case in accordance with the provisions of Section 7(c) of the Act and the Commission's certificate regulations. [Account must be taken of] the practical considerations which are involved in the construction of major facilities. In the first place, the expenditure of several millions of dollars raises questions concerning the company's ability to finance the construction, the effect of the construction upon rates to existing customers, the prospective return on investment and the character and stability of the markets. Second, the construction of facilities of substantial size poses questions as to the design and engineering features of the project, the availability of pipe and materials and the integration of the new facilities into the existing pipeline. Thirdly, where the new facilities are to extend many miles into a new area additional operating and maintenance personnel and equipment must be organized and provided.
>
> The construction of major facilities thus involves many matters of judgment which must be considered and decided in the first instance by the management of the company, and then reviewed by the Commission for compliance with the standard of public convenience and necessity upon an application filed pursuant to the certificate provisions of Section 7(c) of the Act.
>
> "Public convenience and necessity is not defined by the statute," which leaves to the Commission administrative discretion "to draw its conclusion from the infinite variety of circumstances which may occur in specific instances." *Interstate Commerce Commission* v. *Parker*, 326 U.S. 60, 65. Section 7(e) of the Act "requires the Commission to evaluate all factors bearing on the public interest" (*Atlantic Refining Co.* v. *Public Service Commission of New York*, 360 U.S. 378, 391), and its function "is not only to appraise the facts and to draw inferences from them but also to bring to bear upon the problem as expert judgment and to determine from its analysis of the total situation on which side of the controversy the public interest lies." *United States* v. *Detroit & Cleveland Navigation Co.*, 326 U.S. 236, 241. The standard of public convenience and necessity therefore "is not a rigid absolute of unchanging content, to be mechanically applied regardless of the wide diversity of facts presented by different cases." *Transcontinental Gas Pipe Line Corp.*, 20 FPC 264, 270.

For these reasons, the Examiner concludes that it is improper to require Michigan Wisconsin to set out in its tariff a statement of long-lateral "extension policy."

The Commission said in *American Louisiana Pipe Line Co. and Michigan Wisconsin Pipe Line Co.*, 29 FPC 932, 935–36, "sales to affiliates present possibilities of abuse and should be scrutinized with care." The record herein demonstrates the soundness of these observations. Michigan Wisconsin has been shown to be guilty of abuse in the construction of short laterals for the sale of gas to its affiliate Milwaukee Gas. Furthermore, a possible abuse in the proposed construction of a long lateral to serve the same affiliate was prevented by Commis-

sion action. Great vigilance should be exercised in examining into and passing upon this respondent's extension projects, and in seeing to it that the Commission's mandates respecting such projects are complied with. But the means of guarding against abuse, and achieving nondiscriminatory treatment of customers, in the construction of extensions, does not lie in tariff provisions.

FINDINGS AND CONCLUSIONS

Upon consideration of the evidence adduced and the briefs of counsel, it is further found and concluded that:

(1) The Iowa-Missouri group, proponents of the proposed zones and zone rates, have failed to sustain the burden upon them of proving that Michigan Wisconsin's present rates are unduly preferential or unduly discriminatory.

(2) The evidence affirmatively establishes that Michigan Wisconsin's present rates are not unduly preferential or unduly discriminatory, and that system-wide rates should be continued.

(3) Zones and zone rates should not be established on the Michigan Wisconsin system.

(4) The 10-cent formula should not be made a part of Michigan Wisconsin's tariff.

(5) No other lateral or extension policies should be set forth in Michigan Wisconsin's tariff.

ORDER

WHEREFORE, *it is ordered*, subject to review by the Commission on appeal, or review by the Commission on its own motion, as provided in its Rules of Practice and Procedure, that:

(A) The proposal and request of the Iowa-Missouri group that rate zones and zone rates be established on the Michigan Wisconsin system be and the same are hereby disallowed and denied.

(B) The proposal and request of Michigan Gas and Electric Co. and the Staff that a statement embodying the 10-cent formula and practices in connection therewith be made a part of Michigan Wisconsin's tariff be and the same are hereby disallowed and denied.

(C) The proposal and request of Michigan Gas and Electric Co. and the staff that a long-line extension policy of Michigan Wisconsin be made a part of Michigan Wisconsin's tariff be and the same are hereby disallowed and denied.

HOWELL PURDUE,
Presiding Examiner.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, CP64–270; SOUTHERN NATURAL GAS COMPANY, CP64–259, CP64–314; EAST TENNESSEE NATURAL GAS COMPANY, CP65–66; TENNESSEE GAS TRANSMISSION COMPANY, CP64–165; CITY OF BUFORD, GEORGIA, CP65–11, CP65–20; CITY OF SUGAR HILL, GEORGIA, CP65–10, CP65–19; CITY OF AUSTELL, GEORGIA, CP65–74

ORDER GRANTING REQUEST FOR SECOND TEMPORARY AUTHORIZATION

(Issued August 30, 1965)

By a series of orders, the last of which was issued on October 6, 1964, the matters presented by the above-designated docketed applications were consoli-

dated for formal hearing. In the main they consist of competitive proposals by Transcontinental Gas Pipe Line Corporation (Transco), Southern Natural Gas Company (Southern), and East Tennessee Natural Gas Company (East Tennessee) to construct facilities so as to meet the increased natural gas requirements of Chattanooga Gas Company (Chattanooga). East Tennessee is currently the sole supplier of Chattanooga since neither Transco nor Southern have any facilities into the Chattanooga area. The proceeding in these matters was concluded on April 13, 1965, and is now awaiting an Examiner's Initial Decision.*

Southern, in its application in Docket No. CP64-314, seeks authorization to install, construct, and operate (1) 94,870 compressor horsepower at new and existing stations and (2) approximately 195 miles of various-sized new pipeline and pipeline loops, and appurtenant facilities, all at an estimated cost of $28,377,920. These facilities will increase Southern's daily design delivery capacity by approximately 180,000 Mcf per day. Southern proposes to utilize the facilities so as to make additional sales of 146,165 Mcf per day to both new and existing customers. Of this amount Southern has allocated 24,770 to Atlanta Gas Light Company (Atlanta), 5,000 Mcf to The Water, Light and Sinking Fund Commission of Dalton, Georgia (Dalton), and 29,000 Mcf to Chattanooga. Although all three of the major applicants propose to serve the increased requirements of Chattanooga, only Southern and Transco are vying to supply the increased requirements of Atlanta and Dalton.

On February 23, 1965, in view of the virtual impossibility of the completion of the proceeding which would permit the timely issuance of permanent authorization to construct the facilities necessary to meet its existing customers' increased requirements for the coming heating season, Southern filed a request for temporary authorization to construct that portion of the facilities asked for in its application in Docket No. CP64-314, which it alleged are unassociated with its competitive project to serve Chattanooga. In our order of April 13, 1965, 33 FPC 729, granting the request for temporary authorization for the construction only of the specified facilities we stated, among other things, that under the given circumstances we did not deem a request of six months in which to undertake an orderly construction program and thereby avoid excess costs to be unreasonable. Southern, by its filing of July 9, 1965, now requests a temporary certificate to construct the proposed looping of its Rome Lateral in order to meet the 1965-1966 heating season increased firm peak day requirements of Atlanta and Dalton at the Rome delivery point, which are a subject of the competitive proceeding, together with the noncompetitive firm peak day requirements of the City of Adairsville. The instant proposal will increase the Rome line's existing daily delivery capacity of 68,331 Mcf by 6,080 Mcf. The total cost of the subject facilities is estimated at $2,277,282.

East Tennessee, the only party filing any opposition to the instant request, in essence reiterates the contentions set forth in its opposition to Southern's first request for temporary authorization. There, as here, East Tennessee argued that the proposed facilities to be constructed under the temporary authorization could be utilized to supply the competitive markets and thereby prejudice East Tennessee's application in the instant consolidated proceeding. However, as pointed out in our order of April 13, 1965, the only competitive market that East Tennessee is concerned with is in the Chattanooga area and Southern does not here propose to construct any facilities so as to extend Southern's system into that area.

In granting Southern's request for temporary authorization to construct approximately 49.2 miles of 14-inch OD loop along its existing Rome line

*See 35 FPC 917, 930.

extending from Southern's North line to Rome, Georgia, and a crossing of the Etowah River, we shall require, as similarly required in the grant of the first request for temporary authorization, that the costs associated with the construction of these facilities shall not be included in Southern's rate base in the event that permanent certification is not granted.

The Commission finds:

Based on the allegations of Southern for a temporary certificate of public convenience and necessity and the further matters discussed above, the request for construction only of the above-enumerated facilities should be granted.

The Commission orders:

(A) The application of Southern Natural Gas Company in Docket No. CP64–314 for a second temporary authorization for construction only of the limited facilities enumerated above, is granted.

(B) The grant of the instant temporary authorization is without prejudice to such final determination of the applications in the proceeding in Transcontinental Gas Pipe Line Corporation, *et al.*, Docket No. CP64–270, *et al.*, as the record may require.

(C) The temporary certificate issued herein and the rights granted hereunder are conditioned upon Southern's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(1) and (c)(4) of Section 157.20 of such Regulations. Should the Commission deny permanent certification of the facilities herein authorized to be constructed under temporary grant, all costs associated with the construction of said facilities shall not be included in Southern's rate base.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Carl E. Bagge.

BROWN-NEW HAMPSHIRE, INC., PROJECT NO. 2300

ORDER APPROVING REVISED PROJECT EXHIBIT DRAWING

(Issued August 31, 1965)

On May 5, 1965, Brown-New Hampshire, Inc., filed for Commission approval a revised Exhibit L drawing showing changes in the project structures of Shelbourne Project No. 2300 located on the Androscoggin River about 3 miles east of Gorham, New Hampshire.

The changes in the project structures were undertaken by the licensee as a necessary emergency measure due to damage of the dam as a result of heavy ice floes occurring on March 5, 1964. Reconstruction of the damaged portion of the dam was accomplished between May and July of 1964 after the licensee had informed the Commission of its intention to do so in compliance with Article 3 of its license. Our staff has inspected the reconstruction work and has advised that the reconstruction has been completed as shown on the revised Exhibit L drawing and is adequate.

The Corps of Engineers has approved the revised Exhibit L drawing pursuant to Section 4(e) of the Federal Power Act insofar as the interests of navigation are concerned.

The Commission finds:

Exhibit L–1, Revision 1 July 6, 1964 Plan View of Station & Dam F.P.C.–2300–8 conforms to the Commission's rules and regulations and should be

approved as part of the license for the project, and Exhibit L–1 Plan View of Station & Dam F.P.C.–2300–4, now part of the license and which has been superseded, should be eliminated from the license.

The Commission orders:

The revised Exhibit L drawing designated in the finding above is hereby approved as part of the license for Project No. 2300, and the Exhibit L drawing referred to in the same finding as being superseded is hereby eliminated from the license.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

MISSISSIPPI POWER COMPANY, DOCKET NO. E–7112

ORDER AMENDING ORDER TO SHOW CAUSE AND PROVIDING FOR HEARING

(Issued August 31, 1965)

On July 15, 1963, 30 FPC 198, the Commission issued an order directing the Mississippi Power Company (Mississippi Power), Gulfport, Mississippi, to show cause why a dual rate provision in its filed rate schedules for service to three cooperatively-owned wholesale electric customers is not unlawful within the meaning of Sections 205 and 206 of the Federal Power Act. The order does not question whether Mississippi Power's schedules of filed rates and charges for service to cooperatives are unjust, unreasonable and unlawful for reasons of rate level. Mississippi Power's answer to the show cause order was filed October 14, 1963. It defended the dual rate provision and raised the issue of Commission jurisdiction over Mississippi Power's sales to its wholesale rural electric cooperative customers.

By order issued September 5, 1963, permission to intervene in the proceeding was granted to Coast Electric Power Association, Dixie Electric Power Association, East Mississippi Electric Power Association, Pearl River Valley Electric Power Association, Singing River Electric Power Association and Southern Pine Electric Power Association (Intervenors).

Settlement conferences have been convened at the initiative of the Commission staff as contemplated by our order of July 15, 1963, attended by representatives of both Mississippi Power and Intervenors. To date no settlement agreement has been reached.

Since the Commission's show cause order was issued, several rate schedules for initial service to new wholesale delivery points have been accepted for filing which contain a dual rate provision identical to that questioned by the Commission's order. The designations of those rate schedules are as follows:

Customer	*Rate Schedule Designation*
Coast EPA	FPC No. 76
Do	FPC No. 77
Singing River EPA	FPC No. 78
Do	FPC No. 79
Southern Pines EPA	FPC No. 80
Pearl River Valley EPA	FPC No. 81
Do	FPC No. 82
East Mississippi EPA	FPC No. 84
Dixie EPA	FPC No. 85

It is appropriate for purposes of the Federal Power Act that these rate schedules, as well as any hereafter accepted for filing prior to termination of this pro-

ceeding which contain the dual rate provision in issue, be added to the list of rate schedules enumerated at *supra*, p. 199 of the Commission's Order to Show Cause issued July 15, 1963.

Under the circumstances, the Commission believes an opportunity for hearing on the questions raised by its Order to Show Cause will facilitate a resolution of matters raised in this docket.

The Commission further finds:

It is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 205, 206, 308 and 309 thereof, that a public hearing be held concerning the issues raised in the Commission's Order to Show Cause issued July 15, 1963, in this docket.

The Commission orders:

(A) The Commission's Order to Show Cause issued July 15, 1963, in this docket is hereby amended to include in the list of rate schedules appearing on *supra*, p. 199 of that Order Mississippi Power's Rate Schedule FPC Nos. 76, 77, 78, 79, 80, 81, 82, 84, 85, and any rate schedules hereafter accepted for filing prior to the termination of this proceeding which contain the dual rate provision cited in the Commission's Order to Show Cause.

(B) A public hearing shall be held concerning the lawfulness of the dual rate provision cited by the Commission's Order to Show Cause issued July 15, 1963.

(C) In accordance with Paragraph (B) above, a prehearing conference shall be held before a hearing examiner of the Commission on September 20, 1965, at 10:00 a.m. (EDST) in a hearing room of the Federal Power Commission, 441 G Street NW., Washington, D.C., for the purposes of narrowing issues and setting dates for submittal of testimony and cross-examination of witnesses.

(D) Notice of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.37) on or before September 16, 1965.

OPINION NO. 472

TRANSWESTERN PIPELINE COMPANY, G–20464, CP60–49, CP60–50, CP61–63, CP61–168, CP61–243, CP62–160; COLORADO INTERSTATE GAS COMPANY, CP63–344 (PHASE TWO); TRANSWESTERN PIPELINE COMPANY, CP64–104; ARKANSAS LOUISIANA GAS COMPANY, CP64–125, CP62–219; CITIES SERVICE GAS COMPANY, CP64–131; MARATHON OIL COMPANY (PLYMOUTH), CI61–169; CREE DRILLING CO., CI61–193; CONTINENTAL OIL COMPANY, CI61–375; PAN AMERICAN PETROLEUM CORPORATION, CI61–438; UNION OIL COMPANY OF CALIFORNIA, CI61–715; PETRO-ASSOCIATES, INC. (OP., ET AL.), CI61–936; SCHAFER OIL CORP. (NOW H&Y OIL COMPANY), CI61–1774; PHILLIPS PETROLEUM COMPANY, G–18201; A. G. HILL, CI61–497

OPINION AND ORDER MODIFYING AND ADOPTING INITIAL DECISION OF PRESIDING EXAMINER, AND PROVIDING FOR FURTHER HEARING

(Issued August 31, 1965)*

Syllabus

1. Proposals of Transwestern and Arkansas Louisiana to supply gas to Cities Service are decidedly superior to that of Colorado Interstate. PP. 663; 698.

*Initial decisions appear on PP. 668, 703. See order issued December 16, 1965 clarifying opinion, etc., 34 FPC 1474.

2. Ordinarily Commission would give no consideration to a defective application; it does so here for sole purpose of demonstrating that Cities Service's gas requirements are better satisfied by means other than those of Colorado Interstate. P. 663.
3. Since Commission is not confined to a determination of how Cities Service's requirements for the additional 200,000 Mcf daily during 1966 should be met [Company having immediate need for only 100,000 Mcf daily] it need not grant by default the only presently available application for this amount of gas. P. 664.
4. Risks to public in rejecting Colorado Interstate's proposal prior to final determination of where Cities Service will secure additional gas needed during 1966 are outweighed by risks that public will pay more than necessary for a long period of time if latter is forced to rely on Colorado Interstate for its gas supply. P. 664.
5. Since Colorado Interstate's application, after comparative evaluation, should be denied, it is unnecessary to determine legal effect of its lack of contract for sale of gas to Cities Service. PP. 664, 665.
6. Discussing denial of Arkansas Louisiana's application [without prejudice to further presentation of evidence respecting gas supply], Commission observes that policy of enforcing applicable requirements vigorously will result in greater efficiency, expedition, fairness and protection to the public. P. 665.
7. It is proper, for comparative purposes, to use the minimum Btu content included in pipeline contracts. P. 665.
8. Transwestern has violated the Natural Gas Act by engaging in unauthorized construction and operation of certain facilities involved here, but facts adduced fail to show that imposition of sanctions is warranted. P. 666.
9. If doubt exists whether contemplated activities are jurisdictional, pipelines should follow available procedures for determining whether authorization therefor should be obtained. P. 666.
10. In a proceeding under Section 7 of the Natural Gas Act, Commission *issues* certificates of public convenience and necessity; *denies* certificate; *authorizes* abandonment of facilities; *denies*, without prejudice, pipeline's application for certificate and *provides* for supplemental hearing.

J. Evans Attwell, James W. McCartney and *Raybourne Thompson* for Transwestern Pipeline Company.

James L. White, Martin L. Friedman, Michael J. Shea, Frank P. Saponaro, Jr., William R. Duff and *Robert R. McCracken* for Colorado Interstate Gas Company.

Robert Roberts, Jr., Gilbert L. Hetherwick, Bernard A. Foster, Jr., Donald B. Robertson and *Sherman S. Poland* for Arkansas Louisiana Gas Company.

Harry S. Littman, Jack Werner, Harold L. Talisman, Richard J. Connor, George J. Meiburger, Conrad C. Mount and *Claude H. Mullendore, Jr.* for Cities Service Gas Company.

Morton Taylor, R. Joseph Opperman and *Harold L. Kennedy* for Marathon Oil Company.

Bruce R. Merrill, Tom Burton and *Joseph C. Johnson* for Continental Oil Company.

J. P. Hammond, Clifford O. Stone and *Carroll L. Gilliam* for Pan American Petroleum Corporation.

George Bond for Union Oil Company of California.

William L. Cole, John Ormasa, Milford Springer, O. C. Sattinger, A. R. Robbins, John P. Egan, J. R. Elliott and *J. H. Kreft* for Pacific Lighting Gas Supply Company; Southern California Gas Company; and Southern Counties Gas Company of California.

William J. Grove for Oklahoma Illinois Gas Pipeline Company.

Jerry T. Duggan, Charles E. McGee and *James D. McKinney, Jr.* for The Gas Service Company.

E. A. Stansfield for Public Service Company of Colorado; Colorado Wyoming Gas Company; The Pueblo Gas & Fuel Company; and Cheyenne Light, Fuel & Power Company.

Charles C. McDugald and *Paul E. Goldstein* for Natural Gas Pipeline Company of America.

Charles S. Rhyne, Robert L. Winters, Edward D. Means, Jr. and *John Weston Miller* for Municipal Group for Opposing Increase in Natural Gas Rates.

Charles S. Rhyne, Edward D. Means, Jr., Leonard M. Campbell and *Max P. Zall* for City and County of Denver, Colorado.

Louis Johnson for City of Colorado Springs, Colorado.

Dean C. Mabry for City of Trinidad, Colorado.

Richard C. Byrd and *William L. Mitchell* for State of Kansas and Kansas State Corporation Commission.

Robert D. Youle for Midwest Industrial & Commercial Gas Users Association; and Sheffield Division, Armco Steel Corporation.

Albert J. Feigen for Ozark Transmission District, Inc.

Stanley S. Harris, Jeremiah C. Collins, C. Frank Reifsnyder and *Peter G. Powers* for El Paso Natural Gas Company.

Richard E. Tuttle, J. Calvin Simpson and *John P. Murphy* for Public Utilities Commission of State of California.

William M. Bennett and *Franklin G. Campbell* for California Public Utilities Commission.

Raybourne Thompson and *James W. McCartney* for Transwestern Pipeline Company and Trans-Cities Pipeline Company.

John F. Carr for the City of Springfield, Missouri, and Board of Public Utilities of Springfield, Missouri.

Franklin Campbell for California Public Utilities Commission and People of the State of California.

Richard C. Byrd, Alvin F. Grauerholz and *Harry G. Wiles* for Kansas State Corporation Commission.

William E. Hynan, Jr. and *John Mullally* for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

O'Connor, *Commissioner:* This is a certificate case, arising under Section 7(c) of the Natural Gas Act (Act), coming before us on exceptions to the initial decision of Presiding Examiner Max L. Kane, issued April 19, 1965, *infra*, p. 668. Since the parties' principal proposals are competitive, a comparative hearing was held in conformity with *Ashbacker Broadcasting Corp.* v. *F.C.C.*, 326 U.S. 327 (1945). Oral argument was held before the Commission on July 13, 1965. As appears more fully herein, we are adopting the Examiner's decision in most respects, and are relying on that decision for a detailed statement of the facts.

The principal question in this case requires us to determine the requirements of Cities Service Gas Company (Cities) for additional gas service and the best manner of meeting those needs.

Cities, in order to meet the increasing demands of its customers, has executed two 20 year contracts, one with Transwestern Pipeline Company (Transwestern) and the other with Arkansas Louisiana Gas Company (Ark La), both for 100,000 Mcf of gas per day, an aggregate of 200,000 Mcf of gas per day.[1] Transwestern

[1] During the first and second contract years, which are 1964 and 1965, Transwestern and Ark La each would sell 50,000 Mcf of gas per day.

would deliver its 100,000 Mcf to Cities at the points on the western end of Cities' existing main Oklahoma-Hugoton line (see attached map, *infra*, p. 669) by means of facilities proposed herein costing an estimated $1,275,700. Ark La proposes to deliver 100,000 Mcf a day at the opposite end of Cities' system through facilities which would cost an estimated $7,020,750. Such facilities include a 103 mile extension from Ark La's existing main line near Driggs, Arkansas, to the point of delivery to Cities at Jane, Missouri. To receive and transport gas proposed by the above dedicated sources, Cities proposes to construct facilities at an estimated cost of $6,320,600.

Colorado Interstate Gas Company's (CIG) competitive proposal involves the sale of 100,000 Mcf per day, beginning in 1965 and 200,000 Mcf per day beginning in 1966 by means of proposed new facilities costing an estimated $30,000,000. These facilities include a 275 mile line from CIG's Fourway compressor station in the Texas Panhandle roughly paralleling Cities existing Panhandle to Wichita mainline and by-passing Cities' Guymon line to a point on Cities system at Blackwell, Oklahoma.

Cities has filed no application for a certificate for facilities necessary to receive and transport the volumes CIG wishes to sell it; in fact, Cities has stated that it is unwilling to purchase such volumes because of objections to CIG's price, gas supply, location of facilities, and other aspects of its proposal.

This proceeding also involves additional issues which are treated in this opinion following consideration of the comparative issue.

Initially, the Examiner concluded that Cities has established a need for an additional 100,000 Mcf on an average day in 1965, 200,000 Mcf in 1966 and 1967, up to 286,000 Mcf in 1968, and increasing to 336,000 Mcf in 1970. He then considered whether the competing projects separately satisfy the requirements of public convenience and necessity with respect to markets, gas supply, facilities, financing, rates, and economic feasibility. He held that Transwestern's project for the sale of 100,000 Mcf of gas a day to Cities meets these requirements and should be granted, as should Cities' project for facilities to receive and transport such volumes of gas.

The Examiner also held that the Ark La project would meet these requirements, except that Ark La failed to adduce evidence showing that its gas supply is sufficient for both its present market and the proposed sale to Cities. Accordingly, the Examiner denied Ark La's project, but without prejudice to Ark La's making the further showing required with respect to gas supply. Ark La has stated in response that it desires to make such a further showing in the immediate future. Pending Ark La's future showing, the Examiner pointed out that Cities proposes to obtain the 100,000 Mcf a day anticipated from Ark La from temporary outside sources.

The Examiner would deny CIG's competing project for the sale of 200,000 Mcf a day to Cities. He held that CIG's project could have been rejected solely because CIG has no market, since CIG proposes to sell gas only to Cities, and Cities has stated that it cannot and will not accept CIG's proposal.

However, the Examiner went further and made a comparative evaluation of the Transwestern and Ark La projects with the CIG project, to determine which would better serve the public interest, on the evident expectation that Ark La could make the gas supply showing he required. On this basis, the Examiner held that the Transwestern and Ark La projects are superior to the CIG project, because Transwestern and Ark La: (1) have contracts with Cities establishing a market that will purchase their gas, while CIG has not; (2) their prices to Cities would be lower than CIG's price; (3) their prices have been sufficiently substantiated by cost data; (4) they would provide Cities with long-term supplies of gas, particularly Ark La's supplies from the new Arkoma basin, that are

more desirable to Cities than CIG's supply; (5) their deliveries at eastern and western points on Cities' system would enable the fuller utilization of certain existing facilities of Cities and provide gas at more convenient points for transportation by Cities to its customers; (6) their service to Cities would require a smaller investment than would CIG's service; (7) they would provide Cities with greater flexibility and reduced costs by wider ranges in daily deliveries of gas and more favorable make-up provisions than would CIG; and (8) their contract prices would provide Cities with greater rate stability than would CIG's price.

The Examiner further held that the Transwestern project alone is superior to the CIG project, on the basis of the considerations referred to above.

Staff and CIG except to the Examiner's decision, contending that the CIG project is superior and should be certificated. The other parties' exceptions take varying positions, generally in favor of the Transwestern or Ark La projects in whole, in part, or conditionally, as discussed more fully hereinbelow.[2]

THE COMMISSION'S DETERMINATIONS

A. *The Comparative Issue*

As indicated at the outset, we are in basic agreement with the Examiner's decision in this case. In summary, we conclude that Cities requires an additional long-term supply of 200,000 Mcf of gas on an average day during 1966 and 1967, of which 100,000 Mcf represents an immediate imperative need. In the circumstances of this case, we further conclude that the public convenience and necessity require us to: (1) certificate Transwestern to deliver 100,000 Mcf per day to Cities; and (2) to defer final action respecting the remaining 100,000 Mcf, relying on Cities' asserted ability to obtain such gas as it may require pending such final decision from outside temporary sources.

Crucial to our conclusion is our determination that the proposals of Transwestern and Ark La to supply 200,000 Mcf per day are decidedly superior to CIG's proposal; and secondly, that Transwestern can supply 100,000 Mcf per day on more advantageous terms than can CIG, and that the only immediate need of Cities is for 100,000 Mcf. With the few exceptions and clarifications discussed in this opinion, we adopt the Examiner's findings and conclusions on gas supply, markets, facilities and financing, economic feasibility, cost and cost allocation[3] incident to the instant applications, and his comparative evaluation of the applications. For the most part, the Examiner's decision adequately resolves the exceptions of the parties respecting these issues.

We recognize, as Staff and CIG argue, that Ark La has not submitted such evidence as to justify a grant of its application. While we would not ordinarily give consideration, comparative or not, to a defective application, we have done so here for the sole purpose of demonstrating that there are means of satisfying Cities' gas requirements which are preferable to those presented by CIG.

Viewed in this light, we reject the exceptions of Staff and CIG to the Examiner's result. In essence, Staff and CIG argue as follows: Cities has a need for an additional 200,000 Mcf per day. There are two proposals in this proceeding

[2] Exceptions were filed on May 19, 1965, by Staff, Ark La, Pacific Lighting Gas Supply Company, *et al.*, The Public Utilities Commission of the State of California, *et al.*, (California Commission), and the Municipal Group for Opposing Increase in Natural Gas Rates, *et al.*, and on May 20, 1965, by CIG. Replies to exceptions were subsequently filed by most of the above parties and also by The Gas Service Company and Transwestern.

[3] We emphasize that the cost allocation respecting Transwestern is adopted solely for the purposes of this case. As the Examiner points out, a definitive allocation of costs and a determination of "just and reasonable" rates may properly be deferred for a rate case under Section 4(e) or 5(a) of the Act.

to meet this need. One is CIG's application. The other is a combination of Ark La and Transwestern which proposes 100,000 Mcf each. Ark La's application cannot be granted because it failed to adduce evidence which would satisfy the minimum prerequisites of public convenience and necessity. Thus, there is only one proposal in this case—CIG's—which can satisfy Cities' need for 200,000 Mcf. To rely on the results of a further hearing regarding Ark La's proposal denies CIG's right to a comparative hearing in this case and could deprive the public of additional supplies of gas it needs if Ark La's further showing is not adequate.

While the reasoning of this argument may be logical, it stems from an incorrect premise. Specifically, since we are not confined in this proceeding to a determination of how Cities' requirements for 200,000 Mcf per day additional gas during 1966 should be met, we need not grant by default the only presently available application for this amount of gas. The immediate need is for 100,000 Mcf per day of gas and the record makes clear that this need can better be satisfied by a grant of the Transwestern application than by certification of CIG.

We are convinced that the risks to the public in rejecting CIG's proposal prior to a final determination of where Cities will secure the additional 100,000 Mcf per day of gas it will need during 1966 are outweighed by the risks that the public will pay more than is necessary for a long period of time if Cities is forced to rely upon CIG for its gas supply. There are two important factors supporting this conclusion. First, the nature of Cities' requirements for additional gas is less critical than, for example, the need to install capacity to meet the peak demands of firm customers. Here, Cities has estimated that it can sell 100,000 Mcf additionally on an average day in 1965 and 200,000 Mcf additionally in 1966 and 1967. These sales include both firm and interruptible. Of the latter group, several are to industrial customers which have an alternate source of fuel. Thus, we are not faced here with the prospect of depriving space-heating consumers of needed supplies of gas during the winter season. Second, the risk that Cities will have insufficient supplies of gas is minimized by other sources of supply available on at least a temporary basis. While these sources are not defined with precision in the record, the history of Cities' gas purchases gives promise that the claim is not an idle boast.[4] Of course, we expect Cities to immediately take such preliminary action as may be necessary to enable it to implement such temporary procurement measures as may become necessary.

This determination in no way deprives CIG of its right to a fair hearing. If it appeared that the CIG proposal were superior to the combined Transwestern/Ark La proposals (or any other possibility) we would balance the savings by granting Transwestern against the possible losses resulting from a failure to certificate the project which could supply the larger amount. In that situation, we would not permit the defective status of Ark La's application to deprive CIG of its right to full comparative consideration or to a grant of its application. However, we do not find CIG superior, and, as the status of Ark La's application could not have prejudiced CIG's proposal, this factor cannot be allowed to disqualify Transwestern.

There are five aspects of the comparative issue which require further comment. First, the Examiner found that CIG failed to sustain its burden of establishing that its proposal is either practical or economical, principally be-

[4] We take judicial notice of the fact that since the record has closed, Cities has filed data showing that it has attached uncommitted new reserves to its system capable of providing an additional 25,000 Mcf to 35,000 Mcf per day, pursuant to its budget certificate in CP65–166. We also note that CIG has recently indicated, by way of application for temporary authority that, with a minimal amount of construction, it could provide an additional 50,000 Mcf per day to Cities as it has in the past (Docket No. CP61–72).

cause it had no contract with Cities. As stated above, we evaluated each of the proposals before us and concluded, on a comparative basis, that CIG's application should be denied. In the light of this analysis, it is unnecessary to determine the legal effect of CIG's lack of a contract for the sale of gas included in its proposal.

Second, the Examiner denied Ark La's application without prejudice to the applicant's presentation of further evidence. His decision is ambiguous with respect to the scope of the proceeding at which such evidence would be adduced.

We completely agree with the Examiner's denial of Ark La's application and his reasons for so doing. In addition, we note that competitive proceedings such as the present one are becoming increasingly common, and decision between the competing applicants increasingly difficult, as pipelines vie for the markets that remain. In such circumstances, we are convinced that a Commission policy of enforcing the applicable requirements rigorously will result in greater efficiency, expedition, fairness and protection to the public. The proposition that firm adherence to principle is generally best in the long run is more than mere rhetoric. Experience shows that although the denial of defective proposals may initially seem non-productive and wasteful, such action generally results in new applications for projects from which the defects have been eliminated in a form which permits intelligent consideration.

The hearing which we establish herein to reconsider Ark La's application (or any amendment thereto) is not to be limited to that applicant's presentation. To the contrary, any party, including CIG and the Kansas State Corporation Commission, has a right to advance any proposal deemed most appropriate for satisfying Cities' remaining gas requirements.

The third concerns the Btu question. Transwestern and Ark La propose the delivery of gas having a Btu content of 1103 and 992, respectively. However, their contracts require a Btu content of only 1012 and 975, respectively. The comparable figures with respect to CIG are 980 and 963, respectively. The Examiner compared the applications using both sets of Btu figures and did not specify that Btu content relied upon. In our opinion, it is proper to use for comparative purposes the minimum Btu content included in the contracts. It is only gas of that quality which the suppliers are obliged to deliver, and to which Cities has a right to receive. While the current situation may justify more optimistic expectations, it would be a simple matter for Transwestern, CIG and Ark La to process the gas down to the minimum levels established by contract. Using the proposed contract rates, the 100 percent load factor cost at Cities' Graham and Saginaw stations per million Btu is 25.4 cents for CIG, 22.66 cents for Transwestern and 24.32 cents for Ark La.[5]

Fourth, the Examiner found that the unit cost of gas under Ark La's proposal was approximately 1.0 cent less than the rate it proposed to Cities, but did not consider whether any adjustment of Ark La's rate was necessary. Since we are not approving Ark La's application, it is unnecessary to resolve this question. We merely do not want our determination here interpreted as a decision on this issue.

Fifth, although the Kansas State Corporation Commission filed no exceptions to the Examiner's decision, at the oral argument it took the position that Cities should obtain the gas it proposes to buy from Transwestern, from producers in the Kansas-Hugoton Field to alleviate an under-production situation there. The record shows that Cities presently has substantial reserves in the Kansas-Hugoton Field which Cities is, and has been, underproducing. Unfortunately, the record is not equally clear concerning the deliverability of

[5] See Examiner's decision, *infra*, p. 693.

these reserves. Moreover, a series of recent applications request Commission authorization for sales and for abandonment of reserves dedicated to Cities in this area.[6] For these reasons, and considering Cities' imperative need for an additional supply of 100,000 Mcf of gas per day, we conclude that the public interest requires the certification of Transwestern's application herein. In the remanded hearing provided by our order, we anticipate that the parties will fully explore the possibility of supplying Cities' remaining gas requirements from this source.

B. *Other Issues*

The Examiner was correct in his holding that Transwestern has violated the Act by engaging in the unauthorized construction and operation of certain facilities involved in various dockets consolidated herewith, but not directly involved in a consideration of the competing projects. Staff correctly points out that such violations also included the unauthorized transportation of natural gas in interstate commerce. We agree with the Examiner's rejection of Staff's contention that Transwestern conclusively lacked the ability to have knowingly violated the Act. However, both the Examiner and Staff agree that the facts adduced fail to show that the imposition of sanctions is warranted.

Notwithstanding this conclusion, we reiterate the Examiner's admonition that if doubt exists whether contemplated activities are jurisdictional, Transwestern (and other pipelines) should follow the procedures available for determining whether Commission authorization therefor should be obtained, and the Examiner's warning that future unauthorized activities may result in the imposition of sanctions against Transwestern.

The Examiner would grant certain non-competitive authorizations involving the abandonment of certain obsolete facilities of CIG between Colorado Springs and Denver, and the construction and operation of replacement and other facilities to complete CIG's Rocky Mountain expansion program. He also would grant the producer applications herein for the sale of gas to Transwestern, subject to the condition that the initial rate not exceed the applicable ceiling prescribed by the Commission's Statement of General Policy No. 61–1. No party has excepted to these conclusions and we agree with the Examiner's disposition of these issues.

In addition, the Examiner would deny Ark La's application in Docket No. CP62–219 for the same reasons that he denied its application in Docket No. CP64–125. We agree with this determination of the Examiner and shall adopt his decision on this issue.

Numerous exceptions not mentioned above were advanced by various parties. These include the exceptions of Pacific Lighting, the Municipal Group for Opposing Increase in Natural Gas Rates, *et al.*, a group of various Kansas and Missouri towns, including Springfield, Missouri. We have considered these exceptions but have concluded that they are without merit and do not require any changes in the Examiner's decision. Therefore, such exceptions should be denied.

The Commission further finds:

Except as herein modified, the Examiner's decision should be adopted by the Commission as its decision in this case; and except as herein granted, the exceptions to the Examiner's decision should be denied.

---

[6] Cities Service Gas Company, Docket No. CP65–140, El Paso Natural Gas Company, Docket No. CP65–384, Northern Natural Gas Company, CP65–389, Ashland Oil & Refining Company (Operator), *et al.*, G–3912, Sinclair Oil & Gas Company (Operator), *et al.*, CI65–1267, CI65–1271.

The Commission orders:

(A) Certificates of public convenience and necessity are issued to Cities in Docket No. CP64–131 and to Transwestern in Docket No. CP64–104 authorizing the sale of up to 100,000 Mcf per day of natural gas in interstate commerce for resale, together with the construction and operation of the facilities necessary therefore, as proposed in their respective applications.

(B) The certificate issued to Transwestern in Docket No. CP64–104 is subject to the following conditions:

(1) If there are any deficiencies in Transwestern's revenues during the first six years of operation under the Cities' contract (other than deficiencies resulting from increases in the cost of purchased gas), no such deficiencies will be taken into account in computing Transwestern's cost of service to Pacific Lighting Gas Supply Company, nor shall any such deficiencies be used to support increased rates in any rate increase application by Transwestern directed to Pacific Lighting Gas Supply Company.

(2) Transwestern shall, within 45 days of the date of issuance of this opinion, file its 20-cent contract price as a two-part rate reflecting demand and commodity charges acceptable to the Commission.

(C) Colorado Interstate's application for authorization to abandon its Colorado Springs to Denver 20-inch line and to construct and operate a replacement therefor, and to construct and operate additional compressor facilities required to complete its Rocky Mountain expansion program, as proposed in its application herein, is granted. In all other respects the application by Colorado Interstate in Docket No. CP63–344 (Phase Two) is denied.

(D) The applications of Ark La in Docket Nos. CP62–219 and CP64–125 are denied, without prejudice, however, to the applicant's presentation of further evidence to show a gas supply adequate to meet its present overall Ark-La-Tex system market requirements in addition to the requirements of the proposed sale to Cities.

(E) Pursuant to the authority conferred upon the Federal Power Commission by the Natural Gas Act, particularly Sections 7 and 15 thereof, the Commission's Rules of Practice and Procedure, and the Regulations under the Natural Gas Act (18 CFR, Chapter I), a supplemental hearing shall be held in this proceeding at which Ark La shall be afforded opportunity to show that its gas supply is adequate in reserves and deliverability, to meet the requirements of its Ark-La-Tex customers in addition to the Cities sale, and to consider any other proposal designed to meet Cities' need for additional gas service, as prescribed by the following:

(1) Notices or petitions to intervene in the Ark La application to serve Cities Service may be filed with the Federal Power Commission, Washington, D.C., 20426 in accordance with the Commission's Rules of Practice and Procedure on or before September 24, 1965.

(2) Applications to be consolidated in the remanded proceeding must be filed with the Federal Power Commission on or before October 11, 1965; and notices for petitions to intervene in such applications may be filed with the Commission on or before October 21, 1965.

(3) Presiding Examiner Max L. Kane, or any other officer or officers of the Commission designated by the Chief Examiner for that purpose (see delegation of authority, 27 F.R. 4276, etc.) shall establish the procedures to be followed in the remanded proceeding, including the setting of dates for a prehearing conference or hearing as early as may be appropriate after October 11, 1965.

(F) Certificates of public convenience and necessity are hereby issued for the facilities installed and operated by Transwestern for the transportation of nat-

ural gas in interstate commerce in Docket Nos. G–20464, CP60–49, CP61–63, CP61–243 and CP62–160.

(G) Certificates of public convenience and necessity are hereby granted to Transwestern in the applications as amended in Docket Nos. CP60–50 and CP61–168.

(H) Certificates of public convenience and necessity are hereby issued to the producer applicants in Docket Nos. CI61–169; CI61–193; CI61–375; CI61–438; CI61–715; CI61–936; CI61–1774; CI61–497 and G–18201, subject to the condition, however, that the total initial price including all reimbursements and charges shall not exceed 17 cents per Mcf at 14.65 psia, from the date of issuance of the certificate until such price may be lawfully changed in the manner provided by the Natural Gas Act.

(I) The Presiding Examiner's initial decision issued in this case on April 19, 1965, is modified as herein set forth and, as so modified, is adopted as the decision of the Commission as of the date of issuance of this opinion and order.

(J) Except to the extent herein granted, the exceptions filed to the Examiner's decision are denied.

INITIAL DECISION
OF THE PRESIDING EXAMINER UPON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 19, 1965)

KANE, *Presiding Examiner:* This consolidated comparative proceeding involves principally competing applications seeking Federal Power Commission authorization and approval, pursuant to Sections 7(c) and 7(e) of the Natural Gas Act (Act), of an integrated transaction involving the purchase, sale and transportation in interstate commerce of natural gas and the installation of facilities required in connection therewith. The proposed purchaser, Cities Service Gas Company (Cities), in Docket No. CP64–131 seeks authorization to receive and transport to its markets additional volumes of natural gas allegedly required to meet its increased market demands. It proposes to purchase such additional volumes of gas totalling 200,000 Mcf per day[1] by 1966 from, and has for such purpose executed contracts with, Transwestern Pipeline Company (Transwestern) and Arkansas Louisiana Gas Company (Arkla).[2] To enable it to receive, transport and utilize the additional volumes of natural gas sought herein, Cities proposes and seeks authorization to construct the following facilities in a two-stage program estimated to cost a total of $6,320,600.00: (1) Interconnections between Transwestern's facilities (existing and proposed) and Cities' 26-inch Oklahoma-Hugoton pipeline in Harper and Beaver Counties, Oklahoma; (2) 14,000 horsepower of new and additional compressor facilities on its Oklahoma-Hugoton 26-inch system; and (3) thirty-six miles of 20-inch pipeline extending

[1] Cities has asserted in its brief that if it should be determined that authorization for both the Arkla and Transwestern proposals be not forthcoming as set forth in their respective applications, it is Cities' position that the public interest would be best served by its acceptance of 100,000 Mcf per day from either Arkla or Transwestern.

[2] The 100,000 Mcf per day proposed to be delivered by Transwestern into Cities' 26-inch Oklahoma-Hugoton line would be transported by Cities to its Grabham compressor station. The proposed 100,000 Mcf per day proposed to be delivered by Arkla would be delivered into Cities' proposed facilities and transported to its Saginaw compressor station in the Joplin-Springfield market area. The CIG deliveries referred to *infra*, it is proposed, will be made to Cities at Blackwell, Oklahoma, and Cities would be required to install additional facilities to transport such volumes to its Grabham and Saginaw stations. While contracts were entered into by Cities with Arkla and Transwestern for the purchase of the additional volumes of gas no contract could be negotiated with and none has been entered into with CIG.

PRINCIPAL FACILITIES INVOLVED IN TRANSWESTERN PIPELINE COMPANY, ET AL.
DOCKET NOS. G-20464, ET AL.

from its Saginaw compressor station in Newton County, Missouri, to Jane, Missouri, the proposed point of connection with Arkla's proposed 20-inch pipeline.

Transwestern in Docket No. CP64–104 seeks authorization to sell to Cities at a uniform price of 20 cents per Mcf (14.73 psia) 50,000 Mcf per day until December 31, 1965, increasing the amount to 100,000 Mcf per day in 1966, and for the term of the contract thereafter. In order to accomplish the sale and delivery of these volumes Transwestern requests authorization (1) to construct a metering station at the point of intersection of its existing 10-inch Dobie Springs' lateral and Cities' 26-inch Oklahoma-Hugoton line in Harper County, Oklahoma; (2) to construct a 10.8-mile extension of its existing 12-inch Laverne line in Beaver County, Oklahoma, to a second proposed point of interconnection with Cities' Oklahoma-Hugoton line; and (3) to add 1,000 compression horsepower in Beaver County, Oklahoma, and a dew-point control plant at the compressor station site. The total estimated cost for these proposed facilities is $1,275,700.00.

Arkla's proposal to accomplish the proposed sale and delivery of its portion of the additional volumes to Cities is contained in its request for authorization in Docket No. CP64–125 wherein it seeks authorization (1) to sell and deliver to Cities 50,000 Mcf per day in 1964 and 1965 and 100,000 Mcf per day for the following 18 years at a price of 22.5 cents per Mcf,[3] and (2) to construct at an estimated cost of $7,300,000 a new 103-mile 20-inch transmission line from a point near Driggs, Arkansas, to a point of connection with Cities' proposed new line at Jane, Missouri.

Arkla, in these proceedings, also seeks authority, by amendment to its certificate previously issued in Docket No. CP62–219, to enlarge and extend the facilities authorized in that docket in order to increase the size and capacity of its Arkoma line. The enlargement and extension of the facilities estimated to cost approximately $7,000,000 involves the construction of additional field facilities in the Arkoma Basin area of Oklahoma and Arkansas; 4,000 additional compressor horsepower at the Dunn Station, Driggs, Arkansas; and a new 2,000 horsepower compressor station near Wilburton, Oklahoma. On January 22, 1964, temporary authority was issued to Arkla for certain minor additional field facilities requested in this amended application.

Arkla requests certificate authorization to construct and operate these additional facilities irrespective of the ultimate disposition of its application for authorization of the sale to Cities in Docket No. CP64–125 on the ground that they are essential in order to enable it to transport gas from its expanding reserves in the Arkoma Basin to its existing Ark-La-Tex system. The Staff, however, in effect, opposes the granting of the amended certificate, taking the position that the sole market showing presented by Arkla in these proceedings is its contract for the proposed sale to Cities and that absent certification in Docket No. CP64–125, Arkla's application in the amended certificate in Docket No. CP62–219 should be denied until it is supplemented with a deliverability and market showing justifying the requested increased capacity of its Arkoma line as being in the public interest.[4]

CIG, in its competitive application, as amended, filed in Docket No. CP63–344 (Phase Two) proposes to sell to Cities the total volumes of natural gas sought by Cities herein, to wit, 100,000 Mcf daily in 1965 and 200,000 Mcf daily beginning in 1966 and for the remainder of the 20-year period thereafter, at the proposed

[3] At a pretrial conference Arkla announced it had reduced the contract price of 22.75 cents, as reflected in Arkla's application in this proceeding, to 22.5 cents per Mcf because of certain changes made in the Internal Revenue Code.

[4] Staff also asserts that the absence of a system-wide showing of Arkla's markets renders impossible its evaluation of the merits of the amended application.

price of 22.5 cents per Mcf at 14.65 psia. The facilities required to effectuate the sale to Cities, for which authority is sought herein costing in excess of $34,000,000 consist of the following: (1) 275 miles of 24-inch pipe from its existing Fourway compressor station on the southern terminus of its existing main line to a point of connection on Cities' line at Blackwell, Oklahoma, together with the construction of a sales meter station at that point; (2) increase of the installed horsepower at its Fourway compressor station by 16,480 horsepower; (3) addition of 1,320 horsepower at its Mocane station and 500 horsepower at its Rawlins' station; construction of a new 4,500 horsepower compressor station at Arlington on its Wyoming line; and (5) construction of a new 3,960 horsepower compressor station at Woodward on its Oklahoma line.

In addition to the foregoing, CIG seeks authorization to construct facilities to meet the 1966–1967 heating season requirements of its existing Rocky Mountain area customers and to retire allegedly obsolete, operatively dangerous, facilities on its Bivins-Denver line. In connection with such authorization CIG proposes to construct 58.9 miles of high pressure line and to retire the 56.4 miles of 20-inch line between Colorado Springs and Denver, as well as 3,200 horsepower at the McClintock station.[5]

Procedural Developments

The protracted proceedings herein fall into two stages, an initial hearing and a reopened hearing caused by complete changes in the proposed projects. Because of the many twists and turns that these proceedings took prior to the conclusion of the hearing, it is deemed advisable to outline the procedural developments herein in order to understand the reason for the delay between the initial applications and the final decision herein. Thus, on December 18, 1959, Transwestern filed its application in Docket No. G–20464, requesting authorization to construct and operate certain field facilities. A temporary certificate was issued on July 8, 1960, after the application has been amended and supplemented. Thereafter hearings were held before another Presiding Examiner on July 25, 1961, and on September 6 and 7, 1961. The Presiding Examiner issued his initial decision on February 27, 1962, *infra* p. 703, not only recommending denial of the application for permanent authorization but also finding that Transwestern's unauthorized construction and use of certain facilities constituted a willful violation of the Natural Gas Act. By order issued April 30, 1962, 27 FPC 893, the Commission granted Transwestern's request to reopen the proceedings for the purpose of taking additional evidence with respect to increased markets and to afford Transwestern an opportunity to explain its alleged violation of the Natural Gas Act as found by the Examiner. During that interim period, Transwestern filed its applications in Docket Nos. CP60–49, CP60–50, CP61–63, CP61–243, CP61–168 and CP62–160. These dockets involved requests for authorization for facilities constructed pursuant to temporary certificates of public convenience and necessity issued during and shortly after the initial construction of the Transwestern pipeline system. By orders issued December 10, 1962, and March 3, 1964, these miscellaneous applications were finally consolidated for hearing with the various applications in the instant proceedings after being initially consolidated with Transwestern's application in Docket No. G–20464 and with the applications of Transwestern, Trans-Cities Pipeline Company, and Cities, filed in Docket Nos. CP63–16, CP63–15, and CP63–17, covering the proposed "Trans-Cities" project.

[5] CIG proposed construction of facilities to meet the market requirements of its Rocky Mountain customers in the year 1964–65 was deleted from its proposal in Docket No. CP63–344 in accordance with the amendment filed by CIG and approved by the Examiner.

The latter dockets comprising the so-called "Trans-Cities" project involved requests for authorization to install facilities required by Transwestern for the sale and delivery to Cities of up to 200,000 Mcf of gas per day at Blackwell, Oklahoma, through the newly formed Trans-Cities Company. By notice issued February 7, 1963, hearings on the consolidated Transwestern, Trans-Cities, and Cities applications were scheduled to begin on March 4, 1963. By order issued March 1, 1963, the Commission permitted intervention by all the parties filing except El Paso, CIG, Western Natural, and Gulf Pacific. Hearings were convened pursuant to the Commission's order on March 4, 1963, and continued with intermittent short recesses through May 16, 1963. In the interim, by order issued April 26, 1963, the Commission granted the motions for rehearing by CIG and El Paso and permitted their intervention and participation in the then pending consolidated proceedings. During the course of the hearing, motions were filed by the Municipal Group, The City of Springfield and the Board of Public Utilities of Springfield, and El Paso to consolidate the G–20464, *et al.* applications with an application filed by Transwestern in Docket No. CP63–204. In the latter docket, Transwestern had requested authorization to install additional facilities and to increase deliveries to its California customer, Pacific Lighting Gas Supply Company. The Commission denied the motions for consolidation by order issued June 11, 1963, 29 FPC 1159.

On June 14, 1963, CIG filed its application in Docket No. CP63–344 and requested consolidation of its applications in Docket Nos. CP63–206 and CP63–344 (Phase Two) and the related producer applications with the applications previously consolidated in Docket No. G–20464, *et al.* On July 30, 1963, the Commission consolidated the Trans-Cities project and the Transwestern applications in Docket No. G–20464, *et al.* with the CIG application in Docket No. CP63–344 (Phase Two). CIG's application involving the Wind River project in Docket No. CP63–206 and the related producer applications were also consolidated as were the Western Transmission project applications in Docket Nos. CP63–329 and CI63–1460. Hearings on these consolidated applications and projects were then scheduled for September 9, 1963. However, the Commission, by notice issued September 6, 1963, granted the motions of Transwestern, Trans-Cities, and Cities for indefinite postponement of the said scheduled hearing. Thereafter, on September 9, 1963, the Commission issued its order granting severance of the Western Transmission project applications in Docket Nos. CP63–329 and CI63–1460 and set those applications for separate hearing. On October 24, 1963, the Commission also severed the producer applications involved in the Wind River project.

Notices of withdrawal of the Trans-Cities project applications were thereafter filed by Transwestern and Trans-Cities in Docket Nos. CP63–16 and CP63–15 on November 4, 1963, and in Docket No. CP63–17 by Cities on November 1, 1963. A new application was filed by Transwestern in Docket No. CP64–104 on November 4, 1963. Cities' application in Docket No. CP64–131 was filed December 9, 1963, and on January 2, 1964, the Commission authorized withdrawal of the Trans-Cities' project applications noting that Transwestern and Cities had developed an alternate proposal which was the subject of the applications filed in Docket Nos. CP64–104 and CP64–131. Thereafter, the Commission issued its March 3, 1964 order consolidating the applications of Transwestern, Arkla, and Cities with the miscellaneous Transwestern applications in Docket No. G–20464, *et al.* and the applications of CIG in Docket Nos. CP63–206 [6] and CP63–344 (Phase Two).

On March 4, 1964, the Commission granted certificates of public convenience and necessity to certain producers whose applications had been consolidated in the

[6] On April 13, 1964, CIG filed a notice of withdrawal of its application in this docket.

matter of E. E. Fogelson, *et al.*, Docket No. G–19013, *et al.*, 31 FPC 476. The applications of other producers were severed from those proceedings and thereafter consolidated with the G–20464, *et al.* applications. These applications involved sales being made to Transwestern under temporary certificates in Docket Nos. CI61–169, CI61–193, CI61–375, CI61–438, CI61–715, CI61–936, and CI61–1774. On application for rehearing, the Commission also consolidated additional producer applications in Docket Nos. G–18201 and CI61–497.

Petitions to intervene in the finally consolidated proceeding were filed by the Gas Service Company; the Midwest Industrial Commercial Gas Users Association, and Sheffield Division of Armco Steel Corporation (Midwest); the Municipal Group; The City of Springfield, and the Board of Public Utilities of Springfield, Missouri; CIG; Pacific Lighting Gas Supply Company; El Paso Natural Gas Company; Transwestern; The Public Service Company of Colorado; Colorado Wyoming Gas Company; The Pueblo Gas and Fuel Company, and Cheyenne Light, Fuel and Power Company; The City of Colorado Springs, Colorado; The City and County of Denver, Colorado; Pan American Petroleum Company; Natural Gas Pipeline Company of America; Arkla; Oklahoma Illinois Gas Pipeline Company; The State Corporation Commission of the State of Kansas; The Public Utilities Commission of the State of Colorado; The Missouri Public Service Commission; The City of Trinidad, Colorado; and the Public Utilities Commission of the State of California. By Commission order issued April 29, 1964, all petitions to intervene except that of Oklahoma Illinois were granted. A prehearing conference was held on March 23, 1964, and the hearings in these proceedings began on May 5, 1964, and were concluded on July 30, 1964. Briefing was completed and the case fully submitted on November 6, 1964. On December 18, 1964, oral argument was held before the Examiner pursuant to the applicants' request.

The principal issue involved and to be resolved in these proceedings is which, if any, of the authorizations sought by the above-described applicants meet the requirements of the statute and are otherwise required by the public convenience and necessity under Section 7(e) of the Act. As a corollary to this issue it must be determined on a long-term basis and in conformity with the requirements of Section 7(e) which of the applicants will best meet the immediate and future natural gas requirements of Cities and its customers in this proceeding and which would best serve and protect the public interest. See *American Louisiana Pipe Line Company*, G–2306, *et al.*, 20 FPC 575, 579, 581.

Another issue, though unrelated to the primary issue, which must also be resolved in this proceeding, arises out of the prior proceedings in Docket No. G–20464 wherein the Presiding Examiner in his decision of February 27, 1962, found that Transwestern's unauthorized construction and operation of approximately 99 miles of pipeline attaching 79 wells in 11 fields constituted a violation of the Act within the purview of Section 21(a) of the Act, 15 U.S.C. 717. Pursuant to the Commission's order of April 30, 1962, *supra*, granting Transwestern's petition to reopen the said proceedings, Transwestern was given the opportunity to explain the construction of the field facilities not covered by the temporary certificate issued in that docket and to present evidence to show that there had been no violation of Section 7(c) of the Act.

The applications by Transwestern and Arkla, herein, on the one hand, and the competing application of CIG on the other, to furnish the gas service sought by Cities in its application in Docket No. CP64–131 in the instant proceedings are mutually exclusive. The Commission in such instance is necessarily called upon to rule in favor of one and against the other. *Kentucky Natural Gas Corporation* v. *F.P.C.*, 159 F. 2d 215, 218 (CA6–1947). Since the grant of one of the applications without a hearing to all applicants would result inevitably in the

deprivation of the right of the losing party of the opportunity which Congress chose to give him (*Midwestern Gas Transmission Co.* v. *F.P.C.*, 258 F. 2d 660, CADC–1958), the law requires as a matter of fairness that all parties be afforded a comparative hearing on the mutually exclusive aspects of their applications. *Ashbacker Radio Corp.* v. *F.P.C.*, 326 U.S. 327, 333.

Accordingly, a full comparative hearing was held herein at which all parties were given equal opportunity to present evidence and to cross-examine the witnesses of the other party. It must be kept in mind, in this connection, however, that in the event the evidence or the circumstances indicate that one of the parties has not met the required minimal requirements of public convenience and necessity, obviously such party's failure would render unnecessary further consideration of the kind necessary in a comparative hearing, since whatever the outcome of the comparison it would be necessary to reach the same conclusion. Consequently, elimination from consideration of those projects that fail to meet the minimal requirements of public convenience and necessity is sanctioned. Furthermore, in such event, those projects, so failing, need not be given a comparative evaluation with any other project and neither must a project that does meet the requirements be compared with those that do not. See *American Louisiana Pipe Line Company*, 20 FPC 575, 586.

The Staff, taking the position that Arkla's presentation "makes it impossible to realistically determine on what basis, if any, a certificate of public convenience and necessity could be issued to it", excludes Arkla's application from any comparative evaluation. There is ample support for the action taken by the Staff, and it is under no obligation to provide any missing link to a party's presentation. However, it may be that in this difficult and somewhat novel situation in which the Commission is attempting to exercise its responsibilities for the regulation of pipelines and the determination of the respective merits of competing applications, the interests of the industry, the consumer, and the general public require something more than the bare and frustrating assertion that an applicant, having the burden of proof, has in some manner failed adequately to sustain that burden, thus disqualifying it from comparative evaluation. Moreover, it may be borne in mind that in order to discharge the function of the Commission adequately it is not enough merely to deny projects that fall short of meeting a public need. We should also endeavor to mold and shape the defective proposals into a form that would satisfy needs of the public in conformity with the requirements of law. *Cf. Midwestern Gas Transmission Co.* v. *F.P.C.*, 258 F. 2d 660, 667 (CADC–1958). In view of these considerations, a full comparative analysis of all the competing applications and supporting evidence has been made herein notwithstanding the finding that one or more may have initially satisfied the usual requirements of public convenience and necessity.

In considering the relative merits of the conflicting proposals herein, the Commission is empowered to consider the favorable factors contained in one proposal of more or controlling importance in determining which of the various applications is to be certificated. *Kentucky Natural Gas Corporation* v. *Federal Power Commission, supra.* The best approach, it appears, in resolving this question is to consider initially the proposals separately in the light of the minimal conventional requirements of public convenience and necessity considered in certificate applications, including adequacy of gas supply, facilities, markets, financing, rates and economic feasibility. *Cf. Kansas Pipeline and Gas Company*, 2 FPC 29.

The Cities Project

The evidence adduced at the hearing supports Cities' alleged needs for an additional gas supply necessary to fulfill its future estimated requirements on

a long-term basis. Its need for additional gas supplies, it is estimated, will increase from 100,000 Mcf on an average day in 1965 to 200,000 Mcf in 1966 and 1967 and up to 286,000 Mcf in 1968, increasing to 336,000 Mcf in 1970. Cities has estimated that its present reserves are insufficient to handle the increased market requirements of its total system resulting from the normal load growth of a market area comprising the northeastern portion of Oklahoma, central and eastern Kansas, western Missouri, and small areas in Texas and southern Nebraska. Clearly, there is more than an adequate market for the additional volumes sought by Cities in these proceedings. Its estimates and need for additional gas are significantly supported by its largest customer, The Gas Service Company, purchasing approximately 80 percent by volume of its total jurisdictional sales. While no substantial evidence was adduced contradicting or impugning Cities' evidence establishing the need for the additional volumes of gas sought in the instant proceedings, the intervener, Municipal Group for Opposing Increase in Natural Gas Rates, *et al.*, joined in to some extent by the intervener Kansas State Commission, sought to establish that Cities' requirements could be adequately satisfied by its contracting for only 100,000 Mcf per day. The interveners' analysis was not convincing enough to support a finding that Cities had failed to demonstrate its present need for the total amount of gas sought in these proceedings.[7]

On the basis of a complete system-wide showing of the gas reserves presently attached to its system, Cities has clearly established the need for the gas supplies which it seeks to obtain through its contracts with Transwestern and Arkla in the instant proceedings. In this connection it is well to note that CIG's proposal in its competitive application is to supply Cities' total asserted need of 200,000 Mcf daily beginning in 1966.

Pursuant to its agreement with Cities, Transwestern is to sell and deliver 50,000 Mcf daily during 1964 and 1965, increasing the amount to 100,000 Mcf daily in 1966 and thereafter for the remainder of the 20-year term from the date of first delivery. The price to Cities is 20 cents per Mcf,[8] firm for a period of six years except for changes to reflect increases or decreases in Transwestern's purchased gas costs.

Arkla's contract with Cities provides for the sale and delivery of an average 50,000 Mcf per day until January 1, 1966, and thereafter of 100,000 Mcf per day for the remainder of the 20-year term of the contract. During 1964 and 1965 Cities has the right to receive as little as 37,500 Mcf per day and as much as 66,500 Mcf on any particular day or days, and on and after January 1, 1966, the daily minimum would rise to 75,000 Mcf and the daily maximum to 133,000 Mcf. The sales price is a flat 22.5 cents per Mcf which price is firm for the life of the contract except for increases in the weighted average price per Mcf paid by Arkla for gas purchased in the Arkoma area.

CIG's proposal is to sell Cities 100,000 Mcf daily in 1964, 1965, and 200,000 Mcf per day commencing January 1, 1966. The initial price proposed by CIG is 22½ cents per Mcf at 14.65 psia.

It is evident that the contractual proposals of Transwestern and Arkla, on the one hand, and the competitive proposal by CIG on the other, if supported by their respective reserve and deliverability studies made in these proceedings would

[7] However, note Cities' qualification to the effect that in the event both the projects of Arkla and Transwestern were not certificated "that it will accept 100,000 Mcf from either Arkla or Transwestern and arrange for the other required volumes from outside temporary sources until the remaining application of Arkla or Transwestern is certificated, rather than accept the proposal of Colorado Interstate."

[8] Cities and Transwestern will accept a condition requiring a two-part rate providing for an average 20 cents per Mcf rate on a 100 percent load factor basis.

constitute a showing of an adequate gas supply to support the certificate authorization sought by Cities in these proceedings.

The two-stage construction program of the facilities proposed by Cities in its application designed to enable it to receive and transport to market volumes of gas proposed to be purchased from Arkla and Transwestern would entail total estimated expenditures of $6,320,600, $4,108,000 or approximately 65 percent would be expended immediately and $2,212,600 or approximately 35 percent would be expended during 1965 in the second stage in order to meet its 200,000 Mcf additional requirements in 1966. The adequacy of the design, and reasonable cost, of the proposed facilities were amply supported by the testimony and exhibits adduced by Cities. Such testimony was not contested by any party to the proceeding and stands uncontroverted. Accordingly, it is found that the design of the proposed facilities is adequate and the cost estimates reasonable.[9]

Neither the reasonableness nor the adequacy of Cities' plan of financing proposed in the instant proceeding was challenged by any of the parties. Cities' plan of financing contemplates that to the extent funds are required from outside sources to finance its over-all 1964 and 1965 construction expenditures, including the $6,320,600 for the facilities proposed herein, such funds will be obtained initially through unsecured bank loans with one or more of the banks with whom the company currently maintains its banking relations. The loans would extend over a 3-year term, approximately, and bear interest at the then existing rate which is currently 4½ percent. The estimated cost of obtaining the bank loans in 1964 is nominal, approximately $15,000, with an additional nominal amount for the 1965 borrowing. At maturity, the bank loans would be converted into permanent financing, probably first mortgage pipeline bonds which would contain provisions for retirement through operation of an annual sinking fund over a 20-year period. The exhibit and testimony setting forth the pertinent financial data relating to Cities clearly demonstrates that the company's financial condition is such that its financing requirements can be negotiated under satisfactory terms and conditions.

From the foregoing it is clearly apparent that Cities has satisfied the requirements of public convenience and necessity with respect to supply, markets, need for and function of the proposed facilities, adequacy and reasonable cost thereof, and financial and economic feasibility. However, as will more fully hereinafter appear, because of the decision with respect to Arkla, authorization herein will temporarily be conditioned, in accordance with Cities' qualification referred to above, to the contract volumes provided for in the Transwestern contracts and the facilities connected with the receipt and transportation therewith.

Transwestern Project—Gas Supply and Markets

In its application in Docket No. CP64–104 herein, Transwestern proposes certification of a project to serve Cities, a new customer. The proposed service would be in addition to its present and virtually exclusive service to Pacific Lighting.

Transwestern's market for the proposed sale and transportation of the additional volumes of gas is established by the executed gas sales agreement with Cities. Pursuant to this agreement, Transwestern will sell and deliver to Cities, on a firm basis at 20 cents per Mcf[10] (at 14.73 psia), 50,000 Mcf daily through 1965 and 100,000 Mcf daily thereafter for the remaining years of the 20-year term from the date of initial delivery. Cities' needs and ability to take these volumes of additional gas have been established. Transwestern's evidentiary

[9] In view of Cities' position that it could not accept the CIG proposal no presentation as to the adequacy of design or reasonableness of cost of the facilities necessary for the receipt of the CIG gas was made in these proceedings.

[10] See footnote 8, *supra*.

presentation also sustains its burden, in accordance with the criteria of *Kansas Pipeline and Gas Company, et al.*, 2 FPC 29 (1939), of establishing possession of a supply of gas adequate to meet the demands of the proposed project in addition to those which it is reasonable to assume will be made upon it by Pacific Lighting, and that such proposed additional service will in no way jeopardize or affect its existing service to that purchaser. *Northern Natural Gas Co.*, 30 FPC 859, 863. *Panhandle Eastern Pipe Line* v. *F.P.C.*, 232 F. 2d 467, 471 (CA3–1956), cert. denied, 352 U.S. 891.

Transwestern's showing herein, considered in light of a realistic existing average day sales of 410,000 Mcf to Pacific Lighting, reflects a gas supply and reserves sufficient to meet the combined peak day and annual requirements of its presently certificated sales as well as the increased requirements anticipated in the proposed sale to Cities for a period of at least 15 years (Staff brief, p. 9).[11] Transwestern's lines extend into production areas which are conceded to be currently productive as well as potentially productive supply areas. The principal sources of supply, namely the Anadarko and Permian Basin areas, are producing areas which are by no means fully explored or developed and will apparently be a source of new supplies for many years in the future. Discovered but uncommitted reserves in these areas will undoubtedly be available for purchase by Transwestern.

It has been urged in these proceedings that Transwestern must sustain the burden of proving not only a satisfactory gas deliverability life in connection with presently certificated sales in addition to those sought in the instant proceeding but also the proposed increased sales sought in other pending dockets. Not only would such a burden be an unconscionable one to impose upon an applicant for a certificate of public convenience and necessity, since the certification of other sales in the future must necessarily be based upon pure conjecture, but the result of any such requirement might be a denial of otherwise eligible independent applications on the ground that reserves were not sufficient to support all pending applications, whether eventually certified or not. This reductio ad absurdum result could necessarily follow from adoption of any such proposition. Any future proposed expansion of Transwestern's markets will, of course, require a determination at the time of such proposal that Transwestern, as of that date, has gas reserves of an adequate deliverability life after considering its existing purchase patterns and the then available and dedicated reserves. It is neither required nor feasible to determine or prejudge in these proceedings the certification of any other proposed expansion of Transwestern's markets. *Cf. Northern Natural Gas Company*, 30 FPC 859, 862. Nor does the Commission's order of June 11, 1963 (29 FPC 1159), require any different result. The "impact if any" which Transwestern's proposed California sale may have on its proposed sale to Cities has not been ignored. Evidence was introduced concerning the impact of such sale upon the cost allocation between the two customers of Transwestern and it is the Examiner's view, adopting the Staff's interpretation, that "it is that impact which was the substance of the Commission's order."

Facilities and Financing

No serious question exists either as to the adequacy of the facilities proposed to be constructed by Transwestern under its proposed project or the reasonableness of the estimates of the cost of financing their construction. Because of the proximity of existing facilities in both Transwestern's and Cities' pipeline sys-

[11] A reserve and deliverability study (Exhibit 106) prepared by Transwestern in Docket No. CP64–91, but introduced in evidence by Pacific Lighting in these proceedings allegedly shows Transwestern's ability to serve the proposed deliveries of 640,000 Mcf per day to Pacific Lighting and 100,000 Mcf per day to Cities.

tems and the available capacity in both systems, a minimum of additional facilities and investment is required to accomplish the proposed sale and delivery of the 100,000 Mcf of gas daily to Cities. Those facilities, described *supra* in the description of Transwestern's application, are adequately designed to provide the service proposed and the total estimated cost thereof, to wit, $1,275,700, is reasonable. Transwestern proposes to defray the cost of these facilities from funds made available through company operations and no additional financing will be required. Because of the comparatively minor nature of the required facilities, as proposed, and concomitant low investment required, there is no question but that the proposed method of financing is feasible and reasonable.

Economic Feasibility

The record establishes the economic feasibility of the proposed project. As a result of the comparatively minimum additional facilities required to make delivery of the gas under the proposed sale to Cities, Transwestern's incremental transportation cost amounts to approximately ½ cent per Mcf. The 20-cent contract rate, based upon the incremental cost of service, including the average cost of purchased gas and the operating expenses, depreciation, taxes and return on investment as specifically attributable to the proposed Cities' service, will enable Transwestern to realize excess revenues of more than $1,000,000 for each of the three projected years 1966 through 1968. Furthermore, the proposed sale to Cities would permit greater utilization of Transwestern's existing facilities which in turn would result in the reduction of unit costs for transmission of gas through its line to all its customers. See *Transcontinental Gas Pipe Line Corp.*, Opinion No. 449, February 17, 1965, 33 FPC 237, *Northern Natural Gas Company*, 30 FPC 859, 873.

From the foregoing it would appear that Transwestern has sustained its burden of establishing that there is an adequate market for the expanded gas service; that its gas supply is adequate to support the expansion; that its proposed facilities are adequate to render the service proposed and are well designed; that the estimated cost of construction is reasonable; that the project can be reasonably financed and is economically feasible; that the proposed sales will lower Transwestern's unit costs to the ultimate benefit of its other customers;[12] and that it will derive a net profit from the projected Cities' sale after the deduction of the incremental cost of service specifically attributable thereto. Having established that it is able and willing to render the proposed service and having satisfied the usual requirements for the issuance of a certificate of public convenience and necessity under Section 7 of the Act, Transwestern would ordinarily be entitled to the certificate authorization it seeks in Docket No. CP64–104. *Cf. Northern Natural Gas Co.*, 15 FPC 1634 aff'd *sub nom.*, *National Coal Association* v. *F.P.C.*, 247 F. 2d 86 (CADC–1957).

The Staff, however, opposes Transwestern's certification basing its opposition on the ground that Transwestern's proposed rate to Cities is not in the public interest because such proposed rate is fundamentally based upon a method of cost allocation of joint use costs between Pacific Lighting and Cities which is unacceptable and not in the public interest. Adopting as "a more proper and realistic allocation of Transwestern's cost" the cost allocation method advocated by Pacific Lighting with minor changes based upon "the more realistic average daily and maximum daily volumes to Pacific Lighting," the Staff arrives at a rate of 23.44 cents per Mcf at 100 percent load factor as Transwestern's proper rate to Cities. Staff concludes that at this rate Transwestern will be able "to recover all of its costs," and "would be able to perform the service proposed." (Br. p. 16).

[12] This benefit is conceded by Transwestern's other customer, Pacific Lighting.

Furthermore, it is this rate that Staff adopts as a basis for a comparison with CIG's competitive application "to determine if its project is required by the public convenience and necessity."

Staff also takes the position that neither the six-year price moratorium between Transwestern and Cities nor its proposed one-part rate to Cities is in the public interest.

Pacific Lighting takes a somewhat ambivalent position toward the Transwestern proposal. Thus, while vigorously supporting its own proposed method of cost allocation, arriving at a 25.1 cent per Mcf rate to Cities as the rate necessary to cover Transwestern's costs in connection with the sale to Cities, and arguing that "Transwestern's cost allocations and proposed price moratorium are improper and discriminatory," it freely admits that the Transwestern-Cities project would provide a cost benefit of approximately $1,000,000 a year (Tr. p. 6721) to its southern California gas consumers and would also benefit those consumers indirectly by improving the health of Transwestern through providing relief from its gas purchase take-or-pay obligations." (Br. p. 4). Furthermore, asserting that Transwestern has established its ability to make the deliveries to Cities contemplated in the application in addition to the 640,000 Mcf daily allegedly required to be made to Pacific Lighting, it concludes that "while there may be some problem with rates and moratoriums * * * we certainly are not opposing the grant of the application." (Tr. p. 6723).

CIG also attacks the 20-cent rate to Cities alleging that it is below properly allocated costs and is unduly discriminatory and preferential. Using its cost allocation method, described as a "demand-commodity method," CIG arrives at an allocated cost to Cities of 27.18 cents per Mcf (at 14.65 psia). It is this rate which it uses as a basis for comparison in its competitive application.

We now turn our attention to the objections based upon the rate and the price moratorium contained in the Cities-Transwestern contract and the effect of the cost allocation method to be applied in determining whether such date is a proper one.

Since Transwestern and Cities have indicated that they have no objections to requiring that the sale between them be made under a two-part rate providing for an average 20 cents per Mcf rate on a 100 percent load factor basis, and the authorizations herein are to be conditioned to that effect, the objections based upon the one-part rate are deemed mooted.

There is no basis for the conclusion that the public interest requires any increase in the proposed contract rate or the elimination of the price moratorium in the said contract.

Taking into account the investment required by Transwestern for the new service to Cities and the loss of any return on the facilities whose capacity would not be fully utilized in the event this particular business was lost, it would require evidence of a kind not presented in this record to warrant a finding that the rate of return Transwestern is willing to accept from this sale is unreasonably low. On the contrary, the evidence supports the conclusion that the incremental revenue derived from the sale to Cities is more than the incremental cost involved in the additional facilities, and that the price which it will receive for the gas is sufficient to assure Transwestern of an excess over a reasonable allocation of the costs arising out of this transaction. *Cf. Northern Natural Gas Company*, 15 FPC 1634, aff'd 247 F. 2d 86. While it may be that the rate might not return what may be considered a reasonable rate of return, it cannot be said that a public utility may not itself agree by contract to a rate affording less than a fair return or that, if it does so, it is entitled to be relieved of its improvident bargain. *F.P.C.* v. *Sierra Pacific Power Company*, 350 U.S. 348, 354. The sole concern of the Commission in such circumstances would seem to be whether the rate

is so low as to adversely affect the public interest—as where it might impair the financial ability of the public utility to continue its service, cast upon other consumers an excessive burden, or be unduly discriminatory. *F.P.C.* v. *Sierra Pacific Power Company, supra.* With the purpose of the Act kept in mind it follows that a contract voluntarily entered into by the utility may not be said to be either unjust or unreasonable simply because it may prove to be not as profitable to the public utility as the Commission might desire in order to insure the financial stability of the company. In the instant proceedings there is no evidence which could support a finding that the proposed rate to Cities is so low as to have an adverse effect on the public interest. *Cf. F.P.C.* v. *Sierra, etc., supra.* Neither is there any evidence to support the conclusion that continued performance of the contract including the price moratorium would affect either the service to its other customers or deplete or adversely affect the company's revenues to the extent that recoupment would have to be made at the expense of such other customers.

It is not contended that the low rate is so burdensome as to interfere with Transwestern's ability to fulfill its public utility obligations. On the contrary, Transwestern's fortunes would appear to brighten as a result of the transaction. Its take-or-pay situation, which has been described as quite serious and had cast a pall over its operations, would be alleviated if not completely remedied as a result of the transaction; and its excess capacity would be utilized to a better degree resulting in a lesser unit cost of transmission. The result would redound not only to its own financial benefit but also to that of its other customer, Pacific Lighting. Its entire picture will, it appears, be nationally improved by Commission approval of the proposed project.

It has been agreed by Transwestern that no deficiency in its revenues resulting from the operation of the moratorium provision in its contract with Cities will be taken into account in computing Transwestern's cost of service to Pacific Lighting and no such deficiency will be used to support any increased rates in any rate increase application brought by Transwestern directed to Pacific Lighting. The condition to this effect which is being attached to Transwestern's authorization herein adequately protects Transwestern's jurisdictional customers from any costs attributable to the Cities' sale, pending any allocation to be made in any future rate case involving Transwestern. See *Mid-America Pipeline Company* v. *F.P.C.*, 330 F. 2d 226 (CADC–1964). The risk, if any, in the final analysis thus devolves upon Transwestern and its stockholders, and not upon its other customers.

Since the operation of the moratorium, as conditioned does not adversely affect Pacific Lighting and since it will receive the benefits of a more efficient utilization of the capacity of Transwestern's system as a result of the proposed sale to Cities, its objections to such moratorium and to the proposed sale on that score, appear to be ill founded. Furthermore, under such circumstances, Pacific Lighting cannot be deemed to be a victim of any undue discrimination because it is obtaining the protection to which the law entitles it. *F.P.C.* v. *Sierra, etc., supra.*

Cost Allocation

The straight line rate of 20.0 cents per Mcf Transwestern proposes to charge Cities for all gas delivered has been tested by the different cost allocation methods advocated by Transwestern, CIG, Pacific Lighting and the Staff of the Commission.[12] Generally speaking, the conflict among the parties as to an appropriate

[12] While the term "Cost Allocation" is generally applied to that process in which the total cost of service of a natural gas company is divided between the jurisdictional and nonjurisdictional customers, it is used herein to refer to the division of total costs between two jurisdictional customers.

rate level for the sale to Cities concerns the proper method of allocating, as between Pacific Lighting and Cities, the costs of service on the West Texas and Panhandle laterals and the branch lines extending therefrom to the gathering areas where gas is purchased from producers. There is no disagreement among the parties that the costs associated with the main line facilities extending westward from Roswell station to California are to be assessed in their entirety to Pacific Lighting.

Transwestern maintains that the total costs of facilities in the joint production area should be considered to be transmission costs and, as such, apportioned between the two customers on the basis of the respective miles of haul to each. Pacific Lighting and the Staff contend that the cost of many of these facilities are improperly included in the transmission function because they are costs incurred in the production and gathering process.

Pacific Lighting's proposed cost allocation method, accepted by the Staff is based upon a functional approach. Thus, Transwestern's facilities are categorized as performing within a "gas supply" or a "transmission" function. The "gas supply" costs are then volumetrically allocated, while "transmission" costs are allocated on a mileage basis weighted by an adjusting factor based upon the "relative capacity" of the various sizes of transmission lines, a procedure which would ascribe higher unit costs of transportation to smaller diameter lines.

The division into gas supply and transmission functions as applied by Pacific Lighting leaves certain of the lines, obviously transmission, out of the transmission category. Such a result is inescapable in this type of classification since there is no clearly defined criterion by which a facility can be classified as performing solely a gas supply function as opposed to a transmission function. This would be particularly true with respect to substantial branch lines. Furthermore, Pacific Lighting's introduction of a 2.6 exponent designed as a theoretical basis for weighting transmission costs to reflect varying sizes of pipe adds an additional uncertainty to the method advocated. In the absence of appropriate Commission precedent, no firm basis for the adoption of this complicated and highly theoretical method is manifested and CIG, in effect, apportions all the joint use cost between the two customers in proportion to each customer's peak and annual use responsibility without modification by the use of a miles factor.

There are further differences among the parties with respect to the classification of costs between the demand and commodity components of cost, the standards for which were initially developed by the Commission in *Atlantic Seaboard Corporation, et al.* (11 FPC 43), and *Northern Natural Gas Company* (11 FPC 123).

In analyzing the divergent methods of cost allocation advocated by the respective parties involved herein, it must be borne in mind that the basic problem to be resolved in the instant certificate proceedings under Section 7 of the Act does not require a final adoption of a cost allocation method which Transwestern must apply in apportioning costs between its jurisdictional customers in order to comply with the provisions of the Natural Gas Act that all rates and charges must be just and reasonable and that such rates and charges must not be unduly discriminating or preferential. Such determination is properly reserved for actions brought under Sections 4 and 5 of the Natural Gas Act, see *South Georgia Natural Gas Company*, 22 FPC 211, 214, cited with approval in *Northern Natural Gas Company*, 28 FPC 1155, 1163, and no reason appears for tying such essentially denominated rate matters to a certificate proceeding.

In any event the adoption of a cost allocation method for the restricted purposes of this proceeding does not and certainly is not intended to pre-empt or

preclude a different result in a proper proceeding where the necessary facts and circumstances are fully explored and established on the record. In any such proceeding, the Commission could adopt some compromise between the cost allocation formulae espoused by the various parties herein based upon the resolution of issues which were not and could not be fully tried on the merits in this certificate proceeding.

It is recognized that there are certain advantages and disadvantages with respect to each of the varying and conflicting allocation methods proposed in this case and that none of these methods is free from problems or difficulty. Arguments can be made for and against each of the methods suggested. Each of such methods has infirmities which in themselves do not condemn them as the improper method. Since the question of allocation of costs involving as it does judgment based upon a myriad of facts, is not an exact science and cannot be resolved by any slide rule method, the selection of the method to be used should be bottomed on fairness and the exercise of judgment. *Tennessee Gas Transmission Company*, 27 FPC 202, 207. As a guide, the Court in *Colorado Interstate Gas Company* v. *F.P.C.*, 209 F. 2d 717, 726, referring to the basis for such selection, suggested the following criteria, "It should not be so complex as to require long tedious studies involving speculations and assumptions but rather should be a method which can be expeditiously applied to facts quickly ascertainable."

For purposes of the instant certificate proceedings the Mcf mile approach which uses system-wide average costs and allocates such costs on the basis of mileage constitutes a generally reasonable method of cost allocation between Transwestern's jurisdictional customers, Cities and Pacific Lighting. Since in the Transwestern system the joint use facilities have no extreme variations in load factor or load density, the distance factor can, by the Mcf mile method, be applied directly to system-wide costs to provide an allocation which gives some reasonable effect to the increase in the cost of transmission on each arm of the joint use facilities without disregarding the fact that the facilities in each arm are parts of an integrated system. *Cf. Tennessee Gas Transmission Co.*, 27 FPC 202. The reasoning of the Commission in *Northern Natural Gas Company*, 14 FPC 11, affirmed 236 F. 2d 372, and cited with approval in *Tennessee Gas Transmission*, *supra*, p. 209, would appear to be peculiarly applicable in the instant case. Thus, the Commission there stated, "Since in our view of this record there are no such circumstances present to counterbalance the distance factor, we conclude that the distance of transmission required to effect delivery at the various points of sale by Northern reflects with reasonable accuracy the relative cost of providing service to its customers." 14 FPC at p. 24. The same principles, with slight variations, can be applied in the instant case in connection with the cost allocation suggested by Transwestern.

Thus, it is appropriate for the purpose of testing the propriety of the rate of 20 cents per Mcf Transwestern proposes to charges Cities, to consider as the cost of transmission facilities all the costs of the lines and compressor stations shown in Exhibit 62, Schedule G, pages 2 and 3, including the two major lateral lines as well as the branch lines extending therefrom to the producing areas. The testimony of record shows that these facilities do not include gathering lines in the producing areas used in collecting gas from various sources and bringing these supplies to a common entry point into the high pressure pipe line system. The extent of the gathering lines is not ascertainable with exact precision and is not required in this certificate hearing. The record is adequate to permit determination, within reasonable limits, of the cost of service functionalized in accordance with Commission practice. Exhibits 135 and 137 of Pacific Lighting, adopted by the Staff for its purposes, contain de-

tailed costs of the major lateral lines by pipe size. Using these unit costs of lines as developed from this source and projecting the cost data to other sized lines deemed to be transmission facilities and further relating other costs to such lines in proportion to the investment in the lines, it is concluded that the investment in transmission facilities classified as gas supply cost is approximately $33,287,900, leaving a balance of gas supply costs of $10,106,900 assignable to the production and gathering function. If the functional costs of service are classified in keeping with the *Seaboard* opinion, *supra*, and apportioned between the two customers with transmission costs modified to reflect the actual miles of haul, it is found that the costs properly assignable to the Cities' sale by Transwestern are 20.48 cents per Mcf at 14.73 psia. This price exceeds the proposed Transwestern rate by only 0.48 cents per Mcf, or 2½ percent; a negligible difference in a proceeding such as this where there is lacking the precise details of costing that would be appropriate in a proceeding under Section 4 or 5 of the Natural Gas Act.

Arkla's Project

As indicated, *supra*, Arkla in Docket No. CP64–125, the docket essentially involved in the comparative aspects of these proceedings, proposes to construct facilities required to accomplish the sale of an average of 50,000 Mcf of gas daily to Cities until December 31, 1965, and 100,000 Mcf daily thereafter at a unit price of 22.5 cents per Mcf. The presentation made by Arkla designed to support the established criteria for issuance of a certificate of public convenience and necessity is based upon what can be called an incremental basis. The Staff adopting the same view espoused by CIG in these proceedings contends "that Arkla's failure to present a full system-wide showing as to markets, supply, costs, revenues, and other system-wide data makes it impossible to realistically determine on what basis, if any, a certificate of public convenience and necessity could be issued to it." See br. p. 36. Arkla attempts to justify its admitted "incremental" approach on the ground that such approach satisfies the requirements of the Commission's Regulations, paragraph 157.14(a)(10), (11), (16) with respect to gas supply, data, markets, revenues, expenses and income. Furthermore, Arkla, while stating that it does not contend that the Staff has waived any failure to comply with the rules, alleges that it was never notified either of any deficiency in its application or in the supporting exhibits. It concludes that since its application was not deficient when tendered for filing, and is not now deficient, and having proved the facts set forth in its application it is entitled to certification.

Markets

Arkla's market for the sale and transportation of the additional volumes of gas involved in Docket No. CP64–125 is established by the contract between Cities and Arkla dated as of October 1, 1963. Pursuant to this agreement, Arkla will sell and deliver to Cities an annual average of 50,000 Mcf per day at a 75 percent minimum annual load factor through 1965 and an annual average of 10,000 Mcf per day at the same load factor for the remainder of the 20-year term of the contract. Cities' needs and ability to take these volumes of additional gas have been established.

Feasibility

No issue was raised either with respect to the engineering feasibility of the facilities to be constructed or to Arkla's ability to finance the proposed construction involved in Docket Nos. CP64–125 and CP62–219. The total cost of the facilities required by Arkla to effectuate the proposed sale to Cities and to bring Arkoma gas to its own Arkla-Tex system amounts to approximately

$26,000,000, including the $12,400,000 cost of the Arkoma facilities already constructed. $7,300,000 of this total amount is accounted for by the construction costs of the proposed 20-inch lateral from the Arkoma line to Jane, Missouri, for the Cities' sale for which authorization is sought in Docket No. CP64–125, and $7,020,750 for the additional facilities requested in Docket No. CP62–219. The financing will be obtained through short term bank loans and the subsequent issuance of first mortgage bonds. It is clear from the evidence adduced that Arkla can successfully finance said proposals and that the said facilities are feasible from an engineering standpoint, can be constructed at a reasonable cost and are sufficient to make the proposed deliveries to Cities.

Gas Supply

In order to satisfy Commission certification requirements relating to gas supply and deliverability, Arkla has presented an admittedly incremental showing. Data was presented and testimony submitted concerning deliverability and availability of gas reserves dedicated to Arkla in the Arkoma Basin area. It was indicated that all of the proposed deliveries to Cities will come from the Arkoma area. The Staff takes the position that such showing does not afford an adequate record to determine whether the sale to Cities will or will not jeopardize service to existing customers and that Arkla has failed to sustain its burden of proving that its present dedicated gas reserves and gas deliverability will enable it to perform the service proposed without jeopardizing existing service, and that therefore its application in Docket No. CP64–125 should be denied. (*Northern Natural Gas Company*, 30 FPC 859, 862, 863). While the Staff indicates that Arkla may have shown an incremental source of supply sufficient to meet the needs of the proposed sale to Cities it makes no attempt to analyze the validity of such incremental showing.[14] CIG, on the other hand, does attack the basis for the reserve estimates and questions their validity.

It is evident that the studies of Arkla and CIG to determine reserve estimates were in basic disagreement with respect to the values of various factors used in calculating gas reserves. It must be recognized that the very nature of the calculation and estimation involved as well as the subject matter of determining reserves defies not only the use of exact computations but even any agreement among equally qualified experts. Accordingly, the Examiner does not propose to determine the relative capabilities of the expert witnesses in this proceeding and rejects Arkla's conclusion that CIG's witnesses' professional judgment is suspect, while its own witnesses' testimony, because of alleged greater experience and greater knowledge of the particular area, must be adopted. However, it does appear that the testimony adduced in connection with the reserve estimates revealed merely a difference in techniques used by the various witnesses rather than any substantial miscalculation. While there seems to be substantial merit to both presentations, it is concluded that the Arkla presentation, though recognized as quite optimistic, based as it was upon generally accepted factors will be accepted for the purposes of this proceeding. Thus, as of March 1, 1964, Arkla indicated a total dedicated acreage of 1.4 million acres in the Arkoma Basin containing total claimed proven reserves of 1.4 trillion cubic feet. These alleged proven reserves, based on estimated annual deliveries of 36,668,000 Mcf to Cities and 34,862,000 Mcf to Arkla's system, result in the reserve life index of 20

[14] Upon oral argument Staff counsel did, however, assert that Arkla had increasing reserves on its hands and that while not knowing what the market needs of the Ark-La-Tex system were from the Arkoma Basin, that it would be to the benefit of the system's customers to accomplish a sale to Cities in order for Arkla to stay on top of the rapidly developing reserves. (Tr. 6708).

years and the deliverability life of 14 years for Arkla's requirements from the Arkoma pipeline system; that is, the sale to Cities and the indicated deliveries to the Arkla-Tex system to be made from that area.

While Arkla's estimates are undoubtedly colored by unduly optimistic forecasts there seems to be no reason to doubt that the daily quantities required for sale to Cities under the certificate sought in the instant proceedings could be produced as indicated, especially in view of the fact that the Arkoma Basin area was characterized as the newest, largest and most desirable developing source of gas in the entire mid-continent area. However, there is no basis upon which a determination could be made as to the adequacy of the reserves or deliverability based upon the requirements of the remainder of the Arkla-Tex system. Arkla has asserted that such showing is unnecessary.

Arkla's presentation admittedly an incremental showing with respect to gas supply is based upon the alleged requirement of "present Commission policy" as reflected in Order No. 279, 31 FPC 750, Section 2.61(c) of the Rules of Practice and Procedure. Furthermore, it is contended that such showing is directed to the regulatory discretion of the Commission under appropriate circumstances to accept an incremental showing as sufficient to support the incremental requirements for which authorization is sought in certificate proceedings citing *Tennessee Gas Transmission Company*, Docket No. CP64–165, May 26, 1964, 31 FPC 1290.

The basis for the incremental showing by Arkla must be rejected. There is no need to resolve the issue raised with respect to adequacy of gas supplies by a determination of theoretical concepts or broad aspects of the question of gas supply reserves. The issue can and should be resolved in accordance with the pragmatic approach adopted by the Commission in *Northern Natural Gas Company*, 30 FPC 859, 873. As restated the issue resolves itself into a determination as to whether Arkla has shown a sufficient gas supply potential to meet the additional gas requirements of the service proposed for Cities while at the same time not jeopardizing the supplies of the rest of its system. Since Arkla has not submitted any evidence establishing the current annual requirements of the Arkla-Tex system it becomes virtually impossible to ascertain whether its gas reserves are adequate to meet the anticipated requirements of its expanded markets as proposed without jeopardizing the rest of such system. Accordingly, notwithstanding any liberalization of deliverability standards, no basis appears for a finding that Arkla has satisfied the Commission's requirements.

Nor does Order No. 279, Section 2.61(c) of the Rules of Practice and Procedure cure the defect. The notice of the proposed rulemaking involved indicated quite clearly that the question of reserves remains an issue in each certificate proceeding. However, the adoption of the new procedure was designed to expedite completion of certificate cases by having the annual report incorporated by reference to satisfy the burden of proving the adequacy of reserves and deliverability. Furthermore, the notice indicated that the test for determining the adequacy of reserves would be a flexible one and the determination would be based on all the relevant facts concerning the particular company including the information furnished in the annual report (referring to Form 15). Not only was there no incorporation by reference of the Form 15 to satisfy the burden of proving the adequacy of reserves and deliverability in the instant proceedings but the said Form 15 was, in fact, not filed until September 2, 1964, or approximately a full month after the hearings in these proceedings were concluded. Certainly, the results sought to be achieved by the filing of the Form 15 could not redound to Arkla's benefit in this proceeding.

It appears, therefore, that contrary to Arkla's position taken herein, its gas supply showing falls far short of compliance with the most recent directives of

the Commission and constitutes a substantial failure in its proof of the prerequisites for the issuance of a certificate of public convenience and necessity. Furthermore, no adequate condition could be imposed requiring such compliance as a sine qua non for the issuance of such a certificate.

Notwithstanding the above conclusion common fairness requires consideration of Arkla's proposal on a comparative basis under the circumstances involved herein. Its Form FPC 15 was filed after the completion of these hearings in these proceedings. There apparently was no suggestion by Staff during the prehearing or hearing stage of these proceedings indicating that it would take the position that the lack of a system-wide showing of gas supply would be regarded by it as a fatal defect in Arkla's application excluding it from consideration on a comparative basis. If the Staff were going to rely on such position the better procedure, it seems, would have been to forewarn Arkla to give it the opportunity either to make such showing, or to take the calculated risk involved in relying on the type of presentation made. *Cf. American Louisiana Pipe Line Company, et al.* v. *F.P.C.*, 344 F. 2d 525 (CADC–1965). In any event, the consideration of Arkla's proposal on a comparative basis herein will facilitate conclusion of these proceedings in the event Arkla is given the opportunity to cure the defect by filing the required proof of an adequate gas supply as hereinafter directed.

Cost Presentation

The reasons for the infirmity of Arkla's incremental gas supply showing, which is herein deemed to be insufficient to satisfy the requirements of the Commission, cannot be said to apply to its incremental cost presentation.

Arkla's cost allocation presentation it claims, supports the rate levels proposed to be charged for the service to be rendered to Cities. Admittedly, this cost study is an incremental presentation based on the costs of gas purchased in the Arkoma Basin plus the costs of transmitting this gas to Arkla's Dunn compressor station, at which point the proposed Jane lateral extending northward to the Cities' line at the Arkansas-Missouri border, will connect with the existing Arkla line which carries gas in a southeasterly direction to the Hot Springs-Little Rock load centers. The Arkla cost study allocates the costs of gas from the Arkoma fields and the transportation cost to Dunn between Cities and the Arkla system; to the cost thus allocated to Cities there are added all the direct costs associated with the Jane lateral for the purpose of measuring the proposed rate to Cities.

The Staff does not agree with Arkla's incremental cost showing preferring instead a system-wide or rolled in cost method.[15] It is claimed that an "over-all" system cost of service is required for the integrated Arkla-Tex system, including the facilities requested here in Docket Nos. CP62–219 and CP64–125, which cost must then be allocated between Cities and the Arkla system.[16]

It is true that Section 157.14(a)(18)(i) and (ii) of the Commission's Regulations provides that an applicant seeking a certificate shall submit costs studies, including an "over-all" cost study and other data which support the rate for the proposed service. In this connection applicant is required to submit a statement which "* * * shall clearly show whether such (new) rate results from negotiation, cost-of-service determination, competitive factors or others * * *." Thus,

[15] It is well to note that neither the cost allocation study presented by Transwestern (Ex. 137) nor that introduced by CIG (Ex. 146) are true "system-wide" allocations. In each study the applicant segregated the cost of certain facilities deemed to be used exclusively for customers other than Cities, in a manner similar to that employed by Arkla.

[16] Staff would also assign the $7,300,000 cost of the Jane lateral directly to the Cities' sale.

an applicant is not bound to a "system-wide" cost determination in establishing a new rate schedule but will make various types of studies to determine the price at which gas will be sold under the specific conditions of time, place, volumes, etc., in the sale under consideration.

The Examiner concludes that the evidence and testimony of the Arkla witnesses which, in effect, was supported by Staff Exhibit 139, establishes the propriety of the incremental price proposed for the sale to Cities under the terms and conditions contained in the agreement between Arkla and Cities except as herein noted. It is further concluded that in the peculiar circumstances here presented a "system-wide" cost of service for the Arkla-Tex system would be of questionable value in making a determination of a proper rate level for the new type of service to be rendered. In the first place, Arkla is predominantly a distribution company differing from the usual pipe line company in many ways. It is composed of many discrete parts which apparently have their own separate gas supply sources. The main Arkla-Tex system has multiple sources of gas supply in the states of Texas, Louisiana, Oklahoma and Arkansas adjacent to load centers. Gas for this system is purchased at the wellhead and in the field from producers, at the tail gate of gasoline extraction plants, from pipelines, as city gate purchases, as well as bulk purchases for system supply; in addition, the company produces substantial quantities of gas from its own holdings. Until the time of this proposal, Arkla had but nominal jurisdictional loads all of which were field sales; the company was, and is, primarily in the business of retail distribution. Arkla, prior to this time, had no schedules of rates offering interstate gas to pipelines for resale. The rate now proposed is not a generally applicable rate for similar service from any point on the system but rather a rate designed under consideration of the fact the Arkoma Basin has been tapped for general system supply, as authorized by this Commission at Docket No. CP62-219, and there is, it is claimed, available from this source sufficient quantities of gas above company requirements to make the sale to Cities.

Under such circumstances, the problems involved in making an appropriate "system-wide" cost study are formidable and of such magnitude and complexity as to make such cost study of questionable value or worth in a certificate proceeding of this nature. Apparently, there has never been a detailed cost study of the facilities and operations of the Arkla-Tex system presented before this Commission. Certainly, this certificate proceeding is not the best forum for making such a detailed study.

The more reasonable approach under the subsisting facts is to determine whether or not the terms and price relating to the proposed sale to Cities are such that public convenience and necessity are served by the proposal without any concomitant burden thereby being placed upon the consumers served by Arkla.

The following table establishes Arkla's margin-rate over cost of 1.10 cents per Mcf:

TRANSWESTERN PIPELINE COMPANY, ET AL., DOCKET NO. G-20464, ET AL. ALLOCATION OF COST OF ARKOMA FACILITIES OF ARKANSAS LOUISIANA GAS COMPANY (14.73 PSIA) DERIVED FROM EXHIBITS 73 AND 74

Arkoma facilities only—gross investment:	*Amount*
Line "O"	$9,320,900
Compressors	2,919,800
Gathering facilities	6,508,100
Total	18,748,800

Jane lateral—gross investment	$7,289,100
Gross investment	26,037,900
Depreciation:	
Joint facilities—3d year	1,629,000
Jane lateral	765,300
Net investment—joint facilities	17,119,800
Net investment—Jane lateral	6,523,800
Total net investment[1]	23,643,600
Deliveries at Dunn for Cities—Mcf per year	36,668,000
Deliveries at Dunn for Arkla—Mcf per year	34,862,000
Total	71,530,000
Deliveries to Jane for Cities—Mcf per year	36,302,000
Fixed costs on joint facilities[2]	$2,568,000.0000
Fixed costs per Mcf delivered to Dunn	.0359
Fixed costs on Jane lateral[2]	978,570.0000
Fixed costs per Mcf on Jane lateral	.0269
Unit cost per Mcf at Dunn adjusted for losses	.0363
Fixed cost on Jane lateral	.0269
Unit cost per Mcf—produced and purchased gas	.1508
Total unit cost to Cities per Mcf	.2140
Rate to Cities	.2250
Margin-rate over cost	.0110

[1] Working capital assumed to be offset by Federal Income Tax advance collections.

[2] The figure 15.0% closely approximates the amounts calculated from Arkla's Ex 74, Schedule 1, which shows 3d year figures—Return—6.34%; Income Taxes—3.60%; Depreciation and Operating Expenses 4.79% or a total of 14.73%.

Thus, the costs per year of the Arkoma facilities including Dunn allocable to the Cities' sale equal 3.63 cents per Mcf calculated on the basis of annual deliveries at Dunn of 36,668,000 Mcf and 34,862,000 to Cities and to the Arkla system, respectively. The annual costs of the Jane lateral, wholly assignable to Cities, amount to 2.69 cents per Mcf. The resultant costs allocable to Cities, exclusive of purchased gas costs, total 6.32 cents per Mcf. Arkla assigned a cost to the Cities' sale of 15.0 cents per Mcf for gas purchased in the Arkoma Basin, while Staff in Exhibit No. 139 used a cost of 15.23 cents for produced and purchased gas for the Arkla system as a whole, and we have used a cost of 15.08 cents per Mcf as a result of the calculations made in the accompanying table.[17] Using any of the foregoing figures the proposed rate price of 22.5 cents per Mcf is more than sufficient to recover the allocable costs of the proposed service. It seems clear that even though there is a question as to Arkla's incremental cost allocation method a proper two-part rate averaging the contract price at 100 percent load factor can be designed.

[17] It seems reasonable to conclude that the cost of gas for this sale should more properly be based on the costs of purchased and produced gas for the Arkla-Tex system. Since this approach would eliminate certain of the high-cost, city gate purchases for isolated systems, and thus lower the costs for the sale to Cities it appears that the figures used in the above calculation prove to be more than reasonable under the circumstances.

In addition to the authorization sought in Docket No. CP64–125, Arkla seeks authorization to amend its certificate in Docket No. CP62–219 in order to increase the size and capacity of its Arkoma line. The increased capacity is allegedly required to enable Arkla to meet its obligations to handle the increased volumes of gas which it has contracted to purchase from producers in the Arkoma area. The facilities sought are required in order to permit Arkla to perform the service to Cities proposed in Docket No. CP64–125. However, Arkla contends that the facilities are absolutely essential to the proper operation of its system whether or not the proposed sale to Cities is authorized herein.

While there appears to be no serious question in connection with either the financing, or feasibility, of the facilities, or with the fact that increased volumes have been contracted for in the area in question, no showing has been made, absent the proposed sale to Cities, for the need, market-wise, for the requested increase in pipeline capacity. No such showing was made apparently because no alternative for the additional sales, absent the proposed Cities' sales, had been contemplated. In the absence of such showing it is impossible to determine whether the requested increased capacity would be required by the public convenience and necessity.

It is Staff's position "that should Arkla's application in Docket No. CP64–125 be denied the Commission should postpone action on Arkla's motion to amend its certificate in Docket No. CP62–219 until such motion is supplemented with a deliverability and market showing justifying that the requested increased capacity of its Arkoma line is in the public interest." (Br. p. 35.) In view of the determination made herein with respect to the reserve showing and deliverability required of Arkla in Docket No. CP64–125, it appears that if the showing to be made therein satisfies the requirements of public convenience and necessity, the authorization of the sale to Cities would be sufficient to support the application to amend in Docket No. CP62–219. In any event, however, it appears that the interests of all parties concerned would be served if, the procedure adopted with respect to its reserve and deliverability showing in Docket No. CP64–125 be adopted herein and Arkla be given the opportunity to file proof of the required market showing and deliverability in Docket No. CP62–219 with the Commission making known such desire and stating fully the nature of the evidence it wishes to present.

CIG's Application

Gas Supply

In support of its gas supply presentation CIG introduced into evidence copies of all its gas purchase contracts (Exhibit 99) and a system-wide showing of its total gas reserves and availability (Exhibit 97). The evidence adduced indicates total system reserves of 6,643,975 MMcf at 14.73 psia, resulting in an 18-year total reserve life index based on its estimated 1966 requirements of 369,078,589 Mcf, including the proposed sale of 200,000 Mcf daily to Cities. CIG has further demonstrated that such total system gas reserves are sufficient to meet its proposed service to Cities without jeopardizing the reasonable annual and peak day demands of existing customers. *Northern Natural Gas Company*, 30 FPC 859. Furthermore, CIG has in accordance with previous Commission standards established that there is sufficient deliverability to meet its projected requirements including the proposed sale to Cities for a period of 13 years commencing January 1, 1964. See *Midwestern Gas Transmission Company, et al.*, 21 FPC 653; *Northern Natural Gas Company*, 22 FPC 164.

The Staff takes the position that the above showing meets the requirements of deliverability life based upon a showing of total reserves as required by Section 157.14(11) of the Regulations. The evidence supporting the attacks upon

CIG's showing of adequate gas supply as referred to above is not substantial enough to require any finding to the contrary.

Facilities and Engineering Feasibility

CIG's proposed facilities including the 24-inch line to Blackwell, the point of proposed delivery to Cities, is capable of delivering an average volume of 200,000 Mcf and a maximum volume of 214,000 Mcf per day at the pressures required by Cities. Notwithstanding the attempts to attack the adequacy of design of the facilities or of the related gathering systems, it is found that the facilities are adequate and can deliver the volumes as proposed. Furthermore, it is found that CIG is able to finance the facilities proposed to serve Cities as well as its Rocky Mountain customers.

Economic Feasibility and Market

CIG's testimony adduced at the hearing including the exhibits concerning revenues, expenses, operating income, cost of service, and allocation of proposed rate, establishes that CIG would earn its rate of return from revenues computed using its presently effective rates and the proposed rate to Cities of 22.5 cents per Mcf at a 100 percent load factor. The operational year of 1966 used by CIG for cost-of-service purposes is found to be in accord with the requirements of Section 157.14(18)(ii)(a) of the Commission's Regulations for determining the proposed rates to Cities since it reflects the use of the first full year of proposed operations to determine a rate in a certificate proceeding.

In support of its market showings CIG relies upon Cities' demonstration of its need for the volumes of gas, the sale of which CIG seeks authorization in these proceedings. In support of its demonstration CIG cites *Kansas Pipe Line & Gas Company*, 2 FPC 29, 45, as authority for the proposition that the absence of a contract with Cities to serve the volumes sought herein does not militate against issuance of a certificate to it. The Staff, apparently adopting this view, concludes that Cities has on the record established a reasonable market demand on its system requiring an additional supply of gas amounting to 200,000 Mcf per day and that CIG's proposal to sell and deliver gas to Cities should be certificated.

While both CIG and the Staff apparently take the position that Cities' presentation of the need for the volumes sought to be authorized herein is sufficient to satisfy CIG's market showing neither makes mention of the fact that Cities has in no uncertain terms stated that it will not and cannot accept the CIG proposal and that the absence of the requisite market accordingly constitutes a fatal defect in CIG's presentation. See *Midwestern Gas Transmission Company*, 22 FPC 775, 794.

While there may be some question as to whether Cities' apparently adamant position might prove to be as irrevocable as indicated, it does appear that it was incumbent upon CIG to make some showing that there existed in the territory proposed to be served customers who can reasonably be expected to use the additional volumes of natural gas during the period in question. See *Kansas Pipe Line & Gas Company*, 2 FPC 29, 45. The record, however, is entirely barren of any evidence indicating that on the basis of experience in similar territory or otherwise there are reasonable grounds for anticipating that any such customers will be attached to CIG's proposed facilities.

Furthermore, CIG's proposal, relying as it does solely upon the proposed sale to Cities could not be certificated in these proceedings without imposing a condition in Cities' certificate compelling Cities to enlarge its facilities in order to receive the volumes of gas which CIG proposes to deliver at Cities' Blackwell station and to transport such gas to the market areas on Cities' system where they are needed. The construction of such facilities would allegedly entail expenditures estimated

at approximately $7,677,500, or $1,831,400 more than the estimated total of $5,846,100 for the combined facilities required to accomplish the same results under the combined Arkla-Transwestern proposal.[18] Not only would this requirement necessitate the investment of capital associated with the proposed construction of the additional facilities but would also define the extent of the investment. The decision on matters of such nature are generally reserved for management; *Central West Utility Company* v. *F.P.C.*, 247 F. 2d 306, 311; *Panhandle Eastern Pipe Line Company* v. *F.P.C.*, 204 F. 2d 675; and the authority of the Commission to order the development of such a project is more than doubtful. *Michigan Consolidated Gas Company* v. *F.P.C.*, 246 F. 2d 904, 910.

While the Commission may in a proper case substitute its judgment for that of management where the public interest requires, no sufficient showing has been made herein requiring the exercise of such judgment in connection either with the desirability or feasibility of the additional facilities which would be required by Cities. *Cf. Natural Gas Pipeline Company of America, et al.*, 16 FPC 80, 83. Thus, Cities' position to the effect that it would not, and could not under its application in these proceedings, accept the CIG proposal, while not altogether disqualifying CIG cannot be totally disregarded. Needless to say, without the proposed sale to Cities the CIG project being constructed solely for that purpose could not and would not be economically feasible.

Failing to adduce any evidence supporting any possible alternative to the proposed sale to Cities, CIG must be found to have failed to sustain its burden of establishing that its proposal is either practical or economical and that the authorization of the construction of the facilities sought in these proceedings are required by the public interest and convenience. *Cf. Panhandle Eastern Pipe Line Company*, Docket No. CP64–18, initial decision May 20, 1964, modified and adopted, order of the Commission July 24, 1964, 32 FPC 349.

In addition to the facilities proposed to be constructed in connection with the proposed Cities' sale CIG also proposes abandonment of its existing Colorado Springs to Denver 20-inch pipeline and the replacement thereof with a modern pipeline system. It was amply demonstrated, and there is no evidence to the contrary, that the 20-inch line between Colorado Springs and Denver, Colorado, has become obsolete and is hazardous to operate. The proposed replacement would not only allegedly eliminate the potential hazard but would also result in more efficient and economical operation. Accordingly, that portion of CIG's application requiring authorization for abandonment of its existing 20-inch line between Colorado Springs and Denver and the replacement thereof by a 58.9-mile new high pressure line should be granted.

Notwithstanding the conclusion contained above to the effect that CIG has failed to establish the minimal requirements for certification of its proposed project, its application has not been foreclosed from consideration in connection with the other applications since the existence of a more desirable alternative is one of the factors entering into the determination of whether the other proposals would serve the public convenience and necessity. While it may be true that the Commission would not compel Cities to enter into a contract with CIG in the circumstances herein involved, it must be recognized that if it were determined that the CIG project reflected a more desirable alternative in serving the public convenience and necessity, the Commission could reject the other proposals after consideration of their merits in connection with such alternative proposal. *Cf. City of Pittsburgh* v. *F.P.C.*, 237 F. 2d 741, 751. Accordingly, comparative consideration of the CIG proposal along with the other proposals is required

[18] These figures are based on delivery of 200,000 Mcfd. If CIG were to deliver the 233,000 Mcfd proposed under the combined Arkla Transwestern proposals, the difference in costs would rise to $4,111,400.

in order to determine whether the public convenience and necessity requires certification of such other proposals.

Comparative Aspects of the Various Proposals

The objective to be achieved in this consolidated comparative certificate proceeding requires the assessment of the various proposals against the backdrop of public convenience and necessity, keeping in mind the salient fact, the overriding consideration that the consumer is entitled to the lowest possible reasonable rates consistent with the maintenance of adequate service. *The Atlantic Refining Co.* v. *Public Service Commission of New York*, 360 U.S. 378. In realizing this objective, however, we must not overlook the fact that of prime importance to the parties involved herein is the adoption of the most desirable, soundest, most economical and enduring solution to the urgent present and long-term supply problem posed by Cities' application. *Natural Gas Pipeline Company of America, et al.*, 16 FPC 80, 82. As a corollary proposition, it is also incumbent upon us to determine whether such problem can be reasonably and adequately solved by any program more in the public interest than that here proposed by Cities itself. In connection with the resolution of these propositions considerable weight should be given to the effect of initial contracts which have been freely negotiated between willing sellers and buyers in a competitive market and which may well reflect the value of the gas in the particular market and under the circumstances of the particular transaction more accurately than any other evidence which may be adduced. *Trunkline Gas Company, et al.*, 21 FPC 704, 717, affirmed 281 F. 2d 42.

Of prime importance in determining the relative merits of the competing systems is the consideration of the costs involved, and whether the granting of certificates authorizing the various projects at the rates and terms involved would be in the public interest since it is fundamental that all other factors being equal the public interest would not be served in this case if the price to be paid by Cities to one applicant is in excess of that which it would pay if it obtained its gas supply from another. *Cf. Kentucky Natural Gas Corporation* v. *F.P.C.*, 4 FPC 1043, aff'd 159 F. 2d 215. In this connection it might be significant to note that Gas Service Company, Cities' largest customer, receiving approximately 97 percent of its gas supply from Cities and purchasing approximately 80 percent by volume of Cities' total jurisdictional sales and accordingly rightfully concerned over Cities paying the lowest over-all price for the gas involved, urges certification of the Arkla-Transwestern proposal on the ground, among others, that " by any standard of measurement the Arkla-Transwestern projects provide the lowest over-all cost of gas to Cities." (Gas Service Brief, p. 10). An examination of the cost to Cities of the respective proposed sales bears out Gas Service's conclusion.

In analyzing the various costs involved, it must be kept in mind that in order to be realistic and meaningful such analysis not only must take into consideration the proposed rate and the cost of transporting the gas from the proposed delivery points to the points of distribution but also the actual heating value of the gas. It is generally agreed that the value of natural gas to the consumer varies directly with its heat content measured in Btu's and the thermal unit cost of transporting natural gas varies inversely with such Btu content. The transportation cost will inevitably be affected by such Btu content as well as other factors and the utilization of high Btu content gas results in a saving with respect to the transportation cost of heat energy per Mcf. See *Sunray DX Oil Company*, etc., Docket No. G–4281, *et al.*, decision of Examiner, 33 FPC at 1240.

A significant comparison of the cost of the respective sales to Cities, and eventually to the ultimate consumer, can be gleaned from the following table:

Comparison of cost for proposed sales to Cities Service Gas Co., Docket No. G–20464, et al.

	CIG				Transwestern				Arkla			
	Contract rate		Cost of service		Contract rate		Cost of service		Contract rate		Cost of service	
1. Cost per Mcf at 100% L.F., 14.65 psia...cents	22.50		[1] 22.46		[2] 19.89		[3] 20.37		22.50		[4] 22.56	
2. Guaranteed minimum thermal content of gas, Btu per cubic foot	963		963		1,012		1,012		975		975	
3. Delivered thermal content of gas, Btu per cubic foot		980		980		1,103		1,103		992		992
4. Cost per million Btu at 100% L.F.....cents	23.36	22.96	23.32	22.92	19.65	18.03	20.13	18.47	23.08	22.68	23.14	22.74
5. Cost of transporting gas from proposed delivery points to Cities' Grabham and Saginaw stations,[5] per million Btu...cents	[6] 2.04	2.00	2.04	2.00	3.01	2.76	3.01	2.76	1.24	1.22	1.24	1.22
6. Cost at 100% L.F. at Cities' Grabham and Saginaw stations,[5] per million Btu...cents	25.40	24.96	25.36	24.92	22.66	20.79	23.14	21.23	24.32	23.90	24.38	23.96

[1] Exhibit 101.
[2] Contract rate 20 cents per Mcf at 14.73 psia.
[3] As determined by Examiner, see *supra*, p. 683, adjusted to 14.65 psia.
[4] Staff exhibit 139.
[5] Transwestern's deliveries to Grabham and Arkla's deliveries to Saginaw stations.
[6] Exhibit 127: Cities' Reply Br., p. 19.

The cost-wise superiority of the Arkla-Transwestern proposal is clearly evident from an analysis of the above table whatever standard might be applied. Thus, the average price of 21.20 cents proposed in the applications of Arkla and Transwestern is 1.30 cents per Mcf less than that proposed by CIG. On the basis of proposed deliveries of 200,000 Mcf in 1966 and thereafter, the difference in cost between the two projects amounts to $2,600 a day or $949,000 a year.[19]

Taking into consideration the cost to Cities of transporting gas from the various delivery points to the locations on Cities' system for distribution to its major market areas and the minimum contract heating value of the gas, such difference in cost amounts to 1.91 cents per Mcf or $3,820 a day and $1,394,300 a year on a 200,000 Mcf daily basis.[20]

A realistic comparison of relative costs must place great stress upon the cost of the actual heat units delivered at the common points of the purchaser's system. If the proper weight is given to such factor, the combined Arkla-Transwestern cost would amount to 2.61 cents per Mcf less than that of CIG or $5,220 per day and $1,905,300 a year.[21]

In the face of the substantial over-all cost savings involved in the combined Arkla-Transwestern project as compared to the CIG project no adequate showing has been made upon which CIG's alternative project could be deemed to be in the public interest.

It is significant to note, moreover, that the lower over-all cost of gas to Cities provided by the Arkla-Transwestern projects, or for the 100,000 Mcf per day by Transwestern alone, is applicable whether the basis used be the contract price or the computed cost of service.

Another element, that must be included in connection with the cost considerations herein, involves the differences in initial capital investment required by Cities for facilities to move the proposed supplies of gas from the respective receiving points to its Grabham and Saginaw compressor stations.[22] Thus, the evidence indicates that Cities will require a total estimated capital investment of $5,846,100 in connection with the combined Arkla-Transwestern project while the CIG project will require a higher investment of $7,677,500 or a difference of $1,831,400. There is no justification in the record for requiring this increased investment.

In connection with the cost and investment involved in, and required by, the respective proposals, consideration should also be given to the nature and extent of the facilities which would be justified in satisfying Cities' needs. It appears that the CIG project goes to unsupportable extremes in size and cost to provide a competitive alternative for the Arkla-Transwestern proposal. Thus, cost of the facilities required by its project, including among other things the construc-

[19] The difference in cost when limiting the comparison to Transwestern's deliveries of 100,000 Mcf per day and an equal amount from CIG amounts to $2,610 a day and $952,650 a year.

[20] The comparable figures if only Transwestern's deliveries are compared to CIG's are 2.74 cents per Mcf or $2,740 a day and $1,000,100 per year computed on a 100,000 Mcf daily basis.

[21] If Transwestern's project alone is considered the difference would amount to 4.17 cents per Mcf or $4,170 per day and $1,522,050 a year.

[22] Notwithstanding CIG's attack upon using these stations as the key stations, using the previous Trans-Cities' proposal as a basis, the evidence in this proceeding indicates that Cities considered them as the key points on its system for supplying the increased market requirements in the greater Kansas City area and on the Joplin Springfield Southern Trunk System. In any event, in deciding this case we need only be concerned with the parties' proposals in their present form. *Natural Gas Pipeline Company of America*, 16 FPC 80, 82. There is no reason to doubt the management determination by Cities with respect to the key position of the Grabham and Saginaw stations as compared to the Blackwell delivery point.

tion of 275 miles of a new 24-inch transmission line and additional compressor stations as well as increasing already installed horsepower at other stations amounts to approximately $34,700,000. Contrasted with CIG's proposed major construction and expenditures is the total of approximately $15,000,000 required by the combined Arkla-Transwestern proposed project, consisting of $1,275,700 for the construction of a 10.8-mile extension of Transwestern's existing 12-inch line and other minor facilities and approximately $14,000,000 for Arkla's construction of a 103-mile, 20-inch transmission line and the enlargement and extension of facilities already certificated in CP62–219 in the Arkoma Basin area. The relative size and cost of the CIG project, more than double the combined cost of the Arkla-Transwestern project, strongly militates against its authorization in this comparative setting.

Gas Supply

While the evidence favoring the claimed superiority of the gas supply of the combined Arkla-Transwestern project over the CIG project is not entirely convincing, some weight should be given Cities' conclusion that its gas supply needs will be more adequately satisfied if the responsibility remains more directly in its own hands and in accordance with the contracts which it has negotiated with Arkla and Transwestern. Its judgment is to the effect that the Arkoma Basin area, the proposed source of the gas supply from Arkla, is the only new, reliable and active source of development of gas in eastern Oklahoma, and the most important new gas supply area in the entire mid-continent region. Cities will, in fact, be able to obtain substantial additional supplies from that area in the future, if the optimistic forecasts are fulfilled, to meet the increasing demands of its system.[22] Since Arkla's facilities are already in this area, it is in a most favorable position to acquire the uncommitted reserves in and adjacent to the Arkoma area which it appears are of sufficient magnitude to support Cities' optimistic forecast.

Transwestern's gas supply coming from potentially highly productive areas in western Oklahoma and the Texas Panhandle also provides a fresh source for Cities' needs. In contrast to these apparently fresh and new sources of supply, the supply area on which CIG primarily relies to supply its proposed sale to Cities, and from which the gas would physically come, is the West Panhandle area of Texas. While CIG takes the position that its "reserves and deliverability have the test of time and experience, whereas the reserve and deliverability estimates of Arkla and Transwestern, being largely applicable to new gas supply areas where experience is limited, are far less certain", (Brief p. 57) Cities seizes on the same factors as support for its conclusion that "there is nothing alluring about CIG's gas supply insofar as the West Panhandle field is concerned." Evidence adduced indicates that in excess of 60 percent of the original recoverable reserves in the field have been depleted; and that there is "no great chance for discovery of substantial volumes of gas overlying the West Panhandle field." (Tr. 4839). Furthermore, it appears that the proposed CIG pipeline would be tapping reserves from a field which already services Cities. The competitive position thus arising therein between Cities and CIG would certainly not redound to Cities' or its customers' benefit.

In this connection, neither the Kansas Commission nor the Municipal interveners have shown that a superior alternative gas supply is available to Cities on the basis of which it could meet either part or all of its alleged existing market requirements of an additional 200,000 Mcf per day.

[22] The contract between Cities and Arkla, Exhibit 72, Part 1, provides in part for negotiations in good faith for the purchase of the additional volumes.

It is further contended that Cities' customers are entitled to the benefits of the use of the unused capacity in Cities' 26-inch Oklahoma-Hugoton main pipeline and that the Arkla-Transwestern project provides for full utilization of that existing line resulting in more inexpensive and economic transportation of gas from source of supply to Cities' customers. On the other hand, the CIG proposal would require what is essentially a long duplicative 24-inch line to move the gas from the Panhandle field to Blackwell, resulting in a continuation of the excess capacity in the Cities' 26-inch main Oklahoma-Hugoton line without adding a new source of supply to the Cities' system.

In view of all the circumstances it is concluded that Cities' long-range over-all gas supply problem will be more adequately and satisfactorily solved, and the interests of its entire system and those of its customers would be better served under the Arkla-Transwestern project than under the CIG proposal. The fact that Cities will be able to obtain its gas requirements for the market area involved from Transwestern and Arkla with comparatively minor expenditures instead of by long pipeline from the competing pipeline, with attendant additional capital expenditures involved, from an area not as favorably situated, could justify a ruling in granting the certificate of public convenience to the former even though both are otherwise qualified applicants. *Cf. Kentucky Natural Gas Corp.* v. *F.P.C.*, 2 FPC 1043, affirmed 159 F. 2d 215 (CA6–1947).

Flexibility

Under the contracts with Transwestern and Arkla, a delivery of a maximum daily volume of 233,000 Mcf to Cities is proposed. Commencing in 1966 under the Transwestern contract (Exhibit 64) Cities is entitled to receive up to 100,000 Mcf per day at a price of 20 cents per Mcf at 14.73 psia. It may also purchase as little as an average of 90,000 Mcf per day at the same price. Under the Arkla contract, Exhibit No. 72, part 1, Cities, beginning in 1966, has an obligation to purchase an annual daily volume of 100,000 Mcf per day at a price of 22.5 cents per Mcf at 14.65 psia. Furthermore, Cities, as the occasion warrants, may purchase as little as 75,000 Mcf on any day or days and may purchase as much as 133,000 Mcf on any day or days. Cities stresses that this option affords it flexibility in its gas purchases which will at least in part constitute a valuable consideration to Cities and its customers, particularly during the six cold weather months each year. Under the CIG project, CIG is obligated to deliver 200,000 Mcf per day and could not physically provide service to Cities of a peak load of 233,000 Mcf per day unless additional construction not proposed in these proceedings were authorized. While CIG contends that its facilities are so designed that they can be readily and easily expanded to meet increasing market requirements of Cities not only in 1967 but in later years, and testimony indicated that CIG was willing to negotiate for greater annual flexibility, the speculative aspects of such negotiations cannot, of course, be evaluated or resolved in these proceedings. Finally, it is well to note that the make-up provisions are more favorable to Cities under the Transwestern-Arkla contracts than under the CIG proposal. Thus, under the Transwestern contract Cities has the right to receive gas paid for but not taken during a five-year make-up period; under the Arkla contract during a two-year make-up period; and under the CIG proposal only a one-year make-up period is provided.

Rate Stability

There can be no question that considerations of rate stability are entitled to great weight in determining the relative effects of competitive applications upon the public convenience and necessity.

It is claimed by Cities, in the instant proceedings, supported by Gas Service Company, that the Arkla-Transwestern project provides greater rate stability

than that afforded by CIG's proposal. Thus, Arkla's 22.5 cents per Mcf price, firm for the life of the contract except for increases above 15 cents in Arkla's gas purchase costs in the Arkoma Basin area, is predicated on the 15 cents per Mcf price,[24] contained in Arkla's existing contracts for gas purchased in the Arkoma area; and Transwestern's contract price of 20 cents per Mcf is predicated on average purchase gas costs of 16.7 cents per Mcf (Exhibit 64). Transwestern's sales contract provides for continuance of said rate for the first six contract years except for increases or decreases in purchased gas costs. The propriety of these rates is assailed on the grounds of discrimination and improper methods of cost allocation. With respect to the former the conclusion is unsupported by any substantial evidence and the condition attached with respect to the rate moratorium has the effect of eliminating the chance of injury to Transwestern's other customers. With respect to the cost allocation question, the Examiner has adopted a cost allocation formula which establishes the propriety of the rates. In an adequate proceeding either or both of these conclusions can adequately be tested. In any event, it is Cities' uncontradicted conclusion that "the fact that both the Arkla and Transwestern contract prices are predicated on current area ceiling gas purchase costs is the most important single factor requiring the conclusion that Cities can expect substantial price stability under these contracts." Brief, p. 35.

In contrast, it is claimed, Cities can expect substantial price instability under the CIG proposal. Not only is CIG's initial price of 22.5 cents to Cities at 100 percent load factor subject to increase to 22.95 cents per Mcf at the minimum annual load factor of 90 percent and to 27.55 cents per Mcf at a 75 percent load factor, but the effect of any increase in the price of CIG's company-owned gas would inevitably proportionately increase the cost of the gas component in its cost of service, increasing the costs allocated to the Oklahoma line and Cities' share thereof. While CIG cavalierly dismisses this possibility as "pure and undiluted speculation", apppraisal must be given the fact that the inclusion of substantial quantities of gas at prices less than 4½ cents per Mcf (the lowest cost gas on CIG's system), results in a low average cost of gas component in CIG's cost of service. If for any reason, whether the result of any Area Rate Proceedings now pending with respect to pipeline-owned gas in the area under question in AR64–1, or by purchase of new gas to replace existing but diminishing low cost supply, or otherwise, CIG's company-owned gas becomes priced at a figure higher than 4½ cents per Mcf at the wellhead, the effect upon CIG's cost of service and ultimately upon the purchase price to Cities could be considerable. It is calculated that for each one-cent increase there would be a corresponding $\frac{1}{10}$ of a cent increase allocated to the Oklahoma line. While it is true that Cities' cost of gas would also increase in the event of future increases in Transwestern's and Arkla's gas purchase costs the possibility of the latter increases are less remote than those of CIG. In any event, since our present inquiry is into the relative cost of gas to Cities of alternative proposals, *cf. City of Pittsburgh* v. *F.P.C.*, 237 F. 2d 741, 753, the distinct possibility of an additional allowance to CIG on its West Panhandle field production, coupled with its expressed intention to recover any increased allowance to the extent that is permitted to do so, would, it seem, justify a Cities' management decision determining the comparative superiority of the Arkla-Transwestern proposals in this proceeding.

In view of the conclusions reached above with respect to the essential elements of cost of gas, investment required, gas supply, flexibility and rate stability, and on the basis of the record compiled herein, it is concluded that the combined

[24] The applicable area initial price contained in the Commission's Statement of General Policy No. 61–1, as amended.

Arkla-Transwestern project, and that of Transwestern's alone to provide 100,000 Mcf per day to Cities, are decisively superior to that of CIG in satisfying the requirements of public convenience and necessity. Accordingly, it is found that the public interest would best be served by certification of Transwestern's portion of the proposed project as applied for in Docket No. CP64–104, notwithstanding the rejection of Arkla's applications for its portion of the project. This solution of the comparative aspects of this proceeding appears to be a practical one especially in view of Cities' representation that it will accept 100,000 Mcf per day from either Arkla or Transwestern and will make arrangements for the required additional 100,000 Mcf per day from outside temporary services until the remaining application is certificated.

Miscellaneous Dockets

Certain dockets, G–20464, CP60–49, CP61–63, CP61–243 and CP62–160, concerning transactions involving Transwestern have been consolidated in the instant proceedings. Because they were not directly involved in the consideration of the comparative merits of the competing applications in these proceedings, they have been treated independently without reference to the proposed sale to Cities.

In the lead docket No. G–20464, the Presiding Examiner in the initial proceeding denied Transwestern's application for a certificate of public convenience and necessity, finding that Transwestern had failed to make the required market and economic feasibility showing to support the issuance of a certificate. Furthermore, the Examiner found that Transwestern had violated the Act by the unauthorized construction of jurisdictional facilities. While such decision was pending before the Commission, Transwestern filed a petition requesting that the proceedings be reopened for the purpose of taking additional evidence. Such evidence was designed to support the contention that material changes had occurred in Transwestern's market situation which removed any question as to the sufficiency of its markets and the economic feasibility of the facilities proposed. In addition, Transwestern also sought to adduce evidence to show that its construction of the field facilities involved did not constitute a willful violation of Section 7(c) of the Natural Gas Act. Thereafter, on February 26, 1963, Transwestern filed a second amendment to its application seeking authorization for the construction of the facilities, the unauthorized construction of which was the basis for the Presiding Examiner's finding of willful violation of the Act. Transwestern admits having constructed the unauthorized facilities. It contends, however, that the construction either involved exempted gathering facilities as that term is used in Section 1(b) of the Act and thus exempt from Commission jurisdiction, or that assuming that some type of certificate authorization was required for the construction of the facilities, Transwestern's conduct did not constitute a willful and knowing violation of the Act within the meaning of Section 21(a) thereof. In support of this latter contention, Transwestern did submit evidence to establish that in meetings with the Commission Staff, they were advised that additional certificate authorization was not required for the construction of the connections to any well in the field into which they had a previously certificated supply line and that they relied on that advice.

The Staff takes a rather novel position in connection with this alleged violation. Thus, while going to great lengths to establish that the unauthorized activities involved clearly constituted a violation of Section 7(c) of the Act; and that Transwestern did not, or has not, obtained certificate authorization to engage in the transportation of natural gas in interstate commerce from the additional wells, Staff concludes that it concurs "in Transwestern's asserted inability to have willfully and knowingly violated the Act by its uncertificated engagement in transportation in interstate commerce." (Brief, p. 29).

The Examiner agrees with the conclusion of Staff that Transwestern has violated Section 7(c) of the Act, at least with respect to the construction of the connecting lines involved for which authorization is sought in the second amendment to its application in Docket No. G–20464. Not only were the facilities designed for, and engaged in, the transportation of gas in interstate commerce, as alleged by the Staff, but the connecting lines having the size capacity and function of those built by Transwestern should properly be regarded as jurisdictional facilities. See *National Coal Association* v. *F.P.C.*, 247 F. 2d 86. However, the Examiner cannot agree with Staff's startling rationale for its conclusion, to wit, that Transwestern "conclusively lacks the ability to have knowingly violated the Act." Notwithstanding this conclusion, however, the evidence tends to support Transwestern's position to the effect that its previous conduct, including its seeking of and dependence upon, Commission Staff advice; its consistent record in securing certificate authorization prior to construction of facilities; and its filing of the second amendment to the application in Docket No. G–20464, fails to show any proclivity for violating the Act. Accordingly, under the facts presented, it is found that Transwestern's unauthorized construction and operation of the facilities involved, which Transwestern strongly alleges were undertaken in good faith, and which constituted the violation complained of, does not warrant the imposition of sanctions.

It must be emphasized, however, that unauthorized construction of facilities is of a serious concern since it may materially hamper the performance of important Commission duties such as allocation of capacity and determination of the need for proposed capacity. Accordingly, Transwestern is cautioned to follow procedures for determination of Commission jurisdiction over all construction plans which arguably could require certification under the Rules of Practice and Procedure, or otherwise. Failure to do so could result in the imposition of appropriate sanctions in the event an unauthorized construction is later determined to be jurisdictional. *Cf. Northern Natural Gas Co.*, 28 FPC 1155, 1166.

The facilities for which authorization is sought herein, in addition to those sought in Docket No. G–20464, are included in miscellaneous Docket Nos. CP60–49, CP61–63, CP61–243 and CP62–160 (a budget-type application). Permanent authorization was granted in Docket No. CP60–50 and authorization is sought herein to conform the previous authorization with the facilities as actually installed. A certificate was previously issued in the budget-type application in Docket No. CP61–168 and an amendment is sought to increase the amount of authorization. The facilities involved in all the foregoing miscellaneous dockets, including Docket No. G–20464, have been constructed and have been placed in service. On the basis of evidence submitted in these proceedings, it is concluded that the facilities for which authorization is sought are used and required to transport the currently required volumes to Transwestern's customers, exclusive of the proposed sale to Cities in Docket No. CP64–104. Transwestern has established that its maximum daily demand obligation has increased to 410,000 Mcf per day (FPC order issued December 16, 1963, Docket No. CP64–34, 30 FPC 1520). It cannot deliver its certificated 410,000 Mcf per day maximum demand quantities without the capacity provided by the facilities involved in these miscellaneous dockets. Furthermore, Transwestern has established additional markets supporting the permanent certification of the facilities previously constructed under these miscellaneous dockets as well as the other elements of public convenience and necessity. No substantial evidence was adduced to the contrary. Staff recommends certification thereof. Accordingly, it is concluded that certificates of public convenience and necessity should be issued granting the authorizations sought by Transwestern in Docket Nos. G–20464, CP60–49, CP60–50, CP61–63, CP61–168, CP61–243, and CP62–160.

By order dated March 4, 1964, *supra*,[25] the Commission also consolidated the producer applications in Docket Nos. CI61–169, CI61–193, CI61–375, CI61–438, CI61–715, CI61–936,[26] CI61–1774,[27] G–18201, and CI61–497, for hearing in this proceeding. Each of these applicants were granted a temporary certificate, conditioned at the 17.0 cents per Mcf rate.

The applications and rate schedules of the respective producer applicants, with the exception of Petro-Associates, Inc. (Operator), Docket No. CI61–936, were made a part of the record as items by reference. As indicated in the order of the Commission, dated March 4, *supra*, certification in these dockets depends upon permanent certification in Docket Nos. G–20464, CP61–168, and CP62–160, and on the producers' initial prices. All the producer applicants, except Petro-Associates in Docket No. CI61–936, have indicated willingness to accept the initial price of 17 cents per Mcf at 14.65 psia, in accordance with the Federal Power Commission's Statement of General Policy No. 61–1, as amended, for jurisdictional sales in Texas Railroad Commission District No. 10. Since it has been determined herein that the certification of the applications in Docket Nos. G–20464, CP61–168, and CP62–160 are required by the public convenience and necessity the producer applicants consolidated in these proceedings, except Petro-Associates, Inc., in Docket No. CI61–936, should be granted permanent certificates subject to the conditions hereinafter imposed.

ADDITIONAL FINDINGS AND CONCLUSIONS

The following findings are made upon consideration of the record in these proceedings, the evidence adduced, and the briefs filed, and constitute a summary of and are deemed to be supplementary to those hereinabove stated:

(1) CIG, Cities, Arkla, and Transwestern are all "natural-gas companies" within the meaning of the Natural Gas Act; and the proposed construction and operation of the facilities by each, as more fully described in their applications as amended and supplemented, as well as CIG's proposed abandonment of its existing Colorado Springs to Denver 20-inch pipeline, are subject to the jurisdiction of the Federal Power Commission under Section 7 of the Natural Gas Act.

(2) All the sales and transportation of natural gas proposed herein will, if authorized, be made in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission; and such sales and transportation are subject to the provisions of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Cities is able and willing to do the acts and to perform the service proposed in Docket No. CP64–131 and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the facilities proposed by Cities in Docket No. CP64–131 are required by the public convenience and necessity and a certificate therefor as hereinafter ordered and conditioned should be issued, temporarily limited, however, to the facilities required in connection with the proposed sale of 100,000 Mcf per day from Transwestern.

(5) Transwestern is able and willing to do the acts and to perform the service proposed in its application in Docket No. CP64–104, and to conform to the provisions of the Natural Gas Act and requirements, rules and regulations of the Commission promulgated thereunder.

(6) The construction and operation of the facilities proposed by Transwestern in its application in Docket No. CP64–104 and the sale of natural gas by means

[25] As supplemented on application for rehearing.
[26] Withdrawal of application has been requested.
[27] H&Y Oil Company, successor to, and substituted for, Schafer Oil Corp.

thereof at the rate proposed by Transwestern are required by the public convenience and necessity, provided, however, that Transwestern file its 20-cent per Mcf contract rate as a two-part rate reflecting demand and commodity charges acceptable to the Commission.

(7) The moratorium provision in Transwestern's contract with Cities is not contrary to the public interest provided, however, Transwestern's certificate be conditioned to the effect that no deficiency in Transwestern's revenues resulting from the operation of the moratorium provision in Transwestern's contract with Cities should be taken into account in computing Transwestern's cost of service to Pacific Lighting Gas Supply Company and no such deficiency should be used to support any increased rates in any rate increase application brought by Transwestern directed to Pacific Lighting Gas Supply Company.

(8) A certificate of public convenience and necessity, conditioned as suggested herein, should be issued to Transwestern in Docket No. CP64–104 authorizing the construction and operation of the facilities described therein and authorizing its proposed sale of 100,000 Mcf per day to Cities.

(9) Public convenience and necessity require that the general terms and conditions set forth in Paragraphs (a), (b), (c) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act should attach to the certificates issued hereunder to Cities and Transwestern and to the exercise of the rights granted thereunder.

(10) The application of Arkla in Docket No. CP64–125 should be denied without prejudice because the applicant has not met the statutory burden imposed by the Natural Gas Act of proving that it is able to do the acts and to perform the services it proposes more particularly with respect to the adequacy of its gas supply necessary for the proposed service to Cities without jeopardizing service to its existing customers. This finding is made without prejudice in order to enable Arkla to file a statement with the Commission making known its desire to present further evidence in support of the gas supply showing as hereinafter provided.

(11) Arkla's motion to amend its certificate issued in Docket No. CP62–219 is denied at this time without prejudice to its supplementing the application with a deliverability and market showing justifying that the public convenience and necessity requires the requested increased capacity of its Arkoma line.

(12) On a comparative basis the application of CIG is less advantageous to Cities, its customers and their ultimate consumers than are the competing proposals of Transwestern in Docket No. CP64–104 and of Arkla in Docket No. CP64–125 or in comparison with Transwestern's application alone in Docket No. CP64–104.

(13) CIG's application in Docket No. CP63–344 (Phase Two), insofar as it requests certificate authorization to construct and operate facilities necessary to render its proposed service to Cities, has not been shown to be in the public interest and should be denied.

(14) The public convenience and necessity require the abandonment by CIG of its Colorado Springs to Denver 20-inch line and the construction and operation of the replacement thereof, as well as the construction and operation of the additional compressor facilities required to complete its Rocky Mountain expansion program as proposed in its application, as amended.

(15) The facilities heretofore installed and operated by Transwestern under Docket Nos. G–20464, CP60–49, CP61–63, CP61–243 and CP62–160 as reflected by the record in these proceedings is required by the public convenience and necessity and certificates of public convenience and necessity should be issued covering such facilities.

(16) Permanent certificates of public convenience and necessity in Docket Nos. CP60–50 and CP61–168 should be granted.

(17) Transwestern was not guilty of willfully and knowingly violating the Natural Gas Act by the construction and operation of the facilities not described in its original application in Docket No. G–20464.

(18) The public convenience and necessity requires that the general terms and conditions set forth in Paragraphs (a), (b), (c) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, including the Rules of Practice and Procedure, should attach to the issuance of permanent certificates of public convenience and necessity to Transwestern in its applications consolidated in this proceeding and to the exercise of the rights granted thereunder.

(19) Each of the producer applicants in Docket Nos. CI61–169, CI61–193, CI61–375, CI61–438, CI61–715, CI61–497 and CI61–1774 and G–18201 are engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and is a "natural-gas company" within the meaning of the Natural Gas Act.

(20) The proposed producer sales are required by the public convenience and necessity subject, however, to conditions which will prohibit a total initial price in excess of 17 cents per Mcf at 14.65 psia until such price may be lawfully changed in the manner provided in the Natural Gas Act; and subject, further, to the ultimate disposition in the rulemaking proceedings in Docket Nos. R–199 and R–200.

ORDER

WHEREFORE, *it is ordered*, subject to review by the Commission on appeal or review by the Commission on its own motion as provided by its Rules of Practice and Procedure, that:

(A) Certificates of public convenience and necessity are hereby issued to Cities in Docket No. CP64–131 and to Transwestern in Docket No. CP64–104 for the sale of 100,000 Mcf per day of natural gas in interstate commerce for resale together with the construction and operation of the facilities necessary therefor, as proposed in their respective applications.

(B) The certificate of public convenience and necessity issued to Transwestern in Docket No. CP64–104 is hereby conditioned, however, as follows: (1) if there are any deficiencies in Transwestern's revenues during the first six years of operation under the Cities' contract (other than deficiencies resulting from increases in the cost of purchased gas), no such deficiencies will be taken into account in computing Transwestern's cost of service to Pacific Lighting Gas Supply Company, nor should any such deficiencies be used to support increased rates in any rate increase application by Transwestern directed to Pacific Lighting Gas Supply Company, and (2) Transwestern shall file its 20-cent contract price as a two-part rate reflecting demand and commodity charges acceptable to the Commission.

(C) The application by CIG for authorization for abandonment of its Colorado Springs to Denver 20-inch line and for the construction and operation of the replacement thereof; and for the construction and operation of the additional compressor facilities required to complete its Rocky Mountain expansion program, as proposed in its application herein is hereby granted. Except as herein otherwise provided the application by CIG in Docket No. CP63–344 (Phase Two) is in all other respects denied.

(D) The application of Arkla in Docket No. CP64–125 is denied, without prejudice, however, to the applicant's presentation of further evidence in support of an adequate gas supply to meet its present market in addition to the proposed sale to Cities. If it so desires, it shall within twenty days from the date of this order file a statement with the Commission making known such desire and stating fully the nature of the evidence it wishes to present. Any such statement shall be served on the other participants not later than the time of filing and they may answer it within ten days of service.

(E) No action is taken on Arkla's motion to amend its certificate issued in Docket No. CP62-219 until this motion be supplemented with a deliverability and market showing justifying that the public convenience and necessity requires the requested increased capacity of its Arkoma line or until a certificate approving the authorization in Docket No. CP64-125 or its successor or equivalent substitute is obtained.

(F) Certificates of public convenience and necessity are hereby issued for the facilities installed and operated by Transwestern for the transportation of natural gas in interstate commerce in Docket Nos. G-20464, CP60-49, CP61-63, CP61-243 and CP62-160.

(G) Certificates of public convenience and necessity are hereby granted to Transwestern in the applications as amended in Docket Nos. CP60-50 and CP61-168.

(H) Certificates of public convenience and necessity are hereby issued to the producer applicants in Docket Nos. CI61-169; CI61-193; CI61-375; CI61-438; CI61-715; CI61-1774; CI61-497 and G-18201, subject to the condition, however, that the total initial price, including all reimbursements and charges shall not exceed 17 cents per Mcf at 14.65 psia, from the date of issuance of the certificate until such price may be lawfully changed in the manner provided by the Natural Gas Act.

(I) The general terms and conditions set forth in Section 157.20 of the Commission's Regulations under the Natural Gas Act shall attach to the certificates issued herein to Transwestern and to Cities and the facilities hereby authorized shall be constructed and placed in actual operation as provided by subparagraph (b) of Section 157.20 of the Commission's Regulations within four months from the date on which the Commission's order issues.

MAX L. KANE,
Presiding Examiner.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATION FOR A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY PURSUANT TO SECTION 7(C) OF THE NATURAL GAS ACT

(Issued February 27, 1962)

RENDELMAN, *Presiding Examiner:* Pursuant to Section 7(c) of the Natural Gas Act, on December 18, 1959, Transwestern Pipeline Company (Transwestern) filed an application[1] for a certificate of public convenience and necessity authorizing the construction and operation of field facilities for the purpose of gathering into its existing certificated main pipeline system natural gas which it agreed to purchase from various independent producers under 32 separate contracts in the Panhandle area of Texas, Oklahoma and Kansas and in Eddy County, New Mexico. These facilities, which would enable Transwestern to connect an additional 518,000,000 Mcf of gas, included 265 miles of 4-inch to 12-inch pipelines, 8040 horsepower additional compression in three new stations, and metering and dehydration facilities, at an estimated cost of $9,458,568. On July 8, 1960, the Commission granted a temporary certificate authorizing construction and operation of the proposed facilities. Thereafter, by order dated June 15, 1961, the Commission issued a "notice of application and date of hearing" setting this matter for public hearing to commence on July 25, 1961. Petitions to intervene were filed by the California Public Utilities Commission (PUC) and Pacific Lighting Gas Supply Company (Gas Supply) and its affiliates Southern Counties Gas Company of California and Southern California Gas Company. By order of

[1] As amended on June 20th and February 9, 1960, and as further modified by a letter from Transwestern to the Commission dated February 11, 1960.

July 20, 1961, the Commission allowed the proposed interventions but denied a motion by PUC to consolidate the various producer certificate applications in this proceeding.

In the interim between the date respondent filed its certificate application, and completion, under the authority granted in the temporary certificate, of the facilities proposed therein, additional wells were drilled on leases previously dedicated to Transwestern. Allegedly by reason of the fact that it could effect substantial savings thereby and without, at the time, observing the formality of applying for authorization therefor from the Commission as required by Section 7(c) of the Natural Gas Act, respondent constructed some 99 additional miles of field lines to connect these newly drilled wells, thereby acquiring additional reserves totalling approximately 419,000,000 Mcf covered by 39 additional contracts for a total of 937,000,000 Mcf to be connected under the entire project. The presently estimated costs of these additional facilities is $4,057,516, or a total of $13,516,074 for the entire project.

On July 25, 1961, immediately preceding the hearing, Transwestern filed an amendment to the pending application to include the aforementioned additional facilities. Thereafter, during the course of the hearing, counsel for Transwestern moved to conform its certificate application to the testimony in the record with respect to these additional well-connection facilities and additional producer contracts. Testimony at the hearing was limited to that of the witnesses presented by Transwestern, and the hearing was concluded on September 7, 1961. Neither the interveners nor the Staff presented any evidence.

It was not until August 7, 1961, after both the facilities temporarily certificated and the unauthorized facilities were substantially completed and in operation, that application was made to the Commission to amend the temporary certificate so as to include the additional construction. By letter dated September 21, 1961, the Commission denied the application on the ground that inasmuch as the facilities had already been constructed prior to the application, and were actually in operation, no showing of any existing emergency had been made and Section 157.17 of the Commission's Regulations was therefore inapplicable.

Pursuant to Commission Opinion No. 328, dated August 10, 1959, 22 FPC 391, as amended by orders issued September 23, 1959, 22 FPC 542, and September 29, 1959, 22 FPC 574, respectively, a certificate of public convenience and necessity was issued to Transwestern authorizing the construction and operation of a new 30-inch pipeline from the Panhandle-Hugoton and the West-Texas-Permian Basin areas in Texas to the California-Arizona borderline near Topock, Arizona, in order to furnish a supply of gas to the Pacific Lighting Gas Supply Company, for resale to its affiliated companies, Southern Gas Company of California and Southern California Gas Company, and distribution to the gas-consuming public in the 14 counties served by them in Southern California. The issuance of the certificate was based, among other factors, on a showing of "minimum deliverability of 308,000 Mcf per day for 13 years." The purchase agreement between Transwestern and Gas Supply provides for a daily take of 300,000 Mcf with permitted variances therefrom of 91 percent to 115 percent, or a variation of 273,000 to 345,000 Mcf per day, with a contractual makeup period of five years for quantities of gas below the daily minumum not taken but paid for.[2] Also,

[2] The agreement as originally written contained a 100 percent minimum bill provision with a 10-year contractual makeup period. In Opinion No. 328, the Commission reduced the minimum bill to 75 percent and ordered revision of the 100 percent take-or-pay provisions in Transwestern's contracts with its respective producers to conform therewith. On rehearing, the Commission in the amendment of September 23, 1959 raised the 75 percent minimum bill provision to 91 percent in the agreement between Transwestern and Gas Supply, and eliminated the 75 percent take-or-pay provisions from the producer contracts. The effect thereof was to reinstate the original 100 percent take-or-pay provisions.

commencing November 1, 1963, Gas Supply will be required to take an additional 50,000 Mcf per day. Firm deliveries to Gas Supply commenced on October 1, 1960.

Section 7(e) of the Natural Gas Act states that

> * * * a certificate shall be issued to any qualified applicant therefor * * * if it is found * * * that the proposed service, sale, operation, construction, extension, or acquisition, to the extent authorized by the certificate, is or will be required by the present or future public convenience and necessity; otherwise such application shall be denied.

The Commission has held that "public convenience and necessity" as used therein encompasses such factors as gas supply, facilities, markets, financial ability, economic feasibility, and proper initial prices. *American Louisiana Pipe Line Company*, 20 FPC 575; *Midwestern Gas Transmission Company*, 22 FPC 575. With the exception of markets and economic feasibility, respondent has substantially complied with the aforementioned requisites constituting public convenience and necessity. As to markets and economic feasibility, on the basis of the present record in this case, Transwestern has not made a sufficient showing to warrant the issuance of a certificate of public convenience and necessity.

At the time Transwestern's original certificate was issued Gas Supply was Transwestern's only jurisdictional customer. As of the present writing, this fact remains unaltered. There is testimony in the record to the effect that new markets will be sought and are anticipated, but as of this date such prospective markets remain undeveloped, and Transwestern has filed no application with the Commission for authority to make any additional jurisdictional sales. There is thus no reason to conclude that Transwestern will acquire any new markets within the immediately foreseeable future. The record further shows that despite the daily contract quantity of 300,000 Mcf, Gas Supply's take since the pipeline was put into operation to the time of the hearing herein has averaged only 265,000 Mcf per day, somewhat below the minimum billing of 273,000 Mcf per day. Moreover, it appears that in August of 1961, Gas Supply filed a rate increase application with the California Public Utilities Commission in which it estimated that its purchases from Transwestern would not average over 300,000 Mcf per day for the calendar year 1962.

It is to be noted that in the instant application Transwestern does not seek to increase the capacity of its certificated main pipeline system. It is alleged by Transwestern that the sole purpose of the additional facilities to be constructed and operated under the instant application is for implementation of its existing supply of gas in order to maintain its present deliveries. There is nothing in the record, however, to indicate that its present supply of gas is not sufficient to serve that purpose. This conclusion is confirmed by the testimony of Transwestern's president to the effect that without the reserves to be connected by the facilities proposed herein, Transwestern still has sufficient reserves to meet its contract requirements, and that it is not anticipated that Gas Supply's take from Transwestern will be increased within the next year or two. The Commission also so found in Opinion No. 328 issued in the original certificate proceeding, wherein it stated

> Considering only those reserves committed to it under the contracts which are part of these proceedings, the record shows a minimum deliverability of 308,000 Mcf per day for 13 years.

The Commission did point out therein, as urged by Transwestern in its brief in this case, that it was reasonable to conclude from the evidence in that record that Transwestern's reserves would be steadily increased. Acting accordingly, Transwestern has acquired the additional gas reserves covered by the contracts

concerned in this proceeding, as assumed by the Commission, but insofar as its present sales, or sales in the immediate future are concerned, no showing has been made in the record in this case of the necessity for the additional gas which the facilities proposed herein would make available. It is to Transwestern's advantage, of course, to have these reserves at hand should the necessity therefor arise in the future, but it does not appear from the evidence that the facilities to connect these reserves, which Transwestern presently seeks to have authorized, are necessary at this time or will be within the reasonably foreseeable future.

Transwestern argues that in the initial certificate proceedings the Staff questioned the sufficiency of Transwestern's reserves and opposed the issuance of the certificate for that reason, whereas in the instant proceedings the Staff takes the apparently contradictory position that additional gas reserves are unnecessary to enable Transwestern to fulfill its contract obligation to Gas Supply. The apparent inconsistency is dissipated, however, when it is considered that the Staff's initial position was based on Transwestern's broad market presentation in that proceeding wherein it was anticipated that the Southern California market would be greatly expanded. On the basis of the evidence, or lack thereof, herein, it does not appear as of the date of this writing that the Southern California market has developed to the extent originally so optimistically anticipated.[2] This was admitted by Transwestern's president in his testimony and is further reflected by the fact that during the past year deliveries to Pacific Lighting have averaged approximately 8,000 Mcf per day less than the minimum billing. Moreover, it is to be noted that in August 1960, Pacific Lighting declined Transwestern's offer to supply an additional 150,000 Mcf per day.

As a matter of economic feasibility, Transwestern's present situation with respect to the 100 percent take-or-pay provisions in its producer contracts, both in the original certificate proceedings and in the 75 contracts concerned in this proceeding, does nothing to support the present application and, in fact, presents ample reason for denial thereof. As a result of the failure of the California market to develop as anticipated, Transwestern presently finds itself in a position where at the end of its first year of operation it will be obligated to pay its producers for gas which it could not take and did not receive. There is testimony in the record to the effect that Transwestern is presently conducting negotiations with its producers which would avoid such payments by reducing the required "takes" or by extending the makeup period, but there is nothing to indicate that any definitive agreement has been reached. Such tenuous representations present no basis to suppose that Transwestern will not in fact be required to comply with the present take-or-pay provisions in its producer contracts.

As testified by Transwestern's manager of gas purchases, the additional daily contract quantity which Transwestern could be obliged to take under the contracts concerned in this proceeding is approximately 208,000 Mcf. If a certificate of public convenience and necessity were issued herein, Transwestern under the terms of its producer contracts, would immediately be required to take this additional contract daily quantity into its pipeline system by reason of the fact that

[2] Also to be considered is the effect on the future market in Southern California of El Paso Natural Gas Company's presently pending application before the Commission for a certificate of public convenience and necessity for its Rock Springs project, which if authorized would bring a large additional supply of gas to the area. Additionally proposed and presently pending before the California PUC is the joint Tennessee Gas Transmission Company–Pemex project whereby gas would be brought to Southern California for the purpose of supplying the Southern California Edison Company, presently one of the largest customers of Gas Supply's affiliate. Inasmuch as Southern California Edison's annual expenditure for gas is approximately $26,000,000 the effect on Transwestern of the loss of Southern California Edison as a customer of Gas Supply's affiliate would be, to say the least, substantial.

the proposed facilities are completely installed and operating. At the present rate of its sales to Pacific Lighting, with no immediate prospect of any increased demand for gas, and in the absence of any showing of new markets, it is obvious that Transwestern could soon find itself in a position where it will be obligated to pay for the entire contract daily quantity of 208,000 Mcf without ever having actually received the first Mcf thereof, inasmuch as its present supply is more than ample to support the even less than minimum contract daily quantity taken by its only customer. Transwestern could reduce its take from its other suppliers and take reduced quantities of gas from its new producers but the end result would be the same. Inasmuch as Transwestern's contracts with its producers in this proceedings are conditioned upon the issuance of a permanent certificate, denial of the application therefor will act to relieve Transwestern of this obligation. Transwestern calls attention to the fact that commencing November 1, 1963, Gas Supply will be required to take an additional 50,000 Mcf per day but under the present state of affairs the relief afforded thereby would be minimal.

In Opinion No. 328, in the original certificate proceeding, the Commission discussed the effect of gas paid for but not received as follows. [4]

> The rationale of our realining the Transwestern minimum bill with the concurrent adjustment in its commodity charge and the realinement of the take-or-pay provisions in Transwestern's supply contracts is basically the requirement that payment be made for services rendered. Ratepayers of Gas Supply ought not to be called upon to supply a constant flow of dollars to Transwestern for a variable supply of gas from it, which dollars Transwestern in turn must pass on to the producers with still more cash supplied by extra-revenue sources. The producers have not shown a need for a constant income independent of their sales or the price proposed. Absent good and sufficient reason shown, it is not in the public interest to permit an accumulation of gas paid for but not taken, and as yet unproduced, for which money has already exchanged hands.

The circumstances surrounding this application fall squarely within the purview of the language hereinabove quoted. If for no other reason in accordance with the policy expressed therein, the issuance of a certificate of public convenience and necessity in this case would not be in the public interest.

Another serious issue in this proceeding concerns the unauthorized construction, and present operation without the approval of the Commission, of about 99 miles of pipeline by which Transwestern attached reserves totalling approximately 419,000,000 Mcf covered by 39 additional contracts. This is in addition to the 265 miles of pipeline covered by the original application and authorized under the temporary certificate issued by the Commission on July 8, 1960.

It appears from the record that such unauthorized construction and operation clearly violates Section 7(c) of the Natural Gas Act, and under the circumstances herein constitutes a willful violation within the meaning of Section 21(a) thereof. Transwestern apparently does not dispute the illegality of its unauthorized act but states in supposed justification therefor that it was able to realize substantial savings by accomplishing such construction while its crews, equipment, and inspectors were in the field in the process of constructing the facilities originally proposed. However, this explanation is hardly sufficient to condone such a willful and knowledgeable transgression. It is elementary that the certificates, both permanent and temporary, discussed in Section 7 of the Natural Gas Act are issued in the interest of *public* convenience and necessity. Under the circumstances herein, it appears that the only convenience served by

[4] 22 FPC 391, 395.

Transwestern was its own; the necessity, or lack thereof, for these unauthorized facilities has hereinbefore been discussed.

In a similar situation, *Mississippi River Fuel Corporation*, 9 FPC 198, the Commission found that it was under a duty to transmit, in accordance with Section 20(a) of the Natural Gas Act, evidence of the apparent violations to the Attorney General of the United States for his consideration as to whether, in his discretion, criminal proceedings should be instituted. Accordingly, the attention of the Commission is hereby directed to the aforementioned violation of Section 7(c) of the Natural Gas Act for its determination as to the further course to be followed herein.

As hereinbefore noted, the circumstances in this case are to some extent unique in that the instant application for a permanent certificate of public convenience and necessity includes facilities which have already been completed and are presently in service under the temporary authorization previously issued. Counsel for Transwestern makes the point that if denied a permanent certificate of public convenience and necessity, Transwestern would be in a position where it would have no authority to operate the facilities, yet under Section 7(b) of the Natural Gas Act it could not discontinue operation thereof without authorization granted by the Commission. As stated by counsel, Transwestern would find itself in a position where it "could not abandon the facilities it has already constructed except pursuant to Commission authorization under Section 7(b) of the Natural Gas Act; yet it would have no authority—either permanent or temporary—to operate such facilities." Such point, however, is not well taken, in that Section 7(b) cannot logically be construed so as to apply to the instant situation. The temporary certificate issued herein, as does any temporary certificate issued by the Commission, states that issuance thereof "is without prejudice to such final disposition of the application for certificate as the record may require." Construction under a temporary certificate thus is a risk advisedly undertaken by the applicant. As expressed by the Commission in connection with the issuance of a temporary certificate in *Mississippi River Fuel Corporation*, 9 FPC 219, 222,

> This action should not be considered as providing any assurance that, after hearing, a permanent certificate will be issued to applicant for the acquisition, construction and operation of facilities not heretofore authorized in this docket. Such acquisition and construction, if undertaken by applicant under the authority hereinafter granted, must be solely at applicant's risk.

In the consideration of its decision the Commission should therefore not take cognizance of, or be influenced by, the fact that facilities authorized under a temporary certificate have been completed and placed in operation, where on the record subsequently made at the hearing it appears that issuance of a permanent certificate would not be in the public interest. Insofar as the Commission is concerned, it is as though such facilities had never been constructed.

Denial of the application for a permanent certificate herein leaves Transwestern in the same position as the many natural gas companies previously before the Commission whose applications for permanent certificates of public convenience and necessity were similarly denied but which did not undertake construction or operation of the proposed facilities prior to the final determination of the Commission. It would, indeed, then, constitute an idle exercise to require Transwestern to apply for the discontinuance of facilities which, insofar as the Commission is concerned, do not officially exist. Moreover, inasmuch as denial of a permanent certificate herein will not result in curtailment of the supply of gas or services furnished to Gas Supply, no abandonment is involved and no application under Section 7(b) of the Act is therefore necessary. *Tarpon Oil Corporation* and *J. C. Trahan, Drilling Contractor, Inc., Operator, et al.*, Docket No. CI60-582, *et al.*,

issued October 30, 1961, 26 FPC 635; *Peoples Gulf Coast Natural Gas Pipeline Company* and *Texas Illinois Natural Gas Pipeline Company*, Docket No. G–19963, 22 FPC 1013; *cf.*, *Coastal Transmission Corporation, et al.*, Docket No. G–18338, *et al.*, issued November 2, 1961, 26 FPC 677.

In the letter-order of September 21, 1961, denying Transwestern's request to amend the temporary certificate so as to include those facilities constructed without authorization, the Commission specifically directed that operation thereof not be discontinued "without permission of the Commission issued pursuant to the provisions of the Natural Gas Act." In view of this specific direction by the Commission, denial of the permanent certificate herein could leave Transwestern in the position where it would be engaged in the illegal operation of facilities from which it could not desist without approval of the Commission. While this anomolous situation is a creature of the applicant's own creation, it is recognized in the interest of practicality, if nothing else, that such a condition should not persist. It is therefore found that continued operation of the unauthorized facilities is not in the public interest, and Transwestern is hereby directed to discontinue the operation thereof.

Transwestern decries the presumably wasteful results which would follow the denial of a permanent certificate herein. It is conceded that insofar as jurisdictional sales in the immediate future are concerned, the completed facilities proposed by this application may lie fallow, but if Transwestern is correct in its prognostication as to the future development of the Southern California market, the construction of these facilities will not have been in vain. Transwestern will not be foreclosed from renewing this application at some future date if it can, by substantial evidence, demonstrate a need for the gas made available by connection of these facilities either by reason of the fruition of the Southern California market or the development of additional jurisdictional sales. The Commission apparently issued the temporary certificate herein based on Transwestern's sworn representation that an emergency existed by reason of the alleged substantial savings that could be realized if these intended additional facilities could be constructed while its construction crews were still in the field laying its heretofore certificated main pipeline system.[5] In conjunction therewith the Commission undoubtedly also weighed the evidence adduced by Transwestern in the original certificate proceedings with respect to the expanded market it anticipated would develop shortly thereafter. That such market has not so developed is not the fault of the parties. However, the issuance of a permanent certificate based on the present status of the Southern California market as shown in these proceedings is not warranted.

After conclusion of the hearing and the filing of briefs, the Presiding Examiner received a letter dated February 5, 1962, from Transwestern requesting that official notice be taken of the application filed by El Paso Natural Gas Company (not a party to this proceeding) in Docket No. CP62–154, the telegram filed by Southern California Gas Company and Southern Counties Gas Company of California in support of the application, and the petition to intervene filed by Transwestern in that proceedings. Objection thereto was asserted by Gas Supply by letter dated February 12, 1962.

The documents referred to in the foregoing paragraph are merely pleadings in the proceedings to which they relate and any official notice given thereto herein would be limited merely to recognition of the fact that such documents had been filed with the Commission in Docket No. CP62–154. No inferences or con-

[5] This was the same ground upon which Transwestern applied for amendment of the temporary certificate to include the additional 99 miles of pipeline constructed without authorization.

clusions could be drawn as to the truth or falsity of the statements contained therein, or the effect thereof on the issues in this proceeding without the testimony of a competent witness who could be tested by cross-examination.

Accordingly, the objection of Gas Supply to Transwestern's request that the items referred to in Transwestern's aforementioned letter of February 5, 1962, be considered as evidence in this proceedings, is sustained.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the record and briefs filed in these proceedings, it is found and concluded, in addition to the findings and conclusions heretofore stated that:

(1) Transwestern Pipeline Company, a corporation organized and existing under the laws of the State of Delaware, is engaged in the transportation and sale of natural gas in interstate commerce for resale and ultimate public consumption subject to the jurisdiction of the Commission, and is a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The facilities concerned in this application for a certificate of public convenience and necessity are proposed for use in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, together with the construction and operation thereof, and are subject to the requirements of Section 7 of the Natural Gas Act.

(3) The present public convenience and necessity does not require the issuance of a permanent certificate authorizing the construction and operation of the facilities proposed herein, nor does it appear that the issuance thereof will be so required within the reasonably foreseeable future.

(4) Certain of the facilities, concerned herein, as hereinbefore discussed, were constructed and are presently in service, without the prior authorization of the Commission. Such construction and operation is contrary to the provisions of Section 7(c) of the Natural Gas Act, and constitutes a willful violation within the meaning of Section 21(a) thereof.

(5) Continued operation of the unauthorized facilities referred to in the preceding paragraph is not in the public interest.

ORDER

WHEREFORE, *it is ordered*, subject to review by the Commission, as follows:

(A) That Transwestern's application for a certificate of public convenience and necessity for the construction and operation of the facilities proposed therein be denied without prejudice to renewal thereof at such time as it can demonstrate a need therefor.

(B) That Transwestern discontinue the operation of those facilities not authorized by the temporary certificate heretofore issued by the Commission on July 8, 1960.

MARTIN E. RENDELMAN,
Presiding Examiner.

Before Commissioners: L. J. O'Connor, Jr., Acting Chairman; Charles R. Ross and Carl E. Bagge.

ALABAMA POWER COMPANY, PROJECT NO. 2407

ORDER APPROVING REVISED PROJECT EXHIBIT AND FIXING ANNUAL LAND CHARGE

(Issued September 1, 1965)

On March 26, 1965, Alabama Power Company, licensee for Project No. 2407, filed for Commission approval revised Exhibit K, Sheet 4 (FPC No. 2407-14) pursuant to Article 31 of the license, showing two islands comprising 9.41 acres of public lands of the United States within the project boundary. The lands were not shown on the exhibit originally filed and, therefore, no annual charge for the occupancy of the lands was fixed in Article 30 of the license for the project which should be modified to include a charge for such occupancy. The license for the project was issued on January 14, 1965, and made effective as of April 1, 1962, 33 FPC 71.

The Commission finds:

Revised Exhibit K, Sheet 4 (FPC No. 2407-14) conforms to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) The exhibit designated in the finding above is hereby approved as part of the license for Project No. 2407.

(B) Article 30 of the license is hereby modified to read as follows:

Article 30. The licensee shall pay to the United States the following annual charges, effective as of April 1, 1962:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations in effect from time to time. The authorized installed capacity for such purpose is 42,700 horsepower.

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, $22.58.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

J. R. FRANKEL, ET AL. (SUCCESSORS TO BERKSHIRE OIL COMPANY, SUCCESSOR TO R. R. FRANKEL), DOCKET NOS. G–17671, G–19948 AND RI60–334

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING REFUNDS, TERMINATING PROCEEDINGS AND TERMINATING PROCEEDING IN PART

(Issued September 1, 1965)

On June 9, 1965, J. R. Frankel, *et al.* (Frankel), submitted an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The predecessors of Frankel filed proposed increased rates which were suspended by order of the Commission for the statutory period, and made effective by motion, subject to refund. The sale involved is a sale presently being made by Continental Oil Company (Continental) to Gas Gathering Corporation (Gas Gathering) which in turn resells the gas to Transcontinental Gas Pipe Line Corporation (Transco). Continental succeeded to Frankel's interest on November 2, 1961, and was thereafter made a co-respondent in Docket No. RI60–334. The sale is made in the Happytown Field, St. Martin Parish, Louisiana, at a presently effective rate of 21.05¢ per Mcf of natural gas at 15.025 psia.

Frankel proposes a settlement rate at the applicable increased rate ceiling of 15.75¢ per Mcf of natural gas at 15.025 psia, and to make refunds for the period it collected rates subject to refund in accordance with the Grigsby refund formula set forth in our order in *Jack W. Grigsby (Operator), et al.*, Docket No. RI61–96, *et al.*, issued August 6, 1964, 32 FPC 529. The amount of the refunds will be approximately $96,400 exclusive of interest. Additionally, Frankel proposes that the proceedings in Docket Nos. G–17671 and G–19948 be terminated, and that Docket No. RI60–334 be terminated as to its interest since Continental is responsible for any refunds that may be required in that proceeding since November 2, 1961.

We believe that Frankel's settlement proposal, as hereinafter conditioned, is in the public interest and shall approve the same. However, we desire to make it clear that acceptance of Frankel's offer of settlement shall not be construed as prejudicing any findings or order of the Commission in any future proceeding involving Frankel's rates and rate schedules. Additionally, for all of the reasons set forth in *Humble Oil & Refining Company*, Docket No. G–9287, *et al.*, 32 FPC 49, we shall require Frankel to deposit the refund monies in a special escrow account pending further order of the Commission.

The Commission finds:

The proposed settlement of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Frankel on June 9, 1965, as supplemented, is consistent with the Statement of General Policy No. 61–1, as amended, 18 CFR 2.56, and approval thereof as made effective and hereinafter ordered is in the public interest and is appropriate to carry out the provisions of the Natural Gas Act.

The Commission orders:

(A) The offer of settlement filed with the Commission by Frankel on June 9, 1965, is approved in accordance with the provisions of this order.

(B) Frankel shall compute the difference between the rates collected subject to refund in Docket Nos. G–19948 and RI60–334 and the settlement rate for sales

to Gas Gathering prior to November 2, 1961 in accordance with the following percentages: 25% in the year 1960, and 70% in the year 1961 prior to the assignment to Continental, with applicable interest to the date of this order, and shall within 45 days from the date of issuance of this order submit a report to the Commission, with a copy to Gas Gathering, setting out the amount of refunds (showing separately the principal and applicable interest) the bases used for such determination, the period covered, and ten days thereafter a letter from Gas Gathering agreeing to the correctness of such amounts.

(C) Frankel shall retain the amounts shown in the report required under paragraph (B) above, subject to further order of the Commission directing the disposition of those amounts.

(D) Frankel shall deposit the retained refunds in a special escrow account, and shall tender for filing on or before October 15, 1965, an executed Escrow Agreement, conditioned as set out below, accompanied by certificate showing service of a copy thereof upon Gas Gathering. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between Frankel and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) Frankel, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the bank or trust company for the quarterly period.

(E) Upon notification by the Secretary of the Commission that Frankel has complied with the terms and conditions of this order, the proceedings in Docket Nos. G–17671 and G–19448 shall terminate, and the proceeding in Docket No. RI60–334 shall terminate only insofar as it pertains to Frankel and its predecessors, all without further order of the Commission.

(F) The acceptance by Commission of Frankel's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Frankel and is without

prejudice to claims or contentions which may be made by Frankel, the Commission staff, or any affected party hereto, in any proceeding.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

ICE HARBOR PROJECT, SNAKE RIVER, COLUMBIA RIVER BASIN, WASHINGTON, DOCKET NO. E-7235

ALLOCATION OF COSTS

(Issued September 1, 1965)

The Congress, by the River and Harbor Act of March 2, 1945, Public Law No. 14, 79th Congress, 1st Session (59 Stat. 10), authorized the construction by the Corps of Engineers, Department of the Army, of the Ice Harbor Project on the Snake River for the purposes of navigation, power development, and irrigation.

The enabling act cited above provides that surplus electric energy generated at the project shall be delivered to the Secretary of the Interior for disposition in accordance with existing laws relating to the disposition of power at the Bonneville Dam. Section 6 of the Bonneville Act of August 20, 1937, Public Law 329, 75th Congress, 1st Session (50 Stat. 731), provides that rate schedules for the sale of Bonneville power shall be prepared by the Administrator and become effective upon confirmation and approval by the Federal Power Commission. Section 7 of the Bonneville Act states in part:

> * * * Rate schedules shall be based upon an allocation of costs made by the Federal Power Commission. In computing the cost of electric energy developed from water power created as an incident to and a byproduct of the construction of the Bonneville project, the Federal Power Commission may allocate to the costs of electric facilities such a share of the cost of facilities having joint value for the production of electric energy and other purposes as the power development may fairly bear as compared with such other purposes.

The Ice Harbor project consists of a dam, navigation lock, hydroelectric power plant, and appurtenant structures, including facilities for passing anadromous fish. The present power installation consists of three units rated at 90,000 kilowatts each, making a total rated capacity of 270,000 kilowatts. Three skeleton powerhouse bays are available for future installation of three additional units of the same size.

In allocating the costs of a multiple-purpose project, each purpose should bear at least its separable cost (the incremental cost of including the purpose in the project) and no purpose should be charged with cost in excess of benefits. Within these limits each purpose should share equitably in the savings resulting from multiple-purpose development. These principles are based on, and are consistent with, sound procedures of project formulation.

The separable costs-remaining benefits method of cost allocation fulfills the above objectives. This method of cost allocation was developed through interagency effort. As set forth in the May 1958 report on "Proposed Practices for Economic Analysis of River Basin Projects" (sometimes referred to as "The Green Book"), the method is summarized as follows:

> Briefly, it provides for: (1) assigning to each purpose its separable costs; i.e., the added costs of including the purpose in the project; and (2)

assigning to each purpose a share of the residual or remaining joint costs in proportion to the remaining benefits; i.e., the benefits (as limited by alternative costs) less the separable costs. Thus, the method provides for an equitable sharing among the purposes in the savings resulting from multiple-purpose development.

By agreement reached in 1954 among the Departments of the Army and the Interior and the Federal Power Commission, the separable costs-remaining benefits method of cost allocation was adopted as preferable for general use. That method has been used by the Commission in other cost allocation reports, and it is used herein to allocate the costs of the Ice Harbor project.

The Commission's staff has analyzed all available data relating to the Ice Harbor project, has conferred with representatives of the Corps of Engineers and the Bonneville Power Administration, and has reviewed comments of the Assistant Secretary of the Interior and Acting Chief of Engineers with respect to the Ice Harbor allocation problem. In its comments and suggestions, the Department of the Interior took virtually the same position as it did regarding the allocation of costs for the McNary Project (Docket No. E–6383, order issued March 5, 1965, 33 FPC 411). On the basis of these studies, the Commission's Bureau of Power has prepared and submitted a report, dated July 30, 1965 on "Allocation of Costs to Power Development, Ice Harbor Project, Columbia River, Washington."

The Commission having considered the matters hereinabove recited, the report of the Commission's Bureau of Power, the comments received from the Secretary of the Interior and the Acting Chief of Engineers, and other pertinent data relating to the Ice Harbor project together with the provisions of applicable statutes, *finds:*

(1) The federal interest rate of 2.5 percent, applicable during the period of construction of the Ice Harbor Project, as determined under the provisions of paragraph 15 of the Bureau of the Budget's Circular No. A–47, dated December 31, 1952, is reasonable and appropriate for use in allocating the costs of the Ice Harbor project.

(2) The total actual investment cost of Ice Harbor project to June 30, 1964 is $132,580,100 exclusive of specific recreation cost totaling $641,587 to June 30, 1964 and preauthorization study cost of $150,000.

(3) Inasmuch as irrigation development will not be benefited by the Ice Harbor project until some unknown future date, there should be no allocation of project costs to irrigation, at least for the present. Inasmuch as recreation is not an authorized project purpose, only the specific costs of recreation facilities should be allocated to recreation. Thus, the allocation of joint-use costs should be restricted to power and navigation.

(4) The use of the "Separable Costs-Remaining Benefits" method of cost allocation, as developed through federal inter-agency effort and set forth in the May 1958 report of the Inter-Agency Committee on Water Resources, entitled "Proposed Practices for Economic Analysis of River Basin Projects", is reasonable and appropriate in determining the allocation to power development of Ice Harbor project costs.

Upon consideration of the above findings and the report of the Bureau of Power dated July 30, 1965, copy of which is attached hereto, *infra*, p. 716, and in the light of the provisions of the Bonneville Act and the River and Harbor Act of 1945, the Commission makes the following determination with respect to the allocation of Ice Harbor project costs to power development.

(A) The allocation of joint-use costs of the Ice Harbor project, including construction costs, interest during construction, and operation and maintenance expenses, is 21.4 percent to navigation and 78.6 percent to power.

(B) Applying the percentages set forth in paragraph (A) above to the joint-use actual investment cost to June 30, 1964 results in allocating $39,649,800 of the total project investment cost to navigation, and $92,930,300 to power.

Commissioner Black adheres to the views expressed in the separate concurring statement accompanying the Allocation of Costs issued March 5, 1965 in Docket No. E-6383, McNary Project, 33 FPC 411 at 413.

ALLOCATION OF COSTS TO POWER DEVELOPMENT, ICE HARBOR PROJECT, SNAKE RIVER, COLUMBIA RIVER BASIN, WASHINGTON

Introduction

The River and Harbor Act of March 2, 1945, Public Law No. 14, 79th Congress, 1st Session (59 Stat. 10), authorized the construction by the Corps of Engineers, Department of the Army, of the Ice Harbor project among other projects on the Snake River, Columbia River Basin, Washington. Section 2 of that Act, provided with regard to the Snake River projects, the following:

> Snake River, Oregon, Washington, and Idaho: The construction of such dams as are necessary, and open channel improvement for purposes of providing slack water navigation and irrigation in accordance with the plan submitted in House Document No. 704, Seventy-Fifth Congress, with such modifications as do not change the requirement to provide slack water navigation as the Secretary of War (Army) may find advisable after consultation with the Secretary of the Interior and such other agencies as may be concerned: Provided, that surplus electric energy generated at the dams authorized in this item shall be delivered to the Secretary of the Interior for disposition in accordance with existing laws relating to the disposition of power at Bonneville Dam.

Thus, the project has been authorized for navigation, power development, and irrigation. The project has been constructed and is now in operation.

The Bonneville Act of August 20, 1937, Public Law No. 329, 75th Congress, 1st Session (50 Stat. 731), cited in the enabling Act, includes the following significant provisions:

> Sec. 6. Schedules of rates and charges for electric energy produced at the Bonneville project and sold to purchasers as in this Act provided shall be prepared by the (Bonneville) administrator and become effective upon confirmation and approval thereof by the Federal Power Commission * * *
>
> Sec. 7. * * * Rate schedules shall be based upon an allocation of costs made by the Federal Power Commission. In computing the cost of electric energy developed from water power created as an incident to and a by-product of the construction of the Bonneville project, the Federal Power Commission may allocate to the costs of electric facilities such a share of the cost of facilities having joint value for the production of electric energy and other purposes as the power development may fairly bear as compared with such other purposes.

It will be noted from the above that schedules of rates and charges for the sale of Ice Harbor power must be confirmed and approved by the Commission before becoming effective; and that such schedules shall be based upon an allocation of costs made by the Commission.

Costs and other data needed in the allocation of costs for the Ice Harbor project have now been furnished to the Commission by the Corps of Engineers. This report derives an allocation of the Ice Harbor project costs.

The Columbia River Basin

The Ice Harbor project is located at river mile 9.7 on the Snake River, a tributary of the Columbia River, in the State of Washington, at the head of slack water of the McNary Reservoir.

The Columbia River rises in Columbia Lake, British Columbia, and flows first in a northwesterly and then in a southerly direction for 460 miles to the International Boundary near Trail, British Columbia. Below the boundary, the river flows in a general southerly direction across the eastern end of Washington and, from a point about 15 miles below the mouth of the Snake River, flows westerly to the Pacific Ocean, forming the boundary between Washington and Oregon. The river distance from the International Boundary to the Pacific Ocean is 750 miles, and the fall in this reach is about 1,288 feet. Only about 10 feet of this fall is below the Bonneville Dam (mile 145.3) which is the head of tidewater.

The Columbia River drains an area of 259,000 square miles, of which 220,000 square miles are in the United States. Its principal tributaries in Canada are the Kootenay and Pend Oreille Rivers; and in the United States the Snake, Williamette, Cowlitz, Spokane, Deschutes, Lewis, Yakima, Okanogan, Wenatchee, Chelan, and John Day Rivers.

The Snake River Basin

The Snake River drains an area of 109,000 square miles in the United States principally in the States of Oregon and Idaho. Principal tributaries of the Snake River are the Clearwater, Salmon, Grand Ronde, Boise, and Payette Rivers.

Plate 1 shows the location of the Ice Harbor project in relation to other existing and planned projects in the lower Columbia River Basin. Plate 2 shows a profile of the lower Columbia and Snake Rivers.

The Ice Harbor Project

The Ice Harbor project structures include the hydroelectric power plant, navigation lock, gated spillway, non-overflow sections of the dam, and facilities for the passage of anadromous fish. The overall length of the combined structures is about 2,700 feet. Plate 3 shows the project plan and typical sections of the spillway, powerhouse, and lock.

The reservoir created by the dam extends up the Snake River 32 miles to a point near Matthews, Washington, and to the site of lower Monumental Dam presently under construction. The maximum normal level of the reservoir is at elevation 440 feet above mean sea level. A drawdown of three feet to elevation 437 provides 24,860 acre-feet of storage which is used as daily and weekly pondage for power purposes.

The present power installation consists of three units rated at 90,000 kilowatts each, making a total rated capacity of 270,000 kilowatts. Three skeleton powerhouse bays are available for the future installation of three additional units of the same size. The units are designed to carry overload up to 15 percent of the rated capacity. All of the turbines are automatic adjustable blade propeller-type wheels. The powerhouse will total 671 feet in length including the bays for future expansion, and its maximum height from the draft tube foundation to intake deck is 217 feet.

The lock chamber has clear horizontal dimensions of 86 feet by 675 feet. The maximum lift above the McNary pool is 105 feet.

Two fish ladders, 16 and 24 feet wide, have been provided along the north and south shore, respectively, for passing anadromous fish. In addition, an attraction water system and channel for the fish are located along the downstream face of the powerhouse and immediately above the draft tubes.

Principal data for the Ice Harbor project are shown in Table 1, attached.

Power at Ice Harbor

Ice Harbor is essentially a "run-of-river" power project and as such its power output is dependent on unregulated natural streamflows of the Snake River tributary area immediately above the dam and upon water releases from reservoirs at other projects upstream. The Snake River at Ice Harbor Dam, with an estimated average discharge of 49,200 cubic feet per second, has an annual streamflow pattern of low flows during the fall and winter and high flows during late spring and summer. This regular pattern of natural runoff is and will be modified somewhat by flow regulation by the Brownlee and Dworshak reservoirs and several other storage projects on the upper Snake River and its tributaries, which are completed or under construction, and by the High Mountain Sheep project when this site is developed.

When inflows are in excess of the hydraulic capacity of the power plant for extended periods, the reservoir level at the dam is maintained at elevation 440. At such times the water required for power production is passed through the powerhouse and the balance is discharged over the spillway. During the annual fall and winter low streamflow season, usually from September to April each year, the 24,860 acre-feet of pondage is used in operating the power plant to supply peak power load demands and otherwise make effective use of the plant capacity.

The Ice Harbor project is an important unit in the Federal Columbia River power system. Information supplied by the Bonneville Power Administration shows that as of June 30, 1963, that system had a total installed capacity of 6.5 million kilowatts. The nominal prime power, or average output of the system during the critical period, would be approximately 4.2 million kilowatts. Ice Harbor's contribution to this nominal prime power would be about 150,000 kilowatts. Completion of the planned future storage projects in the Snake River Basin would increase the existing regulatory storage capacity from 1.0 to 5.2 million acre-feet. The nominal prime power at Ice Harbor would then be about 200,000 kilowatts when the upstream storage projects are developed.

Under current development conditions, the annual generation at Ice Harbor averages about 2.0 billion kilowatt-hours. The additional storage capacity indicated above would increase the annual generation.

The following tabulation shows the actual in-service date of each power unit of the Ice Harbor project:

In-Service Dates of Generating Units at Ice Harbor

Unit number	Cumulative rating (kw)	Date in-service
1	90,000	[1] Dec. 18, 1961
2	180,000	Feb. 27, 1962
3	270,000	Feb. 8, 1962

[1] During load rejection tests on Jan. 4, 1962, the linkage mechanism in Unit No. 1 failed and the turbine was extensively damaged. The unit was restored to service on Feb. 28, 1963.

Navigation

The Ice Harbor project is an essential unit in the slack water navigation system of the lower Columbia and lower Snake Rivers. The lock was completed and all navigation features, including the slack water pools, were available for full usage in October 1962. The in-service date for navigation facilities was assumed, therefore, to be November 1, 1962.

Irrigation

Although irrigation was a part of the Ice Harbor plan as it was authorized, there are no specific project features or costs for this purpose. Benefits will accrue to potential irrigation projects above the Ice Harbor pool through savings in pumping costs and plant investment due to lower pumping heads. However, at the present time, there is no indication that irrigation will become a purpose of this project in the foreseeable future. Since the project is not providing an irrigation function, an allocation of project costs to irrigation is not warranted at this time.

Recreation and Fish and Wildlife

Recreation has not been authorized as a project purpose at Ice Harbor. Some recreation facilities have been provided, however, and during 1963 and 1964, the number of visitor-days totaled about 163,000 and 193,000, respectively, for the reservoir. Planned specific facilities of recreation, such as parks and camps, are estimated to cost $656,200, and substantially all of these facilities had been provided as of June 30, 1964. In this report, such costs, and only such costs, are assigned to recreation.

The fish passage facilities at Ice Harbor were provided to preserve the fish runs and not for fishery enhancement. Therefore, the costs of those facilities are considered as joint-use costs to be allocated between the purposes of power and navigation.

The staff carefully considered whether recreation at Ice Harbor warrants inclusion in the cost allocation as a purpose to which both specific and a portion of joint-use costs may be allocated. A review of the legislative history of the Ice Harbor project shows clearly that the Commission has authority to allocate costs only to the purposes for which the project was authorized. These are stated to be slack water navigation and irrigation, with power generation clearly defined in the project document and its marketing disposition defined in the law. These purposes have not been modified by Congress.

Project Benefits

Power benefits creditable to the Ice Harbor project have been estimated on the basis of unit values of $18.24 per kilowatt-year of dependable capacity and 3.39 mills per kilowatt-hour of energy, both measured at market centers in the Pacific Northwest. These values were based on economic conditions current as of about 1957. To obtain net benefits at the point of generation, the at-market benefits were adjusted for annual transmission costs of $3.48 per kilowatt of plant machine capability (overload) and average system transmission losses of 4.5 percent for capacity and 3.5 percent for energy. The values of power were derived from detailed studies, made by the Commission's staff, of the then current cost of alternative power sources in the Pacific Northwest area. The studies indicated that the above unit values were approximately equivalent to the cost of power from a non-federal publicly-owned steam-electric plant.

As previously noted, the project's contribution to the system output would increase as more upstream storage is added to the system. Proper evaluation of the Ice Harbor project benefits requires crediting part of the project output to upstream storage. For purposes of determining power benefits for this cost allocation, it is assumed that the current contribution to the system of 150,000 kilowatts of continuous power, utilized at 70 percent annual load factor, would provide 214,300 kilowatts of dependable capacity creditable to at-site facilities. Similarly, the present average annual generation of 2 billion kilowatt-hours would be credited to the project. Applying the above unit power values to these outputs and making adjustments for transmission losses, and transmission costs of $1,080,500, the estimated average annual power benefits on this basis would be $9,195,100.

A portion of the estimated transportation savings accruing as a result of the navigation system on the lower Columbia and Snake Rivers is creditable to the Ice Harbor project. As estimated by the Corps of Engineers, the total average annual navigation benefits of the system amount to $17,376,000 and the portion creditable to Ice Harbor is $1,840,000.

Method of Allocation

In allocating the costs of a multiple-purpose project, each purpose should bear at least its separable cost (the incremental cost of including the purpose in the project) and no purpose should be charged with costs in excess of benefits. within these limits each purpose should share equitably in the savings resulting from multiple-purpose development. These principles are based on, and are consistent with, sound procedures of project formulation.

The separable costs-remaining benefits method of cost allocation fulfills the above objectives. This method of cost allocation was developed through interagency effort. As set forth in the May 1958 report on "Proposed Practices for Economic Analysis of River Basin Projects" (the Green Book), the method is summarized as follows:

> Briefly, it provides for: (1) assigning to each purpose its separable costs; i.e., the added costs of including the purpose in the project; and (2) assigning to each purpose a share of the residual or remaining joint costs in proportion to the remaining benefits; i.e., the benefits (as limited by alternative costs) less the separable costs. Thus, the method provides for an equitable sharing among the purposes in the savings resulting from multiple-purpose development.

By agreement reached in 1954 among the Departments of the Army and the Interior and the Federal Power Commission, the separable costs-remaining benefits method of cost allocation was adopted as preferable for general use. That method has been used by the Commission in other cost allocation reports, and it is used herein to allocate the costs of the Ice Harbor project.

Detailed procedures may differ in the allocation of joint-use costs by the separable costs-remaining benefits method. Prior to the Commission's allocation of costs of the McNary project on March 5, 1965, the general practice had been to derive separate sets of percentage allocations for construction costs and for operation and maintenance costs. In the McNary cost allocation it was concluded that a single set of percentage allocations should be derived for application to all costs of joint-use facilities. The single set of percentages represents a weighted composite average of the ones that would be derived separately for construction costs and for operation and maintenance expenses. Thus, the overall results are the same. The single percentage procedure has also been adopted

in this report. The allocation percentages are shown to the nearest tenth of one percent.

Project Costs

Information on Ice Harbor project costs was furnished to the Commission by the Corps of Engineers in a report on Cost Allocation Studies, Design Memorandum No. 28, dated June 21, 1961, and in subsequent correspondence. As of June 30, 1964, the project was 99.5 percent complete and the cost of construction work to that date totaled $123,800,700 exclusive of the cost of specific recreation facilities. An additional amount of $605,600 was estimated to complete the project after that date. The total estimated costs have been used to make the cost allocation and these costs by principal features are summarized below:

Summary of Estimated Construction Costs—Ice Harbor Project

Item	*Project costs*
Joint-Use Facilities:	
Lands and damages	$795,300
Relocations	24,559,600
Reservoir preparation	426,900
Dams	15,666,000
Fish facilities	11,867,200
Roads and railroads	1,111,100
Buildings, grounds, and utilities	634,000
Permanent operating equipment	307,700
Total joint-use facilities	55,367,800
Navigation Facilities:	
Lock	18,056,800
Channels	7,629,500
Total navigation facilities	25,686,300
Power Facilities:	
Power plant	43,352,200
Total construction costs	[1] 124,406,300

[1] Exclusive of specific recreation costs of $656,200 and preauthorization study costs of $150,000. It is the policy of the Corps of Engineers not to charge preauthorization costs against any project, so the Ice Harbor project fiscal records exclude such costs.

The estimated annual costs of operation and maintenance and major replacements are shown in the following tabulation:

Operation, Maintenance and Major Replacements—Ice Harbor Project

Item	Operation and maintenance	Annual equivalent replacement costs
Power facilities	$175,700	$290,000
Navigation facilities	80,500	43,000
Joint-use facilities	152,200	111,000
Total project	408,400	444,000

Alternative Projects

Cost estimates have been made by the Corps of Engineers of alternative single-purpose power and navigation projects which would produce the same benefits for each purpose as the multiple-purpose project. These estimates are used in the allocation of costs as limitations on the benefits for each project purpose. The estimated cost of the power-only project was based on the cost of the multiple-purpose project with the navigation lock replaced by an earth and rock embankment section of the dam. The estimated cost of the navigation-only project was based on the cost of the multiple-purpose project with the power plant removed and the power intake section of the dam replaced by an earth and rock embankment. The following tabulation summarizes estimated construction cost, investment, and annual charges for the alternative single-purpose power and navigation projects.

Estimated Costs of Alternative Single-Purpose Projects

Item	Power-only project	Navigation-only project
Construction cost	$103,416,800	$76,582,800
Interest during construction	6,679,900	3,974,400
Investment	110,096,700	80,557,200
Annual charges:		
Interest and amortization	3,882,000	2,840,400
Operation and maintenance	320,700	184,300
Replacements	398,000	121,000
Total	4,600,700	3,145,700

Project Investment

In deriving the project investment, an interest rate of 2½ percent was used in computing interest during construction. That was the prevailing rate for water resources projects of the Corps of Engineers when construction of the Ice Harbor project was initiated. Interest during construction was computed as simple interest on expenditures from June 1, 1945, the date appropriated construction funds were available, to the in-service dates.

Table 2 shows the computation of interest during construction on the specific navigation and specific power facilities. Charges to interest during construction were stopped on one-third of the total construction cost of the specific power facilities at the end of the month in which each generating unit was placed in service. Similar charges on expenditures for navigation facilities ceased on November 1, 1962, the in-service date of such facilities.

In order to compute interest during construction on expenditures for joint-use facilities in a similar manner, it is necessary to know what portion of such costs is to be assigned to each of the purposes of navigation and power. A trial allocation was made, as shown in Table 3, using an approximate interest during construction amount of $3,750,000. The resulting division of the gross investment in joint-use facilities, 21.4 percent to navigation and 78.6 percent to power, was then used to determine the portion of in-service joint-use construction costs assignable to navigation and power. Table 4 shows the computation of interest during construction on joint-use facilities. The total computed differs from the estimate used in the trial allocation by about 0.2 percent.

The following tabulation shows the estimated total construction costs, the computed interest during construction, and estimated total investment costs.

Estimated Ice Harbor Investment Costs [1]

	Construction cost	Interest during construction	Investment
Power facilities	$43,352,200	$3,567,800	$46,920,000
Navigation facilities	25,686,300	1,467,800	27,154,100
Joint-use facilities	55,367,800	3,743,800	59,111,600
Total project	124,406,300	8,779,400	133,185,700

[1] Exclusive of the cost of preauthorization studies and recreational facilities.

The allocation of total annual costs is shown below:

Allocation of Annual Costs—Ice Harbor Project

	In thousands of dollars		
	Navigation	Power	Total
1. Benefits	1,840.0	9,195.1	11,035.1
2. Alternative costs	3,145.7	4,600.7	7,746.4
3. Benefits limited by alternative costs	1,840.0	4,600.7	6,440.7
4. Separable costs	947.8	2,402.8	3,350.6
5. Remaining benefits (3)−(4)	892.2	2,197.9	3,090.1
(a) Remaining benefits in percent	28.9	71.1	100
Allocated residual costs [in proportion to 5(a)]	634.6	1,563.3	2,197.9
7. Total allocation (4)+(6)	1,582.4	3,966.1	5,548.5
8. Annual costs, specific facilities	1,081.0	2,120.1	3,201.1
9. Annual costs, joint-use facilities (7)−(8)	501.4	1,846.0	2,347.4
(1) Allocation in percent	21.4	78.6	100

Summary

On the basis of the preceding allocation, the distribution of joint-use costs of the Ice Harbor project should be made retroactively and prospectively, 21.4 percent to navigation and 78.6 percent to hydroelectric power. These percentages should be applied to the following costs relating to joint-use facilities: construction costs, interest during construction, investments, replacements and retirements, and operation and maintenance.

With the application of the above percentages, the allocation of actual construction costs, interest during construction, and investment to June 30, 1964, would be as follows:

Allocation of Costs—Ice Harbor Project; June 30, 1964

(In thousands of dollars)

	Navigation	Power	Total
Construction costs:			
Specific facilities	25,649.2	43,330.6	68,979.8
Joint-use facilities	11,731.6	43,089.3	54,820.9
Total	37,380.8	86,419.9	123,800.7
Interest during construction:			
Specific facilities	1,467.8	3,567.8	5,035.6
Joint-use facilities	801.2	2,942.6	3,743.8
Total	2,269.0	6,510.4	8,779.4
Project investment:			
Specific facilities	27,117.0	46,898.4	74,015.4
Joint-use facilities	12,532.8	46,031.9	58,564.7
Total	39,649.8	92,930.3	[1] 132,580.1

[1] Exclusive of actual specific recreation costs totaling $641,587 to June 30, 1964, and preauthorization study costs of $150,000.

Annual Charges—Ice Harbor Project

Annual charges for the project include interest at 2½ percent; amortization of investment costs over a 50-year period; operation and maintenance; and replacements. These charges are summarized below, using average annual operation, maintenance, and replacement costs as estimated by the Corps of Engineers.

Ice Harbor Project Annual Charges

Item	Interest and amortization	Operation and maintenance	Annual replacements	Total annual charges
Power facilities	$1,654,400	$175,700	$290,000	$2,120,100
Navigation facilities	957,500	80,500	43,000	1,081,000
Joint-use facilities	2,084,200	152,200	111,000	2,347,400
Total project; annual charges	4,696,100	408,400	444,000	5,548,500

Allocation of Costs

In addition to benefits, project costs, and alternative costs, it is necessary in making the allocation to have the separable costs for each project purpose. Since recreation is to be assigned only its specific costs, separable costs must be derived for only the purposes of power and navigation. The difference between the annual costs of the multiple-purpose project and the single-purpose navigation project represents the annual separable power cost. Similarly, the difference between the annual costs of the multiple-purpose project and the single purpose power project represents the annual separable navigation cost. These computations of the separable costs are shown below.

Estimates of Separable Annual Costs

Multiple purpose project costs	Alternative project costs		Separable costs	
	Power only	Navigation only	Power	Navigation
$5,548,500	$4,600,700			$947,800
5,548,500		$3,145,700	$2,402,800	

Each purpose is allocated its separable cost plus a portion of the residual cost. The latter cost is the difference between the annual cost of the multiple-purpose project, $5,548,500, and the sum of the separable costs, $3,350,000, or $2,197,000.

K–B COMPRESSION COMPANY, INC. (OPERATOR), DOCKET NO. RI60–247

ORDER RELEASING REFUNDS

(Issued September 1, 1965)

The Commission by order issued September 4, 1964,[1] approved K–B's offer of settlement of a pending rate proceeding and ordered K–B to retain the refund to its customer, Lone Star Gas Company, pending further order. This retention was directed in keeping with our policy expressed in the order approving the Humble settlement[2] wherein we stated that it is "our duty to insure that the ultimate consumers of gas actually receive all of the benefits of our rate regulation to which they may be entitled," and that we were taking action "to assure that, within the limits of our jurisdictional reach, the refunds to be ordered actually flow to those parties legally and equitably entitled thereto."

Review of the flow-through obligations of K–B's pipeline customer shows that Lone Star is obligated to flow-through the jurisdictional portion of the refund in this proceeding. All of the other pipelines in the resale chain are similarly obligated to flow-through all significant jurisdictional amounts. Accordingly, we hereinafter provide that K–B shall release the refund for flow-through in accordance with the applicable Commission settlement orders.

The Commission orders:

(A) K–B shall release and pay over to Lone Star within 30 days of this order the total amount assigned to Lone Star as specified in K–B's refund report filed October 19, 1964, together with the earnings on this amount while held in trust from September 4, 1964, to the date of this order.

(B) Each pipeline company subject to the jurisdiction of this Commission which receives a flow-through of refunds as a result of this order shall flow-through such refunds and submit a report thereof in accordance with the applicable Commission orders governing its flow-through obligations.

(C) Where any pipeline subject to the jurisdiction of this Commission receives a refund as a result of this order and, contrary to our conclusion that the jurisdictional portion thereof will flow-through to its customers, claims the right to retain such amounts that pipeline shall report to the Commission within 10 days of the date of this order, the basis of such claim and, when the amount is received, that pipeline shall retain the amount in dispute subject to our further order.

(D) The amounts ordered to be retained pursuant to paragraph (C) shall be retained in accordance with the methods set forth in paragraph (j) in the Commission's "Order Releasing Refunds in Part" issued April 21, 1965, in *Humble Oil & Refining Company*, Docket No. G–9287, *et al.*, 32 FPC 830. The party retaining such amounts shall report to the Commission the manner in which the amounts are retained within 30 days of receipt.

CRISP COUNTY POWER COMMISSION v. GEORGIA POWER COMPANY, DOCKET NO. E-7120

ORDER DENYING MOTION TO DISMISS AND PROVIDING FOR HEARING

(Issued September 2, 1965)

On August 8, 1963, Crisp County Power Commission (Crisp County), Cordele, Georgia, filed with the Federal Power Commission a complaint against Georgia Power Company (Georgia Power), Atlanta, Georgia, requesting the Commission to order, pursuant to Section 202(b) of the Federal Power Act, that Georgia Power establish interconnection with and interchange power and energy with Crisp County under terms and conditions to be prescribed by the Commission.

On September 9, 1963, Georgia Power filed with the Commission an Answer and Motion to Dismiss the Complaint filed by Crisp County. The motion to dismiss contended that Crisp County is not a "person" within the meaning of Section 202(b) of the Federal Power Act. On September 30, 1963, Crisp County filed an Answer to Georgia Power's motion to dismiss, and on October 11, 1963, Georgia Power filed a supplemental brief in support of the motion to dismiss. This Commission in its past decisions has indicated that municipalities are "persons" for purposes of complaint and invocation of the consumer protective provisions of Part II of the Federal Power Act. *Shrewsbury Municipal Light Department* v. *New England Power Company*, Order Fixing Date of Hearing; Denying Motion to Dismiss, issued May 2, 1963, Docket No. E-7021, 32 FPC 472-A. The Commission's Opinion Nos. 438 and 438-A were upheld by the Court of Appeals, *New England Power Co.* v. *F.P.C.*, 349 F. 2d 258, CA1 #6434, decided July 21, 1965. Although the court did not reach the question of whether a municipality which generates electricity is a "person" under § 202(b), there is nothing in the legislative history to indicate that any distinction was intended in the Act between municipalities with generating facilities and municipalities without generating facilities insofar as their ability to secure interconnection with investor-owned utilities to provide service to the municipal power distributor consistent with Section 202(b). All the consumer safeguard provisions of Part II of the Power Act can be invoked to regulate a public utility on the complaint of a municipality. *United States* v. *Public Utilities Commission of California*, 345 U.S. 295, 312-313, 316 (1953). It is true that this case indicates (p. 313 at footnote 23) that Congress intended to preclude the Commission from requiring any investor-owned company to wheel power from a federal or state or municipally owned generating system to a customer of such system. But nothing of this nature is contemplated by Crisp County's complaint, nor does the fact that the appropriate terms of any such interconnection may reflect the value of the generating capacity Crisp County can supply to the interconnected system in any way bring the present matter within the ambit of the type of situation Congress was concerned with in limiting the scope of Commission authority under Section 202(b). In short, it is clear that Crisp County is a "person" within the meaning of that term as it appears in Section 202(b), and there is nothing in the Act or its legislative history which stands in the way of our granting it the relief requested if it is necessary or appropriate in the public interest and otherwise consistent with the Section's standards. It is therefore appropriate to deny Georgia Power's Motion to Dismiss.

As a result of informal conferences among representatives of Crisp County, Georgia Power and the Commission's staff for purposes of clarification of the issues and agreement as to service of prepared testimony, the following schedule has been recommended for Commission consideration:

September 15, 1965	Service of direct testimony and exhibits by Crisp County.
October 15, 1965	Service of testimony and exhibits by Georgia Power.
November 3, 1965	Service of testimony and exhibits by Commission Staff and intervenors.
November 15, 1965	Service of testimony and exhibits by Georgia Power in reply to Staff and intervenors, and by Crisp County in reply to Georgia Power, Staff and intervenors.
November 30, 1965	Commencement of hearing.

The Commission further finds:

It is necessary and appropriate for the purposes of the Federal Power Act that a public hearing be ordered respecting the issues presented under Section 202 of the Act and in the Complaint and the Answer.

The Commission orders:

(A) Georgia Power's motion to dismiss the complaint of Crisp County is hereby denied.

(B) Pursuant to the authority contained in the Federal Power Act, particularly Sections 202, 308 and 309 thereof, a public hearing shall be held commencing on November 30, 1965, at 10:00 a.m. (EST) in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C., respecting the issues presented under Section 202 of the Act and in the Complaint and the Answer.

(C) The schedule for the service of testimony and exhibits as set forth in the recital above is hereby adopted.

(D) Notices of intervention and petitions to intervene may be filed with the Federal Power Commission, Washington, D.C. 20426, in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.37) on or before September 15, 1965.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

HOME GAS COMPANY, DOCKET NO. RP65-61

ORDER ACCEPTING REVISED TARIFF SHEETS FOR FILING, CONDITIONALLY ACCEPTING TWO REVISED TARIFF SHEETS, AND APPROVING REFUNDS

(Issued September 2, 1965)

Home Gas Company (Home) on June 28, 1965, tendered for filing certain revised tariff sheets to its FPC Gas Tariff, Third Revised Volume No. 1.[1] The proposed change in rates would make effective as of January 1, 1965, a reduction in the commodity component of Home's jurisdictional rates of 0.38 cent per Mcf or approximately $82,721 annually, based on actual and estimated sales for the year 1965.

[1] Fifteenth Revised Sheet Nos. 7 and 12, Sixth Revised Sheet No. 18, and Sixteenth Revised Sheet No. 22.

The proposed rate filing, which we have docketed as above, reflects the reduction in the Federal income tax rate for corporations to 48 percent, which became effective January 1, 1965, and the flow-through of the rate reduction by Home's supplier The Manufacturers Light and Heat Company, which also became effective January 1, 1965.[2] Home will commence billing at the lower rates beginning with the first billing month after receiving Commission approval and will make refunds for the period January 1, 1965, through the billing month immediately preceding the first month billed under the rates accepted for filing herein.

Among the revised tariffs tendered for filing are Fifteenth Revised Sheet No. 12 and Sixth Revised Sheet No. 18 which set forth the charges applicable to Home's partial requirements customers (Rate Schedules CDS–EPR and CDS–PR). The only change proposed in the EPR and PR Schedules is a reduction equal to rate reduction in Rate Schedule CDS–1, so that the three schedules will continue to have identical rate levels. The lawfulness of Home's EPR and PR Schedules is now under consideration; respectively in Home's Docket No. RP63–8 and in the consolidated proceedings, *Atlantic Seaboard Corp.*, Docket No. G–16401, *et al.* in which Home is one of the respondents. We are therefore accepting Fifteenth Revised Sheet No. 12 and Sixth Revised Sheet No. 18 conditionally subject to the outcome of proceedings in Docket Nos. G–16401 and RP63–8.

The proposed filing is not intended to change or otherwise affect the existing obligations of Home relating to refunds and rate reductions.

Home requests the waiver of the notice requirements of the Commission's Regulations as may be necessary to permit the tendered tariff sheets to become effective as of January 1, 1965, as proposed. The Commission issued notice of the filing on July 9, 1965. No protests or objections to Home's proposed reduced rates have been received.

The Commission finds:

(1) Good cause exists for waiving the notice requirements of Section 154 of the Commission's Regulations under the Natural Gas Act and for permitting the revised tariff sheets specified above to become effective as of January 1, 1965.

(2) The proposed revised tariff sheets and the rate reductions as proposed by Home are proper and in the public interest in carrying out the provisions of the Natural Gas Act, and such tariff sheets should be accepted for filing to be effective subject to the conditions of this order.

The Commission orders:

(A) The notice requirement of Section 154 of the Commission's Regulations under the Natural Gas Act is hereby waived and the revised tariff sheets specifically described hereinabove are accepted for filing to be effective as of January 1, 1965.

(B) Fifteenth Revised Sheet No. 12 and Sixth Revised Sheet No. 18 which are accepted for filing in paragraph (A) above, shall be subject to the provisions of any orders of the Commission which have been issued and which hereafter may be issued in the proceedings in Docket Nos. G–16401, *et al.* and RP63–8.

(C) This order shall not be construed to change or otherwise affect the existing obligations of Home relating to refunds and rate reductions under orders heretofore issued by the Commission in proceedings involving Home; and, further, this order is without prejudice to any findings or orders which have been made or which may hereafter be made by the Commission and is without prejudice to any claims or contentions which may be made by the Commission, Home,

[2] The rate reduction was approved in Docket No. RP65–50 by order issued August 2, 1965.

the Commission staff, or any other party affected by this order, in any proceedings now pending or hereafter instituted by or against Home or any other persons or parties affected by this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. RP65–59; THE PHILADELPHIA GAS WORKS DIVISION OF UNITED GAS IMPROVEMENT COMPANY v. TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. RP65–52

ORDER ON MOTIONS FOR CLARIFICATION

(Issued September 2, 1965)

The Commission by order issued July 21, 1965, 34 FPC 98, conditionally approved a rate reduction proposal submitted by Texas Eastern Transmission Corporation in a letter of intent dated June 1, 1965, in Docket No. RP65–59, and dismissed the complaint proceedings in Docket No. RP65–52. In the letter of intent Texas Eastern proposed a reduction in its jurisdictional rates of approximately $3,500,000 annually, to be effective June 1, 1965, and undertook certain obligations to make refunds and rate reductions subject to specified conditions.

On August 6, 1965, the Public Service Commission of the State of New York filed a motion requesting the Commission to clarify the aforementioned order, or in the alternative, to consider its document as filed a conditional notice of intervention, objection, and application for rehearing. On August 12, 1965, a joint "Application for Clarification or Rehearing" of the order was filed by The Brooklyn Union Gas Company, Long Island Lighting Company, and The Philadelphia Gas Works Division of The United Gas Improvement Company, distributor customers of Texas Eastern.

The requests for clarification complain principally of claimed ambiguities in the order and Article V of Texas Eastern's proposal regarding Texas Eastern's refund and rate reduction obligations relating to the Rayne Field proceedings. In effect, the motions request the Commission to make clear that the parties are not foreclosed by the order issued July 21, 1965, or the proposal thereby conditionally approved, from the right to urge in the Rayne Field proceedings such disposition of the benefits Texas Eastern may realize in such proceedings as the parties may deem appropriate.

On August 20, 1965, Texas Eastern filed an answer to the aforementioned requests for clarification and a proposal to resolve the objections raised. Texas Eastern states it would agree to the elimination of the second paragraph of Article V of the letter of intent and issuance of a clarifying order amending the order issued July 21, 1965, and approving the elimination with the understanding that neither the letter of intent, the order issued July 21, 1965, nor the clarification order shall be construed to require the Commission, Texas Eastern or any other party to waive any right, claim or argument, inchoate or otherwise, now or hereafter existing with respect to Rayne Field. Texas Eastern further represents that this proposal would enable effectuation of the letter of intent without prejudice to the rights of any party to make any claims or arguments in the Rayne Field proceedings or elsewhere to the same extent as though the letter of intent had never been filed or approved.

Texas Eastern served its answer on all its customers and interested State commissions with a request that any comments thereon be filed with this Commission on or before August 30, 1965. No comments thereon have been submitted.

It is our view that the proposal contained in Texas Eastern's answer filed August 20, 1965, presents a reasonable basis for resolution of the above motions for clarification, and should be approved as hereinafter provided.

The Commission orders:

(A) Texas Eastern's agreement to eliminate the second paragraph of Article V of its letter of intent filed June 1, 1965, is approved and our order issued July 21, 1965, is amended with reference to that provision to the same extent as if it had not been included in the letter of intent, subject to the understanding set forth in Texas Eastern's answer filed August 20, 1965.

(B) Except as hereinabove amended, the order issued July 21, 1965, in these proceedings remains in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CONSOLIDATED GAS SUPPLY CORPORATION (FORMERLY HOPE NATURAL GAS COMPANY), DOCKET NO. CP65-282; THE CALIFORNIA COMPANY, A DIVISION OF CHEVRON OIL COMPANY (FORMERLY THE CALIFORNIA COMPANY, A DIVISION OF CALIFORNIA OIL COMPANY) (OPERATOR), ET AL., DOCKET NO. CI65-825

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 3, 1965)

The California Company, a Division of Chevron Oil Company[1] (Operator), *et al.*, on February 23, 1965, and Consolidated Gas Supply Corporation,[2] on March 12, 1965, filed applications pursuant to Section 7(c) of the Natural Gas Act for certificates of public convenience and necessity authorizing sales of natural gas in interstate commerce for resale, all as more fully set forth in the applications which are on file with the Commission and open to public inspection.

Specifically, applicants seek authorization for the sale of a total of approximately 45,000 Mcf per month to Transcontinental Gas Pipe Line Corporation (Transco) pursuant to a 20-year gas purchase contract dated January 20, 1965.

The gas will be produced in the Block 23 Field, South Marsh Island Area, offshore Louisiana and will be delivered to Transco at a mutually agreeable point on Transco's line in adjacent Block 34. The total initial price proposed is 19 cents per Mcf (at 15.025 psia). The contract provides for 1 cent per Mcf escalations each five years, downward Btu adjustment (below 1000 Btu per Mcf), life-of-the-contract take-or-pay make-up, and reimbursement for fifty percent of new taxes.

Pursuant to due notice,[3] a petition to intervene in Docket No. CI65-825 was

---

[1] Effective July 1, 1965, the name of The California Company, a Division of California Oil Company was changed to The California Company, a Division of Chevron Oil Company.

[2] Effective April 1, 1965 the name of Hope Natural Gas Company was changed to Consolidated Gas Supply Corporation.

[3] See notice of the Secretary issued March 3, 1965 in *Southeastern Public Service Company (Operator), et al., and other applicants listed herein,* Docket No. G-2684, *et al.* (30 F.R. 3363, March 12, 1965) (Docket No. CI65-825); and notice of the Secretary issued March 19, 1965, in *Hope Natural Gas Company,* Docket No. CP65-282 (30 F.R. 3890, March 25, 1965).

filed by The Philadelphia Gas Works Division of The United Gas Improvement Company (PGW) on March 19, 1965 and notices of intervention were filed by the Public Service Commission of New York (New York) in Docket No. CI65–825 on March 22, 1965 and in Docket No. CP65–282 on April 9, 1965.

Subsequently, however, the petition to intervene and the notices of intervention were withdrawn.[4] Both New York and PGW stated that their decisions to withdraw their objections to the certification of these sales at the proposed price were arrived at after Counsel for the applicants supplied fuller explanations of the contract. The features of the contract noted by PGW and New York as persuasive are the five-year stability of the initial price and the life-of-contract take-or-pay make-up provision. Both also note the fact that the volumes involved are quite small.

The initial price of 19 cents per Mcf is less than our Statement of General Policy No. 61–1 Guideline Price of 19.5 cents per Mcf for this area (18 CFR 2.56). Therefore, in keeping with our announced policy and in the absence of objection, we shall issue certificates to the applicants as requested.

At a hearing held on September 1, 1965, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the applications and exhibits thereto, submitted in support of the respective authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) The applicants in Docket Nos. CP65–282 and CI65–825 are "natural-gas companies" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) The sales of natural gas proposed in Docket Nos. CP65–282 and CI65–825 as hereinbefore described and more fully described in the applications in said proceedings will be made in interstate commerce subject to the jurisdiction of the Commission, and such sales together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The applicants in Docket Nos. CP65–282 and CI65–825 are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The sales of natural gas by applicants in Docket Nos. CP65–282 and CI65–825 together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

The Commission orders:

(A) Certificates of public convenience and necessity are issued, upon the terms and conditions of this order, to the applicants in Docket Nos. CP65–282 and CI65–825 authorizing the sales for resale of natural gas in interstate commerce, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, all as hereinbefore described and as more fully described in the applications in Docket Nos. CP65–282 and CI65–825.

(B) The certificates granted in paragraph (A) above are not transferable and shall be effective only so long as applicants continue the acts and operations

[4] PGW filed its notice of withdrawal on April 27, 1965 and New York filed its notices of withdrawal on April 22 (Docket No. CI65–825) and May 3, 1965 (Docket No. CP65–282).

thereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations, and orders of the Commission.

(C) The grant of the certificates issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against applicants. Further, our action in this proceeding shall not foreclose or prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract herein involved. The grant of the certificates aforesaid for service to the particular customer involved shall not imply approval of all of the terms of the contract, particularly as to the cessation of service upon termination of said contract, as provided by Section 7 (b) of the Natural Gas Act. The grant of the certificates aforesaid shall not be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sales of natural gas subject to said certificate.

Commissioner Ross *dissenting*.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64-184

FINDINGS AND ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 3, 1965)

On June 22, 1965, El Paso Natural Gas Company (Petitioner) filed in Docket No. CP64-184 a petition to amend further the Commission's order issued April 20, 1964, 31 FPC 959, as amended, in the subject docket to delete therefrom authorization for the construction and operation of certain facilities and for the sale and delivery of natural gas by means of such facilities, all as more fully set forth in the petition to amend in this proceeding.

The order of April 20, 1964, authorized Petitioner to construct and operate, among other facilities, thirteen mainline taps and to sell and deliver natural gas by means of such taps to certain existing customers. Petitioner states that seven of these taps have not been constructed and are not now proposed to be constructed since the distributor customers involved have not gone forward with the initiation of natural gas service. Therefore, petitioner seeks to have authorization for the following facilities and appurtenances and for the sale and delivery of natural gas by means of such facilities deleted from the order of April 20, 1964:

Customers	Facilities	Location
California-Pacific Utilities Co	Richard E. Markillie Tap No. 1	Douglas County, Oreg.
	Kenneth R. Bare Tap	Do.
	Sladen O. Shugart Tap	Do.
Northwest Natural Gas Co	Sher Khan Tap	Lane County, Oreg.
	Clifford Picknel Tap	Do.
	Glenn Weeldreyer Tap	Do.
	M. C. Helms Tap	Linn County, Oreg.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on July 7, 1965 (30 F.R. 8597). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued April 20, 1964, as amended, in Docket No. CP64–184 be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued April 20, 1964, as amended, in Docket No. CP64–184 is further amended to delete therefrom authorization for the facilities and for the sale and delivery of natural gas by means of such facilities as set forth in the foregoing table, all as hereinbefore described and as set forth in the petition to amend.

(B) In all other respects said order, as amended, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. CP66–12

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 3, 1965)

On July 12, 1965, Florida Gas Transmission Company (Applicant) filed in Docket No. CP66–12 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(c) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction, during the 12 month period commencing with the date on which this order issues, and the operation of natural gas facilities for the sale of natural gas to direct customers and existing distributors for resale and for miscellaneous rearrangements not resulting in any change of service rendered by means of the facilities involved, all as more fully set forth in the application in this proceeding.

Applicant proposes to construct the following maximum number of projects pursuant to the instant authorization:

(1) Three projects for the transportation and sale of natural gas previously authorized under certificates for transportation and sale to existing distributors at rates on file with the Commission for resale in existing market areas. Each project will include any necessary lateral, lateral loop lines, metering, regulating and appurtenant facilities.

(2) Five projects for direct sales of natural gas to consumers located outside local distributors' franchise areas. Each project will include the necessary tap, meter, regulator and such minimum distance of appropriate size (1-inch to 6-inch) line pipe as may be necessary.

(3) Twenty miscellaneous rearrangements.

The total cost of facilities proposed under this application will not exceed a maximum of $30,000 and the total deliveries to any one customer will not exceed a maximum of 100,000 Mcf of natural gas per year.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 1, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Florida Gas Transmission Company, a Delaware corporation having its principal place of business in Winter Park, Florida, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its opinion and order of December 28, 1956, in Docket Nos. G–9262 and G–9960 (16 FPC 118).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and/or sale of natural gas in interstate commerce and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The authorization hereinafter granted should be limited to construction during a 12 month period commencing with the date on which this order issues and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $300,000, with the total deliveries to any one customer not to exceed a maximum of 100,000 Mcf of natural gas per year.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(8) The certificate issued hereinafter should be conditioned upon Applicant's compliance with the provisions of Section 157.7(c)(7) of the aforesaid Regulations.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Florida Gas Transmission Company, to construct, during the 12 month period commencing with the date on which this order issues, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding and to operate such facilities to sell natural gas to direct customers and to distributors for resale as hereinafter provided.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general

terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The authorization granted in paragraph (A) above is limited to construction during the 12 month period commencing with the date on which this order issues and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $300,000, with the total deliveries to any one customer limited to a maximum of 100,000 Mcf of natural gas per year.

(D) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(E) The certificate issued by paragraph (A) above is expressly conditioned upon Applicant's compliance with the provisions of Section 157.7(c)(7) of the aforesaid Regulations and, further, shall not entitle any industrial customer to whom firm deliveries are authorized herein to any priorities to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. CP66-19

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 3, 1965)

On July 19, 1965, Florida Gas Transmission Company (Applicant) filed in Docket No. CP66-19 an application, as supplemented on August 5, 1965, pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the period from July 1, 1965, to July 1, 1966, and the operation of gas purchase facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers or other similar sellers thereof, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the facilities covered by this application will not exceed a maximum of $1,500,000, with no single project to exceed a cost of $300,000, which costs are proposed to be financed from internally generated funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 1, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Florida Gas Transmission Company, a Delaware corporation having its principal place of business in Winter Park, Florida, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1956, in Docket Nos. G-9262 and G-9960 (16 FPC 118).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the period from July 1, 1965, to July 1, 1966, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $1,500,000, with no single project to exceed a cost of $300,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Florida Gas Transmission Company, to construct during the period from July 1, 1965, to July 1, 1966, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers or other similar sellers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in Paragraph (A) above is limited to construction during the period from July 1, 1965, to July 1, 1966, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $1,500,000, with no single project to exceed a cost of $300,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

INTERSTATE POWER COMPANY, DOCKET NO. CP65-360

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 3, 1965)

On May 14, 1965, Interstate Power Company (Applicant) filed in Docket No. CP65-360 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain transmission pipeline facilities for the transportation of natural gas in interstate commerce, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately 10.0 miles of 12-inch pipeline from a point near Hooppole, Illinois to the Rock River near Prophetstown, Illinois, and 1.5 miles of 8-inch submarine pipeline crossing the Rock River, parallel to its existing pipeline, for the purpose of increasing its system design capacity. Highway crossing permits are required from the State of Illinois and the Counties of Henry and Whiteside, as well as permits from the United States Army Corps of Engineers and the Department of Public Works and Buildings, Division of Waterways, of the State of Illinois, for which applications have been made.

Applicant's proposed facilities will enable it to utilize the additional volumes requested from Natural Gas Pipeline Company of America (Natural) and will make capacity available for future load growth.

Natural is presently authorized to deliver 25,334 Mcf per day of pipeline gas and 4,248 Mcf per day of storage gas to Applicant. In Docket No. CP65-169 Natural has been granted authorization to increase its deliveries to Applicant by 600 Mcf daily from pipeline capacity and 320 Mcf daily from storage capacity.

The estimated cost of the proposed facilities is $423,350, and will be defrayed from the proceeds of the sale of securities in connection with electric and gas expansion programs.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 1, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Interstate Power Company, a Delaware corporation having its principal place of business in Dubuque, Iowa, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 24, 1959, in Docket No. G-18220 (22 FPC 128).

(2) The proposed construction and operation of facilities by Applicant as hereinbefore described, and as more fully described in the application in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Interstate Power Company, authorizing the construction and operation of facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided in paragraph (b) of Section 157.20 of the aforesaid Regulations within 12 months of the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP65–420

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 3, 1965)

On June 28, 1965, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP65–420 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities for a new delivery point for the sale of natural gas to Illinois Power Company (Illinois Power) for resale and distribution in the Village of Hoyleton, Illinois, all as more fully set forth in the application in this proceeding.

Specifically, Applicant proposes to construct and operate a 2–inch side tap, approximately 200 feet of 3–inch lateral and a meter station in Washington County, Illinois. The estimated cost of these facilities is $9,530, which cost will be financed with funds on hand.

Applicant states that Illinois Power, an existing customer of Applicant, will provide natural gas service for Hoyleton from the quantity of gas which Applicant has heretofore been authorized to sell and deliver to Illinois Power. Hoyleton's estimated third year peak day and annual natural gas requirements are 193.9 Mcf and 15,195 Mcf, respectively.

The application indicates that Illinois Power has obtained the necessary authorizations from the Illinois Commerce Commission and from Hoyleton.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 1, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Natural Gas Pipeline Company of America, to construct and operate the proposed facilities in order to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP65–415

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 3, 1965)

On June 25, 1965, Northern Natural Gas Company (Applicant) filed in Docket No. CP65–415 an application pursuant to Section 7(c) of the Natural Gas Act for

authorization to provide up to 420 Mcf of natural gas per day a firm basis to Metropolitan Utilities District of Omaha, Nebraska (Metropolitan) for resale by Metropolitan to General Appliance Manufacturing Company (General), all as more fully set forth in the application.

Metropolitan has requested Applicant to provide up to 420 Mcf of natural gas per day on a firm basis for service to General in its new lawn mower manufacturing plant under construction at Omaha. Metropolitan has an effective service agreement with Applicant to purchase 135,000 Mcf per day of contract demand, and its firm sale to General will be made from that contract quantity. However, under the provisions of Applicant's applicable rate schedule R–2, all large volume (200 Mcf or more per day) industrial customers, whether they are served by Northern or through a distributor, are subject to interruption in accordance with a procedure set forth in said rate schedule R–2 unless the industrial customer is certificated to receive firm gas and the volume is set forth in a service agreement. Therefore, Applicant requests a certificate authorizing the 420 Mcf per day as firm service to General, and agrees to file with the Commission a new service agreement with Metropolitan reflecting the firm service so authorized. No additional facilities are proposed.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 1, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) The firm natural gas service authorized by this order is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid firm natural gas service is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Northern Natural Gas Company, authorizing the delivery of up to 420 Mcf of natural gas per day on a firm basis to Metropolitan Utilities District of Omaha, Nebraska for resale by Metropolitan to General Appliance Manufacturing Company, upon the terms and conditions of this order.

(B) Applicant shall file with the Commission a service agreement with Metropolitan reflecting the firm service authorized above, within 30 days from the date of issuance of this order.

(C) The certificate issued above shall not entitle General to any priorities to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SOUTH TEXAS NATURAL GAS GATHERING COMPANY, DOCKET NO. CP66-8

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 3, 1965)

On July 12, 1965, South Texas Natural Gas Gathering Company (Applicant) filed in Docket No. CP66-8 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the fiscal year August 1, 1965, to August 1, 1966, and the operation of gas purchase facilities to enable Applicant to take into its certificated pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas adjacent to said system.

Applicant requests waiver of the cost limitations imposed by Section 157.7(b) of the Commission's Regulations under the Natural Gas Act so that it may maintain its competitive position in acquiring new supplies of natural gas. The total cost of the proposed facilities will not exceed $1,000,000, with no single project to exceed a cost of $250,000, which costs will be financed from cash on hand, from cash generated from operations and from internal sources.

After due notice, no petition to intervene notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 1, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, South Texas Natural Gas Gathering Company, a Delaware corporation having its principal place of business in Corpus Christi, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its opinion and order issued August 30, 1962, in Docket No. G-18907 (28 FPC 401, 418).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration

of the authorization granted hereinafter a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the fiscal year August 1, 1965, to August 1, 1966, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $1,000,000, with no single project to exceed a cost of $250,000.

(8) Good cause has been shown for waiver of the cost limitations imposed by Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(9) The certificate issued hereinafter should not be construed as authorization to attach new customers or to increase the volume of sales to existing jurisdictional customers.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, South Texas Natural Gas Gathering Company, to construct during the fiscal year August 1, 1965, to August 1, 1966, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the fiscal year August 1, 1965, to August 1, 1966, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $1,000,000, with no single project to exceed a cost of $250,000.

(E) Applicant's request for waiver of the cost limitations imposed by Section 157.7(b) of the Commission's Regulations under the Natural Gas Act is granted.

(F) The certificate issued by paragraph (A) above shall not be construed as authorization to attach new customers or to increase the volume of sales to existing jurisdictional customers.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UNITED NATURAL GAS COMPANY AND PENNSYLVANIA GAS COMPANY, DOCKET NO. CP65-421

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 3, 1965)

On June 28, 1965, United Natural Gas Company (United) and Pennsylvania Gas Company (Pennsylvania) filed in Docket No. CP65-421 a joint application,

as supplemented July 26, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the exchange of natural gas, all as more fully set forth in the application.

The parties propose to exchange up to 6,000 Mcf of natural gas per day on a regular basis during the months of May through October, pursuant to the terms of a five year contract dated June 23, 1965. All deliveries will be made on a gas-for-gas basis, with deliveries to be balanced at the end of each calendar month.

The proposed exchange of gas will be accomplished through the utilization of an existing interconnection between the parties' respective systems in Elk County, Pennsylvania, and an interconnection proposed to be constructed near Youngsville, Pennsylvania. The Youngsville connection will require the construction and operation by United of approximately 2.5 miles of 6-inch transmission line, estimated to cost $71,790, and the construction and operation by Pennsylvania of a metering station and flow control facilities estimated to cost $10,560. All construction will be financed with cash on hand.

The proposed exchange will provide United with additional operating flexibility by creating a second source of supply into its Youngsville service area, and at the same time will relieve Pennsylvania from transporting equal volumes of gas a distance of 20 miles to ultimate points of delivery for injection into storage.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 1, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) United Natural Gas Company, a Pennsylvania corporation having its principal place of business in Oil City, Pennsylvania, and Pennsylvania Gas Company, a Pennsylvania corporation having its principal place of business in Warren, Pennsylvania, are both "natural-gas companies" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) The proposed construction and operation of facilities and exchange of natural gas by United and Pennsylvania are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and exchange of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) United and Pennsylvania are able and willing properly to do the acts and to perform the service proposed, and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to United Natural Gas Company and Pennsylvania Gas Company, authorizing the construction and operation of facilities and exchange of natural gas hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued above and the rights granted thereunder are conditioned upon the compliance of United and Pennsylvania with all applicable

Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation, and the exchange of natural gas shall be undertaken, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within one year from the date on which this order issues.

(D) United and Pennsylvania shall file their Exchange Agreement dated June 23, 1965, with the Commission as a new rate schedule to their respective FPC Gas Tariffs, Original Volume No. 2, within 60 days from the date of issuance of this order.

OPINION NO. 473

ARKANSAS POWER & LIGHT COMPANY, DOCKET NO. E-7090

OPINION AND ORDER DETERMINING JURISDICTION

(Issued September 7, 1965)*

Syllabus

1. Here Commission is dealing not merely with single or multiple flow of energy but instead with an interstate energy pool. P. 750.
2. Citing *Indiana & Michigan*, Commission *holds* Respondent's sales of energy from interstate pool are sales in interstate commerce subject to its jurisdiction under Section 201 of the Federal Power Act. P. 750.
3. Discussing Respondent's attempt to trace out-of-state energy, Commission observes that it has no burden to show by tracing techniques that interstate energy reaches each wholesale customer, where as here, interstate energy permeates entire system. PP. 750, 751.
4. There may be situations where a public utility which is part of an integrated power system can show that some of its wholesale sales are isolated from interstate network and, as such, not in interstate commerce—any such demonstration would have to rely primarily upon convincing engineering analysis of system operation rather than purely negative showing of absence of measureable interstate flows. P. 751.
5. Use of tracing to disprove that a particular sale of company which is part of electrically integrated system is in interstate commerce is a wholly unrealistic methodology irrelevant to present day power system technology. P. 751.
6. Argument that subject facilities are used in local distribution and thus facilities and sales therefrom are beyond Commission jurisdiction is rejected as not relevant. P. 751.
7. If company is, in fact, a public utility, all wholesale sales for resale in interstate commerce are subject to provisions of Sections 205 and 206 of the Federal Power Act regardless of facilities used. P. 751; 760.
8. Under Federal Power Act, Commission has exclusive jurisdiction over all sales at wholesale in interstate commerce except where expressly exempt—State assertion of jurisdiction has no bearing on question. P. 752.
9. Fact that utility had sufficient generation in Arkansas during peak periods or during whole year to have more than supplied the 23 customers does

*Initial decision appears on p. 753. Rehearing denied by order issued November 5, 1965, 34 FPC 1242. Affirmed, *Arkansas Power & Light Company* v. *F.P.C.*, 368 F. 2d 376 (CA8–1966).

not alter result, for Middle South control area is not operated that way and record does not support such a segregation of supplies and markets. P. 752.

10. To exempt sales to cooperatives would deprive their members of the protection afforded by the Act to customers of municipalities—Commission has regulated such sales for years. P. 752.
11. Courts give weight to an established course of administrative interpretation. P. 752.
12. In a proceeding under Section 201 of the Federal Power Act, Commission *determines* that Respondent's wholesale sales are jurisdictional and requires that rate schedules be maintained for them.

Richard M. Merriman, Harry A. Poth, Jr., and *E. B. Dillon, Jr.* for Arkansas Power & Light Company.

Wallace E. Brand for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

BAGGE, *Commissioner:*

This is a proceeding under Section 201 of the Federal Power Act to determine whether wholesale sales made by Arkansas Power & Light Company (Respondent) to 23 purchasers[1] in the state of Arkansas are subject to the jurisdiction of the Commission. The proceeding was initiated by a show cause order issued by the Commission on April 16, 1963, 29 FPC 744, relating to Respondent's failure to file rate schedules for the sales to the 23 purchasers in accordance with Section 205 of the Act. The proceedings are now before us upon exceptions to the initial decision of Presiding Examiner Ames W. Williams filed by Respondent and adopted by the Arkansas Public Service Commission and the brief opposing exceptions filed by our staff. In accordance with our recent decision in *Indiana & Michigan Electric Company*, 33 FPC 739, Opinion No. 458, Docket No. E–7089, issued April 14, 1965, we agree with the examiner that the wholesale sales for resale here involved are subject to our jurisdiction under the Act and that Respondent is required to maintain rate schedules for them.

The hearing began September 9, 1964, and concluded September 28, 1964, but was much reduced because of extensive stipulation of facts concerning the operations of Respondent and its affiliates. After the filing of briefs the examiner issued his decision on April 22, 1965. As a result of our Order No. 282, on April 21, 1964 (31 FPC 972), permitting companies to file rate schedules subject to reservation on the question of jurisdiction, Respondent on July 30, 1964, filed rate schedules for the 23 sales in issue with such a reservation.

The Respondent admits that it is a public utility within the meaning of Section 201(e) of the Federal Power Act and has on file its rate schedules covering sales to Louisiana Power & Light Company, Mississippi Power & Light Company, Empire District Electric Company, Tennessee Valley Authority, Oklahoma Gas &

---

[1] The purchasers referred to in the original order are Southwestern Power Administration, Citizens Light and Power Company, Public Utilities Company of Crossett, West Memphis, North Little Rock, Prescott, Hope and Osceola, Arkansas, Benton Municipal Light and Water Works, Ashley-Chicot Electric Cooperative, Inc., Riceland Electric Cooperative, Inc., C & L Rural Electric Cooperative Corp., Craighead Electric Cooperative Corp., Woodruff Electric Cooperative Corp., Petit Jean Electric Cooperative Corp., First Electric Cooperative Corp., Farmers Electric Cooperative Corp., Carroll Electric Cooperative Corp., South Central Electric Cooperative, Inc., Southwest Arkansas Electric Cooperative Corp., Ouachita Rural Electric Cooperative Corp., Mississippi County Electric Cooperative, Inc., and North Arkansas Electric Cooperative, Inc. The Southwestern Power Administration was erroneously included in this order and The Conway Corporation omitted. This opinion and order, therefore, does not relate to Southwestern, but includes Conway.

Electric Company, Southwestern Electric Power Company and Arkansas Missouri Power Company.

The principal issues raised by Respondent and the staff are (1) whether the sales to the 23 purchasers are sales at wholesale in interstate commerce within the meaning of Sections 201 and 205 of the Act, (2) whether Section 201(b) exempts the sales if the facilities involved are used in local distribution and (3) whether sales to an electric cooperative are sales for resale within Section 201(d) of the Act. The first two issues are almost completely settled by *Indiana & Michigan, supra*, so that only a brief discussion of the evidence is needed in addition to the examiner's decision.

Respondent is one of the four operating subsidiaries of Middle South Utilities, Inc., a holding company, which also owns Louisiana Power & Light, Mississippi Power & Light, New Orleans Public Service, Inc. and Middle South Services, Inc., a service company. It is interconnected with the other operating subsidiaries. The Middle South system, in turn, is interconnected with companies and systems surrounding it. Respondent is in fact one of 140 major utilities operating in a network covering the eastern half of the United States and a portion of Canada. This network includes the service areas of three large groups of companies. Respondent is in the "Interconnected Systems Group" in its Southwest Region.

All of these interconnected utilities operate continuously in parallel; that is, the frequency of each generator is synchronized at the standard 60 cycles. The entire system of companies is arranged so that generation will match load and will be obtained from the most economical sources. On a regional level Respondent and its affiliates (except for New Orleans which is controlled separately) form a "control area" which covers large portions of the states of Arkansas, Louisiana and Mississippi.

This three-state control area is connected to the utilities or control areas that surround it by tie lines known as "boundary ties." Each boundary tie has a meter which records the flow in the tie line. The information recorded by the meters is telemetered to the control center at Pine Bluff, Arkansas. At the control center the System Operator supervises frequency control, power dispatching and scheduling of generation with a view to continuously providing the energy requirements of the control area from the sources yielding the lowest overall cost consistent with reliability of service.

This objective is achieved through the use of the generators in the control area or by arranging interchange with other systems. The key tool for this purpose is frequency control. This is a basic requirement for any electric utility and is critical for a utility which is interconnected with others. The basic frequency is 60 cycles per second. If the frequency falls below this, it means that the load on the interconnected systems has increased, or generation had decreased, as by the loss of a generating unit. Conversely if the frequency rises, it means the load has decreased in relation to generation. There is an obligation in each control area to provide sufficient generating capacity to preclude imposing the frequency regulating burden on other systems. The system operator ordinarily will employ the generating resources in the control area to supply its requirements. Where there is a shortage of generation, however, energy will automatically move in from other areas to meet the deficiency. This is known as "pool assist." Where it is economically justified or otherwise necessary, the system operator will also arrange interchange transactions with another system. Even where no pool assist or interchange is necessary, there may still be outward flows over some boundary ties and inward flows over others, although there may be no net movement of power either way.

In calling upon generation to meet an increase in load, it is desirable that the system operator use the most economical generation available. The generators on

the Middle South system, as on other systems, vary in efficiency; that is, some generators require fewer Btu's of heat to generate a kilowatt hour of electric energy than others. Fuel costs vary from station to station, and costs also vary depending upon the percentage of capacity at which the unit is being operated. Transmission losses also vary depending upon the location of the generator and the load. The incremental cost of energy from any given generator adjusted for losses is known as "Delivered Lambda" and is expressed in mills per kilowatt hour. It works out that the system operates most efficiently when the delivered lambdas of each generator are equal. Attempting to achieve this result the Middle South System Operator utilizes a computer which assists in the allocation of generation among available sources at optimum economy. When the computer indicates that the delivered lambda at the boundary tie is at least three-tenths of a mill less than the Middle South system's lambda, adjusted for losses, the Middle South System Operator will arrange an interchange transaction and obtain the needed energy from an adjoining system.

As a consequence of this method of operation, Respondent receives and delivers energy across state boundaries pursuant to rate schedules on file with the Commission. In 1963 Respondent received 1,062,818,000 kwh of electric energy from Louisiana Power and Mississippi Power within the control area and from Oklahoma Gas & Electric Company and Empire District Electric Company outside the control area. In the same year total deliveries to those systems were 766,462,000 kwh.

The sales to the 23 customers involved in these proceedings are made from short lines extending from substations where the voltage is stepped down in most instances from 115 kv to 13.8 kv for delivery to each customer. Total deliveries to these customers amounted to 718,768,360 kwh in 1963. The sales to the 23 customers are made from energy available in Middle South's control area which extends over three states and from energy received from other systems outside the control area. As in *Indiana & Michigan, supra*, we are not dealing merely with a single flow of energy or multiple flows of energy but are dealing instead with an interstate pool of energy to which the generators of the control area and other interconnected systems contribute power and from which all loads, and sometimes the loads of other systems, are supplied. Therefore, in accordance with *Indiana & Michigan, supra*, and the authorities cited therein, particularly *Pennsylvania Water & Power Co.* v. *F.P.C.*, 343 U.S. 414, Respondent's sales of energy from this interstate pool are sales in interstate commerce and are subject to our jurisdiction under Section 201 of the Federal Power Act.

A witness for Respondent made an attempt to trace out-of-state energy to the points of sale in issue. He utilized what Respondent characterized as a manual tracing method by which he studied Respondent's facilities, the log sheets for deliveries to or receipts of energy from other companies and the flows of energy and loads in Respondent's system. He applied this method to the monthly peak hour for each of the four months April, August, October and December used in the Company's Power System Statement, Form 12, filed with the Commission for 1963. On the basis of this study he found that 60 out of 108 delivery points received interstate energy, but the remaining 48 did not. Alternatively, he used a computer, particularly with respect to the distribution of transmission losses, and he found that 66 out of 108 delivery points received interstate energy, but the remaining 42 did not. In both cases he found for these four peak hours that 16 out of the 23 customers received interstate energy, but 7 customers did not. Respondent's witness did not have an opinion as to whether the seven customers received any out-of-state energy during the remaining 8,756 hours in the year. However, the staff showed that, on the basis of Respondent's computer study and

reported flows over certain interconnections into Arkansas, several more of the customers must have received out-of-state energy during the year.

In our opinion, these tracing studies added little to this proceeding. They did provide unnecessary additional proof that the sales by Arkansas to its wholesale customers are made from an integrated system in which there are large flows of energy in interstate commerce. We reiterate our view expressed initially in *Indiana & Michigan, supra*, that there is no burden upon the Commission to show by tracing techniques that interstate energy reaches each wholesale customer, where it has shown, as here, that, as a matter of engineering analysis of the system, interstate energy permeates the entire system. Moreover, as Respondent's witness acknowledged the tracing studies adduced here do not prove that any of the few sales which under that method were shown not to be receiving interstate energy during the four-hour test period were not sales in interstate commerce, since these sales could have utilized interstate energy at some time outside the test period.

There may be situations where a public utility which is part of an integrated interstate power system can show that some of its wholesale sales are isolated from the interstate network and, as such, are not in interstate commerce. In our opinion, however, any such demonstration would have to rely primarily upon a convincing engineering analysis of system operation rather than a purely negative showing of the absence of measurable interstate flows, no matter how comprehensive such a tracing study might be. An interstate electric network is dynamic and ever changing both with respect to load and to generation source. It is an oversimplification, therefore, to talk in terms of a flow of electricity from point to point in an integrated power network of the type involved here. Instead, generation from each source in the system contributes directly or indirectly, and to an ever varying extent, to the energy present, in all parts of the system which are not isolated from out-of-state energy sources. The fact that, as a matter of engineering determination, identification of either the source or destination of particular units of energy within an interstate power system such as respondent's may be difficult and at times impossible does not detract from the interstate nature of the over-all operation. On the contrary, the more complex and comprehensive the nature of the interstate network, the more unlikely it will be that any energy sources will be measurably identifiable. The use of tracing to disprove that a particular sale of a company which is part of an electrically integrated interstate system is in interstate commerce is a wholly unrealistic methodology which is irrelevant to present day power system technology.

Respondent argues that the lines extending from its substations to the 23 customers are facilities used in local distribution, and, as such, the facilities and the sales made from them are beyond the jurisdiction of the Commission. Respondent's witness described most of these lines as operating at 13.8 kv and serving retail customers, large and small, as well as the wholesale customers involved here. In our view the evidence concerning the nature of these lines is not relevant. In accordance with our opinion in *Indiana & Michigan, supra*, we fully agree with the statement of the examiner that:

> If the company is, in fact, a public utility, all wholesale sales for resale in interstate commerce are subject to the provisions of Sections 205 and 206 of the Act regardless of the facilities used.

Entirely apart from this principal, which is directly derived from Section 201 of the Act, we may observe as we observed in *Indiana & Michigan, supra*, that facilities other than those leading directly to the connection with the customer are involved in the sale, and many of these facilities are clearly jurisdictional. Furthermore, the fact that a company may make a few direct sales off a line

transmitting power to a wholesale customer does not convert the line into a local distribution facility. *F.P.C.* v. *Southern California Edison Co.* (Colton), 276 U.S. 205. In fact, "at no point before delivery [to a wholesaler] has been completed has interstate transmission terminated," and "there is no ground for the position that local distribution includes any transmission occurring before the wholesaler who sells at retail is reached." *Wisconsin Michigan Power Co.* v. *F.P.C.*, 197 F. 2d 472, 477, certiorari denied 345 U.S. 934.

Respondent argues that because the 23 sales are subject to regulation by the State of Arkansas they are not subject to regulation under the Federal Power Act. This question has already been settled. Under the Federal Power Act we have exclusive jurisdiction over all sales at wholesale in interstate commerce except where expressly exempt. State assertion of jurisdiction does not have any bearing on the question. *F.P.C.* v. *Southern California Edison Co.* (Colton), 376 U.S. 205, 215; *U.S.* v. *Public Utilities Commission*, 345 U.S. 295, 299–311; *Wisconsin Michigan Power Co.* v. *F.P.C.*, 197 F. 2d 472, 479–480 (CA7), certiorari denied 345 U.S. 934. The fact that there was sufficient generation in Arkansas during peak periods or during the whole year to have more than supplied the 23 customers does not alter the result, for that is not the way the Middle South control area is operated, and the record does not support such a segregation of supplies and markets.[2]

Finally, Respondent argues that sales to cooperatives are not sales for resale because in other connections it has been held that the relationship of a cooperative association and its members is not that of buyer and seller but rather is that of principal and agent. We do not take issue with these decisions, but they are not relevant to the problem here. A sale by a company to a cooperative for redistribution to its members is not unlike a sale of electric energy to a corporation for resale to its stockholders. To exempt sales to cooperatives would deprive their members of the protection afforded by the Act to the customers of municipalities and private utilities. Consequently, it is not surprising that the Commission has regulated sales to cooperatives for years.[3] There are innumerable rate schedules for the sale of electric energy to cooperatives on file. The courts, of course, give weight to such an established course of administrative interpretation.[4]

The Commission further finds:

(1) Arkansas Power & Light Company, Respondent, is a corporation organized and existing under the laws of the State of Arkansas. It owns and operates a transmission network for the transmission of electric energy in interstate commerce, which energy is transmitted thereby from the state in which it is generated and is consumed at points outside thereof. Such facilities are in addition to, and do not include, facilities used for the generation of electric energy or facilities used in local distribution or only for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter. Respondent is, therefore, a public utility within the meaning of the Federal Power Act.

(2) Respondent operates its facilities as part of an interstate system comprised of a control area covering large portions of three states. Respondent combines its requirements with other systems in the control area, and the com-

---

[2] See our discussion on this matter and other aspects of alleged state jurisdiction in *Indiana & Michigan, supra.*

[3] *Otter Tail Power Co.*, 8 FPC 393, 396; *Florida Public Utilities Co.*, 9 FPC 3, 11; *Wisconsin Michigan Power Company*, 10 FPC 170, 173, aff'd 197 F. 2d 472 (CA7), certiorari denied 345 U.S. 934; *Indiana & Michigan Electric Co., supra.*

[4] *U.S.* v. *Public Utilities Commission*, 345 U.S. 295, 315.

bined requirements are supplied by the pooled generating facilities of systems in the control area. The systems in the control area are also interconnected with other systems, and part of the combined requirements of systems within the control area are at times supplied by energy generated in states outside of the control area. As a result, all wholesale sales by Respondent's system are sales from an interstate pool and are sales of electric energy in interstate commerce within the meaning of Section 201 of the Federal Power Act.

(3) Respondent sells electric energy to the 23 customers listed in footnote 1 above, and each such sale is a sale at wholesale for resale in interstate commerce within the meaning of Sections 201, 205 and 206 of the Federal Power Act.

(4) The facilities used by the Respondent to complete the transmission and sale of interstate energy to the 23 customers referred to in (3), above, are not local distribution facilities within the meaning of Section 201 of the Act.

(5) Respondent has filed, under protest, rate schedules for service to the 23 customers referred to in (3), above, and Respondent should maintain these on file as its rate schedules for service to those 23 customers, as provided below.

The Commission orders:

(A) Respondent shall maintain on file, in accordance with Part 35 of the Commission's Regulations and Section 205 of the Federal Power Act, the rate schedules on file with the Commission as of this date, referred to above, as its rate schedules for its sales at wholesale of electric energy to those 23 customers. Such rate schedules shall remain effective until superseded by a change filed pursuant to Section 205(d) of the Act and Section 35.3(c) of the Regulations thereunder or until changed pursuant to order of this Commission. This proceeding is, in all other respects, terminated.

(B) The decision of the presiding examiner, to the extent not inconsistent herewith, is adopted as the decision of the Commission.

(C) Exceptions not granted herein are hereby denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON AN ORDER TO SHOW CAUSE

(Issued April 22, 1965)

WILLIAMS, *Presiding Examiner:* This proceeding is the result of an order issued by the Federal Power Commission on April 16, 1963, 29 FPC 744, directing the Arkansas Power & Light Company, hereinafter referred to as Respondent, to show cause why the Commission should not find that the Respondent has been violating Section 205 of the Federal Power Act and Part 35 of the Regulations promulgated pursuant thereto, with respect to electrical energy sales at wholesale for resale to 23 purchasers specified in such order [1] by failing to file rate schedules as required by such statute with respect to jurisdictional sales of electric energy.

The hearing, initially set for June 24, 1963, was continued from time to time until September 9, 1964, when it began and continued until concluded on Septem-

[1] The purchasers referred to in the original order are Southwestern Power Administration, Citizens Light and Power Company, Public Utilities Company of Crossett, West Memphis, North Little Rock, Prescott, Hope and Osceola, Arkansas, Benton Municipal Light and Water Works, Ashley-Chicot Electric Cooperative, Inc., Riceland Electric Cooperative, Inc., C & L Rural Electric Cooperative Corp., Craighead Electric Cooperative Corp., Woodruff Electric Cooperative Corp., Petit Jean Electric Cooperative Corp., First Electric Cooperative Corp., Farmers Electric Cooperative Corp., Carroll Electric Cooperative Corp., South Central Electric Cooperative, Inc., Southwest Arkansas Electric Cooperative Corp., Ouachita Rural Electric Cooperative Corp., Mississippi County Electric Cooperative, Inc., and North Arkansas Electric Cooperative, Inc. The Southwestern Power Administration was erroneously included in this order and The Conway Corporation omitted. This decision, therefore, does not relate to the jurisdictional status of the former.

ber 28, 1964. The hearing time was reduced to a minimum as a result of an extensive stipulation of facts concerning the operations of the Respondent and its affiliates. The final brief was filed on December 23, 1964.

Following the opinion of the Supreme Court of the United States in *F.P.C. v. S. Cal. Edison*, 376 U.S. 205 (1964), the Federal Power Commission issued a policy statement, Order No. 282, on April 21, 1964, 31 FPC 972, which advised electric utility companies that there may remain some special situations in which a company engaged in the wholesale of electric energy, although interconnected with systems in other states, will wish to contest its jurisdictional status as to particular sales. Such companies were permitted to file their wholesale rate schedules with respect to such sales containing a reservation as to the question of jurisdiction which could subsequently be adjudicated in an orderly fashion.

On July 30, 1964, the Respondent filed wholesale rates for the 23 sales challenged by the order of April 16, 1964, but with a reservation contesting the Commission's asserted jurisdiction.

The Respondent is an admitted public utility within the meaning of Section 201(e) of the Federal Power Act and has on file its rate schedules covering sales to Louisiana Power & Light, Mississippi Power & Light, Empire District Electric Company, Tennessee Valley Authority, Oklahoma Gas & Electric Company, Southwestern Electric Power Company and Arkansas-Missouri Power Company.

The Issues

The first issue is whether or not the sales of electric energy by the Respondent to the 23 customers named in the order of April 16, 1963 are sales at wholesale in interstate commerce within the meaning of Sections 201 and 205 of the Federal Power Act. The second issue, assuming that the first is resolved in the affirmative, is whether or not Section 201(b) of such Act exempts the 23 sales upon the basis that the facilities involved in making such sales are used in local distribution. The third issue raised by the Respondent is the question whether or not sales to cooperatives are sales of energy for resale within the meaning of Section 201(d) of the Act.

The Stipulated Evidence

The Respondent is one of the four operating subsidiaries of Middle South Utilities Inc. (Middle South), a holding company, which, in addition to the Respondent, owns Louisiana Power & Light Company (Louisiana), Mississippi Power & Light Company (Mississippi), New Orleans Public Service, Inc. (New Orleans) and Middle South Services, Inc., a service subsidiary.

The Respondent is interconnected by high voltage transmission lines with the other operating subsidiaries at the borders of the States of Arkansas, Louisiana, and Mississippi. New Orleans, however, is interconnected only with Louisiana. The interconnections are part of a network of transmission lines operating at 115,000 volts and above, and are cross-connected and operated so as to permit power supplies to flow from the many operating stations within the network to any point on the network where energy is needed. In addition to the interconnections between the Middle South operating subsidiaries, such system is also connected with the Empire District Electric Company, Tennessee Valley Authority, Oklahoma Gas & Electric Company, Mississippi Power Co., Gulf State Utilities, Central Louisiana Electric and the Southwest Power Administration.

The operating subsidiaries, including the Respondent, are members of the Southwest Region—Interconnected Systems Group which is included in the

North American Power Interconnection Committee (NAPSIC). The 140 electric utilities making up CANUSE, PJM and Interconnected Systems Group cover the eastern half of the United States and a small portion of Canada. They operate continuously in parallel. Such operation is required in order to synchronize the frequency output of all connected generators at the standard 60 cycles.

The object of the interconnected electric system is to provide sufficient generation to meet load requirements at any point, plus the losses on the entire interconnection since lacking such a balance, the frequency of the entire system would either increase or decrease.

The Middle South System companies share a generation control arrangement which regulates generation in the service areas of the Respondent, Louisiana, Mississippi and New Orleans [2] and provides for its own requirements and any that New Orleans cannot meet with its own resources.

The combined service areas of the Middle South subsidiaries form what is known as a "control area" [3] and various generators in the three states making up this control area [4] are selected by the operator in charge to provide the needs of the system within the area.

A control area is, in turn, connected to other control areas and utilities that surround it by tie lines known as "boundary ties" and the evidence shows that such ties cover large segments of the States of Arkansas, Louisiana and Mississippi. Each boundary tie has a meter which records the direction and volume of energy flowing in the line and such intelligence is transmitted with respect to the Middle South subsidiaries to the System Operator's Control Center at Pine Bluff, Arkansas where the generators are balanced against the system load requirements.

If a sudden increase in the load requirements of a control area develops, the interconnections with other areas and systems provide instantaneous additional power through a "pool assist."

The system operator's primary concern is, of course, operating economy and a knowledge of the incremental cost of generating a kilowatt hour from the individual sources in the control area is a prerequisite to such an achievement. With this information available, the operator can adjust generation output so that the incremental cost of generation output from any given source is equal to the incremental cost of output from any other source. The Middle South System employs a computer to allocate generation so that each station maintains an equal delivered lambda.[5]

Similar transactions also occur between control areas when available adjacent lambda at a boundary tie is at least three-tenths of a mill less than the Middle South System's own lambda.

It is known too, that energy flows over boundary ties of the Middle South System even though not scheduled by the area control operator. This phenomenon occurs even when the interchange controls are set at zero and the net effect produced by such uncontrolled flows is a balancing of all boundary ties.

---

[2] New Orleans has its own control system within the Middle South control area.

[3] Through interconnection and cross-connection of control areas by transmission networks, the control operator has a choice in the selection of generators to meet area power requirements. The selection is, of course, made upon the basis of meeting the combined system requirements at the least cost.

[4] Sometimes generators outside of the control area are called upon to meet deficiencies within the area.

[5] Delivered lambda is the incremental cost in mills of an additional kilowatt hour delivered to load including losses from a particular generating unit or station. This definition does not, however, take into consideration the incremental heat rate of a generating unit or incremental operating and maintenance costs.

With respect to sales of energy to the 23 customers involved in the show cause order of April 16, 1963, the record indicates that the Respondent's deliveries from its step down substations to the customers' facilities totaled 718,768,360 kilowatt hours during the year 1963.[6]

Respondent's Position

One segment of Respondent's position is based upon the case of *Peoples Natural Gas Co.* v. *Public Service Commission*, 270 U.S. 550 (1926) which is construed to support the premise that if there is more than enough generation by the Respondent within the State of Arkansas to satisfy the needs of the 23 show cause customers,[7] the Arkansas State Commission is the proper regulating authority over such sales and not the Federal Power Commission. Mr. Lewis M. Robinson, Chairman of the Arkansas Public Service Commission, testified at length stating that the Arkansas Commission has continuously exercised regulatory jurisdiction over the service and rates to the 23 customers from 1935 to date for service to private companies and municipalities, and from 1937 to date for cooperatives.

The Respondent also maintains that the Federal Power Commission lacks jurisdiction since the facilities used to make sales to the 23 customers are local distribution facilities. Reliance for the validity of this proposition is placed upon the case of *Connecticut Light & Power Co.* v. *F.P.C.*, 324 U.S. 515 (1945) and the testimony of Mr. Everett E. Thompson, presently the Planning Engineer of the Respondent's Long Range Planning Section, and an employee since 1949.

The Respondent likewise relies upon Mr. Thompson for two four-hour studies, one manual and one computer,[8] made concerning the sources of the energy supplied to the 23 customers which purport to show that in the case of the manual study, 7 customers did not receive any interstate or commingled energy and as to the computer study, it is argued that while some delivery points dropped off, others were picked up. Respondent contends that only 10 of the 23 customers are shown to have received commingled energy by the computer study.

Finally, it is the Respondent's contention that the evidence does not show the sales of energy to the 8 cooperatives among the 23 customers are sales at wholesale merely because the Federal Power Commission Index of Filed Electric Rate Schedules reveals that a large number of contracts involving sales to cooperatives are on file with the Commission.

Staff's Position

The Staff of the Federal Power Commission argues that the Respondent is an admitted "public utility" within the meaning of the Federal Power Act and, under Section 205 thereof, the Federal Power Commission has jurisdiction over wholesale sales for resale if such sales are in interstate commerce. The Staff further maintains that the record amply demonstrates this fact and, therefore, the matter of whether or not the sales made to all 23 of the show cause customers are made by local distribution facilities, is irrelevant. Also, the Staff takes exception to the Respondent's claim that sales of energy by the cooperatives to their members are not "resales" of such energy.

---

[6] Respondent places the amount at 714,636,000 kilowatt hours sold rather than delivered.

[7] The record shows that the Respondent's generating facilities in Arkansas during the year 1963 produced 5,235,091 Kwa. This amount is several times the amount delivered to the 23 customers.

[8] The four hours used in the studies were the hours ending at 8 p.m., April 22, 1963; 3 p.m., August 28, 1963; 7 p.m., October 8, 1963, and 7 p.m., December 18, 1963.

The Proof

The Respondent, as set forth in the preceding resume of the stipulation of fact, is one of the four interconnected operating subsidiaries of Middle South, Inc., doing business in the States of Arkansas, Louisiana, and Mississippi. These companies are interconnected in a control area with the center at Pine Bluff, Arkansas, and, in turn, with other control areas and systems covering the eastern half of the United States and part of Canada.

Since electrical energy cannot be stored, the integrated and interconnected power pool as herein demonstrated is the best means of obtaining instantaneous service and maximum operating economy as the demand for power occurs.

The manner in which the vast and integrated transmission network operates has been previously reviewed and it is obvious that energy flows back and forth and across state lines as the needs of the various interconnected control areas fluctuate and full requirements cannot be met by the generation within certain areas.

In point of fact, the two four-hour tracing studies placed into evidence by the Respondent show unequivocally that interstate or commingled energy reached at least 16 of the show cause customers in the brief period examined. Taking into consideration the scope of the interconnected and highly integrated system herein involved and the testimony by Engineer Thompson that no equipment is used by the Respondent to impede the flow of out-of-state energy into the Middle South complex, it is neither difficult nor unreasonable to reach the conclusion that at some time during the remaining 8,756 unchecked hours of the year, interstate or commingled energy found its way to the remaining 7 customers.[9]

The fact that the amount of out-of-state energy reaching these customers may be quite small in comparison to the quantity of Arkansas or intrastate generated energy consumed is, as stated in the case of *Connecticut Light & Power Co.* v. *F.P.C.*, 324 U.S. 515, 535, 536 (1945), unimportant. See also *Michigan Wisconsin Power Co.* v. *F.P.C.*, 197 F. 2d 472, 478 (CA7–1952) cert. den., 345 U.S. 934.

Since the decision in *Pennsylvania Water & Power Co.* v. *F.P.C.*, 343 U.S. 414 (1952), wherein the Supreme Court stated that "the Federal Power Commission has complete authority to regulate all of this commingled power flow," in dealing with an interconnected interstate electric system such as the Middle South system of which Respondent is an integral part, there is no necessity for tracing or attempting to trace out-of-state energy to either sustain or refute the burden of proof as to interstate sales where pool sales are involved. It follows that the Federal Power Commission, having the authority to regulate *all* of the wholesale sales for resale of commingled energy, certainly has the authority to regulate each part thereof. See also *Wisconsin Michigan Power Co.* v. *F.P.C.*, *supra*.

The Respondent also believes that the Federal Power Commission lacks jurisdiction over the sales in issue since the Department of Public Utilities of the State of Arkansas has exercised regulatory control of the service and rates to the 23 show cause customers for some 25 years. An analogy is drawn between the circumstances in this proceeding and the matter involving the *Peoples Natural Gas Co.* v. *Public Service Commission*, 270 U.S. 550 (1926). In the latter case, West Virginia natural gas purchased at the state line by a Pennsylvania gas company and commingled with a lesser amount of gas produced in the latter state, was sold only to customers within the State of Pennsylvania. In an abandonment proceeding the order of the Pennsylvania Public Utilities Commission requiring the

[9] The four hours used in the two studies appear to have been selected simply because the information happened to be available and the witness had no opinion as to which of the 23 customers may or may not have received interstate or commingled energy during the balance of the year.

continuance of service to a local community was upheld on the theory that there was more than enough Pennsylvania-produced gas in the fungible mass flowing through the company's pipeline to meet the requirements of the Pennsylvania community threatened with a loss of service.

The analogy drawn by Respondent, however, is not pertinent for a number of reasons, not the least persuasive of which is the fact that the *Peoples'* case did not involve a pool sale of electric energy. Also, it is implicit in the *Peoples'* decision that the respective amounts of West Virginia and Pennsylvania-produced gas in the company's pipeline are known and measurable quantities—elements that are not readily ascertainable with respect to electrical energy moving instantaneously in an interconnected and integrated system.[10]

The measurability or separability concept of commingled interstate and intrastate gas has now been rejected by the Supreme Court in *F.P.C.* v. *Lo-Vaca Gathering Company, et al.*, 379 U.S. 366, (1965) wherein restrictive use contracts between the parties sought to eliminate FPC jurisdiction over gas in a commingled flow that would be used by the contracting parties and not be resold.

The court, in reviewing its pertinent decisions since *Connecticut Light & Power Co., supra*, stated:

> * * * "Federal jurisdiction was to follow the flow of electric energy, an engineering and scientific, rather than a legalistic or governmental, test." And that is the test we have followed under both the Federal Power Act and the Natural Gas Act, except as Congress itself has substituted a so-called legal standard for the technological one. Id., at 530–531. In *Interstate Natural Gas Co.* v. *Federal Power Comm'n.*, 331 U.S. 682, 687, we considered the anatomy of the pipeline system to discover the channel of the constant flow; again in *Federal Power Comm'n.* v. *East Ohio Gas Co.*, 338 U.S. 464, 467; and most recently in *Federal Power Comm'n.* v. *Southern Cal. Edison Co.*, 376 U.S. 205, 209, n. 5. The result of our decisions is to make the sale of gas, which crosses a state line at any stage of its movement from wellhead to ultimate consumption, "in interstate commerce" within the meaning of the Act.

The court further succinctly stated:

> Were supplies of gas and pipeline companies free to allocate by contract gas from a particular source to a particular use, havoc would be raised with the federal regulatory scheme, * * *

The views of the court were reiterated in the case of *F.P.C.* v. *Amerada Petroleum Corporation, et al.*, 379 U.S. 687, decided February 1, 1965.

Having disposed of the first issue raised in this proceeding in the affirmative, it is now appropriate to consider whether or not Section 201(b) of the Federal Power Act exempts the wholesale sales to the 23 show cause customers upon the basis that the facilities involved in making such sales are used in local distribution.

The Staff argues that since the Respondent is an admitted "public utility" within the meaning of Section 201(c) of the Federal Power Act, the nature of the facilities used in making wholesale sales to the 23 customers is irrelevant. It is claimed there is nothing in Section 205 of the statute which states or suggests that jurisdiction over the interstate wholesale sales of a "public utility" as in any way dependent upon the nature of the facilities over which the par-

---

[10] In *Amerada Petroleum Corporation* v. *F.P.C.*, 334 F. 2d 404 (1964), the court, while adhering to the *People's*[1] ruling, reiterates its belief that the volumes of intrastate and interstate gas moving in the petitioner's pipeline while commingled, are known quantities and measurable by volume.

ticular sales are made even if such facilities could properly be classified in their entirety as "local distribution facilities."

The construction placed by the Respondent upon Part II of the Federal Power Act would, if adopted, exempt substantial interstate wholesale sales of energy for resale from regulation. Obviously, such a result was not the object of the legislation; likewise Part II has not been so interpreted by the Federal Power Commission or the courts.

The interpretation of the statute the examiner is asked to accept here was firmly rejected in the matter of *Hartford Electric Light Co.* v. *F.P.C.*, 131 F. 2d 953, cert. den., 319 U.S. 741 (1943) and again in *Connecticut Light & Power Co.* v. *F.P.C.*, 141 F. 2d 14, 18 (1944).[11]

In 1951 the court in *Wisconsin Michigan Power Co.* v. *F.P.C.*, 197 F. 2d 472, cert. den., 345 U.S. 934, reiterated the Commission statement that:

> * * * Nothing in the Act makes our jurisdiction under Part II over sales of electric energy dependent upon the nature of the facilities involved in effecting the sale. "Sale of electric energy at wholesale" is defined only as "a sale of electric energy to any person for resale" (Section 201(d)). Under the statute the nature of facilities only applies to the determination of the status of an electric company as a "public utility" under Part II.

A fair analogy may be drawn between the circumstances in the case at bar and the case of *F.P.C.* v. *East Ohio Gas Co., et al.*, 338 U.S. 464, 469 (1949), a natural gas case, wherein the Supreme Court stated:

> Respondents also contend that East Ohio is exempt from the Act because all its facilities come within the proviso in Section 1(b) making the Act inapplicable "to the local distribution of natural gas or to the facilities used for such distribution." But what Congress must have meant by "facilities for local distribution" was equipment for distributing gas among consumers within a particular local community, not the high-pressure pipelines transporting the gas to local mains. For in decisions prior to enactment of the statute this court had sharply distinguished between the two; it had made it clear that the national commerce power alone covered the high-pressure trunk lines to the point where pressure was reduced and the gas entered local mains, while the state alone could regulate the gas after it entered those mains.

The Respondent places much credence in the testimony of Witness Thompson who stated that in his opinion all of the facilities he described as used in serving the show cause customers between the Respondent's transformers and the 23 customers' delivery points are local distribution facilities and that "whether or not a circuit was classified as a distribution circuit or transmission circuit depends on the function the circuit is serving" and not its length or voltage.

Applying the function criterion in this instance, it is abundantly clear that the Respondent's circuits to the delivery points of the show cause customers are performing a transmission function by carrying the energy to the wholesale purchaser, and that the local distribution facilities do not come into service until after the wholesale energy is metered into the wholesale purchaser's distribution facilities.

As the Presiding Examiner so well stated in his decision in *Indiana & Michigan Electric Company*, Docket No. E-7089, issued December 16, 1964, and approved by the Commission in Opinion No. 458, issued April 14, 1965, 33 FPC 739 at 775:

> There is obviously a transmission function involved in the bulk transfer of energy even where the transmission facilities are also used to effect distribu-

[11] Remanded on other grounds.

tion at retail, the bulk transfer being for delivery to a point for subsequent *local* distribution in the retail market.

Also, in *Wisconsin Michigan Power Co.* v. *F.P.C.*, *supra*, the court stated:

> * * * Thus the interstate transmission of electric energy continues from Michigan through the transformers in reduced voltage of the wholesaler; upon delivery to him local distribution begins when he resells. His sales and distribution at retail are clearly local in character, and constitute only local distribution, but at no point before delivery to him has been completed, has interstate transmission terminated. In other words, "facilities used in local distribution" means facilities used for making resale and distribution to consumers, jurisdiction over which is left to the states.

While the Respondent and its witness, Mr. Thompson, have denominated the facilities in question to be facilities used in local distribution, this designation does not necessarily make them so. The Federal Power Commission is not bound by the opinions or conclusions of expert witnesses but is free to exercise its expertise and make determinations from all the facts of record.[12]

This entire rationale, however, is now academic since the Federal Power Commission has firmly asserted in Opinion No. 458, *supra*, that there is nothing in the Federal Power Act that makes Commission jurisdiction over sales dependent on whether the facilities are local distribution facilities. If the company is, in fact, a public utility, all wholesale sales for resale in interstate commerce are subject to the provisions of Sections 205 and 206 of the Act regardless of the facilities used.

The Respondent also claims that its sales to 14 of the show cause customers organized as cooperatives are not sales at wholesale for resale within the meaning of the Federal Power Act because the relationship existing between a cooperative association and its members is not that of buyer and seller, but rather that of principal and agent. A number of cases are cited by Respondent purporting to support this proposition.

An examination of these cases, however, indicates that they are concerned with sales by cooperatives acting as collective marketing agents for their members rather than the converse situation presently under consideration.

Here, the Federal Power Commission is asserting jurisdiction only over interstate and wholesale sales of energy *to* cooperatives and not over local retail sales *by* cooperatives. How the latter sales are effected or denominated by the individual cooperative with respect to its members or customers is without significance. Regardless of the euphemism employed, it logically follows that the cooperatives are not giving away the energy purchased from the Respondent and that the recipients, whether they are called customers, agents, principals, members or otherwise, are obviously paying something more than the wholesale price in exchange therefor. Such an exchange, in the opinion of this examiner, is patently a "resale" within the intent and meaning of the statute.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, including the pleadings, the evidence adduced and the briefs filed, it has been found and concluded, in addition to the findings and conclusions heretofore stated, that:

(1) Arkansas Power & Light Company is a corporation organized and existing under the laws of the State of Arkansas. It owns and operates a transmission network for the transmission of electric energy in interstate commerce which

---

[12] See: *Market Street Railway Co.* v. *Railroad Commission of California*, 324 U.S. 548, 560; *Central Illinois Public Service Co.* v. *F.P.C.*, 338 F. 2d 682 (1964).

energy is transmitted thereby from the state in which it is generated and consumed at points outside thereof, which is in addition to and does not include facilities used for the generation of electric energy or facilities used in local distribution, or any for the transmission of electric energy in intrastate commerce or facilities for the transmission of electric energy consumed wholly by the transmitter. Respondent is, therefore, a public utility within the meaning of the Federal Power Act.

(2) Respondent operates its facilities as part of an interstate system comprised of a control area covering two or more states. Respondent combines its requirements with other systems in the control area and the combined requirements are supplied by the pooled generating facilities of systems in the control area.

(3) Respondent, operating as part of a control area, pools its requirements with other systems and part of the combined requirements are at times supplied by energy generated in states outside of the control area.

(4) Respondent, operating as part of a control area, does not attempt to limit flows of energy over transmission line ties to other companies in the control areas which are located in other states, nor does it attempt to limit such flows over individual boundary transmission line ties of the control area with companies in other states, outside of the control area.

(5) As a result of the methods used by Respondent in operating its system, all wholesale sales from Respondent's system are sales of electric energy "in interstate commerce" within the meaning of Section 201 of the Federal Power Act.

(6) The sales of electric energy to each of the cooperatives named in the Commission's show cause order of April 16, 1963, as well as the sales to municipalities and privately owned utilities are "sales at wholesale for resale in interstate commerce" within the meaning of Sections 201, 205 and 206 of the Federal Power Act.

(7) The facilities used by the Respondent to complete the transmission and sale of interstate energy to the 23 show cause customers, are not local distribution facilities within the meaning of Section 201 of the Act even if such fact were relevant.

Whereas, on July 30, 1964, in accordance with the Commission's Order No. 282 issued April 21, 1964, *supra*, Respondent filed rates for the sale of electric energy at wholesale to: Citizens Light and Power Company; Public Utilities Company of Crossett; the municipalities of West Memphis, North Little Rock, Prescott, Hope, and Osceola, Arkansas; Benton Municipal Light and Water Works; Ashley-Chicot Electric Cooperative, Inc.; Riceland Electric Cooperative, Inc.; C & L Rural Electric Cooperative Corp.; Craighead Electric Cooperative Corp.; South Central Electric Cooperative, Inc.; Southwest Arkansas Electric Cooperative Corp.; Ouachita Rural Electric Cooperative Corp.; Mississippi County Electric Cooperative, Inc.; North Arkansas Electric Cooperative, Inc.; The Conway Corporation; Woodruff Electric Cooperative; Farmers Electric Cooperative Corp.; and First Electric Cooperative Corp. which have been accepted for filing by the Commission and Respondent has, from time to time since July 30, 1964, filed changes of those rates which have been accepted for filing.

ORDER

WHEREFORE, *It Is Ordered*, subject to review by the Commission:

Respondent shall maintain on file, in accordance with Part 35 of the Commission's Regulations and Section 205 of the Federal Power Act, the 23 rate sched-

ules on file with the Commission as of this date, referred to above, as its rate schedules for its sales at wholesale of electric energy to those 23 customers. Such rate schedules shall remain effective until and unless superseded by a change filed pursuant to Section 205(d) of the Act and Section 35.3(c) of the Regulations thereunder, or changed pursuant to order of this Commission. This proceeding is, in all other respects, terminated.

AMES W. WILLIAMS,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

LONE STAR GAS COMPANY, DOCKET NO. CP66–10

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued September 7, 1965)

On July 13, 1965, Lone Star Gas Company (Applicant) filed in Docket No. CP66–10 an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon certain facilities and for a certificate of public convenience and necessity authorizing the construction and operation of new facilities in the area of the City of Denton, Texas, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately 13 feet of 4-inch transmission pipeline, and to abandon approximately 3.67 miles of existing 4- and 6-inch transmission pipeline, all in order to realign its facilities presently serving Denton, Texas and Acme Brick Company, an industrial customer. Approximately 2.76 miles of the pipeline to be abandoned will be utilized in place as distribution facilities, 0.49 mile will be removed and salvaged for use elsewhere on Applicant's system, and 0.42 mile will be abandoned in place. The subject proposal will not result in the abandonment or diminution of service to any of Applicant's existing customers.

Total estimated cost of Applicant's proposed construction is $266, and will be financed with funds on hand.

After due notice, no petition to intervene, notice of intervention or protest in opposition to the granting of the application has been filed.

At a hearing held on September 1, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Lone Star Gas Company, a Texas corporation having its principal place of business in Dallas, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) The proposed construction and operation of facilities by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) The proposed abandonment of facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(5) The aforesaid proposed abandonment of facilities is permitted by the public convenience and necessity, and approval therefor should be granted as hereinafter ordered.

(6) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Lone Star Gas Company, authorizing construction and operation of the facilities hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within 90 days from the date on which this order issues.

(D) Permission for and approval of the proposed abandonment of facilities by Applicant are granted.

(E) Applicant shall advise the Commission of the date of the abandonment of said facilities within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MARATHON OIL COMPANY, DOCKET NO. RI64-549

ORDER AMENDING ORDER

(Issued September 7, 1965)

On August 23, 1965, Marathon Oil Company (Marathon) filed a motion in the above-docketed proceeding requesting amendment of the Commission's order issued herein on March 25, 1965, 33 FPC 637, accepting an offer of settlement for the rate under Marathon's FPC Gas Rate Schedule No. 10 for a sale of natural gas made to Transcontinental Gas Pipe Line Corporation (Transco) in the North Markham-North Bay City Field, Matagorda County, Texas (Texas Railroad Commission District No. 3). In said order, we directed Marathon to retain the related refunds, and, among other things, gave it the election to commingle the retained refunds with its general assets and use them for its corporate purposes at an interest rate of 6% per annum from May 7, 1965, to the date on which they are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission. On May 8, 1965, Marathon advised the Commission that it had elected to retain the refund monies by so commingling them with its general assets.

In Opinion No. 468, *Area Rate Proceeding*, Docket No. AR61-1, *et al.*, 34 FPC 159 (issued August 5, 1965) we determined that the proper rate of interest for refund monies so retained and commingled with general corporate funds was 4.5% per annum.

We believe it appropriate that Marathon should also be required to pay only the interest rate established by our Opinion No. 468, that being the prime rate of interest as fixed by the Federal Reserve Board, and shall, therefore, amend the order of March 25, 1965, accordingly.

The Commission orders:

(A) The Motion for Amendment of the order issued herein on March 25, 1965, filed by Marathon on August 23, 1965, is granted.

(B) Ordering Paragraph (F) of the order issued herein on March 25, 1965, is amended so as to provide for an interest rate of 4.5% per annum in lieu of 6% per annum from May 7, 1965, to the date on which they are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-414

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued September 7, 1965)

On June 24,1965, Northern Natural Gas Company (Applicant) filed in Docket No. CP65-414 an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon certain natural gas facilities and for a certificate of public convenience and necessity authorizing the construction and operation of certain other facilities, all in Sarpy County, Nebraska, all as more fully set forth in the application in this proceeding.

Applicant utilizes the facilities to be abandoned, and will utilize the facilities proposed to be constructed, to deliver gas to its Peoples Natural Gas Division (Peoples Division) for resale and distribution in Bellevue, Nebraska, and for resale to the Kramer Power Plant (Kramer). Applicant states that its town border station serving Bellevue and a large segment of its 8-inch Bellevue branchline are located within the city limits of Bellevue and in close proximity to residential housing developments. As a safety precaution, Applicant proposes to reduce the branchline pressure by relocating the Bellevue town border station approximately two miles upstream from its present site.

Specifically, Applicant proposes the following disposition and construction of facilities:

1. Abandon and remove 130 feet of the 8-inch Bellevue line and construct 110 feet of new 8-inch line at the new location of the town border station.
2. Abandon in place by sale to Applicant's Peoples Division 11,724 feet of the 8-inch Bellevue line.
3. Abandon by sale to Peoples Division a regulator setting serving Kramer.
4. Abandon in place by sale to Peoples Division six farm taps on the Bellevue line.
5. Remove and abandon by sale to Peoples Division a portion of the Bellevue town border station and retire the remaining portion.
6. Construct and operate a new town border station.

Applicant states that no service will be affected by these proposals.

The total cost of construction and removal is estimated to be $46,630 which cost will be financed from cash on hand. Peoples Division will pay Applicant the depreciated original cost for the facilities to be sold.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 1, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) The facilities to be abandoned, as hereinbefore described, are subject to the jurisdiction of the Commission and the abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(5) Such abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity, and an order authorizing and approving same should be issued as hereinafter ordered.

(6) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Northern Natural Gas Company, to construct and operate the proposed facilities, as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

(D) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, all as more fully described in the application in this proceeding, are granted.

(E) Applicant shall advise the Commission of the date of said abandonment within 10 days of the date thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge

PENNSYLVANIA ELECTRIC COMPANY, DOCKET NO. E-6899

ORDER TERMINATING PROCEEDING

(Issued September 7, 1965)

This proceeding was instituted by Commission Order to Show Cause issued on October 1, 1959, 22 FPC 633. That order noted that Pennsylvania Electric Company (Company) had been taking accelerated amortization on certain utility property and had been reporting the accruals arising from deferred tax accounting therefor in its actual report to shareholders through a balance sheet account other than the account prescribed by the Commission in Order No. 204, 19 FPC 837. On November 30, 1959, Company filed its answer which stated that Company was accounting for the deferred tax amounts arising from deferred tax accounting for accelerated amortization in conformity with the requirements of Order No. 204 but was reporting to shareholders and others with the accounting classification prescribed by the Pennsylvania Public Utilities Commission. Thereafter, in its supplemental answer filed on April 8, 1960, Company stated that in December of 1959, after approval by the Pennsylvania Public Utilities Commission, Company had transferred the amounts previously accumulated in "Account 271 A—Earned Surplus Restricted" to an account entitled "Account 258.2—Miscellaneous Reserves—Reserve for Future Income Taxes".

On December 31, 1962, this Commission issued its opinion in *Appalachian Power Company*, Docket No. E-6900, 28 FPC 1199, affirmed 328 F. 2d 237 (CA4-1964), certiorari denied, 379 U.S. 829. Among other things the *Appalachian* opinion noted that Order No. 204 required companies electing deferred tax accounting to record and report the accumulated accruals arising therefrom in a balance sheet account titled "Account 266, Accumulated Deferred Taxes on Income" (now designated Account 281).

On July 2, 1965, the Commission staff wrote to Company to inquire about Company's present deferred tax reporting practices. In reply, on July 30, 1965, Company's counsel filed motion styled "Motion to (1) Accept Proffered Stipulation of Facts, (2) Accept Proposed Waiver of Intermediate Decision Procedure, and (3) Grant Opportunity to Present Oral Argument and File Briefs Before the Commission". The gravamen of that motion was that this proceeding has been pending for many years and that Company has been denied its day in court to contest the matters alleged in the Order to Show Cause.

This Commission's main objection to Company's reporting practices voiced in the Order to Show Cause was the classification of deferred tax accruals arising from the use of accelerated amortization in a restricted surplus account in the proprietary section of the balance sheet. After Company's voluntary application approved by the Pennsylvania Public Utilities Commission in December of 1959, that reporting practice was discontinued. As indicated in Company's Form No. 1 for 1964, Company is presently reporting these accruals in a balance sheet account titled "Reserve—Future Income Taxes" presented at the bottom of the righthand side of its balance sheet and set apart from the proprietary portion of the balance sheet. Although we do not approve of the use of "Reserve—Future Income Taxes" in lieu of "Accumulated Deferred Income Taxes—Accelerated Amortization" we do not believe this discrepancy in nomenclature to be sufficiently serious to warrant the time and attention inherent in any continuation of this proceeding.

The Commission further finds:

It is necessary and appropriate for the purposes of the Federal Power Act and the Commission's Uniform System of Accounts that this proceeding be terminated.

The Commission orders:

The above-captioned proceeding is hereby terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ALABAMA-TENNESSEE NATURAL GAS COMPANY, DOCKET NO. RP65-58

ORDER APPROVING RATE REDUCTION

(Issued September 8, 1965)

Alabama-Tennessee Natural Gas Company (Alabama-Tennessee) on May 21, 1965, submitted a letter of intent proposing to file a reduction of 0.95¢ per Mcf in its jurisdictional rates to be effective as of the first of the month in which the letter of intent is accepted and approved by the Commission. The proposed change in rates would effectuate an immediate annual reduction of approximately $107,000 based upon 1964 test year sales volumes. Alabama-Tennessee also proposed to reduce its rates to flow-through annual liberalized depreciation tax savings, subject to certain terms and contingencies.

Alabama-Tennessee's rate reduction proposal has resulted from numerous conferences held over a period of several months with the Commission's staff. These conferences were initiated by a letter from the Chief of the Bureau of Natural Gas, dated December 14, 1964, as a consequence of the staff's continuing supervision of natural gas companies and its periodic review of the annual reports filed with the Commission by such companies. The proposal is summarized in part as follows:

(1) Upon acceptance by the customers of Alabama-Tennessee and the Federal Power Commission of all of the provisions embodied in the proposal, Alabama-Tennessee will file revised tariff sheets to effect a reduction in the commodity charge of its jurisdictional rates of 0.95 cents per Mcf effective as of the first of the month in which the letter of intent is accepted and approved by the Commission.

(2) In the event that Opinion No. 417, 31 FPC 208 (as modified by Opinion No. 417-A, 31 FPC 928) is finally affirmed by the court of last resort, Alabama-Tennessee will make a further reduction of 0.44 cents per Mcf to reflect the annual effect of liberalized depreciation tax benefits. This additional rate reduction would take effect (subject to the conditions in paragraph (3) below) on the date when the court decision affirming those opinions becomes final and non-appealable. In addition to such rate reduction, Alabama-Tennessee would also unconditionally refund (1) any revenues collected in excess of those properly collectible under the aforesaid opinions between May 5, 1964[1] and the effective date of the proposed rate reduction of 0.95 cents in this docket, and (2) 0.44 cents per Mcf sold between such effective date and the date on which Opinion Nos. 417 and 417-A became final and non-appealable. All refunds provided for in the proposal are payable with interest at 7 percent per annum.

---

[1] The date when Opinion No. 417 became a final order of the Commission.

(3) If Alabama-Tennessee decides not to use liberalized depreciation, it may postpone the future rate reduction of 0.44 cents per Mcf summarized in paragraph (2) above, by filing with the Commission a written notice of its election to revert to straight-line depreciation. This election must be made, and such notice must be given, within the 30-day period following the date upon which the aforesaid Commission opinions become final and non-appealable.

If Alabama-Tennessee gives such notice, and, also, in fact discontinues use of liberalized depreciation in the first calendar year immediately following such final judicial affirmance of Opinion No. 417, its obligation to make the 0.44 cent per Mcf rate reduction shall cease unless the Commission has rendered a decision on or before September 1, 1967, enunciating a policy that any pipeline which has discontinued the use of liberalized depreciation in its tax returns shall, nevertheless, be treated for ratemaking purposes as if it had not discontinued to claim such tax benefits. In that event, Alabama-Tennessee's obligation to make the 0.44 cent per Mcf rate reduction shall become effective as of the date the opinion enunciating such policy with respect to any individual pipeline has become final and non-appealable. Within 30 days thereafter, Alabama-Tennessee shall reduce its future rates by 0.44 cents per Mcf as of that effective date and shall, also, refund 0.44 cents per Mcf sold between the effective date of judicial affirmance of Opinion No. 417 and the effective date of such rate reduction.

(4) If Alabama-Tennessee's obligations to make the future rate reductions and refunds described in paragraph (3), above, ceases because the Commission does not enunciate a policy of compulsory flow-through with respect to any individual pipeline prior to September 1, 1967, or because of judicial reversal of any decision enunciating such a policy, Alabama-Tennessee shall nevertheless refund 0.44 cents per Mcf sold between the date when Opinion No. 417 becomes final and non-appealable and January 1 of the next succeeding calendar year.

(5) Alabama-Tennessee's obligation to flow-through supplier refund and rate reductions pursuant to ordering paragraphs (E), (F), and (G) of Opinion No. 360, 27 FPC 1180, shall remain in effect during the life of this agreement.

(6) Alabama-Tennessee reserves the right in its sole discretion to withdraw the proposal or agreement in the event that there is not complete acceptance of all the terms and conditions therein set forth.

(7) Alabama-Tennessee requests waiver of the general rules and regulations, particularly Part 154 thereof, to permit the proposed rate and tariff changes to become effective on less than 30 days notice as proposed.

(8) The proposal is submitted pursuant to Section 1.18(e) of the Rules of Practice and Procedure, and, if it is not accepted in its entirety, it shall be privileged and of no effect.

Comments of the same general tenor and effect were submitted by the Cities of Huntsville, Sheffield, and Florence, Alabama, as well as by the Tennessee Valley Municipal Gas Association on behalf of its members.[2] These comments are limited to a single feature of the proposed settlement—the provision which makes Alabama-Tennessee's future flow-through of annual liberalized depreciation tax savings contingent upon the outcome of further proceedings in the event that it discontinues the use of liberalized depreciation for tax purposes.

---

[2] The municipalities of Athens, Alabama; Corinth, Mississippi; Decatur, Alabama; Florence, Alabama; Huntsville, Alabama; Iuka, Mississippi; Russellville, Alabama; Selmer, Tennessee; Sheffield, Alabama; and Tuscumbia, Alabama.

The objecting parties (jurisdictional customers of Alabama-Tennessee) state that they "believe" the voluntary rate reduction proposed by Alabama-Tennessee is not enough. However, they are willing to accept that reduction and the provisions for refund set forth in the proposal, but "Alabama-Tennessee's proposal with respect to its possible future discontinuance of liberalized depreciation" (summarized in paragraph (3) above) is unacceptable for the following reasons:

(i) Alabama-Tennessee would make acceptance of its proposal a prerequisite to the 0.95 cents per Mcf reduction which is "required" by excessive earnings unrelated to liberalized depreciation and prerequisite to refunds and reductions required by Opinion Nos. 417 and 417–A which are unrelated to possible future discontinuance of liberalized depreciation.

(ii) It is not likely the Commission will issue a decision prior to September 1, 1967 in any proceeding involving a natural gas company's discontinuance of liberalized depreciation.

(iii) If Alabama-Tennessee at some future date elects to discontinue the use of liberalized depreciation the issue of such discontinuance and the effect on future rates can and should be determined with reference to Alabama-Tennessee by appropriate rate filing.

The customers contend that if Alabama-Tennessee is unwilling to make "the required reduction" without the conditions unacceptable to the customers, "the Commission should issue an order directing Alabama-Tennessee to show cause forthwith why its jurisdictional rates should not be reduced at least 0.95 cents per Mcf and why the penalties of Section 21 of the Natural Gas Act should not be invoked for willfully and knowingly failing to perform an act required by the Act."

First, we reject the thesis that there is any basis herein for invoking Section 21 of the Act, which in any event is a criminal sanction enforceable only in the courts. Second, it is obvious that rejection of the proposal as submitted and initiation of show cause proceedings would further delay the effectiveness of any rate reduction. As heretofore noted, Alabama-Tennessee filed its proposal after discussions with the staff. That filing is nevertheless a voluntary package offer of Alabama-Tennessee to reduce its rates and not a "required reduction" as claimed by the objecting parties.

Our review of the proposal as submitted indicates that in addition to an immediate 0.95 cents per Mcf reduction in rates, it would preserve intact and unimpaired Alabama-Tennessee's obligations under Opinion No. 360, 27 FPC 1180, to flow through supplier refunds and rate reductions and its obligations to flow through liberalized tax depreciation benefits under Opinion Nos. 417 and 417–A. However, the latter obligations, *i.e.*, to flow through the liberalized depreciation benefits are subject to a future cut-off date if Alabama-Tennessee has availed itself of its tax option to cease taking liberalized depreciation, unless the Commission, in a proceeding involving any natural-gas company (including Alabama-Tennessee), has rendered a decision prior to September 1, 1967, requiring such flow-through for rate-making purposes even though the natural-gas company has discontinued the use of liberalized depreciation for tax purposes.

It is our view that the aforementioned condition (as more fully summarized in paragraph (3) above), does not warrant rejection of the proposal submitted by Alabama-Tennessee, especially since it provides that the aforementioned future cut-off date will be mooted by a timely decision involving any natural-gas com-

pany or Alabama-Tennessee. Moreover, there is nothing in the present order approving the company's proposal which would stop us at any date subsequent to September 1, 1967, from prospectively determining this issue.

On balance, we believe that the immediate and substantive benefits of the rate reduction proposed and the continuation of outstanding obligations outweigh the remote and contingent effect, if any, of the aforementioned condition. Accordingly, it is our view that the proposal is in the public interest and should be approved as hereinafter provided.

The Commission finds:

(1) Good cause exists for waiving the requirements of Section 154 of the Commission's Regulations under the Natural Gas Act in order that the rate reduction of 0.95 cents per Mcf may become effective on August 1, 1965, as hereinafter ordered.

(2) The proposed reduced rates and Alabama-Tennessee's agreement to further reduce its rates as provided in the proposal, are proper and in the public interest in carrying out the provisions of the Natural Gas Act and should be accepted for filing and made effective as hereinafter provided and ordered.

The Commission orders:

(A) The provisions of Section 154 of the Commission's Regulations under the Natural Gas Act are waived to the extent necessary to make the tariff sheets to be filed effective as of the date hereinafter specified, subject to the terms and conditions of this order.

(B) Alabama-Tennessee's proposal filed May 21, 1965, to reduce its rates by 0.95 cents per Mcf; to further reduce its rates subject to specified contingencies and to flow-through supplier refunds and rate reductions, in accordance with the pertinent provisions of Opinion No. 360, is approved and made effective as specified herein subject to the terms and conditions of this order.

(C) Alabama-Tennessee shall file within ten days following the date of issuance of this order, revised tariff sheets reducing the commodity component of its jurisdictional rates by 0.95 cents per Mcf. Upon the filing by Alabama-Tennessee of such sheets and acceptance thereof, evidenced by letter addressed to Alabama-Tennessee by the Secretary of the Commission, such tariff sheets shall be effective as of September 1, 1965.

(D) Alabama-Tennessee shall comply fully with each of the obligations it has assumed in the proposal embodied in its letter of intent filed May 21, 1965, and shall comply with each of the provisions of this order.

(E) Within 20 days of making refunds in accordance with paragraph (B) herein, Alabama-Tennessee shall report to the Commission, in writing and under oath, the amount of the refund made to each customer, showing separately the amount of principal and interest so paid, together with a computation showing the manner in which such refund was determined, and shall serve a copy of such report upon each customer receiving a refund, and upon each interested State Commission.

(F) This order is without prejudice to any findings or orders which have been made or may hereafter be made by the Commission and is without prejudice to any claims or contentions which may be made by the Commission, Alabama-Tennessee, the Commission staff, or any other party affected by this order, in any proceedings now pending or hereafter instituted by or against Alabama-Tennessee or any other persons or parties affected by this order.

OPINION AND ORDER REVERSING IN PART PRESIDING EXAMINER'S INITIAL DECISION, DENYING CERTIFICATE APPLICATIONS, AND PROVIDING FOR FURTHER HEARING

(Issued September 9, 1965)*

Syllabus

1. Competing certificate applications must be given a comparative hearing. P. 776.
2. It was not error to rule out two projects failing to meet what Examiner considered minimum requirements applicable to project; project failing to meet such requirements cannot be certificated and need not be given further comparative evaluation. P. 776.
3. Any determination regarding best suited project must begin with analysis of present and future natural gas needs of St. Louis area. P. 776.
4. Competition is a factor to be considered in passing upon pipeline application. P. 778.
5. Proper load balance is important consideration in a natural gas market of advantage to both consumer and industrials because it provides a reasonably priced gas supply not otherwise available. P. 778.

*Initial decision appears on P. 801.

6. Oklahoma-Illinois' proposal would deprive area of load balance benefits provided by present interruptible market. P. 778.
7. While Commission policy encourages extension of natural gas service benefits to small less-favored communities, extensions cannot be approved when to do so would result in affirmative injury to existing gas consumers. PP. 781, 782.
8. Resale and domestic customers are primary intended beneficiaries of Commission regulation under the Gas Act — it is highly questionable whether their injury should be regarded as offset by possible benefits to industrial customers and other interests of less central concern. P. 783.
9. Oklahoma-Illinois project is not in the public interest being based on a diversion of Mississippi's industrial customers and constituting unjustifiable duplication of existing facilities which can be expanded at much less expense. P. 783.
10. Fact that Mississippi has monopoly over pipeline service into St. Louis area is not decisive in evaluation of its project. P. 784.
11. A monopoly will serve to eliminate duplication of facilities and may thus reduce costs to rate payer. P. 784.
12. Impact of monopoly upon competitive situation cannot be ignored in passing on certificate applications. P. 784.
13. Commission's responsibility is to insure that project ultimately certificated is that which is best suited to present and future needs of St. Louis market area. P. 785.
14. In a proceeding under Section 7 of the Natural Gas Act, upon mutually exclusive applications to serve St. Louis area, Commission *denies* proposal of Oklahoma-Illinois and *remands* others for further proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

BLACK, *Commissioner:*

INTRODUCTION

This comparative certificate proceeding pursuant to Section 7(e) of the Natural Gas Act is before us for decision following oral argument heard December 16, 1964, on exceptions to Examiner Martin E. Rendelman's initial decision issued September 10, 1964.[1] At issue is the question of which of three mutually exclusive applications filed by Oklahoma Illinois Gas Pipeline Company (Oklahoma Illinois); Mississippi River Transmission Corporation, jointly with Natural Gas Pipeline Company of America (Mississippi-Natural); and Panhandle East-

[1] Exceptions were filed on October 14, 1964, by the Arkansas Public Service Commission; on October 21, 1964, by Shell Oil Company; on October 23, 1964, by the Missouri Public Service Commission and United Gas Pipe Line Company; on October 26, 1964, by Panhandle Eastern Pipe Line Company, Trunkline Gas Company, Mississippi River Fuel Corporation and Mississippi River Transmission Corporation, Natural Gas Pipeline Company of America, *et al.*, Laclede Gas Company, Illinois Power Company, Missouri Natural gas Company, Pan American Petroleum Corporation, Sunray DX Oil Company, Champlin Oil & Refining Company and Cities Service Oil Company, Marathon Oil Company, Midwest Oil Corporation, the Fuels Research Council, Inc., *et al.*, the City of St. Louis, and the Illinois Commerce Commission (letter); and on November 2, 1964, by Tidewater Oil Company.

Briefs opposing exceptions were filed on November 11, 1964, by the Commission's Staff, the Missouri Public Service Commission, Natural Gas Pipeline Company of America, Mississippi River Fuel Corporation and Mississippi River Transmission Corporation, Oklahoma Illinois Gas Pipeline Company, Panhandle Eastern Pipe Line Company, *et al.*, Laclede Gas Company, the Gas Service Company, the Granite City Group, Owens-Illinois Gas Company, the Cities of Bourbon, Cuba, Pacific, etc., Pan American Petroleum Corporation, Champlin Petroleum Company and Cities Service Oil Company, Shell Oil Company, and Midwest Oil Corporation.

ern Pipe Line Company (Panhandle) is best adapted to meet the immediate and future gas supply needs of the greater St. Louis market area. For the reasons discussed below, we find that the examiner's decision must be reversed as to its principal holdings granting a certificate to Oklahoma Illinois; that the Oklahoma Illinois application must be denied; and, that the applications of Mississippi-Natural and Panhandle must be remanded to the examiner for further proceedings in conformity with this opinion and order.

DESCRIPTION OF PROJECTS

The details of the three projects are described in the examiner's decision and we need only concern ourselves with their salient features.

Oklahoma Illinois, a newly-formed company, proposes to build a pipeline consisting of some 307 miles of 24-inch transmission pipeline and some 394 miles of 12 and 20-inch supply line, together with related compressor facilities, laterals, and appurtenant facilities. As shown in the map attached hereto, the line would form the shape of a "T", with an elongated top bar extending from the Anadarko Basin in northwest Oklahoma through Kansas and Missouri, to St. Louis, and across the Mississippi River to Alton, Illinois; and with a stem extending from the Arkoma Basin in southwest Oklahoma northward to roughly the midpoint of the top bar. Oklahoma Illinois' gas supply would be furnished by some 43 producers in fields in northwestern Oklahoma and in the Red Oak-Norris Fields in southeastern Oklahoma. Estimated cost of this project is $62 million.

The proposed pipeline would have an initial capacity of 186,000 Mcf per day, expandable to 300,000 Mcf per day by additional compression. Its market falls into three categories.[2] First, the pipeline would initially transport and sell up to 105,000 Mcf per day of gas to 14 industrial concerns in the St. Louis area. Second, it would make sales for resale of contract demand and winter peaking gas to the Laclede Gas Company (Laclede), the largest distributing company in the St. Louis area, and also to distributing systems serving 13 central Missouri communities along the pipeline's route, totaling up to 81,000 Mcf per day. Third, it would sell volumes of interruptible gas to the 14 industrial concerns mentioned above. Two of the largest of the industrial firms to which Oklahoma Illinois proposes to sell are Shell and American Oil, both of which are producer-promoters of the pipeline. Total sales for the third year, both firm and interruptible, are estimated at 52,168,583 Mcf (14.65 psia).

As described by the examiner, Oklahoma Illinois' original proposal involved primarily the transportation of gas which the producers would sell directly to industrial concerns in the St. Louis area. At the hearing, Oklahoma Illinois amended its proposal as described in the so-called "C" series of exhibits to provide, *inter alia*, for producer sales to Oklahoma-Illinois, and sales by Oklahoma Illinois to the industrial concerns. It appears that Oklahoma Illinois has abandoned its earlier proposal before the examiner, and only the so-called series "C" proposal is before us.

Mississippi River Transmission Corporation (Transmission), which has a monopoly of pipeline service into the St. Louis area, proposes to increase by some 65,000 Mcf per day the volume of gas it transports into the St. Louis area by purchases from Natural Gas Pipeline Company of America (Natural). Natural would deliver the gas into Transmission's pipeline at a point about 50 miles east of St. Louis, where Natural's line intersects Transmission's line. The cost of this joint project is estimated at $10.5 million, to be expended for

[2] See the map comprising Appendix A hereto. To this map, which is in the record, we have added some information not originally shown on it.

additional facilities on Natural's system. Certain changes which have been made in this project as originally proposed are discussed below. We shall hereinafter refer to this as the Mississippi-Natural project. Also, in general, when we refer to Mississippi we mean both it and Mississippi River Fuel Corporation (Fuel), whose facilities were recently merged with those of Transmission,[3] but on occasion we shall refer to Fuel separately.

Panhandle proposes to construct a 16-inch transmission line from its existing mainline facilities north of St. Louis near Glasgow, Illinois, for a distance of some 53 miles to a point in the St. Louis area near Alton, Illinois (see map comprising Appendix A hereto). Through these facilities, it would transport some 65,000 Mcf per day of gas (at 14.73 psia), for sale in the St. Louis area on a firm basis. The volumes utilized for this service would be made up downstream on Panhandle's system by increasing the deliverability capacity of Panhandle's Howell Storage Field in Michigan from 65,000 Mcf per day to 130,000 Mcf per day. The total cost of the project, including construction of 20 new storage wells in the Howell Storage Field, cushion gas, measurement and regulating equipment, and other facilities, is estimated at $6,036,000, which Panhandle proposes to finance from funds on hand.

Panhandle did not designate any specific customers in its application but stated that it would serve whichever customer or combination of customers we select to receive the supplies of gas it is authorized to transport into the St. Louis area. Panhandle would sell its gas under a proposed LS–2 rate schedule limited to partial requirements customers purchasing gas for resale, which provides for a $2.05 demand charge and a 22.9 cents commodity charge, and monthly minimum bill of 75 percent use of the contract demand.

SUMMARY OF EXAMINER'S DECISION

The examiner found that the Oklahoma Illinois project was of marginal economic feasibility, but that its many advantages outweighed its deficiencies and justified its certification. The examiner was of the view that Fuel formerly, and now Transmission, have not met their obligations of satisfying their customers' natural gas requirements as fully as they should have. The basic consideration upon which he relied in approving Oklahoma Illinois' project was, in his opinion, its distinct advantage of breaking Mississippi's monopoly of pipeline service in St. Louis, thus bringing the benefits of competition to that area. In addition to the benefits provided by an alternate source of supply in the event of emergency, the examiner also found that the Oklahoma Illinois project would fill a large unsatisfied need for gas in the St. Louis area, particularly among the industrial concerns. He estimates that Oklahoma Illinois could save the industrial concerns some $966,000 a year or more, and would stimulate industry and improve employment conditions in the St. Louis area. Finally, the examiner found that the Oklahoma Illinois project would satisfy the requirements of public convenience and necessity provided certain corrective conditions with respect to markets, gas

[3] Pursuant to Commission orders issued August 7, 1964, 32 FPC 547, 551, Fuel and Transmission merged their facilities, with the survivor being Transmission, thus eliminating an initially proposed sale by Transmission to Fuel of the gas Transmission would purchase from Natural. Prior to the merger, Fuel owned and operated the pipeline facilities coming from the south into the St. Louis area to serve distributing companies and other customers there with gas Fuel purchased in northern Louisiana from United Gas Pipe Line Company. Transmission owned and operated a line coming from the east into the St. Louis area to supply Fuel with additional gas to serve the St. Louis market. Transmission purchased its gas from its supplier, Trunkline Gas Company, at a point in south-central Illinois where Transmission's line connected with Trunkline's north-south line. See the map comprising Appendix A.

supply, rates, financing, economic feasibility, and other matters were complied with.

In denying the other two projects the examiner put primary emphasis on the necessity of breaking Mississippi's monopoly and introducing pipeline competition into the St. Louis area.

Before turning to the merits, we should discuss briefly a procedural matter raised by the examiner's decision. The Supreme Court's decision in *Ashbacker Radio Corp.* v. *F.C.C.*, 326 U.S. 327, held that competing certificate applications must be given a comparative hearing. To meet this requirement, we provided for a comparative hearing on the applications in this case. These proceedings, conducted pursuant to our Rules of Practice and Procedure, afforded all parties full opportunity of presenting their case and of cross-examining their opponents' cases. However, the examiner in his decision did not evaluate the projects on a comparative basis because he found that only one, the Oklahoma Illinois project, would accomplish what he considered the *sine qua non* of certificability in this case, namely, the breaking of Mississippi's pipeline monopoly of the St. Louis area by means of a new, large, competitive pipeline into the area. Various parties contend that the examiner's failure to compare the three projects in reaching his decision violates the Ashbacker requirement.

While we differ with his results, we see no error in the examiner's approach, which consisted simply of ruling out the projects that fail to meet what he considered to be the minimal requirements applicable to a project to serve the St. Louis area. *Cf.*, *Minneapolis & St. Louis Railway Co.* v. *U.S., et al.*, 361 U.S. 173, 184–185 (1959). Obviously, if a project does not meet the minimal requirements, it cannot be certificated and it need not be given further comparative evaluation with its competitors. In any event, we now make such an evaluation.

THE ST. LOUIS MARKET

Any determination regarding the best suited project must begin with an analysis of the present and future natural gas needs of the St. Louis area. Each of the projects can then be evaluated in the context of these general market guidelines. The record clearly indicates that additional supplies of gas are needed for the St. Louis market. One of the major differences among the three proposals presently before us, however, is the magnitude of the present and future needs and the manner in which they should be met.

Oklahoma Illinois presented a comprehensive market analysis of the St. Louis area which concluded that the St. Louis market presently needs a pipeline providing additional capacity approximating 186,000 Mcf and that this would increase to 200,000 and 300,000 Mcf per day in 1970 and 1975 respectively. In addition, Oklahoma Illinois presented the testimony of executive officers representing some 14 industrial firms which it has contracted to serve in support of its claims regarding the size and nature of the St. Louis industrial gas market. Direct industrial sales to these firms, which are presently being serviced by Mississippi, would constitute some 90 percent of Oklahoma Illinois' 1964 total sales.

Mississippi's estimates of the need for additional gas in St. Louis differs substantially from those of Oklahoma Illinois. Its estimates are based primarily on historic load factors and the answers to questionnaires which it had submitted to its customers to establish their estimated future needs. Mississippi contends that Oklahoma Illinois' proposed industrial sales are substantially overstated and that the industrial customers do not need or require the increment of service proposed by Oklahoma Illinois. At most, Mississippi says, Oklahoma Illinois proposes to serve these industries only 10,500,000 Mcf more gas per year than it

would supply to them if Oklahoma Illinois were not certificated and when this volume is discounted for unsupported and overstated estimated volumes, it is reduced to only 6,100,000 Mcf per year. It is Mississippi's position that if its present proposal to increase its sales by 65,000 Mcf is approved it can meet the expanding future needs of the area in an orderly and logical manner through the utilization of excess capacity and appropriate annual incremental additions to its facilities. Mississippi estimates the additional requirements to 1970 to be not more than 163,000 Mcf per day.

Panhandle did not submit an independent market analysis but proposes to deliver the same volumes of gas to the St. Louis market as that proposed by Mississippi, *i.e.*, about 65,000 Mcf.

These market analyses differ in result but they all predict a substantial increase in the needs of the St. Louis area for additional volumes of gas. Oklahoma Illinois estimates of the general volumetric requirements of the present industrial market must be reduced. First, by eliminating some 4.5 million Mcf from the estimates of its two affiliated customers which are not supported by the record. Secondly, an additional 2.2 million Mcf must be eliminated from its estimates of the interruptible market to adjust for the erroneous assumption of five of the industrial customers [4] that interruptible gas would be available for more than the 235 days supported by the record. Moreover, it has grossly exaggerated the firm gas requirements of its industrial customers. Here we find the Mississippi evidence more convincing. Oklahoma Illinois' estimates of the present needs of the St. Louis utility market are reasonable. But the high rates which it proposes for this service defeat its ability to obtain this load.

As to the future, Mississippi's 1970 estimates are without record support, and are contrary to its trended growth experience. Oklahoma Illinois' long-range market projections were based on a trend in the growth of population and the number of occupied house units in the area for the years 1940 and subsequent. We have serious difficulty with the validity of the basic assumption of the study that all gas sales, residential, commercial and industrial, will increase in direct proportion to the population, but St. Louis undoubtedly will experience a significant growth in its gas requirements in the future, as all parties are agreed. The growth may well approximate that predicted by the Oklahoma Illinois witness in terms of total gas volumes, firm and interruptible. As to the division between the two, however, Oklahoma Illinois' study is necessarily influenced by its errors in estimating the firm requirements of the present industrial market.

COMPETITION

The examiner based his approval of Oklahoma Illinois' proposal almost exclusively on his finding that there was a need for a second supplier of natural gas in order to break Mississippi's monopoly and introduce pipeline competition into the St. Louis area. He justified this conclusion on the basis that Mississippi's past record of failing to satisfy its customers natural gas requirements as fully as it should have, pointing out that first the distributing customers [5] and now the industrial customers have complained vigorously of its failure to satisfy their expanding gas needs. The examiner denied the other applications because they failed, in his opinion, to accomplish this objective.

---

[4] Owens-Illinois, Laclede Steel, National Lead-Titanium Division, Dow Chemical and Granite City Steel Co.

[5] See *e.g.*, the complaint proceeding instituted by Fuel's utility customers which culminated in the Commission's opinion in *Arkansas-Louisiana Gas Company*, 27 FPC 697, rehearing denied, 27 FPC 1257 (1961).

The examiner properly points out that competition is a factor to be considered in passing on a pipeline application. If in this case Oklahoma Illinois had presented a proposal which while otherwise meeting the minimum requirements had truly brought the benefits of competition to the St. Louis market we would certainly give it serious weight in deciding among the competitive proposals before us. However, we disagree with the examiner that Oklahoma Illinois has presented such a proposal. Competition is not an end in itself and Oklahoma Illinois cannot surmount its other defects merely because in the abstract, competition may be useful in the St. Louis market. In all of the other situations in which we have certificated a second pipeline to serve a major consuming area, it has been in circumstances in which the new competition by focusing on new customers and growth in demand of old customers has been able to provide the competitive spur without the serious immediate impact on the existing pipeline necessitated by a grant of the Oklahoma Illinois proposal. And if it had been feasible for Oklahoma Illinois to propose a pipeline that initially would not require sales of the magnitude required by its actual proposal this might have been true here. However, an analysis of the nature of the competition proposed to be provided by Oklahoma Illinois detracts from its value in benefiting the consuming public as a whole.

The record supports the fact that there is an increasing need for natural gas in the St. Louis market among all classes of users. Since Oklahoma Illinois proposes to serve almost exclusively the industrial segment of this market and its limited efforts outside the area are clearly not competitive pricewise, it is evident that it does not intend to or cannot compete with Mississippi in a manner which would promote the overall public interest. Thus, even if it were otherwise a viable project, the questions involved in considering the Oklahoma Illinois application is not whether competition should be introduced into the St. Louis market but whether competition limited to the lucrative industrial load should be introduced where the effect would be to raise the cost of gas to other classes of users.

The economic feasibility of Oklahoma Illinois' project is premised on a diversion of Mississippi's industrial customers which Oklahoma Illinois proposes to convert from the present interruptible service provided by Mississippi to firm gas service. Since these industrial loads constitute the major portion of the industrial load now served by Mississippi, not only will Oklahoma Illinois' presence in the St. Louis market not result in competition, it will disturb the market balance which now exists between industrial and residential customers. Proper load balance is an important consideration in a natural gas market which is of advantage to both the consumer and the industrials because it provides a supply of natural gas at a reasonable price which would not be otherwise available. It is apparent that the growth in peak demand requirements of the residential consumer load in the St. Louis area will create an ever increasing need for a flexible industrial interruptible market. Oklahoma Illinois' proposal would deprive the area of the load balance benefits provided by the present interruptible market. Even if there is an ultimate market for an additional large supply of gas in the St. Louis area the way to meet it is not by divorcing the industrial and residential loads. While this might act as an indirect spur to improve the quality of Mississippi's present service, it would be competition in a way not calculated to promote the public interest.

THE OKLAHOMA ILLINOIS PROPOSAL

An examination of the market Oklahoma Illinois proposes to serve shows the sales in three categories: (1) industrial customers in the St. Louis area; (2) one utility serving the St. Louis market, Laclede; and (3) a number of small

municipalities and industrial customers in central Missouri. The backbone of the proposal, which would account for approximately 90 percent of the proposal sales, are the 14 industrial customers in the St. Louis area.

The Industrial Market

Oklahoma Illinois would provide both firm and interruptible gas to the 14 industrial concerns to which it proposed to sell gas. It estimates the first year industrial sales at approximately 44,000,000 Mcf of which more than 30,000,000 Mcf would be firm gas. This industrial load is now being served largely by Mississippi. Sales to Shell Oil Company, an affiliated producer customer of Oklahoma Illinois, would constitute over 21 percent of the proposed industrial sales and sales to American Oil Company, another affiliated producer customer, would account for another 12 percent. It is clear that what Oklahoma Illinois proposes is essentially an industrial pipeline operation.

Oklahoma Illinois contends that its project would satisfy the needs of the 14 industrial customers[6] which Mississippi has not met and cannot meet. However, in our opinion the needs of the industrial market are by no means as extensive as Oklahoma Illinois contends. We do not believe the record supports the conclusion that there is an adequate market for these huge volumes of gas demands of Oklahoma Illinois' proposed industrial customers. The testimony of the various industrial witnesses, while generally supporting their ability to consume their claimed total annual volumetric requirements, are not convincing as to their need for this gas on a firm contract basis. It is clear that they are motivated by their dissatisfaction with the pricing practices which have characterized Mississippi's service in the past; by their concern that Mississippi's past failure to provide truly firm service for necessary industrial processes will continue; and, by their alarm over the Commission's endeavors to allocate available gas supplies between Mississippi's industrial and utility customers.[7]

The testimony of these witnesses shows that, with some exceptions, the industrial customers initially established their firm gas requirements in a manner similar to that presently used by Mississippi, resulting in significantly lower firm gas requirements than that contained in Oklahoma's market evidence in this proceeding. These witnesses concede that subsequently they revised their estimates and established the firm requirements as used in the Oklahoma Illinois market study on the assumption that a major portion of the gas then purchased from Mississippi on either a firm or interruptible basis would be purchased from Oklahoma Illinois under firm requirements. Significantly, this upward revision in firm requirements was necessary to establish the projects' economic feasibility.

Furthermore, the contractual arrangements under which these industrial concerns proposed to purchase Oklahoma Illinois gas gives rise to doubts that their needs for firm gas are as large as claimed. For example, the industrials' field purchase contracts, which would be retained as tariff provisions under the series "C" proposal, contain provisions authorizing the industrials to reduce contract volumes by up to 10 percent per year on the declining balance each year after the first. Additional reductions in the contract volumes were available "for economic or technical reasons." Finally, certain of the industrial firms

[6] American Oil Company, American Steel, American Zinc Company, Ceero Corporation, Dow Chemical, Granite City Steel, Laclede Steel, Nation Lead Company, National Lead Titanium, Olin Mathieson, Owens-Illinois Glass, Pittsburgh Plate Glass, Shell Oil Company, and C. J. Williams & Company.

[7] Opinion No. 355, *Arkansas-Louisiana, et al.*, Docket No. G–17567, *et al.*, 27 FPC 697, reversed *sub nom. Granite City Steel Company* v. *F.P.C.*, 320 F. 2d 711.

had contract provisions whereby they could still further reduce their annual takes by more than 10 percent but not to exceed 30 percent of the contract quantity if other industrial customers would waive their contract rights to reductions for the year in question.

Of course, such adjustments in firm volume and reduction rights are legitimate matters of negotiation between a pipeline and its industrial customers. However, here the firm gas requirements of these customers appears to have been initially established to satisfy the feasibility requirements of the Oklahoma Illinois project rather than to reflect a genuine need for firm gas supplies. For example, there is evidence that the affiliated customers, Shell and American Oil, overestimated their requirements. American Oil estimated that its purchase from Oklahoma Illinois would be somewhat more than 5,000,000 Mcf, about half of which would be firm gas. This compares to a total estimated sale by Mississippi in 1964 of 3,506,000 Mcf and an actual purchase from Fuel of 2,554,079 Mcf. American's witness admitted on cross-examination that American really needed only 1,000 Mcf of firm gas daily and it would have preferred to contract for that amount and wanted to purchase 14,000 Mcf of interruptible gas daily. Oklahoma Illinois insisted, however, that it contract for 7,500 Mcf of firm gas daily. Computing the actual requirements of American at 1,000 Mcf of firm gas daily and 14,000 Mcf of interruptible gas daily would result in total annual requirements of 3,655,000 Mcf, or almost 1½ million Mcf less than Oklahoma Illinois' estimate of 5,120,016 Mcf. American's estimates assumed a total conversion to natural gas consumptions, to the exclusion of cheaper priced coal and refinery by-products, and without a realistic evaluation of the relative fuel costs involved. There is similar evidence in the record that Shell has overestimated its requirements by more than 3,000,000 Mcf.

We take notice of Mississippi's 1963 Form 2 which shows its permanently certificated sales to the above described industrial customers to be approximately 24,000,000 Mcf. Mississippi's Form 2's for 1961 and 1962 established an annual increment growth in the sales to these customers of approximately 3,000,000 Mcf. It can be anticipated that Mississippi's sales to these customers in 1964 will approximate 27,000,000 Mcf in contrast to Oklahoma Illinois proposed sales in 1964 of 44.3 million Mcf. Thus, it is evident that over 60 percent of the total sales to the 14 industrial customers proposed by Oklahoma Illinois in 1964 will approximate 27,000,000 Mcf in contrast to Oklahoma Illinois propermanently certificated sales.[8]

The record shows that a substantial portion of the new 17,000,000 Mcf of gas which Oklahoma Illinois proposes to provide to the St. Louis industrial gas market would be purchased by its two affiliates, Shell and American Oil. It is significant that neither of these companies have heretofore requested Mississippi to provide this additional service. In other words, the very backbone of the Oklahoma Illinois project would consist of customers taken away from Mississippi, or of sales to affiliated customers. The fact that Oklahoma Illinois must base virtually its entire market showing on affiliated industrial customers or customers taken from the existing supplier undermines its claim that there exists a large unsatisfied industrial market in that area.

The Utility Market

The record is clear that the principal distributing companies serving the St. Louis area—Laclede and Illinois Power Company—which distribute some 80

[8] In addition, pursuant to the temporary certificates issued by the Commission pending the outcome of these proceedings Mississippi has been providing these customers additional volumes of 9.8 million Mcf per year.

percent of the gas in the area—have no need or desire for deliveries of gas from Oklahoma Illinois' proposed pipeline, since they are now receiving adequate service from Mississippi. Mississippi is already under contract to supply their requirements for two years, and offered to supply them for three more years, an offer the distributing companies declined because they did not wish to contract so far in advance. In fact, these and other St. Louis area distributing companies oppose the Oklahoma Illinois project[9] because it would increase gas costs in the St. Louis area and adversely affect their operations.

Oklahoma Illinois proposes to sell Laclede up to 15,000 Mcf of firm gas per day at specified load factors. This sale would comprise some 5 percent of Oklahoma Illinois' annual sales. Laclede, however, says that it cannot and would not purchase gas from Oklahoma Illinois because Oklahoma Illinois' rates would not be competitive with Mississippi's, its present supplier.[10] The record indicates that Oklahoma Illinois' rates would indeed be significantly higher than the rates for gas delivered by either the Transmission-Natural project or by the Panhandle project.[11] Thus, Laclede's statement that it would not buy Oklahoma Illinois gas cannot be disregarded.

Without the sale to Laclede the economic feasibility of the Oklahoma Illinois project would, according to the examiner, be only marginal, since the project would earn an overall rate of return of 6.62 percent and a rate of return on common equity of 7.55 percent. Oklahoma Illinois' finance witness stated that unless the Oklahoma Illinois project were allowed by the Commission to earn a 7 percent rate of return overall, and between 12 and 13 percent on equity, reflecting interest on First Mortgage Bonds at 5.5 percent, there would be great doubt whether the project could be financed. In this regard, it is noted that the examiner found that Oklahoma Illinois has failed to submit a definitive plan for financing its project, a deficiency he would remedy by a corrective condition.

The Mid-Missouri Market

Oklahoma Illinois stresses that its project would enable service to thirteen small, heretofore unserved communities in Central Missouri along the routes of its pipeline. These sales would comprise less than 5 percent of Oklahoma Illinois' total sales. This Commission has pursued a policy of encouraging pipelines

[9] Other parties also opposing the Oklahoma Illinois project include the City of St. Louis, and the Arkansas Public Service Commission. The Missouri Public Service Commission neither opposed nor supported Oklahoma Illinois, but expressed concern over whether the project would have an unfavorable impact on St. Louis distributing companies and the consumers of gas.

[10] On the present record Oklahoma's utility rates are some 23 percent higher at an 80 percent load factor than Transmission's presently effective utility rates as reduced by the Commission's settlement orders issued August 7, 1964, 32 FPC 547, in Docket No. RP63–2. Thus, even assuming that certification of Oklahoma Illinois would necessitate upward adjustments in Mississippi's rates, Oklahoma's proposed utility rates to Laclede would be substantially higher than Mississippi's.

[11] Oklahoma Illinois' proposed CD–1 rate provides for a demand charge of $3.10 and a commodity charge of 25 cents, resulting in an average rate of 35.2 cents per Mcf at a 100 percent load factor and 45.4 cents at a 50 percent load factor. Transmission's presently effective CD–1 rate provides for a demand charge of $1.89 and a commodity charge of 23.2 cents, resulting in an average rate of 29.4 cents at a 100 percent load factor and 35.6 cents at a 50 percent load factor. Panhandle's proposed LS–2 rate provides for a demand charge of $2.05 and a commodity charge of 22.9 cents, resulting in an average rate of 29.6 cents at a 100 percent load factor and 31.8 cents at a 75 percent load factor (reflecting the proposed 75 percent minimum bill provision). We recognize that some of these rates are unsupported and could not be approved by the Commission, but they provide a rough idea of the relative price levels of the service proposed by applicants under the demand-commodity rates applicable in the St. Louis area.

to extend the benefits of natural gas service to small, less favored communities. However, such extensions cannot be approved when to do so would result in affirmative injury to existing gas consumers. Here the benefits of service to these new communities must be measured against the investment proposed for its fulfillment, and its effect upon the communities to be served, St. Louis, as well as the Mid-Missouri communities. Oklahoma Illinois, dependent on a few large industrial customers, would lack the stabilizing effect of a dependable domestic consumer market and would be highly vulnerable to unfavorable economic changes. Since we lack jurisdiction over direct industrial sales, Oklahoma Illinois' operations would be largely free of our control. Its jurisdictional and domestic customers would be irretrievably tied to service from the pipeline no matter how high its costs might rise. We conclude that whether viewed from the interests of the St. Louis area or the Mid-Missouri market the project is too costly.

It is regrettable that the proposal to serve these communities has come to us as part of a proposal which would supply them gas only under the most unfavorable conditions. However, there are other pipelines in this vicinity and their natural growth should bring gas service to them in the reasonably foreseeable future and, we would expect, under more favorable conditions.

Cost Impact on Consumers

An infirmity in the Oklahoma Illinois project is its probable material adverse cost impact on Mississippi, Mississippi's distributing company customers, and, ultimately, on the consumers of gas in the St. Louis area. If Oklahoma Illinois pre-empts fourteen of Mississippi's industrial customers, whose requirements constitute some 20 percent of Mississippi's annual sales, the unit cost of gas delivered by Mississippi would necessarily increase. Perhaps more important, Mississippi's loss of these sales, which are estimated at some 20 million Mcf of interruptible sales annually, could subject it to take-or-pay penalties on its annual purchases from United, its Louisiana supplier, by reason of Mississippi's inability to maintain the required 72 percent purchase load factor.

After extended discussion, the examiner estimated the total adverse cost impact on Mississippi and Transmission at approximately $950,000 a year initially. However, he thought that the domestic consumer would not immediately feel the effects of this increased cost because of the rate moratorium imposed in the recent settlement of Mississippi's pending rate case. In any event, he concluded that the injury would be outweighed by savings to the industry and improvement of economic conditions by the increased availability of natural gas, and the competitive and other advantages of another pipeline into the area.

It is extremely difficult to find the precise cost impact of the Oklahoma Illinois project on Mississippi's existing resale customers. Mississippi places it at $4,368,000 annually and Laclede at some $3.2 million (subject to certain downward adjustments conceded on the record with a net effect of $2.4 million). The Commission staff, while conceding a possible impact of $5.6 million annually, concludes that in reality practically no impact would be experienced. Our analysis leads us to conclude that the adverse impact of Oklahoma Illinois certification on Mississippi's resale customers would be in the area of $1.4 million.

Our computations, appended hereto as Appendix B, take into consideration the effect of the recent United Gas Pipe Line settlement, and the concession by Mississippi's witness that certain of its remaining industrial customers' sales could be upgraded. We assume that Mississippi would experience an increase in its costs of service of $1,131,000 resulting from its take-or-pay obligations to United upon the loss of these 14 industrial customers; its jurisdictional custom-

ers would be assessed an additional $910,662 of this amount. In addition, because of the loss of these industrial sales, its resale customers would experience an increase in their proportionate allocated costs of the pipeline. This would result in a net increase of $547,490 resulting in a net annual adverse impact of $1,458,152 which we here adopt as a fair measure of this impact.

It is true, of course, that the growth potential of the St. Louis market would rapidly overtake the take-or-pay obligations, and absorb the increased cost allocations. However, our computation assumes that Oklahoma Illinois will acquire only the 14 industrial customers here identified from Mississippi's market. Recognizing its location, the existence of its excess capacity, and its marginal economic feasibility, this would be, at best, naive.

Even assuming the accuracy of the economic savings to the industrial customers computed by the examiner, we do not believe that this Commission would properly fulfill its public interest responsibilities by granting Oklahoma Illinois a certificate in such circumstances. The grant of a certificate which would result in higher prices must be based on the assumption that St. Louis consumers can properly be made to forego, indefinitely, the benefits which they might otherwise be entitled to in order to provide Oklahoma Illinois the market it requires. The resale customers and domestic customers are the primary intended beneficiaries of Commission regulation under the Act, and it is highly questionable whether injury to them should be regarded as offset by possible benefits to industrial customers and other interests of less central concern under the Act.

Conclusion

We have examined with care the evidence relating to the present and probable future fuel supply situation in the St. Louis area, the nature and extent of its industrial needs, the alternative supplies afforded by competitive fuels, as well as the alternatives advanced in this record for provided future increments of industrial gas for the St. Louis market area. Our analysis leads us to this conclusion that the Oklahoma Illinois project, which would involve over 700 miles of large diameter pipe and transport 186,000 Mcf of gas per day at a cost of $62 million is not in the public interest. The project, which is based upon a diversion of Mississippi's industrial customers, would constitute an unjustifiable duplication of existing facilities which can be expanded consonant with the growing needs of the St. Louis market and at much less expense. In comparison, the Mississippi-Natural and Panhandle projects, which would each transport some 65,000 Mcf of gas per day and involve less than 75 miles of pipeline, would cost an estimated $10.5 million for the former and some $6 million for the latter. It is true, of course, that these estimated costs for the Mississippi-Natural and Panhandle projects are incremental costs and that the total costs of gas service from these projects would be higher than these bare figures might imply.

We recognize that additional expansion of the Mississippi system will eventually be necessary to meet the growing needs of the St. Louis market. But the record clearly shows the existing inexpensive expansibility of the Mississippi system over and above that proposed in the present proceeding. Thus the necessary investment can be deferred until a point more approximating its period of use, with the resulting saving to the consumer. It is clear from the foregoing that the problem of supplying the growing gas requirements of the St. Louis area, including, if necessary, the introduction of a competitive supplier of gas, can and should be solved by a less extensive and costly pipeline than that proposed by Oklahoma Illinois. Thus, the certification of Oklahoma Illinois would result in an unjustifiable expenditure of resources, which must in the final analysis be borne by the gas consumer.

Opponents of Oklahoma Illinois have raised several serious procedural questions relating to the Oklahoma Illinois' proposal, and the conditions the examiner would attach to its certificate. In view of our conclusion here that the Oklahoma Illinois project does not meet the public interest requirements, and cannot be certificated, we need not consider these further.

THE MISSISSIPPI-NATURAL PROJECT

The Mississippi-Natural project originally involved sales by Transmission to Fuel of 65,000 Mcf per day of gas that Transmission would obtain from Natural, and the resale by Fuel of such volumes to St. Louis consumers. In view of their recent merger, this intermediate sale by Transmission to Fuel, and certain related features thereof, including the proposed rate schedule applicable to such sale is eliminated. Mississippi still proposes to obtain the gas from Natural at a point where their lines intersect in south-central Illinois, some 50 miles from the St. Louis area, and would transport and deliver this gas to its (formerly Fuel's) utility customers, and to direct industrial customers in the St. Louis area. Mississippi avers that it would require no additional facilities to render the service proposed.

Natural's original proposal also has been subject to changes during the pendency of this proceeding. Natural originally sought authority to, among other things, increase the design day capacity of the Gulf Coast Division of its system by increments of 35,000 Mcf and 30,000 Mcf of gas per day, respectively, and to deliver the total daily contract quantities into Transmission's facilities as aforesaid. To render this service, Natural proposed facilities including approximately 71.5 miles of 30-inch pipeline partially looping its existing pipeline in Texas, Arkansas, and Illinois, and approximately 9,800 BHP of additional compressor horsepower at certain specified stations on the system. Natural has now constructed most of these facilities pursuant to authorization granted by Commission order issued on July 27, 1964, in Docket No. CP64–162, 32 FPC 370, as a part of its then-pending 70,000 Mcf expansion program. Accordingly, Natural would now have to amend its application so as to construct and operate certain additional facilities to enable the service proposed in this proceeding for the St. Louis market.

The Presiding Examiner held that the Mississippi-Natural project should be denied primarily because Mississippi's continued monopoly of supplying natural gas to the St. Louis area is not in the public interest, and because the public convenience and necessity require a project that will break the existing monopoly and bring competition into the St. Louis area.

The fact that Mississippi has a monopoly over the pipeline service into the St. Louis area is not decisive in our evaluation of its project. In the field of public utility regulation, and particularly where so-called "natural monopolies" are concerned, it is recognized that a monopoly will serve to eliminate duplication of facilities and may thus reduce costs to the rate payer; in such situations, regulation rather than competition is relied upon to protect the public from possible exploitation.[12] Nevertheless, the impact of a monopoly on the competitive situation is a factor we should not ignore in passing on certificate applications, cf., *City of Pittsburgh* v. *F.P.C.*, 237 F. 2d 741 (CADC–1956).

Mississippi rightly points out that the examiner has condemned its project because of its past practices, and argues that he is unfairly attempting to punish

[12] *Cf., F.C.C.* v. *RCA*, 346 U.S. 86, 92 (1952); *Penn Water Power Co.* v. *U.S.*, 343 U.S. 414, 421 (1951); *Slaughter-House Cases*, 83 U.S. 36, 66 (1873); *McFayden* v. *Public Utilities Consolidated Corp.*, 299 P. 671, 673 (1931); *Metropolitan Edison Co.* v. *P.S.C.*, 191 A. 678, 682 (1937).

it for policies no longer followed. It maintains that past policies no longer followed are not relevant to what is required by the present and future public convenience and necessity.

We agree. Our responsibility is to insure that the project ultimately certificated is that which is best suited to the present and future needs of these markets. Our sole interest is to insure that the undesirable conditions which have prevailed in this market in the past are not allowed to recur.

The record before us is overwhelming that Mississippi, in the past, failed to satisfy its obligations to the gas consuming public. The present record clearly establishes that Mississippi's industrial market requirements were computed without consultation with the customers themselves. And, it is clear that its pricing practices with its industrial customers is characterized in part at least by considerations of what the market will bear. Thus, we consider it necessary that in the remanded proceedings Mississippi establish that in fact it is ready, willing, and able to fulfill its present and future obligations to render all needed service at just and reasonable rates to both its industrial and utility customers.

Mississippi and some of its utility customers argue that since Natural's pipeline lies only 50 miles east of the St. Louis area, where it proposes to make deliveries into Mississippi's pipeline, the certification of the Mississippi-Natural project would thus bring competition into the St. Louis area.

This argument is weak. Natural's proximity to the St. Louis Market and the certification of its proposed sale to Mississippi might still deny the St. Louis area the benefits of competition, since Natural under its existing proposal would make deliveries only into Mississippi's facilities some 50 miles away from St. Louis, and could not compete directly with Mississippi for customers in the St. Louis area.

The Mississippi-Natural project, like the Oklahoma Illinois project, is subject to infirmities but its cost and size are reasonably consistent with the needs of the St. Louis market. Rather than denying this application we shall remand it for further consideration by the examiner. In the further proceedings Natural should examine the feasibility of providing facilities for delivery of the gas at a point more convenient to the St. Louis market area.

The Mississippi-Natural project on the present record is deficient in numerous respects cited by the Commission's Staff and various parties in their briefs and exceptions but not discussed by the examiner because of his approach to this case.[12] These deficiencies include Natural's and Mississippi's failure adequately to substantiate their estimates of future revenues, expenses, and income in conformity with Section 157.14(11) of the Commission's Regulations, Natural's failure to support its new Rate Schedule PL–1 in conformity with Section 157.14(18)(ii) of the Regulations, and Natural's failure to show that its gas supply is adequate in reserves and deliverability. It is unnecessary to discuss these deficiencies in detail since they can and should be explored in the remanded proceedings to the extent they are not cured by amendment or modification to the applications.

THE PANHANDLE PROJECT

The examiner would deny the Panhandle project on basically three grounds. First, he noted that Panhandle's proposed LS–2 rate schedule would be applicable only to Mississippi. Thus, he found that Panhandle's project would permit Mississippi's monopoly in the St. Louis area to continue. For this reason, he concluded that its certification would be contrary to the public interest.

---

[12] As discussed earlier in this opinion, the examiner did not consider the Mississippi-Natural and Panhandle projects in detail because he held that they could not satisfy the essential prerequisites of a project to serve the St. Louis area.

We disagree. Although Panhandle proposes service to Mississippi, it has also stated, on the record, that it would serve industrial customers in the area if we find this appropriate. Thus, in the remanded proceedings, if it is found that our regulatory efforts would be enhanced by the presence of a competitive supplier, it is apparent that a project in the magnitude and character of the Panhandle project could satisfy that need with a minimum duplication of facilities, without unnecessary investment of resources, and with minimal injury to the residential consumers of St. Louis.

We well might find that approval of Panhandle's project would provide the necessary additional gas supplies, but that Mississippi should continue to serve as the prime supplier in the St. Louis area subject to our jurisdiction. It seems clear that certification of such a project as Panhandle would have a potent competitive effect in the area. And should our regulatory efforts fail to preclude recurrence of past events, the presence of the second supplier would make available the possibility of an effective remedy.

The examiner's second ground for denying the Panhandle application was the inadequacy of its market showing. The record, however, is clear that there is an adequate market in the St. Louis area for the Panhandle project, in the sense of there being customers who need and can reasonably expect to purchase the volumes Panhandle proposes to deliver. (*cf., Kansas Pipe Line and Gas Company, et al.*, 2 FPC 29; 45.)

The examiner also held that Panhandle had not shown that Mississippi's facilities are capable of receiving the gas Panhandle would deliver near Alton, Illinois. In addition, Mississippi contends that Panhandle's gas differs in composition from Mississippi's to such a degree that they are not interchangeable and could not be utilized together in Mississippi's system. The gas can, of course, be physically commingled, but adjustment costs might be incurred. We believe, however, that Panhandle should have the opportunity of curing these deficiencies by the introduction of further evidence in the remanded proceedings. Specifically, additional evidence is needed respecting the ability of Mississippi's facilities to receive the Panhandle gas at Alton; the possible delivery points for such gas, the changes, if any, in Mississippi's facilities and operations which will be required to receive and utilized such volumes; any adjustments, at burner tip or otherwise, which would be required as a result in the difference in composition of Panhandle's gas; and the additional costs, if any, which Mississippi and/or Panhandle might entail in effecting such changes.

The third ground advanced by the examiner for denying Panhandle's application was that it had failed to satisfy, in many respects, the minimal requirements of public convenience and necessity. For example, the examiner concluded that Panhandle's application failed to substantiate its gas supply, failed to support its proposed LS–2 rate schedule, and otherwise failed to meet the technical filing requirements of our regulations. As to Panhandle's gas supply, contrary to the examiner, we find that the Howell Storage field is capable of expansion to provide storage for the additional volumes of gas required to accommodate its project; that Panhandle's gas reserves are adequate; and, that its Waverly Storage Field is capable of delivering 25,000 Mcf per day on a peak day. However, we agree with the examiner that additional evidence is required regarding Panhandle's ability to receive the injection volumes and deliver the withdrawal volumes as scheduled.

Respecting Panhandle's rate and economic feasibility showing, it is true that Panhandle did not put in evidence a system-wide cost of service to support its proposed LS–2 rate for the St. Louis service, contrary to Section 157.14(18)(ii) of our Regulations, which requires such a cost of service for the first calendar

year of operations and an allocation of these costs to each class of service. Panhandle merely presented an incremental costs of service study which allocates the relatively low costs of expanding the Howell Storage field to the proposed new service. Panhandle should make the showing required by our Regulations with respect to the rates and economic feasibility of its project at the further hearing hereinafter ordered.

Since the close of the record in this proceeding Panhandle, like Natural, has been authorized to construct some of the facilities proposed herein. Thus, some of the additional injection and withdrawal facilities in the Howell Storage Field which Panhandle proposed in this proceeding will now be constructed as an adjunct to Panhandle's recent major system expansion for service to markets other than St. Louis. Panhandle would, of course, now have to construct and operate certain additional storage field facilities to provide the service proposed in this proceeding for the St. Louis market and it must bear the burden of proof that the Howell Storage Field is capable of still further expansion to provide the additional storage volumes proposed herein. We shall authorize Panhandle, like Natural, to modify or amend its application to prescribe such additional facilities as may be necessary.

As we have indicated, because of changes made and to be made in the parties' projects, rates and tariffs, it is possible to make only rough comparisons of the levels of the party's respective rates for service to the St. Louis area. However, a comparison of the incremental revenues that Oklahoma Illinois, Panhandle and Natural would receive from supplying their proposed third-year volumes tends to confirm our finding hereinabove that from the standpoint of keeping the cost impact to a minimum, the Mississippi-Natural and Panhandle projects are superior to the Oklahoma Illinois project.

While the Panhandle project is not adequately supported on the present record there is good reason to believe that Panhandle can eliminate the deficiencies in its presentation if afforded the opportunity at a further hearing. Accordingly we shall reverse the examiner's decision rejecting this proposal and shall provide for a further hearing to enable the company adequately to substantiate the project if it can.

On August 2, 1965, Oklahoma Illinois Gas Pipeline Company (Oklahoma Illinois) filed a motion for further oral argument in the above-cited proceedings. The same has been adopted, concurred in, or supported by various other parties, all of whom join in support of certification of the Oklahoma Illinois proposal.[14] In contrast, Panhandle Eastern Pipe Line Company, Laclede Company, Natural Gas Pipeline Company of America, and Mississippi River Transmission Company have filed answers in opposition thereto.

We have considered the various argument advanced by the parties in support of the granting of further oral argument. We conclude, however, that no useful purpose would be served by the grant thereof. Accordingly, the motion shall be denied.

CONCLUSION

For the reasons set forth hereinabove, we conclude that the applications embracing the Oklahoma Illinois project must be denied. As concerns the Panhandle project and the Mississippi-Natural project, neither of these can be

[14] Motions concurring in, or in support of the Oklahoma Illinois motion were filed by the following parties: Granite City Group, the Cities of Rolla and St. James, Missouri, Midwest Oil Corporation, Associated Natural Gas Company, The Gas Service Company, Shell Oil Company, and Owens-Illinois Glass Company. Pan American Petroleum Corporation filed a separate motion for further argument.

granted on the present record. But each proposes a project which, if substantiated, would basically be appropriate, insofar as cost and size is concerned, to the needs of the St. Louis market. Accordingly, we shall remand these applications to the examiner for further proceedings in conformity with the findings and conclusions in this order. In such proceedings the parties will be free to amend and modify their applications so as to best serve the interests of the St. Louis consumers.

Our review of the present record, as well as our past experience in dealing with the natural gas requirements of the St. Louis area establishes certain criteria which should be considered in evaluating the proposals in the remanded proceeding: (1) Is the project reasonably adapted in and character to the needs of the St. Louis market? (2) Would it unduly disrupt the operations of existing utilities? (3) Would it unnecessarily duplicate the existing pipeline facilities in the area? (4) If it involves a second supplier, would it be in the public interest to introduce competition into the St. Louis market? (5) Would it meet the minimal requirements of public convenience and necessity? (6) Would it conform to the other applicable requirements of law? These criteria should be given full consideration in the remanded proceeding.

All exceptions, arguments and requests not discussed or granted herein have been considered but are without substantial support in the record or a reasonable basis in law or are immaterial to the proper disposition of this proceeding and should be denied. The Presiding Examiner's initial decision issued herein on September 10, 1964, should be reversed in part and otherwise modified as herein set forth and as so modified should, to the extent consistent with this opinion, be adopted by the Commission as of the date of issuance of this opinion, to constitute herewith our decision in this proceeding.

The Commission further finds:

(1) The applications for certificates of public convenience and necessity embracing the project proposed herein by Oklahoma Illinois Gas Pipeline Company should be denied.

(2) A further hearing should be held in this proceeding to afford Panhandle Eastern Pipe Line Company, Mississippi River Transmission Corporation, and Natural Gas Pipeline Company of America opportunity to substantiate further their proposals for pipeline projects to serve natural gas to the St. Louis area, in conformity with this opinion and order.

(3) It is necessary and proper in the public interest and in conformity with the provisions of the Natural Gas Act that the matters and issues described hereinabove be determined by public hearing and that the proceeding be expedited in accordance with the procedures set out below.

The Commission orders:

(A) The applications for certificates of public convenience and necessity embracing the project proposed herein by Oklahoma Illinois Gas Pipeline Company are denied.

(B) Pursuant to the authority conferred upon the Federal Power Commission by the Natural Gas Act, particularly Sections 4 and 15 thereof, the Commission's Rules of Practice and Procedure, and the Regulations under the Natural Gas Act (18 CFR, Chapter I), a further hearing shall be held concerning the certificate applications filed herein by Panhandle Eastern Pipe Line Company, Mississippi River Transmission Corporation, and Natural Gas Pipeline Company of America, and the matters involved and the issues presented in this proceeding, as described hereinabove.

(C) At the hearing herein, the aplicants referred to in paragraph (B) above shall have the burden of proof and the obligation of going forward first with the presentation of their direct cases-in-chief.

(D) Presiding Examiner Martin E. Rendelman or any other officer or officers of the Commission designated by the Chief Examiner for that purpose (see delegation of authority, 27 F.R. 4267, etc.) shall preside at the prehearing conferences and at the hearing in this matter, pursuant to the Commission's Rules of Practice and Procedure, and as further provided by this order.

(E) The Presiding Examiner herein designated shall convene a prehearing conference at his earliest convenience and, in the exercise of his judgment, fix the time when the parties shall file their prepared testimony and exhibits, when other prehearing conferences shall be held, when the hearing herein shall commence and the days of hearing, and shall prescribe such other incidents of the hearing as may be necessary and appropriate, with due regard to the parties' requests and in keeping with our purpose of expediting this proceeding to the fullest possible extent.

(F) All arguments, requests, applications, exceptions and appeals not specifically discussed herein are without substantial support in fact or a reasonable basis in law, or are immaterial to the correct decision of this case, and should be and are denied.

(G) The Presiding Examiner's initial decision issued herein on September 10, 1964, should be reversed in part, as more fully set forth hereinabove, but should otherwise, to the extent consistent with this opinion and order, be adopted by the Commission as of the date of issuance of this opinion and order.

(H) The motions for further oral argument filed by Oklahoma Illinois and Pan American Petroleum Corporation, as concurred in or supported by other parties, are denied.

Commissioner Ross *concurs in the result only* but would not prohibit Oklahoma Illinois from presenting a modified project at the remanded hearing.

Commissioner O'Connor *dissenting.*

O'CONNOR, *Commissioner, dissenting:*

By the decision issued today a majority of this Commission has determined that, despite a major shortage of natural gas in the St. Louis metropolitan area, no permanent solution should be undertaken for at least several more years. I cannot concur in their determination so to proceed. Of the various parties making proposals to serve the area, only one has presented full evidence of its ability and willingness to commence service. Its presentation is reasonable in relation to the markets it proposes to serve, and it should be certificated, pursuant to the recommendations of Examiner Rendelman.

I.

The major metropolitan area and the highly diversified industrial complex concentrated at St. Louis is the largest in mid-America. Twelfth in size in the United States, it is expected that its population will increase to 2,655,000 people in the next decade. Its industrial complex is one of the major manufacturing areas of the country. Important to the continued rapid expansion of the area is a fully adequate supply of natural gas for industrial, commercial, and residential purposes. Because of its growth potential and because of prior limitations on an assured supply of natural gas on acceptable terms, it is apparent that the present and foreseeable market is fully adequate to support the major increases proposed by Oklahoma Illinois. While the fundamental issue before us is additional fuel

for the St. Louis metropolitan area, there are further benefits afforded by Oklahoma Illinois that should, on balance, preponderate in its favor. Not only does it meet the needs of St. Louis; in addition, it would provide natural gas service to 80,000 persons in central Missouri and would open major new producing fields in Oklahoma and Arkansas to the expanding market in St. Louis. It should be noted that these fields would provide a long-term supply for that area. A further consideration in this proceeding is governmental promotion of the positive benefits that flow from effective competition. Not only does the majority opinion deny effectuation of these considerations, anomalously while conceding their existence; it further commits fundamental errors in the conduct of comparative proceedings.

It is my position that Oklahoma Illinois has presented an acceptable project which is commensurate with the needs of the St. Louis metropolitan area. In accordance with the recommendations of our Staff, that project should be certificated, subject to certain protective conditions. In the event it refuses the certificate, a further proceeding should be commenced to the end that St. Louis be provided adequate natural gas service.

II.

Under Section 7 of the Natural Gas Act it is our responsibility to weigh the public convenience and necessity involved in any application presented to us, and to certificate the project that fulfills those public interest requirements. In a major pipeline certificate proceeding that interest requires a careful balancing of important policy considerations and of major financial undertakings. The first step in determining the public interest is provided by our Rules and Regulations which require, in Part 157, that a pipeline applicant present, *inter alia*, full and convincing evidence of a willingness to perform, of adequate gas supplies, of market availability, of reasonable costs of facilities, and financeability. It is significant that, of the applicants consolidated in this proceeding, only Oklahoma Illinois has met these threshhold requirements, and it is the only applicant that has held together for St. Louis the facilities that it proposes. As an initial matter, Natural has not only failed to prove such important matters as an adequate gas supply and record support for its proposed rates; it has, in addition, already constructed for use elsewhere the facilities it originally proposed for St. Louis. Panhandle's application is similarly deficient. It has not supported its proposed rates with a system-wide cost-of-service analysis; it has failed to demonstrate the requisite peak-day gas availability; it has not shown that Mississippi can accept deliveries of its proposed volumes at Alton; and it has not reflected any costs that may be incurred for burner tip adjustments required by commingling its gas with Mississippi's. In addition, Panhandle has elsewhere utilized some of the facilities it proposed for St. Louis.[1] The majority has properly concluded that we are not in a position to grant a certificate to either of these applicants. Only Oklahoma Illinois has met the threshhold requirements for a Section 7 certificate.

The Rules and Regulations do not provide for all the public interest considerations that are involved in major comparative proceedings. It is further required that the relative merits of each applicant be weighed, both individually and jointly, for the Commission to determine which best meets the need each proposes to supply. The most important of these considerations is the market analysis: what supply can be supported by the demand of the market in question.

[1] It is inconceivable to me how the majority can *find* on the record before us that Howell Storage Field is capable of delivering, by displacement, the volumes proposed for St. Louis. The third increment to that Field is not before us.

On the record before us the majority must concede, as they do, that there is a market presently in existence in St. Louis that is commensurate with the capacity proposed by Oklahoma Illinois. The following sets out the St. Louis market requirements for 1965:

	MMcf
Resale	130,126
Firm Industrial	22,734
Interruptible Industrial	36,307
Boiler sales not included in interruptible	14,000
Additional customers	3,132
Additional increase because of lower price	14,289
Total Market Requirements	220,588
Volumes sold by MRF & MRT in 1963	185,851
Less volumes sold out of St. Louis area	13,395
Less volumes purchased from Natural (temporary)	10,100
Sales in St. Louis from purchases other than Natural	162,356
Market available	58,232
Proposed sales by O.I. in St. Louis area	49,453

In addition, for the year 1970, it appears that the additional peak day capacity for greater St. Louis will be at least 151,000 Mcf. These figures establish: *first*, that in St. Louis alone there is more than adequate demand for the maximum proposal of Oklahoma Illinois of providing some 186,000 Mcf of peak day capacity for the present market; and, *second*, that there will be *additional* demand in 1965 alone of over 8,000 MMcf per year.[2]

It is apparent from prior proceedings as well as from the record before us that St. Louis has not been accorded the minimal terms of service and volumes of supply that have been required by either the industrial or residential consumers. In *Arkansas Louisiana Gas Company, et al.*, 27 FPC 697 (1962), we found that "Mississippi has not met the demands of its utility customers and they have waiting lists of customers desiring service." The comparative study presented by Oklahoma Illinois apparently confirms this:

PERCENT OF OCCUPIED HOUSING UNITS USING GAS FOR VARIOUS PURPOSES
1960

	Metropolitan area	
	St. Louis	Kansas City
Space-heating	50.6	90.7
Water heating	67.6	86.8
Cooking	65.6	71.6

This residential saturation reflects the long history in St. Louis of delay and frustration in efforts there to meet an ever-expanding market, and the resultant has been its second-class status among the major cities of the United States in terms of energy supply. Significantly, not only has the supply been deficient;

[2] Of course, due to the delay which has characterized this decision, the majority's reliance on 1964 figures is irrelevant; rather, we should be concerned with the market for 1966–67.

in addition, the service has not been on reasonable terms. It cannot be assumed that the industrials in the area have been satisfied. Their current dissatisfaction is apparent in their vigorous efforts to obtain a supply of firm gas from a supplier other than the present monopolist. The majority chooses to disbelieve the testimony of the various industrial concerns as to their increased needs, apparently on the grounds that they were initially based on estimates similar to those used by Mississippi and were subsequently revised upward.[2] The majority thereby sanctions Mississippi's well-established practice of understating its industrial customers' requirements through the device of sales forecasts rather than actual needs. The following chart presents the full picture:

Industrial customer	Direct sales: Mcf —1,000 Btu at 14.65 psia			
	Fuel volumes 1963		Oklahoma Illinois volumes	
	Estimated	Actual	Contract	Estimated
American Oil Co.	3,702,551	3,657,008	5,416,000	5,416,000
American Steel Foundries, Inc.	298,970	535,757	523,900	535,700
American Zinc Co. of Illinois	851,161	840,134	424,500	424,500
Cerro Corp.	992,667	788,015	1,116,900	1,116,900
Dow Chemical Co.	673,481	665,534	1,608,000	1,608,000
Granite City Steel Co.	8,646,676	9,645,667	11,250,000	11,250,000
Laclede Steel Co.	4,213,248	4,311,342	4,358,200	4,358,200
National Lead Co. (G.C.)	180,872	228,289	175,000	228,200
National Lead Co. (Tit.)	2,931,186	3,022,122	4,562,500	4,562,500
Olin Mathieson Chemical Corp.	930,958	1,028,374	1,094,300	1,094,360
Owens-Illinois Glass Co.	3,936,621	4,295,352	4,840,000	4,840,000
Chas. Pfizer & Co., Inc. (C. K. Williams & Co.)	191,511	191,280	227,250	227,250
Pittsburgh Plate Glass Co.	1,966,182	2,207,948	1,499,500	2,388,200
Shell Oil Co.	6,017,710	5,219,768	9,888,000	15,075,000
Total	35,582,794	36,636,110	46,984,050	53,124,750

However, even assuming *arguendo* that Oklahoma Illinois has improperly inflated its proposed sales to industrial customers, the uncertainty could be clarified by a condition in a certificate to Oklahoma Illinois that it further substantiate its proposed industrial sales. To me, the record is compelling that St. Louis has been traditionally undersupplied, and that there is at present ample market demand for a major expansion of natural gas service into the area.

The majority relies heavily on the need for both Oklahoma Illinois and Mississippi to balance their annual delivery volumes with large interruptible sales. Clearly interruptible sales are a necessary feature of the natural gas transmission business. See my dissenting opinion in *El Paso Natural Gas Company*, Docket No. CP65-178 (Order issued May 4, 1965, 33 FPC 945 at p. 948), where I emphasized that "Industrial customers, utilizing gas for a multitude of worthwhile purposes, serve as a base capacity for the transmission company, enabling it to operate year-round and supplying it with needed revenues which redound to the benefit of all consumers." It is not disputed that Oklahoma Illinois will have sufficient interruptible sales; in addition, from its efforts to indicate residential saturation in St. Louis, it must be concluded that it intends additional resale volumes in the area. Mississippi likewise has large volumes of base capacity even without the industrial volumes it will lose to Oklahoma Illinois. In addition to its indus-

[2] By inference the majority discredits the witness for American Oil Company although they were absent from the hearing. Anomalously, they proceed to admit additional volumes are justified by a shift from other fuels; so they must declare that American show which fuel is least expensive. This, however, is one matter that belongs to management in its discretion. There is no "similar evidence" that Shell overestimated its requirements.

trial load, it makes large volume sales of interruptible gas to large electric companies in the area, and it sells large volumes to Laclede on a year-round basis for injection into that distributor's storage fields. Finally, in regards to Mississippi's concern for its interruptible sales, it is only necessary to refer to *Granite City Steel Co.* v. *F.P.C.*, 320 F. 2d 711 (D.C. Cir. 1963), where the Commission's attempts to reallocate Mississippi's load-balancing volumes was unanimously reversed.

It must be further noted that, on the record before us, there can be no objection, and certainly the majority voices none, to the fact that Oklahoma Illinois is essentially an industrial service pipeline with 90 per cent of its initial annual deliveries to be made to industrial concerns. More fundamentally, it is axiomatic that any new pipeline extension will not be fully remunerative for several years, and Oklahoma Illinois' proposed firm industrial sales are an excellent approach to reducing this inherent problem. In all probability Oklahoma Illinois would expand its resale volumes yet it would have a large volume of base capacity in its industrial sales. The resale rate cannot be characterized as "too high" when the comparison is at full load factor and when it is considered that Oklahoma Illinois must be in a position to compete.

There are numerous other factors involved in the market analysis required prior to certification of Oklahoma Illinois. While ignored by the majority, these additional considerations preponderate strongly in Oklahoma Illinois' favor. The first of these is that the new pipeline would provide natural gas service for the first time in central Missouri, and it is apparently the only way many potential customers will be able to receive such service. In addition, there is every indication that there are a large number of major industrial, residential, and military customers in that area with needs that could readily be supplied by Oklahoma Illinois. I also emphasize that major new producing fields would be opened to interstate commerce, and, if the majority is to presume a managerial discretion for fuel allocations such economic concern should also reflect the local economy surrounding each producing area. They voice no such interest. Anomalously, they go further and express concern for the entire economy, upon which they predicate a fear that Oklahoma Illinois would falter in the event of an economic catastrophe. Not only would such an unsupported fear preclude any further extensions of natural gas service; it is totally contrary to their finding that St. Louis is in a position to utilize the additional volumes proposed by Oklahoma Illinois without an adverse impact on Mississippi. Rather than balancing all the compelling economic considerations, the majority selects, albeit anomalously, those economic consequences which will support its position. It is my opinion that such selectivity is not a reflection of the public interest considerations which should guide this agency in its exercise of pipeline certificate authority.

In addition to the market, there is a second major consideration for the St. Louis area, and this is the probable impact of certification of Oklahoma Illinois on Mississippi. If this Commission were to certificate a second pipeline where the losses suffered by the first would be of major proportions, the burden that would be cast upon the latter's customers would be too great to permit this Commission to discharge its responsibilities to the public. There has been charge and counter-charge on this issue, and it appears that there will be some impact on Mississippi if Oklahoma Illinois enters St. Louis. However, as the majority finds, the growth potential of the St. Louis market would rapidly overtake any increased cost allocations to Mississippi's remaining customers and would remove any take-or-pay obligations. The most telling evidence, however, is the

comparative impact on consumers if either Mississippi-Natural or Oklahoma Illinois were certificated. From the following tabulation it appears that, whichever project is certificated to provide additional service to St. Louis, there will nevertheless be an adverse impact on consumers:

IMPACT ON MRF IF OI IS CERTIFICATED

(For Jurisdictional Customers)

	Dollar amount of impact	Cents per Mcf of impact
Per examiner	$950,000	0.85
Per MRF	4,400,000	4.36
Per Laclede	1,254,000	1.19
Per OI	872,000	0.83
Per FPC staff	1,036,000	1.03
Per Majority	1,458,152	1.26

IMPACT ON MRF IF NATURAL IS CERTIFICATED

	Dollar amount of impact	Cents per Mcf of impact
Per MRF	$840,000	0.76
Per OI	2,156,000	1.94

Thus, the majority is placed in the anomalous position of increasing costs to the consumer regardless of the project they certificate.

Left in the unfortunate position of finding an adequate market and finding no adverse impact on Mississippi, the majority carry their argument one step further. They conclude that Oklahoma Illinois is "too costly." By so determining they inject an unyielding posture into the natural gas transmission business of precluding major expansions at a time when competition for growth at the city-gate has never been greater. Their assumption for this unfortunate position must be that, since limited service can be added more cheaply by additions to an existing pipeline, there is no need for major new pipelines. In the first place, however, St. Louis does not need just limited service. The market conceded by the majority fully supports certification of a transmission system capable of delivering 300,000 Mcf per day at the end of this decade, with capacity for still further cheap expansibility. Secondly, looping is not necessarily cheaper than laying a new pipeline. This is conclusively established by one of the applicants in this proceeding as a result of a major expansion it undertook recently. Panhandle was recently issued a certificate for a major system expansion at a cost of $184 per Mcf added.[4] If Panhandle were to bring 300,000 Mcf to St. Louis, based on the above costs, it would be at a cost of over $58,000,000. This does not include the cost to Panhandle of making those volumes available to each industry in the area, which cost would be an additional $9 million. Finally, of course, it would be economically infeasible for Panhandle to provide any additional service to Mid-Missouri as proposed by Oklahoma Illinois. *In toto*, the figures thus approximate what it will cost Oklahoma Illinois to provide 300,000 Mcf to St. Louis. Panhandle's proposal in this proceeding is, on its face, attractive. However, it is for small volumes that give no consideration to the market demand for the present and for the near future. In addition, that low figure is based on the displacement volumes made possible by Panhandle's Howell Storage Field. It is significant that the initial cost of this storage field to Panhandle's present customers was over three times the amount Panhandle included in its cost

[4] Docket No. CP65-255, issued June 28, 1965, 33 FPC 1295.

presentation here. Since it will cost almost the same amounts for either Panhandle or Oklahoma Illinois to meet the market requirements of St. Louis, the majority's determination further to delay that area's chronic undersupply is not acceptable. This is particularly true when consideration is given to the increasing costs of constructing additional facilities. Any difference between the cost to Panhandle and the cost to Oklahoma Illinois disappears when it is realized that present costs to Oklahoma Illinois will be less than total future costs to Panhandle. In addition, Oklahoma Illinois will provide cheap expansibility even above 300,000 Mcf, and it will also initiate service to central Missouri. The majority is without record support for its conclusion that Oklahoma Illinois is too costly. In a proper case, there is more than adequate room in mid-America for a major new pipeline, and the majority's unfounded conclusion can only be based upon a doctrinaire approach to the contrary.

III.

It must be conceded that the comparative merits of each application are not far removed from each other; there is a relative balance between each. This being the case, the most convincing public interest consideration, in addition to that of commencing permanent relief to St. Louis, is the competitive factor that certification of Oklahoma Illinois would introduce. As stated by Examiner Rendelman, "Except where the public interest dictates otherwise, the Courts and the Commission have consistently taken the view that two sources of supply are better than one, and that competition [is] better than monopoly." Examiner's decision, *infra*, pp. 812, 813. By their opinion today, the majority effectively denies this policy to St. Louis.[5]

The concept of competition which underlies this Nation's fundamental laws has many facets. In its broadest sense the policy is that of protecting the integrity of the market place, and the thrust of the law is to protect against the dominance by a single company of a particular line of commerce, not only for the Nation, but also for its various areas and regions. Thus, a healthy competitive situation is to be maintained in which sellers shall be required to exercise their best efforts without specific or implicit dictation of the terms and conditions of supply and service to buyers. More broadly, competition is emphasized to protect the consumer in his choice of products of comparable utility. This policy rests on the assumption that competition between a number of independent businesses generates constant incentive for improvement in the quality and prices charged for goods and services; that competition promotes economy and efficiency among the businesses involved; that competition promotes increased customer awareness; and that competition more generally accommodates to a degree of economic opportunity in the various sectors of the economy. Most fundamentally, competition means there are two or more sellers who are able and willing to bid for the custom of a particular buyer or groups of buyers, and that no one seller has the power to dictate what the buyer is to receive.

There are definite problems for a governmental agency in striking a balance between competition and regulation. Certainly no good purpose would be served by permitting ruinous competition in the pipeline industry. There are overriding public interest considerations that require a careful analysis of the impact on each pipeline and on the public before such competition should be authorized.

[5] It is difficult to discern their position on competition. At one point they say the balance between competition and regulation goes so far as to preclude duplication of facilities. They then declare Panhandle's project is to be favored because it will enable direct sales by it to industrials. This can only be accomplished by the same duplication proposed by Oklahoma Illinois. As to Mississippi the encouragement to Natural to extend its line westerly is clearly duplication.

For this reason it is appropriate that full consideration be given to the impact on Mississippi. Significantly, that impact would be rapidly replaced by the growth potential of the St. Louis market. Our inquiry should stop here. Since it is uniformily acknowledged that there are definite benefits to be realized from a second source of natural gas, including not only competition and the assistance it provides to regulation, but also the safety that inures to a given area by having alternate supply in an emergency, Oklahoma Illinois deserves certification. However, by their standards of what can be permitted as competition, the majority precludes entrance of another major source of supply.

At the outset it must be emphasized that this Commission is not authorized to protect a pipeline from the forces of competition. Section 7 of the Natural Gas Act clearly contemplates that competition, as that term is generally understood, is to be a consideration in the Commission's issuance of a certificate thereunder. That Section contemplates reasonable competition, and the only competition which the existing supplier is entitled to be protected against is competition by another interstate pipeline which does not have a certificate issued by this Commission. The legislative history of the 1942 amendments to Section 7 reflects this policy. The Senate Report gave the following explanation:[6]

> Provisions of the Natural Gas Act empower the Commission to prevent uneconomic extensions and waste, but it can so regulate such powers only when the extension is to a "market in which natural gas is already being served by another natural-gas company." Thus the possibilities of waste, uneconomic and uncontrolled extensions are multiple and tremendous. The present bill would correct this glaring inadequacy of the act.

The following comment appears in the House Report:[7]

> Subsection (g) is a saving clause inserted solely to make clear that the Commission will not be deprived of authority, in a proper case, to issue certificates for extensions to serve an area already being served by another natural-gas company.

The only interpretation to be placed upon the above comments is that the Commission can and should issue certificates for additional service to a particular area if consistent with the public interest and if waste will not result therefrom. Since the impact on Mississippi is found to be *de minimis*, if at all, it is inconceivable to me how the majority could harbor fears of economic waste.

The courts have consistently reflected the above considerations. In *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 169 F. 2d 881, 884 (D.C. Cir. 1948), there is the following comment, "* * * nothing in the Natural Gas Act suggests that Congress thought monopoly better than competition or one source of supply better than two, or intended for any reason to give an existing supplier of natural gas for distribution in a particular community the privilege of furnishing such increased supply. No such privilege can be reconciled with the general mandate in Sec. 7(e) of the Natural Gas Act * * *" Certainly no natural gas company has a vested right to serve any given market exclusively.[8]

This concern for competition has been hitherto reflected in Commission certification of pipelines into the service areas of other pipelines. It is significant that, of the major metropolitan areas in this Nation, there are only four cities among the twelve largest that do not have at least two major sources of supply. Of a size larger than St. Louis, only Boston has a single supplier, and the Tennessee Gas extension into New England is in the vicinity of that city. Further-

[6] S. Report No. 948, 77th Cong., 2d Sess. (1942), p. 1.
[7] H. Report No. 1290, 77th Cong., 1st Sess. (1941), p. 4.
[8] See also, *Kentucky Natural Gas Corp.* v. *F.P.C.*, 159 F. 2d 215 (CA6–1947).

more, of the two other major cities without a second supplier, Baltimore and Washington, D.C., both cities are traversed by a second pipeline, and there is presently a proposal before the Commission for a second pipeline to serve Washington. The pattern of pipeline certification before this Commission makes it clear that we have not, in the past, been precluded from permitting a second pipeline to enter the service area of another. No pipeline in this Nation could assume, until today, that it was to be accorded the public utility status that accompanies a franchised service area. Such protection to existing suppliers can only dissuade potential applicants from undertaking the expense of presenting proposals for secondary supply of incremental needs.

Although the majority opinion makes every possible declaration in favor of competition, the terms it imposes preclude effective competition in St. Louis. Their concept is that of permitting one of two pipelines to approach, at the closest, the outermost boundaries of the metropolitan area. In addition, they propose to permit such "competition" by one of two pipelines, although both have served Mississippi in the past and continue to do so, and neither has made any further efforts to extend into the St. Louis area. The results of their proposal could not be considered to be competition. The majority goes further. They declare there is to be no duplication of facilities. This precludes competition by either Panhandle or Natural. Both of the favored pipelines are on the east side of the Mississippi River; St. Louis is on the west side. To supply distributors in the city proper a river crossing would be necessary; however, this competition cannot be permitted by the majority for it would duplicate facilities of Mississippi. Furthermore, in order for Panhandle to provide service competitive with that of Mississippi it would be necessary for Panhandle to duplicate Mississippi's line along the industrial east side of the metropolitan area. This is the only way for a second supplier to offer its supplies and services to a buyer in St. Louis; the majority, however, decrees that only Mississippi shall perform this latter function. It is an empty gesture to declare that competition has been considered and is to be promoted, but then to permit only Mississippi to operate in St. Louis. Thereby Mississippi is to be assured of a franchise area in which it can conduct itself as it sees fit. The majority goes even further. They declare that there can be no competition, in any event, that involves service to exisiting customers of Mississippi. The only competition that is to be permitted is new service to new customers. It is impossible for another pipeline to provide competition to Mississippi on economically feasible terms when the only extensions to be permitted to the second pipeline would be outside the metropolitan area, would be non-duplicative, and would be only to new customers. For this fortuity to occur it would be necessary for new industrial concerns to locate themselves outside the existing industrial sector of the area and within financially feasible reach of the end-point of the second supplier. This is not competition.

The majority expresses the fear that Oklahoma Illinois would make further inroads into Mississippi's sales pattern to industrials. This assumes competition will not work; that Mississippi will not respond to the service and supply offered by Oklahoma Illinois. It is naive to assume that Mississippi will not be in a position to offer competitive service to that of Oklahoma Illinois. It has already done so by its response to the incipient competitive threat of Oklahoma Illinois. Furthermore, the majority express the hope that they, in their posture as government regulators, can do a better job of providing reasonable terms and conditions of service than another pipeline would. This anticipation is belied, first, by the history of Mississippi's operations in the area, which have been under the control of this Commission for almost thirty years but which have not been pro-

ductive of acceptable service; and, second, by Mississippi's responding, not to the Commission's regulatory efforts, but to the competitive efforts of Oklahoma Illinois. Apparently the majority are firmly convinced that government can replace competition as the ruling principle of business development. This determination places the role of regulation in sharp focus. In considering the various applications we are forced to decide whether the ultimate judgment should rest with the finite judgment of regulators or with the elements of the market place. The controlling consideration today is the protection of Mississippi, but the risks relied upon by the majority are but part of the risks that this Commission must face whenever it proceeds in a major certificate matter. What is most significant is that the Commission has found there is no undue risk; however, the majority apparently requires no risk. Unfortunately, the small risks involved in certificating Oklahoma Illinois are far outweighed by the necessity for a permanent solution to St. Louis' fuel needs.

By their varied determinations today the majority has written competition out of the natural gas transmission business, at least for St. Louis, even though competition at the city-gate is rapidly becoming an ever more important consideration in our regulatory efforts and even though such regulated competition could be a most useful ally in our total effort *vis-a-vis* the natural gas industry. Mississippi is today accorded a protected service area although the record before us is convincing that, if ever there was a role to be performed by competition, it should be done for St. Louis. Of course, it is not the past conduct of Mississippi that should be the basis for certificating Oklahoma Illinois; instead, our determination should be that, regardless of the future efforts of Mississippi, it is nevertheless in the public interest to have a second supplier in the major metropolitan area of St. Louis. As proposed by Oklahoma Illinois, as requested by numerous industrials, as recommended by our Staff, and as Examiner Rendelman determined, the positive benefits of competition should be a compelling consideration in any decision reached on the record before use.

IV.

From all the above considerations it is apparent to me that the Commission should make every effort, consistent with the public interests, to certificate Oklahoma Illinois. As the record now stands it is the only applicant before us. What it proposes is commensurate with the needs of St. Louis. To remand this proceeding on limited grounds can only mean another round of prolonged hearings, in addition to possible court review of the majority's apparent determination to preclude any other applicant from coming before us. Clearly this favoritism to permit substantial revisions in competitive applications to the exclusion of other applications is not legally supportable. In *Northeastern Gas Transmission Co.* v. *F.P.C.*, 195 F. 2d 872 (CA3–1952), it was held that each new proposal must receive a full comparative hearing even though a prior hearing on similar proposals had just been completed, denying each application. *Midwestern Gas Transmission Co.* v. *F.P.C.*, 258 F. 2d 660 (D.C. Cir. 1958) disapproved a fragmented hearing limited to only a small part of a competing applicant's proposal. *Enterprise Co.* v. *F.C.C.*, 231 F. 2d 708 (D.C. Cir. 1955), is the foundation for a line of cases holding that, when facts which affect comparative considerations of a winning applicant's proposal change before an order issuing a permit after a comparative hearing has become final, the Commission must reevaluate the comparative considerations in light of those changed circumstances. On the record before us no applicant other than Oklahoma Illinois can proceed without further evidence. Since further evidence and comparisons thereof must again be made between the various applicants, the effects of that new evi-

dence must be considered again on a comparative basis. The majority opinion impliedly limits the remanded proceeding to Mississippi-Natural and to Panhandle, but the law is explicit that they cannot preclude interventions by Oklahoma Illinois or any other interested party who is within the ambit of their opinion.

Pursuant to the recommendations of our Staff and the conclusions reached by Examiner Rendelman, Oklahoma Illinois should be certificated. It is a reasonable proposal to serve St. Louis. It provides effective competition and a second supply to a historically unsatisfied market; it would redound to the benefit of the entire area in the form of greater industrial activity and increased employment; it provides natural gas service to new areas; it opens major new producing fields to the present and future needs of St. Louis; and it provides immediate, permanent relief to the compelling needs of that area. There are certain protective conditions that should be required. I endorse those recommended by Examiner Rendelman. In addition, there should be at least three others: first, that Oklahoma Illinois agree to a five-year moratorium on increases in the rates it proposes to distributors; second, that Oklahoma Illinois enter into a firm contract with at least one distributor in the service area to commence making sales for resale; and, third, that it further substantiate its contracts for the proposed industrial sales. These are the minimal conditions required by the public interest. Interestingly, another protective condition would be to preclude Oklahoma Illinois from duplicating the Mississippi industrial supply line on the east side of the St. Louis area, thereby removing almost $9 million from the estimated cost of the Oklahoma Illinois line. But for their refusal to consider new pipelines, this would be the most expeditious way for the majority to proceed, pending further evidence of more expansive service by a second pipeline.

Oklahoma Illinois should be offered a certificate as proposed above, with thirty days to respond. By so proceeding the administrative process would be according an expeditious resolution of a pressing market demand, with full protection to the public interest.

Finally, in the event Oklahoma Illinois should be unable to proceed, the Commission should institute another proceeding on its own motion to settle permanently the supply needs of St. Louis. This was the course we took in the *El Paso Natural Gas Company* proceeding, 30 FPC 77 (1963). It would also reflect the procedure we adopted in the first *Midwestern* proceeding, 20 FPC 575 (1958), where the Commission denied all applications but did not preclude any applicant from filing again. The standards there prescribed were subsequently acceptable only to Midwestern, and it was certified at 22 FPC 775 (1959). Significantly, no applicant was favored. The majority prefers to remand only two applicants, departing from judicial precedent, inviting extended litigation, and favoring only these two by informing them of the public interest standards required in addition to those provided in the Rules and Regulations. Not only are other applicants barred; apparently, existing customers of Panhandle and Natural that might seek to intervene are precluded from doing so. It is also significant that none of the producers who would sell to Oklahoma Illinois are permitted in the remanded proceeding, since their interests turn on that of the pipeline. The limited procedures attempted by the majority have the further effect of barring intervention by major parties whose interests deserve our consideration. While an extended comparative proceeding is unfortunate for administrative expediency, it is both fortunate and necessary for interested parties whose legitimate interests will be advanced or impaired by the results. Finally, I would note that establishing standards, albeit vague for service to St. Louis to Panhandle and Natural only is an unfair procedural device that improperly

favors those applicants who could not even meet the initial standards. Such procedure has not been condoned.[9] In view of compelling precedent any party should be permitted to intervene to the end that its interests are protected under the major policy determinations and standards enunciated today.

APPENDIX B

COST IMPACT ON MISSISSIPPI RIVER FUEL CORPORATION

(Cost of Service Impact, Exclusive of Take-or-Pay Penalties)

Line No.	Items	Demand	Commodity	Total
1	Cost of service before industrial sales loss [1]	$12,341,941	$34,943,239	$47,285,180
2	Adjustment to reflect United Gas Pipe Line Co. settlement [2]	(1,589,242)	1,876,307	287,065
3	Adjusted cost of service before sales loss	$10,752,699	$36,819,546	47,572,245
4	Percent jurisdictional business [3]	91.230	63.125	
5	Jurisdictional cost of service before sales loss	$9,809,687	$23,242,338	33,052,025
6	Adjusted total cost of service before sales loss (line above)	$10,752,699	$36,819,546	47,572,245
7	Adjustment for reduced purchases of 28,614,277 Mcf from United Gas Pipe Line Co. reflecting net industrial sales loss [4]		(5,196,353)	(5,196,353)
8	Adjusted cost of service after sales loss	$10,752,699	$31,623,193	42,375,892
9	Percent jurisdictional business [5]	91.230	75.715	
10	Jurisdictional cost of service after sales loss	$9,809,687	$23,943,501	33,753,188
11	Increase in jurisdictional cost of service due to sales loss		$701,163	701,163

[1] Exhibit No. 233. The general format of exhibit No. 233 is utilized on sheet 1 of this appendix to show cost impact exclusive of take-or-pay penalty exposure as the most appropriate illustration thereof.
[2] $1.11 demand and 18.16 cents commodity charges versus $1.43 demand and 16.54 cents commodity charges on demand volumes of 4,966,386 Mcf and commodity volumes of 115,821,416 Mcf.
[3] Exhibit No. 12 in docket No. RP63-2, stipulated amounts.
[4] 34,766,137 Mcf reduction in purchase volumes per exhibit No. 233, less 6,151,860 Mcf for upgrading of certain industrial sales as well as additional sale to River Cement, after reflecting unaccounted-for gas and line losses at exhibit No. 233 figure of 7.55 percent.
[5] See the following equation:

$$\frac{101,000,100}{133,394,505} \times 100 = 75.715 \text{ percent}$$

COST IMPACT ON MISSISSIPPI RIVER FUEL CORPORATION

(Impact of Exposure to Take-or-Pay Penalties)

Line No.	Items	Amount
1	Required 72 percent take-or-pay volumes—Mcf	[1] 111,873,960
2	Adjusted purchases from United Gas Pipe Line Co. before sales loss—Mcf [1]	116,614,865
3	Reduction in purchases from United Gas Pipe Line Co. due to net loss of 28,655,000 Mcf of sales	[2] (10,969,140)
4	Purchases from United Gas Pipe Line Co. after net sales loss—Mcf	105,645,725
5	Take-or-pay penalty gas—Mcf	6,228,235
6	Exposure to take-or-pay penalty at 18.16 cents per Mcf	$1,131,047
7	Percent jurisdictional (from line 9 of sheet 1)	75.715
8	Jurisdictional exposure to take-or-pay penalty	$856,372

[1] Exhibit No. 217. Take-or-pay penalty exposure shown on sheet 2 of this appendix is based on exhibit No. 217, with adjustments as indicated, as the most appropriate illustration thereof.
[2] 34,375,000 Mcf less 18,456,000 Mcf (per exhibit No. 217) less 5,720,000 Mcf for upgrading of certain industrial sales as well as additional sales to River Cement, and using factor of 1.0755 per exhibit No. 233 for unaccounted-for gas and line losses.

INITIAL DECISION
OF THE PRESIDING EXAMINER UPON APPLICATIONS FOR A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 10, 1964)

RENDELMAN, *Presiding Examiner:* This is a consolidated proceeding involving three principal applications, each of which seeks to make available additional volumes of natural gas in the St. Louis, Missouri area. Natural gas is presently available in this area only through the pipelines of Mississippi River Fuel Corp. and its controlled affiliate Mississippi River Transmission Corp. The initial project involves the associated applications of Natural Gas Pipeline Company of America (Natural), Mississippi River Fuel Corporation, and Mississippi River Transmission Corporation.[1] Natural proposes to construct 41.56 miles of 30" pipeline looping and install an additional 2800 horsepower of compression at an existing compressor station and a new 4000 horsepower compressor station, for an estimated cost of $6,616,000.00 so as to increase the design day sales capacity of its pipeline system by 35,000 Mcf per day and to sell an equivalent amount of natural gas on a firm basis to Transmission for resale by Transmission to Fuel. Fuel, in turn, would resell the gas to its jurisdictional and non-jurisdictional customers in the St. Louis, Missouri area. Under this application, it was intended that delivery of the gas be accomplished through use of existing facilities connecting Natural and Transmission and Transmission with Fuel. No additional facilities are intended to be built by either Transmission or Fuel.

On October 18, 1962 Natural filed an amendment to its application in Docket No. CP62-243 modifying the originally proposed facilities so as to provide the same 35,000 Mcf per day for an estimated cost $260,000.00 less than the cost of the originally proposed facilities. On the same day Natural also filed an application in Docket No. CP63-99 for a certificate of public convenience and necessity which would permit construction and operation of 31.78 miles of 30" pipeline looping and install 3,000 additional horsepower compression at its compressor station No. 300, which would enable the sale of an additional 30,000 Mcf per day to Transmission for resale to Fuel commencing December 1, 1963. The anticipated estimated cost of these facilities is $4,169,000.00. This proposed sale of 30,000 Mcf per day to Transmission is in addition to the 35,000 Mcf per day proposed sale by Natural to Transmission in Docket No. CP62-243. The total cost of the facilities proposed to be constructed by Natural in both applications in order to provide the 65,000 Mcf per day increased capacity is estimated at $10,525,000.00. In conjunction with the filing of its application in Docket No. CP62-243, Natural also filed a request to amend its certificate in Docket No. CP61-339 (26 FPC 543) for authorization to use existing facilities interconnecting its system with Transmission for the proposed sale and delivery of the additional 35,000 Mcf per day. Natural now seeks a similar and further amendment of its certificate in Docket No. CP61-339 so as to encompass the additional 30,000 Mcf per day proposed sale in Docket No. CP63-99.

Transmission, in its applications in Docket Nos. CP62-242 and CP63-100 seeks authorization to transport and sell to Fuel the 65,000 Mcf which it proposes to purchase from Natural. Transmission further proposes that any amendment of the certificate issued in Natural's Docket No. CP61-339 include authorization for Transmission to use and operate its existing separately-owned portion of the facilities to receive the 65,000 Mcf of gas now proposed to be purchased from

[1] The combined Mississippi companies will hereinafter be referred to as Mississippi; where necessary to refer to either company singly, Mississippi River Fuel Corp. is designated as Fuel and Mississippi River Transmission Corp. as Transmission.

Natural on a firm basis. In support of its application, Transmission alleges that it has capacity on its pipeline system, substantially in excess of that required to make the proposed delivery to Fuel and at the same time meet its current commitments, and therefore does not propose to construct any additional facilities. It is Transmission's intention to make deliveries to Fuel through the use of those existing facilities installed and interconnected at a point in Madison County, Illinois under the certificate issued in Docket No. CP61–341 for the exchange of gas between Transmission and Fuel. Transmission therefore requests that the certificate issued on September 26, 1961 in Docket No. CP61–341, 26 FPC 545, be amended accordingly. Transmission further anticipates that additional quantities of interruptible gas will be made available from time to time from Natural which Transmission proposes to sell to all its customers, including Fuel, in proportion to their respective contract quantities, plus any additional interruptible gas which it receives from its other supplier, Trunkline Gas Company (Trunkline). Accordingly, Transmission requests that the certificate issued to it January 29, 1962 in Docket No. CP62–76 (27 FPC 182) authorizing sales of interruptible gas, be amended so as to enable it to render interruptible service as set forth in the proposed and amended rate schedules contained in its application in Docket No. CP62–242.

Fuel seeks amendment of the certificate issued in Docket No. CP61–341 (26 FPC 545) which would permit use of the interconnecting facilities authorized therein for the purpose of receiving into its system the additional volumes of gas proposed to be purchased from Transmission which would be made available by Transmission's applications in Docket Nos. CP62–242 and CP63–100. Fuel also states that no additional facilities are required to receive the gas to be purchased from Transmission, nor to transport this gas to existing customers in the allocations proposed in its application in Docket No. CP63–105.

By order dated October 15, 1962, (28 FPC 593) as modified November 20, 1962, (28 FPC 838) the Commission granted, *inter alia*, temporary authorization for delivery of 35,000 Mcf per day of natural gas by Natural to Transmission for resale to Fuel through facilities presently in use. Ordering paragraph (J) of the order of October 15, 1962 states as follows:

> The granting of these temporary authorizations is without prejudice to such final determination of these applications or any other applications consolidated herewith as the record may require.

Deliveries were ordered to commence for the period November 15, 1962, through December 1, 1963. On application by the parties the aforementioned temporary authorization was extended to December 1, 1964. (30 FPC 1223.)

On July 20, 1962, Oklahoma Illinois Gas Pipeline Company (Oklahoma Illinois) filed a motion to consolidate its application in Docket No. CP62–260 with the Natural, *et al.* applications. By such application filed May 14, 1962, Oklahoma Illinois seeks authority to construct and operate 394 miles of 12-inch or 20-inch supply lines and 307 miles of 24-inch transmission line, together with the necessary gathering, lateral and compressor facilities in order to transport up to 105,000 Mcf per day of gas to the St. Louis, Missouri area for purchase by industrial customers directly from Oklahoma gas field producers, and to sell to distributing utilities along the route of its pipeline and in the St. Louis area up to 81,000 Mcf per day of contract demand for resale and winter peaking service. In addition thereto, Oklahoma seeks to sell an interruptible supply of gas to the same industrial customers for whom Oklahoma Illinois would be rendering the transportation service. The initial capacity of the pipeline is intended to be 186,000 Mcf per day with a potential capacity for expansion to 300,000 Mcf per day with additional compression. The total estimated cost of this project is $64,000,000. Oklahoma Illinois proposes to purchase the gas to

be transported from approximately 43 producers all within the State of Oklahoma. By Commission order of October 15, 1962, (28 FPC 596) Oklahoma's motion to consolidate was granted along with the associated producer applications.

Under its original proposal, all the natural gas moving into the interstate pipeline system of Oklahoma Illinois would be purchased from newly developed fields in northwest Oklahoma and the Red Oak-Norris Field of the Arkoma Basin in southeast Oklahoma. Pursuant to the existing contracts, Pan American Petroleum Corporation (Pan American) and other producer applicants agreed to supply specified volumes of gas for a 20-year period to the 14 industrial customers (presently customers of Fuel) supporting the Oklahoma Illinois project. This gas, dedicated solely to the industrial customers, is to be produced from acreage located in 6 townships in Ellis and Woodward counties in northwest Oklahoma and from the Red Oak-Norris Field in Latimore and LaFlore counties in southeastern Oklahoma. Title to the gas passes at point of delivery, which is fixed in the contract at the wellhead of each well or at the outlet of the separator, if installed. The contracts further provide for an initial price of 18¢ per Mcf for the first 5 years with escalations of 2½ cents per Mcf for each 5-year period thereafter. By contract with each of the industrials, Oklahoma Illinois under this arrangement agrees to transport this gas for a period of 20 years from the delivery point in the field to the respective industrial plants in the St. Louis area. Under a second series of contracts known as the P–2 contracts, the producers agree to sell to Oklahoma Illinois, from the same acreage and reserve areas dedicated to the industrial gas purchase contracts, a daily contract quantity of gas equal to the difference between the daily volumes taken by the industrials under their contracts, averaged over a calendar year, and a quantity equal to 1 million cubic feet of gas for each 8 billion cubic feet of reserves at the same 18 cents per Mcf initial price and 5 yearly escalation provisions. These gas sales to Oklahoma Illinois are expressly subordinated to the gas sales to be made under the industrial contracts, hereinafter described.

Another type of contract, consisting of agreements between Oklahoma Illinois and the producer applicants, designated as the P–1 contracts, represents the only firm gas supply committed to Oklahoma Illinois. These P–1 contracts are wholly independent of the industrial and P–2 contracts. The gas to be sold thereunder is to be produced from 5 townships in northwest Oklahoma, separate from but adjoining the 6 township industrial reserve areas. The daily contract quantity is 1 million cubic feet for each 8 billion cubic feet of reserves, with a take-or-pay obligation on Oklahoma Illinois to take over a calendar year, a daily average equal to that amount. Like the industrial and P–2 contracts, the P–1 contracts are for a term of 20 years with an initial price of 18 cents per Mcf for the first 5 years plus escalations of 2½ cents at the end of each 5-year period thereafter.

Oklahoma Illinois additionally submitted contracts with 12 of its 14 industrial customers for the non-jurisdictional direct sale of interruptible gas at the rate of 27 cents per Mcf for a period of 5 years with no minimum bill obligation.

During the course of the hearing, respective counsel for Oklahoma Illinois and the producers advised the Presiding Examiner that the producers would not object to the issuance of a certificate which would eliminate direct sales to the industrial concerns and authorize only jurisdictional sales to Oklahoma Illinois at the interim area guideline price established by the Commission of 17 cents per Mcf for 1000 Btu gas for gas produced in northwest Oklahoma and 15 cents per Mcf for gas extracted from the Red Oak Field in southeast Oklahoma. At the oral argument respective counsel for Pan American, Mid-West and Shell affirmed their willingness to accept a certificate conditioned as hereinabove described, but re-

serving the right to increase the price per Mcf to any upward price adjustment in the area rate thereafter affected by the Commission. With the exception of Shell, the producers further agreed that there would be no demand for an upward adjustment in price for gas having a Btu content in excess of 1,000. The effect on the various existing contracts between the producers, the industrials and Oklahoma Illinois will be discussed further hereinafter.

On October 29, 1962 Panhandle Eastern Pipe Line Company filed an application, as supplemented on November 5, 1962 in Docket No. CP63–106, for a certificate of public convenience and necessity to construct and operate a pipeline and underground storage facilities so as to supply and transport 65,800 Mcf per day (at 14.73 psia) for sale in the St. Louis, Missouri area on a firm basis. By such application, Panhandle proposes to increase the deliverability capacity of its Howell Storage Field from 65,000 Mcf per day to 130,000 Mcf per day and to construct a 16-inch transmission line from its existing mainline facilities at a point near Glasgow, Illinois for a distance of 53 miles to a point in the St. Louis area near Alton, Illinois. The total cost of the project, including construction of 20 new storage wells in the Howell Storage Field, measurement and regulating equipment, cushion gas and other facilities, is estimated at $6,036,000 which Panhandle proposes to finance from funds on hand. Panhandle has not designated any customer or customers to whom any, or all, of the proposed 65,800 Mcf per day will be delivered. In its application, it is stated that Panhandle:

> Contemplates the sale by Panhandle to whichever customer or combination of customers the Commission selects for the marketing or consumption of any supplies to the St. Louis area.

However, Panhandle advises that it proposes that the gas will be made available to its St. Louis area customers at a lower cost than either of the services proposed by Natural or Oklahoma Illinois in the pending applications.

It is further stated in Panhandle's application that there is:

> * * * the possibility that some modification would be required in the applications presently filed with the Commission by Mississippi Transmission, Mississippi Fuel or Oklahoma Illinois, in the event the Commission should select one or more of the parties to provide transmission or distribution of the Panhandle gas in the St. Louis area.

Panhandle proposes an LS–2 resale rate limited to partial requirements customers purchasing gas for resale, of $2.05 per month per Mcf of contract demand and a commodity charge of 22.9 cents per Mcf, with a monthly minimum bill of 75 percent use of the contract demand. In the aforementioned order of November 30, 1962, 28 FPC 911, the Commission granted Panhandle's Motion for Consolidation of its application with those of Natural, Fuel, Transmission and Oklahoma Illinois, etc.

The hearing commenced on January 14, 1963 and was concluded on October 15, 1963 with 94 days of actual hearing during the intervening period. Oral argument before the Presiding Examiner took place on March 19th and 20th, 1964. There were just short of 14,000 pages of transcript with 249 exhibits, many of which had several subdivisions.

That substantial additional supplies of natural gas are, and have been, necessary in the St. Louis area is an uncontested fact amply supported by the past history of the constant demands on Mississippi, the only supplier, by both its utility and industrial customers, for additional volumes of gas. Since 1929, when Fuel first brought natural gas to the area, the available volume of gas has not kept pace with the burgeoning demands of the St. Louis area. During the intervening period there has been a not inconsiderable history of litigation between Fuel and its utility customers resulting from efforts of the distribution companies to obtain

a greater share of the inadequate total supply of gas heretofore made available by Fuel for the rapidly expanding suburban areas of the City of St. Louis. In the instant proceeding Mississippi's jurisdictional customers, supporting the Natural-Fuel-Transmission application, have testified to their present and past need for additional supplies of gas, and those of Fuel's non-jurisdictional customers who have executed contracts with Oklahoma Illinois, have further testified to Fuel's inability to provide their total requirements.

Each of the principal applicants in this proceeding claims the capacity to provide the panacea which would put an end to St. Louis' natural gas problems. Accepting then, as a fact, that there is a need for substantial additional supplies of gas, the question then remaining to be answered is which applicant, acting in the public interest, is best qualified to supply the additional volumes of gas apparently so sorely needed.

Stripped to its bare essentials, the fact of the matter is that this proceeding constitutes nothing more than a contest by Panhandle and Oklahoma Illinois, respectively, to establish a competitive position and thereby acquire a portion of the ready made lucrative market presently exclusively served by Mississippi. On the other hand, Mississippi has taken every possible measure to prevent the entry of another pipeline into the St. Louis area, in order to maintain its monopolistic position. Each of the applicants professes to be motivated by concern for the public interest but it takes no stretch of the imagination to deduce that such concern is incidental to Panhandle's and Oklahoma Illinois' desire to penetrate the St. Louis market, particularly the unregulated industrial market, and Fuel's zealously pursued intention to retain that which it now possesses.

It is indisputable that the natural gas situation as it exists today in the St. Louis area constitutes a monopoly; a monopoly that exists solely by virtue of the Natural Gas Act. Fuel and its controlled subsidiary, Transmission, constitute the only source of gas into the St. Louis area. As such, Fuel's control of gas sales to its industrial customers in that area demonstrates a classic example of the very ills which the antitrust statutes were intended to remedy. Fuel's unregulated industrial prices are not arrived at as the result of arm's-length negotiation, but are arbitrarily fixed at an amount adjusted only to what the traffic will bear. Moreover, until recently, Fuel's practice has been to enter into sales contracts with its industrial customers for a period no longer than six months, obviously so as not to be bound by a price in a long-term contract below that which could possibly be adjusted upwards at the end thereof. It is true that Fuel's prices are to some extent governed by the market price of competing fuels such as coal and oil. But even this situation is an anomaly since fluctuations in the market price of coal and oil result from competition in the open market, whereas the price of natural gas to the industrial concern is dictated solely by Fuel. There are also several customers of Fuel, such as Olin Mathieson Chemical Corporation and Owens-Illinois Glass Company, who find it impossible to use an alternate fuel inasmuch as natural gas is requisite to their processes. These companies have no choice but to pay the price demanded by Fuel. Furthermore, the October 1947 agreement between Fuel and Laclede Gas Co. (Laclede) whereby it was agreed that the respective parties would not compete with each other for industrial customers in the area served by each is as classic an example of an agreement in restraint of trade as it would be possible to devise. The net effect is that in the St. Louis area, under the guise of the Natural Gas Act, Mississippi, at least insofar as its direct sales are concerned, freely operates what would otherwise be an illegal monopoly.

To a large extent the predicament in which Mississippi presently finds itself, where its monopoly is now challenged by Oklahoma Illinois and Panhandle, results either from Mississippi's willingness to gamble on its ability to stave off present and future challenges to its control of the gas market, or from its own shortsightedness in the past. The Oklahoma Illinois for some time prior to filing its application for a certificate, was negotiating with Fuel's large industrial customers was a well advertised "secret" of which Fuel had to be aware, yet rather than compete with the terms dangled in front of the industrials by Oklahoma Illinois, Fuel elected to meet the challenge in the hearing room. It stands to reason that if Fuel had made a timely effort to meet the challenge to its monopoly, Oklahoma Illinois would, in all probability, have been unable to successfully negotiate contracts with the customers Mississippi presently serves. Such offers as Fuel finally did make apparently were too little and too late. Of course, if Fuel had attempted to compete there would have been some diminution of the net profit realized from its industrial sales, but inasmuch as it has been shown in the Mississippi rate hearing, Docket No. RP63-2,[2] that Fuel, in the year ending April 30, 1962, enjoyed at net profit, over and above its cost of service, from its industrial sales of approximately 8 million dollars in excess of the 6¼ percent overall rate of return fixed by the Commission from jurisdictional sales, it would seem that such diminution of overall profit could well have been afforded and without adverse effect on the consumer.

The existence of a monopoly is permitted under the Natural Gas Act when the maintenance of such a monopoly is in the public interest, *Penn Water Power Company* v. *F.P.C.*, 343 U.S. 414, particularly since it does not appear that any other pipeline has previously attempted to enter the St. Louis area. Under existing circumstances, however, with the advent of two serious contenders for the St. Louis market, and in the light of the prior history of controversy between Fuel and its utility customers, this would seem to be an opportune time for a reappraisal of the existing situation and for further consideration of whether, under the guise of the Natural Gas Act, "public convenience and necessity" requires perpetuation of the monopoly presently enjoyed by the Mississippi Companies.

In *City of Pittsburgh* v. *F.P.C.*, 237 F. 2d 741, 754 the court stated:

> The Commission, while it "has no power to enforce the Sherman Act [15 U.S.C.A. § 1-7, 15 note] as such * * * [and] cannot decide definitely whether the transaction contemplated constitutes * * * an attempt to monopolize which is forbidden by that Act * * *," nevertheless "cannot without more ignore the [Act]". Thus, if it appears that Texas Eastern's project would tend to produce monopolization of a petroleum products market, the Commission cannot ignore that fact merely because it is an antitrust factor and such factors have been placed within the ken of the Attorney General. That he is specially competent as to the antitrust laws does not make all other officers or agencies of the Government incompetent. Even private citizens play a role in the effectuation of our national antitrust policy. It would seem odd if circumstances upon which private citizens may found legal and equitable remedies and defenses should be wholly beyond the reliance of the Government. Although the Commission has no power to enjoin conduct as illegal under the Sherman Act or even to declare such illegality, it certainly has the right to consider a congressional expression

[2] The Presiding Examiner takes official notice of Exh. No. 17 received in evidence in Docket No. RP63-2.

of fundamental national policy as bearing upon the question whether a particular certificate is required by the public convenience and necessity.[3]

In defense of its position as exclusive supplier to the St. Louis market, Mississippi alleges that if Oklahoma Illinois is certificated it will lose some 33,815,000 Mcf of direct industrial sales, a loss in excess of 20 percent of its total estimated 1964 sales volume. This, claims Fuel, would idle its existing capacity to the point where its overall load factor would decline by approximately 10 percent causing the remaining sales to carry all of the fixed costs of the pipeline. Secondly, it is stated that the loss of some 20 million Mcf of direct interruptible sales will subject Fuel to take-or-pay penalties on its annual purchases from United Gas Pipe Line Company by reason of its inability to maintain the required 72 percent purchase load factor.

Currently, Fuel contends that certification of Oklahoma Illinois would deprive Transmission's utility customers of substantial savings in the cost of gas purchased from Transmission and that certification of Natural-Fuel-Transmission, rather than Oklahoma Illinois would result in substantially lower rates to Transmission's utility customers due to greater utilization of capacity now available in Transmission's pipeline. As a further reason, Fuel contends that a lower price of gas purchased from Transmission by the utilities would result from the introduction of additional gas purchased from Natural at a lower price than is presently purchased from Trunkline. The net result, according to Mississippi's version, is that the certification of Oklahoma Illinois would cause an increase in Fuel's cost of service and a corresponding "adverse impact on Mississippi's utility customers of at least $4,368,080 annually."

However, unprejudiced recalculation of the $4,368,080 figure indicates that the actual impact on Mississippi's resale customers would be somewhat less. The method of calculation used by Mississippi to arrive at this figure is demonstrated in Exhibit 197, sponsored by the witness, Benjamin Miller. Analysis thereof raises questions which reflect on the basic accuracy thereof. In the first place, it is noted that the volumes of gas supplied from company-owned production and the costs incurred in connection therewith are considerably lower than that produced by Mississippi in recent years. Certainly the volumes of gas available from Mississippi's production would have a definite place in a complete impact study, particularly in relation to a possible cut-back in such company-owned production in order to avoid take-or-pay penalties from United. Secondly, on page 3, line 8 of Exhibit 197, it is noted that the quantity of 41,862,000 Mcf of gas purchased from "plants" does not vary whether Oklahoma Illinois is certificated or not. No reason is given why these purchases from "plants" should continue undiminished while Fuel, in the event Oklahoma Illinois is certificated, would be paying United Gas Pipe Line for gas which it allegedly could not dispose of. Reference to Fuel's Exhibit 141, showing estimates of gas purchases for the years 1963, 1964 and 1965, shows that Fuel projects a cut-back in plants purchases of 10,153,000 Mcf from 41,862,000 Mcf in 1964 to 31,709,000 Mcf in 1965. The question arises as to why this same cut-back in plant purchases of 10,153,000 Mcf could not be accomplished in 1964, thus reducing to this extent the estimated take-or-pay penalty volume of 17,928,674 Mcf, shown on Exhibit 197, to 7,775,674 Mcf. Since the total cost of 41,862,000 Mcf of gas purchased from "plants" is shown as $6,616,869 for an average cost of 15.81 cents per Mcf, the reduction in

[3] For a discussion of the "unsatisfactoriness of the existing bifurcated system of antitrust and other regulation in various fields" see the opinion of Mr. Justice Harlan, concurring in part and dissenting in part in *U.S.* v. *El Paso Natural Gas Co., et al.*, 376 U.S. 651, 662.

cost of "plant" purchases resulting therefrom would thus be $1,605,189 (15.81¢ x 10,153,000 Mcf).

The percentage of resale sales to total sales in the event Oklahoma Illinois is certificated is calculated from page 2 of Exhibit 197 as 80.62 percent (105,655,255 Mcf of resale sales divided by 131,056,865 of total sales). This percentage applied to the $1,605,189 reduction in cost of plants purchases results in a figure of $1,294,000 applicable to resale customers. Mr. Miller allocates all minimum bill penalty dollars to resale customers. Accordingly, any benefit derived by reason of the lesser penalty amount must be similarly so allocated.

On page 2, line 3 of Exhibit 197, commodity costs on Oklahoma Illinois' certification are shown as $26,605,523, which includes the $2,965,402 of minimum bill penalty charges. Subtracting the penalty charges from the total commodity sales cost gives the total purchase gas cost of $23,640,121 of which 80.62 percent, or $19,058,660 is allocated by Mr. Miller to resale customers. Mr. Miller then attributes 100 percent of the minimum bill penalty of $2,965,402 to the resale customers and then adds this amount to the commodity cost of gas for those customers to arrive at the $22,023,604 shown in line 4 of page 2. Again applying Mr. Miller's method, if the $1,605,189, which is the amount resulting from the reduction in cost of gas purchases from plants is subtracted from the $26,605,523 of total commodity gas purchases the result is a total revised commodity cost of $25,000,334. If, from this figure, the penalty charges incurred from failure to take 7,775,674 Mcf, or $1,286,096 is subtracted, the result is $23,714,238, representing the total commodity cost (less penalty) of which 80.62 percent or $19,118,419 is allocable to resale sales. Adding to this the $1,286,096, the revised penalty amount, results in a new total commodity cost of all resale sales of $20,404,515, which is $1,619,089 less than Miller's figure for total commodity cost shown on line 4 of page 2. Thus, the net effect on the reduction in plant purchases from the 41,862,000 Mcf for 1964 shown on Exhibit 58 to the 31,709,000 shown for 1965 more than offsets the purported $1,614,093 total increase in gas supply cost shown on page 2, line 5.[4] The effect claimed by Mississippi of the certification of Oklahoma Illinois on Fuel's "other costs" (Fuel's costs exclusive of gas supply) is shown on page 4 of Exhibit 197. The basic figures in this computation are the total costs shown on lines 1 and 3 of $16,665,574, which are the same costs used by Fuel in its cost presentation in connection with its application for a rate increase in Docket No. RP63–2. (An examiner's decision in this proceeding was issued on August 20, 1963.) Thereafter, on August 7, 1964, 32 FPC 547, the Commission approved a stipulation of settlement in that case. Comparison of the company's alleged "other costs" with those found by the Staff and by the Presiding Examiner in the rate proceedings is as follows:

	Demand	Commodity	Total
Fuel	$6,732,683	$9,932,891	$16,665,574
Staff	5,240,018	8,129,468	13,369,486
Examiner	5,297,509	8,579,723	13,877,232

Following the method of allocation used by Miller, but basing calculations on the lower costs found by the Presiding Examiner in Docket No. RP63–2, the total

[4] The foregoing computations with respect to the cost of gas purchased from United Gas Pipe Line Company were based on United's rates in effect on September 10, 1963, the date Mississippi's Exhibit 197 was received in evidence. On May 14, 1964, the Commission issued Opinion No. 428 in United Gas Pipe Line Company, Docket No. RP63–1, 31 FPC 1180, which substantially lowered the rate levels applicable to sales to Fuel and other customers. On July 15, 1964 United filed a rate increase in Docket No. RP65–1.

increase in "other costs" would have been $1,776,140 rather than the $2,096,121 computed by Miller and shown on line 5 of page 4 of Exhibit 197, a difference or reduction in impact of an additional $319,981.

It should be noted that these "other costs" derived from the test period ending April 30, 1962 are not necessarily those costs that would be incurred if Oklahoma Illinois were certificated in the future. The Presiding Examiner takes official notice of the annual reports filed by Fuel and Transmission for the years 1962 and 1963 (FPC Form 2). For the year 1962 there is shown an increase in the total amount of gas plant in service from $117,780,496 to $118,888,914, or an increase of $1,108,418, while the depreciation expense charged for the year is $4,056,163. For the year 1963, the total investment for gas plant in service increased to $119,470,228, an additional $581,314. For the same period depreciation expenses amounted to $4,098,754. Over the two-year period a decrease in net gas plant in service of $6,465,185 is shown. The decrease in revenue at 6¼ percent rate of return is calculated at $404,074. While this may not be a precisely accurate figure for an adjusted cost of service, it is nevertheless a reasonable estimate of the effect of a decreasing rate base.

The net effect of these two items would be to reduce Miller's calculated impact on Fuel to $1,367,070. The foregoing adjustments to Miller's impact study moreover do not take into account the lower costs of gas resulting from the rate reductions put into effect by Natural Gas Pipeline and Trunkline on January 1, 1964 and April 1, 1964, respectively, which reductions result in lower costs of $187,000 to Transmission and to Fuel. Additionally, it is quite certain that there would be an "upgrading" of direct sales to Fuel's remaining industrial customers in the event of Oklahoma Illinois' certification, as testified by Mr. Quinn, which would further reduce the amount of impact on the two companies by an estimated $897,000.

In summary, the total estimated impact on Fuel and Transmission in the event Oklahoma Illinois is certificated would be approximately $950,000, as shown by the foregoing.

In its discussion of impact on jurisdictional sales, Mississippi impractically fails to take into account the fact that the anticipated loss of industrial sales to a new pipeline could and would, to a substantial extent, be made up by additional sales to its remaining industrial customers, by initial sales to new customers, or by increased sales to its utility customers. In their respective impact studies, neither witness Miller[5] nor witness Benson, testifying for Laclede, acknowledged the possibility of increased sales to Mississippi's remaining industrial customers by reason of the availability of those volumes of gas hitherto served to the customers under contract to Oklahoma Illinois. Exhibit 245, prepared by Mississippi, demonstrates the high incidence of curtailment of gas sales to a number of Fuel's industrial customers in 1962. As a matter of fact, practically all Fuel's industrial customers are drastically curtailed during peak periods.

It logically follows that the availability of the 33,815,000 Mcf of gas sales which, according to Mr. Miller, Mississippi will lose by certification of Oklahoma Illinois, would result in an increase in the volume of sales to those customers so curtailed and an upgrading of interruptible sales generally. Even Mississippi's witness Quinn estimated that there would be increased sales of some 4 billion cubic feet annually to Mississippi's remaining industrial customers because of Fuel's ability to render improved service. Mr. Quinn further admitted that past volumes of sales did not fulfill customer requirements but represented

[5] Cross-examination disclosed that at the time of his testimony in this proceeding Mr. Miller was the owner of 200 shares of stock of Mississippi River Transmission Corp.

only those volumes that Mississippi chose to make available. An indicated by his estimate of total industrial sales by Fuel for 1962 of 55,822,255 Mcf as against 61,760,235 Mcf of actual sales, a difference of 5,937,980 Mcf, and estimated industrial sales for 1963 of 58,757,600 Mcf, as against 66,747,706 Mcf of actual sales, a difference of 7,988,106 Mcf, it would appear that Mr. Quinn's estimates are on the conservative side. Moreover, the advent of an additional pipeline and the consequent assurance of a reasonably priced, plentiful supply of gas, could well result in the influx of new industry to the area and an increase in the demand for natural gas. Proof thereof, appears in the fact that Fuel, itself, is in the midst of constructing a new cement plant which would purchase, according to Mr. Quinn, up to 3000 Mcf of interruptible gas per day. In Fuel's Annual Report to stockholders of 1963 [6] it was announced that such plant would be in production by mid 1965. Moreover, in Fuel's application filed April 30, 1964 [6] for a certificate of public convenience and necessity authorizing construction of facilities to serve the cement plant it is stated that applicant "proposes to utilize in the plant up to an average of 8000 Mcf of gas per day, averaged over the year." On the basis of even a 5-day week, this would give Fuel additional annual sales of 2,080,000 Mcf.

Insofar as sales to utilities are concerned, which under the present scheme of things would not be served by Oklahoma Illinois because of their refusal to make purchases from anyone but Mississippi, Exhibit 58, sponsored by Mr. Quinn, shows an estimated incremental increase in sales to utilities from 105,655,265 Mcf in 1964 to 111,117,790 Mcf in 1966, an increase in these two years of 5,462,525 Mcf. In Arkansas Louisiana Gas Company, *et al.*, Docket No. G–17567, *et al.*, 27 FPC 697, decided by the Commission on April 18, 1962, the Commission found that Fuel's utility customers had substantial need for additional supplies of gas and that Fuel "has not performed its utility obligation to its utility customers." It was therein further found that "Laclede, whose contract with Mississippi is in terms for its full requirements, has not been granted an increase in its stated demand by Mississippi since 1955." Further support for these statements were furnished in this proceeding by Laclede's vice president who testified that Laclede had endured a shortage of gas supply which lasted from approximately September 1949 until sometime in 1962, and his further testimony to the effect that during that period conversions in space heating from coal or oil to gas were not permitted. Coupled with the fact that the saturation in the St. Louis area for residential space heating is 50.6 percent as compared with 90.7 percent for Kansas City, and 94 percent for Cleveland, these factors would indicate a large potential for additional jurisdictional sales. Development of this potential market by Mississippi's utility customers must be reflected by increased sales from the pipelines. The evidence thus would further indicate that Mr. Quinn's estimates of incremental utility sales for future years are again on the extremely conservative side.

By order dated August 7, 1964, the Commission approved a settlement stipulation of the Mississippi rate case, Docket No. RP63–2. In the companion case, Docket No. CP63–12, the Commission, on the same date, approved an application by Transmission to acquire and operate Fuel's pipeline facilities and Fuel's on system production. The possible effect of several of the pertinent provisions of the settlement stipulation, hereinafter set forth, insofar as they relate to the impact on Transmission's resale customers in the event another pipeline should be certificated, merits some discussion.

---

[6] Of which the Presiding Examiner takes official notice.

ARTICLE VI—TRANSMISSION'S RATES AFTER CLOSING DATE

* * * * * * *

Section 2. Subject to the express understanding and reservations stated below, Transmission's Rate Schedule CD–1 as proposed to become effective on the Closing Date will not include Section 9, Minimum Bill Adjustments. Such understanding and reservations are outlined as follows:

* * * * * * *

(b) The agreement of Fuel and Transmission, its proposed successor in the pipeline operations, to forego the minimum bill provisions, solely in the interest of this compromise and settlement, shall not be construed under any circumstances as a recognition or admission by Fuel or Transmission that the minimum bill provisions are unnecessary or unreasonable in any respect whatever; and the agreement of Fuel and Transmission to forego such provisions under the instant circumstances shall never be used by any party hereto as a basis for opposition to such provisions in Docket No. RP63–2 if this settlement is not effected nor in connection with any future minimum bill provisions which Fuel or Transmission may propose.

* * * * * * *

(c) Transmission's agreement in Article IX hereof to a moratorium upon its filing of rate increases after the Closing Date shall in no event preclude its filing minimum bill provisions in connection with an actual loss of market to a new pipeline, or a potential loss of market if the Commission certificates a new pipeline to such market by others than Fuel or Transmission. Notwithstanding this agreement, the present resale customers of Fuel and Transmission acknowledge that in the event Fuel (or Transmission as the case may be) were to lose sales of a magnitude approaching a volume sufficient to support a new pipeline to the St. Louis area, Fuel (or Transmission) will be in a critical take-or-pay position with respect to its gas supply. This agreement shall not be construed as a waiver of the right of the present resale customers of Fuel and Transmission and other parties to oppose such minimum bill provision as may be filed by Transmission.

* * * * * * *

ARTICLE IX—MORATORIUM ON RATE FILINGS

Section 1. It is the intention and understanding of the parties in reaching the agreement set forth herein that there will be no change in the rates to be made effective by Transmission on the Closing Date, except for the contingent reductions provided for by Article VIII hereof, and except as hereinafter provided. Transmission agrees, therefore, if the Commission approves the terms and conditions of this Stipulation and Agreement without modification that it will not file for an increase in the rates and charges to be filed in Rate Schedule CD–1 pursuant to Article VI hereof, to become effective (allowing for notice and maximum suspension) prior to July 1, 1966 except that

* * * * * * *

(d) Transmission may file for increased rates to reflect any cost allocation impact to its jurisdictional customers resulting from the indicated loss of sales and for a minimum bill provision if the Commission certificates the construction of a new pipeline to the St. Louis area by any person or company other than Fuel or Transmission, but Transmission shall not file a motion under Section 4 of the Natural Gas Act to make such increased rates and minimum bill provision effective prior to the time such new pipeline goes into service.

Fuel's existing sales purchase agreement with United Gas Pipe Line Company requires Fuel to maintain an annual purchase load factor of 72 percent. It is Fuel's contention that the loss of some 20 million Mcf of interruptible sales in the event Oklahoma Illinois is certificated would make it impossible for Fuel to meet its minimum bill obligation and would result in a penalty payment to United in 1964 of $2,965,402. It is further contended that certification of Oklahoma Illinois would additionally cause an increase in the cost of gas purchased by the 3 utility customers of Transmission in the amount of $657,866 because of the reduced volumes which would then be purchased by Fuel from Transmission since Transmission would then "require a higher rate to recover its cost of service."

Assuming for the sake of argument that such is the case and that the Mississippi companies' cost of service would be increased by the amount indicated, the fact of the matter is that under the terms of the stipulation as it presently stands, such increase would not immediately, or in the near future, be passed on to Transmission's resale customers because Section 2 of Article VI of the said stipulation, as hereinabove set forth, eliminated the minimum bill provision from Mississippi's CD–1 rate schedule governing sales from Mississippi to its utility customers. Transmission reserves the right to file for increased rates and restoration of the minimum bill provision to its CD–1 rate in the event of the certification of another pipeline prior to the end of the moratorium period (July 1, 1966), but the application for such increase may not be filed before the new pipeline goes into service.

Moreover, if Transmission actually did file for such rate increase on certification of another pipeline, the burden would then be on Transmission to prove that such an increase was warranted. There is no assurance that the purported increase in the cost of service of $4,368,080 would necessarily trigger a proportionate upward variation in the CD–1 rate schedule and a restoration of the minimum bill provision since, in addition to the reasons hereinbefore discussed, Mississippi's witness Miller, in arriving at that amount, allocated the entire increase to Mississippi's utility customers, whereas the more appropriate method would have been to allocate a proportionate share thereof to Mississippi's industrial sales.

Insofar as the time element is concerned, even if a new pipeline were certificated, Transmission would not be in a position to place any rate increase into effect prior to expiration of the moratorium period in any case, since the elapsed time between the issuance of a Commission decision herein, plus the time required to construct and place the new pipeline in service, plus the five months suspension period between the filing of the rate increase and the time it would go into effect (subject to refund) would probably go beyond the moratorium date.

Assuming, nevertheless, for the purposes of this discussion, that there would in fact be an increase in rate to the domestic consumer in the event another pipeline were certificated, the problem then to be faced is whether it is in the public interest to maintain Mississippi's presently exclusive hold on the St. Louis market, and preserve the lower rate, or whether despite such increase it would be in the public interest to provide another source of supply. In *F.P.C.* v. *Transcontinental Gas Pipe Line Corp.*, 365 U.S. 1, 23 the Court reiterated the fact "that the term 'public convenience and necessity' connotes a flexible balancing process, in the course of which all the factors are weighed prior to final determination. *United States* v. *Detroit and Cleveland Navigation Co., supra.*"[1]

Except where the public interest dictates otherwise, the Courts and the Commission have consistently taken the view that two sources of supply are better

[1] 326 U.S. 236.

than one, and that competition was better than monopoly. *U.S.* v. *El Paso Natural Gas Co., et al.*, 376 U.S. 651, 661. As recently as June 26, 1964, Judge Washington, in his concurring opinion in *Lynchburg Gas Co.* v. *F.P.C., et al.*, 336 F. 2d 942, stated as follows:

> Whatever the relevance of the antitrust laws, the welfare of the ultimate consumer is the acknowledged desideratum of the Natural Gas Act. See, e.g., *Federal Power Commission* v. *Hope Natural Gas Co.*, 320 U.S. 591, 610 (1944): "The primary aim of this legislation was to protect consumers against exploitation at the hands of natural gas companies"; *Panhandle Eastern Pipe Line Co.* v. *Federal Power Commission*, 83 U.S. App. D.C. 297, 300; 169 F. 2d 881, 884 (1948), cert. denied, 335 U.S. 854 (1948): "[N]othing in the Natural Gas Act suggests that Congress thought monopoly better than competition or one source of supply better than two, or intended for any reason to give an existing supplier of natural gas for distribution in a particular community the privilege of furnishing an increased supply"; *Public Service Commission of New York* v. *Federal Power Commission*, 257 F. 2d 717, 720 (3d Cir. 1958), aff'd sub nom. *Atlantic Refining Co.* v. *Public Service Commission*, 360 U.S. 378 (1959); *Central Illinois Public Service Co.*, 4 F.P.C. 1043 at 1044–45 (1945); and *Lynchburg Gas Co.*, 24 F.P.C. 955 at 958 (1960). Investors in the natural gas industry, although granted an opportunity for a "fair return", are by no means guaranteed freedom from risk or competition.

In the instant proceeding little guidance is to be obtained from previously decided cases, nor are there any cases cited by the parties hereto which bear precisely on the present situation. There have been numerous cases where applications by a new pipeline to serve a territory exclusively served by another pipeline have been considered by the Commission and the Courts. Such applications have invariably been granted, based upon a finding, either that the existing pipeline was unable to adequately serve the area, or, if it was found that the existing pipeline could, and was willing to, expand its capacity to provide the necessary quantities of gas, the courts and the Commission have nevertheless permitted entry of the second pipeline on the premise that two sources of supply were better than one.

Where it was claimed that a loss in sales to the existing pipeline would result by reason thereof, the courts have pointed out that such loss, if any, would be made up by incremental sales. But it does not appear from a careful search of past decisions, that the Commission has ever been called upon to consider a case where the advantages to be gained by the entry of the new pipeline had to be weighed against a resultant increase in rates to the consumers.

Typical of cases heretofore adjudicated is *Home Gas Co.* v. *F.P.C.*, 231 F. 2d 253. Home purchased gas from The Manufacturers Light and Heat Company which it resold to the local distributors, Rockland Light and Power Company and Central Hudson Gas and Electric Corporation. Following the authorization of Tennessee Gas Transmission Company's entry into the New York market, the Commission certified sales by Tennessee to Rockland and Central Hudson to the extent of 5000 Mcf per day or 1,287,000 Mcf per year. Home and Manufacturers appealed from the Commission's order. The Court found that it was in the public interest to permit sales by Tennessee to Rockland and Central Hudson in that the consumer would be able to purchase gas at a lower rate than purchases from Home would permit and secondly, protection would be provided against failure of the gas supply in the event of an emergency breakdown on Home's pipeline. In response to Home's argument that purchases by Rockland and Central Hudson from Tennessee would result in a loss of profit by Home by reason

of reduced sales, the Court affirmed the Commission's finding that Home's total annual sales would be unaffected and would continue above the level on which Home's present rates were based. The Court further concluded that the issuance of a certificate of public convenience and necessity to serve an area not served by any other pipeline at the time did not confer any vested right to continue to serve that area exclusively, or preclude the Commission from granting a certificate "for service of an area already being served by another natural gas company." *Kentucky Natural Gas Corporation* v. *F.P.C.*, 159 F. 2d 215, 218.

In *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 169 F. 2d 881, cert. denied 335 U.S. 854, there was an appeal from an order of the Commission authorizing the Michigan Wisconsin Pipe Line Company to construct a pipeline into the Michigan-Wisconsin area presently served by Panhandle, in which the largest market was the Detroit-Ann Arbor area in Michigan. There the Court, on page 882, affirmed the Commission's findings to the extent that

> The consuming public in Detroit and elsewhere has * * * been unable to receive natural gas in sufficient volume to meet its needs and desires by reason of the inability of distributing companies to obtain adequate quantities of such gas * * *.
>
> * * * * * * *

and at page 883,

> * * * entry of Michigan-Wisconsin will have advantages over service, however expanded, by Panhandle alone. It will result in competition there, and will also make "available to the Michigan market an alternative service and supply of natural gas from the area of the largest gas reserve in the United States. That such an independent additional and reliable source of supply will be of great value to the area to be served and benefit public convenience and necessity admits of no doubt."

The Court took cognizance of Panhandle's ability to expand its capacity so as to adequately serve the area, but nevertheless held that nothing in the Natural Gas Act guaranteed an existing supplier a perennially exclusive claim on the market so served. Moreover, the Court reiterated the fact that Section 7(e) of the Act requires the Commission to issue a certificate to any qualified applicant where the service to be furnished is required by the public convenience and necessity. Contrary to Panhandle's contention, the Court also found that there would be no detrimental effect on Panhandle's volume of sales because Panhandle's customers would continue to purchase their contract volumes, at least for the life of the existing contracts, and that at the expiration thereof, incremental sales would develop by reason of the rapidly expanding Detroit-Ann Arbor area.

The difference between the above cases and the instant case is that in the former, it was found that the entry of a new pipeline into the area would not adversely affect the existing pipeline and the prevailing consumer rate. To the contrary, in each case both the Court and the Commission found that the entry of an additional pipeline enhanced the status of the consumer. There is no indication in either of the above opinions as to whether the outcome would have been otherwise had the effect of the entrance of another pipeline into the area been to increase the consumer rate. This is a question which apparently remains to be answered in this proceeding. No case has been encountered, nor has any been cited by the parties hereto, where the Commission or the courts have denied entry of an additional pipeline into an area heretofore exclusively served.

In addition to the generally recognized advantages of the availability of a second source of natural gas, such as the presence of an alternate supply in the

event of an emergency, or the benefits to be derived from competition, there are additional benefits which inure, and are unique, to the public in the St. Louis area. Under present circumstances, as has been testified to by industrial witnesses supporting the Oklahoma Illinois application, the industrial companies are able to purchase only those limited quantities of gas which Fuel makes available.[8] These quantities have not kept pace with customer requirements. The net effect could well be to effectively atrophy further industrial expansion, in that large industrial companies requiring a constant, plentiful supply of gas, could not be expected to move into an area without any assurance thereof. There has been testimony during the course of this hearing to the effect that industrial activity in the St. Louis area is on the wane. If such be the case, it may well be that the controlled supply of limited quantities of gas at a pace and price dictated by the only supplier could be a contributing factor thereto. It obviously would not be in the economic welfare of the public as a whole to permit such a condition to persist.

It has further been testified to by the Owens-Illinois Glass Company witness that because of the highly competitive state of the glass market, the high fuel and freight costs incurred at its Alton Plant, and the fact that Owens-Illinois has been unable to sell its full production in the St. Louis area, it might be necessary to shift a substantial part of its production to newly constructed plants nearer its markets. The not inconsiderable loss of employment and consequent adverse effect on the economy of the greater St. Louis area which could result therefrom would again not react to the public benefit.

It is axiomatic that the industrial concerns in the area cannot fail to benefit from the competition generated by the incursion of another pipeline into the area. Historically, the fact is that since 1929 the industrials in the St. Louis area have been called upon to pay, not the market price of natural gas, or a price resulting from arm's-length negotiation, but a price pegged at whatever the traffic would bear, governed only to some slight degree by the price of other fuels. But to those of Fuel's industrial customers to whom natural gas is an indispensable requisite to production there is not even this slight controlling factor. The immediate effect of competition in the area is graphically illustrated by Exhibit 188, prepared at the request of the Presiding Examiner. Based on Fuel's actual volume of sales in 1962 to the industrial concerns which have contracted to buy gas from Oklahoma Illinois, which volumes are considerably below the volumes these same concerns have contracted to buy from Oklahoma Illinois, a minimum savings of $966,471 would have been effected had their gas requirements for that year been purchased from Oklahoma Illinois rather than Fuel. Based on projected full requirements the estimated savings is purported to be $2,354,239.[9]

Essentially, Fuel's reply to the possible invasion of another pipeline and the industrial concerns' demand for cheaper and more plentiful natural gas as here-

---

[8] This statement is based on the testimony of witnesses who support the Oklahoma Illinois application. Fuel has presented no witnesses from any of its other industrial customers who might have testified that Fuel was in fact meeting its customer requirements. To such extent it is considered that the testimony of the industrial witnesses supporting the Oklahoma Illinois application stands unrefuted.

[9] *Granite City Steel Co.* v. *F.P.C.*, 320 F. 2d 711, was decided on May 23, 1963 during the course of this hearing. The Court there reversed the Commission's allocation of Fuel's available gas supply which had given the utilities a greater share thereof and correspondingly diminished the volumes theretofore allotted to the industrials. The effect of the court's decision was to place the industrial concerns, supporting the Oklahoma Illinois application in the "status quo" they had enjoyed prior thereto. Following the issuance of the *Granite City* decision the Presiding Examiner in this proceeding thereupon polled the industrial concerns as to whether there would be any change with respect to their position in this proceeding. It is significant that they unanimously affirmed their support of the Oklahoma Illinois application.

inbefore discussed, is that if compelled to compete with another pipeline, and reduce its price to industrial customers, the result would be an increase in rate to the private consumer. The converse of this proposition is then that the more Fuel charges its direct industrial customers, the less will be the price to domestic or jurisdictional consumers. The absurd extremes to which such an argument could be carried is obvious. While the purpose of the Act is to prevent exploitation of the ultimate consumer at the hands of natural gas companies, *F.P.C.* v. *Hope Natural Gas Co.*, 320 U.S. 591, it could hardly have been the intention of Congress, in enacting the Natural Gas Act, to permit the uncontrolled exploitation of industry for the benefit of the domestic consumer. Section 1(b) of the Natural Gas Act provides that:

> The provisions of this Act shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption, for domestic, commercial industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, * * *

As originally enacted on June 21, 1938, (Public Law No. 368, 75th Cong.) Section 7(c) of the Natural Gas Act, in pertinent part read as follows:

> In passing on applications for certificates of convenience and necessity, the Commission shall give due consideration to the applicant's ability to render and maintain adequate service at rates lower than those prevailing in the territory to be served, it being the intention of Congress that natural gas shall be sold in interstate commerce for resale for ultimate public consumption for domestic, commercial, industrial, or any other use at the lowest possible reasonable rate consistent with the maintenance of adequate service in the public interest. (52 Stat. 825 (1938).)

That this statement in the original Natural Gas Act is looked upon with approval by the courts, and is still considered as the prevailing purpose of the Act, even after the 1942 amendment which eliminated this section, is confirmed by the following statement from *Atlantic Refining Company* v. *Public Service Commission of New York*, 360 U.S. 378, 388 (1959.)

> The purpose of the Natural Gas Act was to underwrite just and reasonable rates to the consumers of natural gas. *Federal Power Com.* v. *Hope Natural Gas Co.*, 320 U.S. 591, 88 L ed 333, 64 S Ct 281 (1944). As the original § 7(c) provided, it was "the intention of Congress that natural gas shall be sold in interstate commerce for resale for ultimate public consumption for domestic, commercial, industrial, or any other use at the lowest possible reasonable rate consistent with the maintenance of adequate service in the public interest." 52 Stat. 825.[7] The Act was so framed as to afford consumers a complete, permanent and effective bond of protection from excessive rates and charges.

[7] The 1942 amendments to § 7, 56 Stat. 83, were not intended to change this declaration of purpose. See Hearings, House Interstate and Foreign Commerce Committee, on HR 5249, 77th Cong, 1st Sess 18–19; HR Rep No. 1290, 77th Cong., 1st Sess; S. Rep. No. 948, 77th Cong, 2d Sess.

To this same effect see also *F.P.C.* v. *Transcontinental Gas Pipe Line Corp.*, 365 U.S. 1, 19; *Sunray Mid-Continent Oil Co.* v. *F.P.C.*, 364 U.S. 137, 147.

In *Colorado Interstate Gas Co.* v. *F.P.C.*, 324 U.S. 581, 596, Mr. Justice Rutledge, speaking for the majority, stated as follows:

> A substantial part of that gas is sold to Colorado Interstate for resale to direct industrial customers. Canadian maintains that the Commission has no authority to fix the rate on the sale of that portion or class of gas to Colorado Interstate. § 1(b) of the Act, however, provides, as we have noted, that the provisions of the Act apply "to the sale in interstate com-

merce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use." Canadian, however, seeks support for its position in the declaration in § 1(a) of the Act that "the business of transporting and selling natural gas for ultimate distribution to the public is affected with a public interest." But we find no warrant for saying that the words "ultimate distribution to the public" imply distribution to domestic users alone. Industrial users are as much a part of the "public" as domestic users and other commercial users. And the distribution to one is as "ultimate" as the distribution to the other. Moreover, that declaration of policy may not be used to take out of § 1(b) of the Act the express provision subjecting to regulation gas sold for resale for "industrial use."

This conception was recently followed in *Granite City Steel Co.* v. *F.P.C.*, *supra*, where the Court apparently equated non-jurisdictional direct sales to industrials, to jurisdictional sales for private consumption when it reversed the Commission's action allocating to the consumers gas volumes previously sold to the industrials.

It is thus indisputable that direct sales by pipelines to industrial concerns are included in the term "ultimate public consumption" as used in the original Section 7(c) of the Act, and that the Court in the *Atlantic Refining Co.* case, *supra*, intended to include industrial concerns when it referred to "consumers" in that portion of the text hereinabove cited.

A further consideration in the determination of whether the public interest in the St. Louis area would be better served by the availability of an additional source of supply, rather than the existing single source, is whether the single supplier, if permitted to remain such, would in the future be sufficiently motivated by concern for the public interest to the extent that it would give priority to the increased gas requirements of its utility customers rather than to the admittedly more profitable increased volumes of direct sales to its industrial customers at unregulated rates. In *Northern States Power Co.* v. *F.P.C.*, 118 F. 2d 141, 144, quoted in *Alabama Power Company* v. *F.P.C.*, 128 F. 2d 280, 288, the Court stated:

> The grant of a license, being a privilege from the sovereign, can be justified only on the basis of benefit to the public.

Speaking of the purpose of the Natural Gas Act, the Supreme Court in *Panhandle Eastern Pipe Line Co.* v. *Public Service Commission of Indiana, et al.*, 332 U.S. 507, 521, stated:

> It could accomplish neither that protective aim nor the comprehensive and effective dual regulation Congress had in mind, if those companies could divert at will all or the cream of their business to unregulated industrial uses.

This view was also expressed in *United Fuel Gas Company, et al.*, v. *Railroad Commission of Kentucky, et al.*, 278 U.S. 300, 309, where it was stated:

> The primary duty of a public utility is to serve on reasonable terms all of those who desire the service it renders. This duty does not permit it to pick and choose and to serve only those portions of the territory which it finds most profitable, leaving the remainder to get along without the service which it alone is in a position to give.

The Court's unanimity of opinion on this score is demonstrated by the almost identical language used in *Northeastern Gas Transportation Company* v. *F.P.C.*, 195 F. 2d 872:

> It is inconceivable that anyone desirous of promoting the public good should urge that we now authorize one engaged in a business affected with the public interest to pick and choose whom it wishes to serve without proper regard for the public good.

and in *People ex rel. New York Gas Company* v. *McCall*, 245 U.S. 345, 351, where the Supreme Court reiterated:

> Corporations which devote their property to a public use may not pick and choose, serving only the portions of the territory covered by their franchises which it is presently profitable for them to serve. * * *

There is little purpose to be gained by repetition of the long history of contention between Mississippi and its utility customers. The facts with relation thereto are graphically set forth in the Presiding Examiner's decisions of September 13, 1960, 27 FPC 713, and December 1, 1961, 27 FPC 748, Docket No. G–17567, *et al.*, resulting from the complaint proceeding, brought by these same utility customers, which culminated in the Commission's opinion in *Arkansas Louisiana Gas Company, et al.*, 27 FPC 697 (Opinion No. 355) rehearing denied 27 FPC 1257.[10] The Presiding Examiner's decisions are replete with excerpts from the testimony registering complaints by the utilities concerning the lack of gas supply, statements made by Mississippi's executive officers to the effect that Fuel had no intention of expanding its own capacity, and further statements by these same executives to the effect that the primary concern of the company was service to its industrial customers and secondarily to the utilities to which it makes sales of gas subject to this Commission's jurisdiction.[11]

The conclusions of the Presiding Examiner in that proceeding were in the main affirmed in Commission Opinion No. 355, *supra* (reversed in the *Granite City Steel* case, *supra*, but only insofar as the allocations of gas made therein were abrogated) by the following findings of fact at 27 FPC 703:

> The record shows that Mississippi has not met the demands of its utility customers, and they have waiting lists of consumers desiring service. Laclede, whose contract with Mississippi is in terms for its full requirements, has not been granted an increase in its stated demand by Mississippi since 1955.
>
> * * * * * * *
>
> While Mississippi continued to serve its industrial customers, the record shows that it would not extend additional service to its utility customers except through Transmission at the high costs of a new pipeline. As noted above, the Commission authorized the Transmission project, but in the light of the present record we are of the opinion that it was not in the public interest to establish this separate supplier of gas and to impose the high costs of the new pipeline wholly on Laclede and Illinois Power. Ordinarily, the costs of pipeline extensions are "rolled-in" so that all customers bear the new costs consistent with the principles of cost allocation employed by the Commission.
>
> * * * * * * *
>
> On the basis of the record and within the scope of the proceeding we agree with the examiner that a remedy is required. Mississippi has retained and extended its service to its industrials including those served under contracts which it claims are firm but which are, in effect, interruptible while its utility customers have been greatly restricted except for service through Transmission. Mississippi, in effect, has not performed its utility obliga-

---

[10] Affirmed in part and reversed in part by the Court of Appeals for the District of Columbia in *Granite City Steel Company, et al.* v. *F.P.C.*, 320 F. 2d 711.

[11] 27 FPC 716, 724 725, 726, 735, 740, 748, 750, 755—footnote 6 thereon, 756, 757, 761, 764, 772, 773, 780, 782.

tion to its utility customers including the domestic and commercial consumers served by them.

* * * * * * *

In this regard, Mississippi must give first consideration to the requirements of its utility customers to meet the needs of domestic and commercial users of natural gas.

It was freely admitted by Mississippi's Chief Executive officer in the complaint proceeding that the only purpose for which Transmission was created was to avoid the diminution of profits from industrial sales which would result from expansion of Fuel's capacity. The fact that the domestic consumer would thereby be compelled to pay a higher rate because the price to be received by Transmission from its utility customers was 46.3 cents per Mcf at 75 percent load factor, in contrast to Fuel's price to those same utilities, of 31.7 cents per Mcf at 60 percent load factor, was of little consequence or concern to Fuel. It is obvious that Fuel's only interest was the preservation of its inordinately high industrial sales profit margin. It is realized that the profit motive is perfectly proper and that Mississippi, or any other pipeline, is by no stretch of the imagination because of the fact that it is regulated, required to operate as an eleemosynary institution. However, the profits of an industrial concern in the public service licensed to do business by the Government must be tempered by its primary obligation to adequately serve the needs of the public. The following excerpt from *Dayton-Goose Creek Railroad Company* v. *U.S.*, 263 U.S. 456, 461 confirms this principle:

> By investment in a business dedicated to the public service the owner must recognize that, as compared with investment in private business, he cannot expect either high or speculative dividends but that this obligation limits him to only fair or reasonable profit.

It has been said that "what is past is prologue."[12] This aphorism is particularly applicable to the present situation. Under the circumstances, and based on past performance, the conclusion is not warranted that the "leopard will change its spots" and that Mississippi's primary objective in the future under its present management will be public service rather than profit.

Consideration of all the facts hereinabove discussed therefore leads to the conclusion that perpetuation of a monopoly insofar as natural gas supply is concerned, when competition is available, would not further the economic welfare of the public in the St. Louis area; would not provide the economic relief to the industrial concerns in the area which free competition would foster; and would not give the utilities that freedom from domination by a single supplier which the presence of another and competing pipeline in the area would furnish. It is therefore found (1) that public convenience and necessity require the presence of a competitive pipeline in the St. Louis area, and (2) that the increase in rates to the consumers, if any, which may result from the entry of another pipeline in the St. Louis area is more than offset by the benefits to be derived therefrom.

THE PANHANDLE APPLICATION

Details of the Panhandle proposal have hereinbefore been set forth. Briefly, Panhandle proposes to construct 53 miles of supply line running from its existing mainline facilities at a point near Glasgow, Illinois to a point in the St. Louis area near Alton, Illinois so as to transport and deliver 65,800 Mcf per day

[12] Inscription on the National Archives Building in Washington, D.C.

of natural gas for sale in the St. Louis area on a firm basis. The gas is intended to be taken by displacement from Panhandle's Howell Storage Field, the capacity of which will be increased to accommodate the required increased volumes. The estimated cost of the project is $6,036,000 which will be financed from funds on hand.

No specific customer designation is made for delivery of any or all of the proposed volumes, but the fact is that Panhandle's application in its present form would permit sales to none other than Fuel. In the first place, Panhandle's new LS–2 rate pursuant to which Panhandle proposes to make sales in the St. Louis area is restricted to partial requirements customers purchasing gas for resale. There is no indication in the application that any other sales, jurisdictional or otherwise, are contemplated. Secondly, it is shown that Panhandle's proposed line will terminate at a point in the Alton-East Alton area where the only facilities purportedly capable of receiving the gas Panhandle proposes to bring to market are owned by Fuel. However, there is no evidence in the record showing that it would be possible for even Fuel to take the gas at that point in the volumes proposed to be delivered by Panhandle, either on a peak day or annually. Panhandle's Exhibits 71 and 72 demonstrate only those connecting facilities proposed for service to Fuel near Alton, Illinois. No other exhibits are in the record which would indicate any intention to connect up to other customers. The conclusion is thus warranted that at the time of filing its application, Panhandle contemplated sales only to Fuel.

Casual reference was made by Mr. Schomaker, Panhandle's design witness, to possible industrial sales, and there was further mention thereof in Panhandle's reply brief and during oral argument. But, ignored in connection therewith is Mr. Schomaker's further testimony on cross-examination that in order for Panhandle to make direct industrial sales it would be necessary to construct an industrial distribution system in addition to the facilities Panhandle proposes to construct under the instant application. No mention thereof appears in such application, nor is the cost of the contemplated industrial distribution system included in the $6,036,000 total estimated cost of the Panhandle project.

It appears that the matter of industrial sales insofar as Panhandle's application is concerned constitutes nothing more than an afterthought, and, as such, little consideration can be given thereto at this point. It has been aptly stated that:

> These comparative contests must turn on a concrete proposal tested through the hearing process, not upon facile and untested afterthoughts. *W. S. Butterfield Theaters* v. *FCC*, 237 F.2d 552, 559.

Thus in the absence of any statement in Panhandle's application as to the specific type of authorization desired, the new LS–2 rate schedule and the intended point of delivery of the proposed facilities effectively eliminate all but Fuel as a potential customer of Panhandle. Fuel, however, has rejected the possibility of any service from Panhandle and the industrial concerns mentioned by Mr. Schomaker as possible customers, which concerns are under contract to Oklahoma-Illinois and presently buy gas from Fuel, have also indicated no intention to discontinue service from Mississippi in the event Oklahoma-Illinois' application is denied.

Panhandle's suggestion that the Commission certify its project, subject to the filing of firm commitments within a reasonable time after issuance of the Commission order, is without merit. There would be no purpose to certification of a pipeline which has not identified or undertaken to show a market for the gas it proposes to transport. While a firm commitment for the sale of a proposed gas supply need not in all cases be submitted, *Midwestern Gas Transmission Company* v. *F.P.C.*, 258 F. 2d 660, 665, an applicant in a certificate pro-

ceeding must nevertheless show that there exists in the territory intended to be served a reasonable expectation that there are customers who will purchase the gas brought to market. *Kansas Pipe Line and Gas Company, et al.*, 2 FPC 29, 45. It is not the Commission's function to act as Panhandle's sales agency and find customers for Panhandle's gas. In *Northern Natural Gas Company, et al.*, Docket No. CP62–85, *et al.*, 30 FPC 859, 864, Opinion No. 404, the Commission stated that:

> The general rule which has developed for expansion which includes sales to large volume industrial customers is that firm commitments will be required only where the contemplated sales appear to have a strong bearing on the economic feasibility of the project, and where there is reason to question whether in fact the sales will be made. See *Kansas-Nebraska Natural Gas Company, Inc.*, 29 FPC 1058, 1067, Opinion No. 389 (1963); *City of Grant City, Missouri*, 29 FPC 754, 758, Opinion No. 386 (1963); *Midwestern Gas Transmission Company*, 22 FPC 775.

In the instant case it is found that the contemplated sales by Panhandle will have a direct bearing on the economic feasibility of its project, and that on the evidence in the record there is substantial reason to doubt that the industrial sales will be made. Panhandle has failed to demonstrate that the public convenience and necessity warrant certification.

There are additional deficiencies to be found in Panhandle's application. Some question has been raised with respect to the ability of the Howell Storage Field to sustain daily withdrawals of 65,000 Mcf in addition to the 65,000 Mcf per day presently certificated. In *American Louisiana Pipe Line Company, et al.*, Docket No. G–2306, *et al.*, 28 FPC 211, 223, the Presiding Examiner in a decision adopted by the Commission stated:

> Panhandle indicated that with the number of wells it projects having available at Howell it would not run into a problem of hydrate formation until the withdrawal rate is at least 70,000 Mcf per day (Tr. 28,611).[17] Consequently hydrates would cause no problem in delivering the required 65,000 Mcf per day. Panhandle further indicated that with compression it could deliver about 64.5 MMcf from Howell when the field is drawn down to 15.6 billion cubic feet[18] (Tr. 28,682). This approximates the required amount. There does not appear to be any reason that Panhandle would be unable to meet the demand which it indicates it would put upon Howell. The delivery of 65,000 Mcf per day on any day during the winter season would appear to be the limit of the ability for Panhandle to depend upon Howell; no more than this amount of contract demand should be placed upon it with the proposed facilities and working storage gas.

To achieve the expansion necessary to overcome the limitation on deliverability therein referred to, Panhandle proposes to drill 20 additional injection-withdrawal wells and to install 2000 hp additional compression. But there is considerable reason to doubt whether these additional facilities will accomplish the desired result. It is Panhandle's claim that with the additional wells and compression it will be possible to make successive daily withdrawals of 130,000 Mcf of gas as long as the reservoir gas content therein is maintained at 18 billion cubic feet. However, it was readily admitted by Mr. King, Panhandle's manager of underground storage, on cross-examination, that data in addition to that presented in Panhandle's Exhibit 69 (the exhibit principally relied upon by Panhandle with regard to the capacity of the Howell Storage Field) would be necessary before it would be possible to determine the capability of the Howell Field to receive the injection volumes and deliver the required withdrawal volumes as scheduled. The additional information lacking from the

Panhandle presentation which would be necessary to determine the validity of the projections in Exhibit 69, includes, among other things, data with respect to the permeability porosity, and thickness of the reservoir and individual back pressure curves for each well. Without these figures the speed with which the reservoir could transmit gas to the wellbores to replace the quantities withdrawn cannot be determined. Similarly lacking is the data requisite to a determination of the actual size of the reservoir such as the delineation of its outer limits and the exact location of the "fault." In the absence of such data, it is concluded that the evidence of record is insufficient to support a finding that the Howell Storage Field is capable of furnishing sustained withdrawals of 130,000 Mcf per day.

It must also be noted that Panhandle has failed to comply with the requirements of Section 157.14(10)(iv) of the Commission's Regulations which require submission of a deliverability study showing the daily volumes which can, or are proposed to be obtained each year from each source of supply; nor did Panhandle furnish any evidence as to the volumes of gas required to meet the peak-day requirements of the proposed new service.

Aside from the technical objections to the Panhandle application, consistent with the discussion hereinbefore set forth with respect to the monopoly situation in the St. Louis area, perhaps the most cogent reason for disapproval thereof is that with Fuel as Panhandle's only customer the monopoly situation in that area would continue to exist. The reasons why it is not deemed to be in the public interest to perpetuate this monopoly have been hereinbefore discussed at length. These reasons apply with equal force to the Panhandle application. No purpose would be served by a reiteration thereof at this point. Accordingly, the Panhandle application is denied.

THE OKLAHOMA ILLINOIS APPLICATION

The ramifications of the Oklahoma Illinois project have hereinbefore also been described in detail. In brief, Oklahoma Illinois proposes to construct transmission, supply and gathering facilities which would enable transportation of up to 105,000 Mcf per day of natural gas from dedicated leaseholds in newly developed fields in northwest and southeast Oklahoma, respectively, through Oklahoma, Kansas and Missouri to Alton, Illinois at an estimated cost for the entire project of $64,000,000.

The original application presented three types of contracts: (1) industrial gas purchase contracts between the producers and the industrial concerns with title to pass and deliveries to be made at the wellhead at an initial price of 18 cents per Mcf for the first five years with escalations of 2½ cents for each five years thereafter. In turn, the industrial concerns executed agreements with Oklahoma Illinois for transportation of the gas from the delivery point in the field to their respective industrial plants in the St. Louis area. (2) Contracts (designated P–2) for the sale of gas, from the same acreage dedicated to the industrial gas purchase contracts, to Oklahoma Illinois which contracts were expressly made subordinate to the industrial gas purchase contracts at the same 18-cent price and escalation provisions. (3) Contracts (designated P–1) between Oklahoma Illinois and the producers for the sale of firm gas from acreage other than that dedicated to the industrial and P–2 contracts, also, at 18 cents per Mcf and including the same escalation provisions.

As hereinbefore noted, the Oklahoma Illinois application was modified during the course of the hearing in that counsel for Oklahoma Illinois and the producers advised that there would be no objection by the parties concerned to the issuance of a certificate which would authorize only jurisdictional sales from the producers

to Oklahoma Illinois at the interim area guideline price established by the Commission of 17 cents per Mcf for 1000 Btu gas from northwest Oklahoma and 15 cents per Mcf for gas produced from the Red Oak Field in southeast Oklahoma. The producers, with the exception of Shell, thereafter agreed to waive any demand for upward adjustment in price for gas having more than 1000 Btu content. At the direction of the Presiding Examiner, and in order to conform the record, details in connection therewith were presented in what has been designated as the "C" series of exhibits.

It takes no more than a cursory inspection of the Oklahoma Illinois proposal as presently constituted, and as detailed in the "C" series of exhibits, to arrive at the conclusion that such proposal encompassing jurisdictional sales from producer to pipeline at prices set by the Commission is obviously more in the public interest and therefore infinitely more palatable to the Commission than the original proposal. In the consideration by the Commission of alternate proposals by the same applicants, one of which on its face would be more acceptable, to the exclusion of the other, there would be little purpose to be gained by extended discussion of the less attractive alternate. In view of the above modification in the Oklahoma proposal, it is therefore deemed unnecessary to devote either time or space to consideration of the Oklahoma Illinois application in its original form. The Oklahoma Illinois application, as modified by the "C" series of exhibits, and as hereinafter conditioned, is approved, and the discussion following setting forth the reasons therefore will be limited to that proposal.

It is the contention of the parties opposed to the Oklahoma Illinois application that the requirements of due process preclude issuance of a certificate of public convenience and necessity to Oklahoma Illinois because of the revisions to the project originally proposed as reflected in the "C" series of exhibits. In support of this contention there is cited the following excerpt from *American Louisiana Pipe Line Company, et al.*, 20 FPC 575, 586 (1958):

> Nor would it be proper in this case to undertake by conditions to revise any of these projects in an attempt to support their authorization. Even extensive conditions may be found reasonable in the circumstances of particular cases. See *e.g.*, *Houston Texas Gas & Oil Corp.*, 16 F.P.C. 118, affirmed, *Florida Economic Advisory Council* v. *F.P.C.*, 251 F. 2d 643 (CADC) certiorari denied, 356 U.S. 959. However, the conditions that would be required here would necessarily be so far-reaching as to redesign the projects entirely. The effect would be to preclude proof that the projects are required by the public convenience and necessity. And in this competitive case, it would deny the competitors the hearing on the new projects to which they are entitled under the law.

But it is to be noted in the above cited case first, that the Court limits its remarks to *this* "case" and secondly, that it is specifically stated therein that "even extensive conditions may be found reasonable in the circumstances of particular cases." In the opinion of the Presiding Examiner this is such a "particular case" and it is further found that the conditions to be attached are not so extensive as to redesign the project. The physical facilities involved and the basic issues remain the same; still for determination is the primary question as to whether the present or future public convenience and necessity will be served by providing an additional source of natural gas supply in the St. Louis area.

Assuming that the question posed in the preceding paragraph is answered in the affirmative, and that Oklahoma Illinois had stood on its originally proposed project, there would be nothing to prevent the Commission from molding such proposal, if otherwise acceptable, to that shape and form which would best

serve public convenience and necessity, by the imposition of the very conditions volunteered by Oklahoma Illinois and its supporters. The courts have even gone so far as to sanction transformation by the Commission of a defective proposal to a valid one by "the addition of curative conditions," *Florida Economic Advisory Council* v. *F.P.C.*, 251 F. 2d 643, 646, cert. denied 356 U.S. 959. Moreover, the changes effected, and the Presiding Examiner's elimination from consideration of any proposal by Oklahoma Illinois other than that which it is deemed best serves the public convenience and necessity, actually resolve the very issues which would be, and have been, raised by the opposing parties in connection with the "A" and "B" proposals, *i.e.*, the Mississippi, Natural, Laclede and Staff, *et al.* attack on Oklahoma Illinois' "A" and "B" proposals insofar as Oklahoma Illinois attempted to prove that direct non-jurisdictional sales from producer to industrials are in the public interest.

The project in its present form, in any case, is essentially the same as the project originally presented insofar as the physical facilities involved are concerned. Remaining the same are the quantum of proof required with respect to reserves and deliverability; each condition under the "C" proposal was tested by cross-examination; the volumes proposed to be sold, the prices to be charged, the parties to the proceeding, the pipeline to be constructed and the estimated cost thereof are the same. In a similar situation where the issue of due process was raised, the Court in the *Florida Economic Advisory Council* case, *supra*, stated on pages 648, 649:

> *Conditions.* The Commission found that the plan was defective as it then stood, but it found that if certain conditions were complied with, the defects would be cured. It granted the certificate subject to these curative conditions, without hearing what petitioner had to say about them. Petitioner says it should have been heard, because the conditions transformed the proposal into an entirely new proposition. We think not. The conditions only resolved issues raised, argued and briefed in the hearing. They involved no surprises except insofar as they may have gone farther or not so far as petitioner would have wished. * * *
>
> * * * * * * *
>
> No useful purpose would have been served by reopening the proceedings to hear petitioner argue that 15% was not proper. * * *

Here, as there, no useful purpose would be served by limiting the hearing to a consideration of the original Oklahoma Illinois application. The only result thereof, in the event of a denial of such application, would have been a second hearing involving the same physical facilities and the same parties. Under the circumstances it is therefore found that none of the parties hereto have been deprived of due process by reason of the changes effected in Oklahoma Illinois' original proposal.

Corporate structure and affiliation

Oklahoma Illinois is a Delaware Corporation organized in May 1961, having three stockholders with the ownership interest divided among them as follows:

Pan American Petroleum Corporation, 46.5 percent.
Shell Oil Company, 33.5 percent.
Fish Engineering Corporation, 20 percent.

All of the Oklahoma Illinois directors and officials are also officials of one of the three stockholder companies.

In addition to their ownership interests in Oklahoma Illinois, Pan American and Shell also act in other capacities with regard to the Oklahoma Illinois project. Pan American is a major producer in the dedicated acreage in northwest Oklahoma as is Midwest Oil Company in the acreage in South-

east Oklahoma. These are the two fields from which the gas to be transported to the St. Louis area by means of the Oklahoma Illinois pipeline would be produced. Shell owns gas leases in both fields. Together, all three producers will provide 86 percent of the gas supply contracted for the project. Pan American is a wholly-owned subsidiary of Standard Oil Company of Indiana which also owns 30.14 percent of the stock of Midwest with an additional 30.13 percent of Midwest stock being owned by Standard Oil Foundation, Inc. Two of the largest industrial customers to which the gas transported by Oklahoma Illinois would be delivered are Shell and American Oil Company, another wholly-owned subsidiary of Standard Oil of Indiana.

Pursuant to the agreement between Fish and Oklahoma Illinois, Fish will negotiate in good faith to agree upon a contract covering the complete detailed design, engineering and construction of the facilities certificated by the Federal Power Commission. Fish is to receive for such services "no more than the actual cost of the work to be performed, plus a fee for its services" as computed in the agreement. With regard to gas transmission lines, laterals and gas gathering systems the fee provided is 1½ percent of total costs if the total cost is less than $60 million, 1¼ percent if such cost is $60 million or more but less than $100 million and 1 percent if the total cost is $100 million or more. The fee for compressor stations, meter stations and dehydration facilities runs from 7½ percent if the total cost is $500,000 or less, to 4½ percent if $15 million or more. No executive salaries are included in the costs upon which the fee is based. Fish would not actually construct the main pipeline laterals and gathering facilities; such work would be let out to a sub-contractor on a competitive bid basis, the successful bidder to be awarded the contract by the Board of Directors of Oklahoma Illinois. Affiliated firms on the list of bidders are barred by the insurance companies lending money for the project. Based on the foregoing facts, it is found that the relationship between the present stockholders of Oklahoma Illinois and the services to be rendered by each fall within Section 5(A) Associated Companies, 5(B) Control and (8) Cost, of the Commission's Uniform System of Accounts Prescribed for Natural Gas Companies.

Markets

The markets proposed to be served by Oklahoma Illinois consist of (1) proposed sales to communities; (2) sales to Laclede Gas Company; and (3) sales to industrial customers. Total projected sales for the third year, both firm and interruptible, are estimated at 52,168,583 Mcf at 14.65 psia.

The route of the proposed Oklahoma Illinois pipeline would traverse a section of Missouri that is without natural gas service. A primary reason for certification of the Oklahoma Illinois application is the fact that natural gas would be supplied to an area of closely concentrated communities having a combined population of more than 80,000, presently without such service. As was stated by Mr. Barry, the marketing and engineering witness for several of the intervening communities in this proceeding, "Anyone could take this Federal Power Commission map which is brought up to date every six months showing the location of natural gas pipelines in this country, and see a blank hole staring you in the face in the middle of Missouri."

"The speedy provision of natural gas to communities which need it is a proper administrative objective." *Midwestern Gas Transmission Company* v. *F.P.C.*, 258 F. 2d 660, 665. In a similar situation the courts have further upheld findings by the Commission that a pipeline company seeking permission to construct a natural-gas pipeline from Texas to Michigan, would, in addition to supplementing service in the Detroit area rendered by another pipeline company, provide natural gas for various communities in Wisconsin, Iowa, Missouri and

Michigan which the other company could not serve, establishes that the proposed pipeline was required by "public convenience and necessity", *Panhandle Eastern Pipe Line Company* v. *F.P.C.*, 169 F. 2d 881, cert. denied 335 U.S. 854.

Presented herein are requests for allocations of gas from Oklahoma Illinois which would bring natural gas service to 13 communities in central Missouri to whom gas service is presently not available.

The Gas Service Company, a distributor of natural gas in Missouri, Kansas, Oklahoma and Nebraska, an intervenor in these proceedings, seeks an allocation of natural gas from Oklahoma Illinois to serve the towns of Bolivar and Lebanon in Missouri.

Section 1.8(c) of the Commission's Rules of Practice and Procedure provide that where the purpose of the intervention is to obtain an allocation of natural gas "for sale and distribution by a person or municipality * * *" the petition shall comply with the requirements of Part 156 of this chapter. Section 156.5 of the Commission's Regulations under the Natural Gas Act requires, *inter alia*, that the intervenor submit with his application "a copy of any franchise or similar authorization which applicant has obtained from each of the municipalities in which applicant engages or proposes to engage in the local distribution of natural gas;" among other things.[13] Also required is a flow diagram and a detailed estimate of the total capital cost of the proposed facilities. Gas Service has submitted neither.

There is no authority in the Presiding Examiner to waive the requirements of the Commission's Regulations.[14] However, where the application is otherwise acceptable, it is logical to assume that the Commission would not wish to deprive the towns of Bolivar and Lebanon of a supply of natural gas because of the failure to comply with minor technical requirements of the pertinent regulations. It is considered that the evidence presented in support of the application, aside from its technical deficiencies, is to say the least, marginal. However, public financing is not required and the financial risk involved will be borne by The Gas Service Company and not by the consumer. Gas Service being one of the largest gas distributing companies in the country, is in a position to assume such risk without detrimental effect to its other customers. Accordingly, inasmuch as franchises have been granted to Gas Service Company by Lebanon and Bolivar, it is recommended to the Commission that the regulation concerned be waived and a certificate issued granting the required allocations of natural gas.

Associated Natural Gas Company, having been granted a franchise from the City of Buffalo, Missouri, similarly seeks an allocation of gas from Oklahoma Illinois to enable such service, but has also failed to furnish a flow diagram or detailed estimate of costs as required by the regulation. The remarks hereinabove made with respect to Gas Service Company apply with equal force here. Accordingly, it is recommended that the same action be taken by the Commission with respect to the Associated Natural Gas Company and the City of Buffalo, Missouri.

The Cities of Bourbon, Cuba, Pacific, St. Clair, Steelville, Sullivan, Washington and Waynesville have each filed an application pursuant to Section 7(a) of the

---

[13] Gas Service's original application requested an allocation to construct and operate distribution systems in some 17 communities along the Oklahoma Illinois route in Missouri and to Fort Leonard Wood, an active military installation also in Missouri. On motion by the opposing parties all evidence with respect to these 17 communities was stricken from the record by reason of Gas Service's failure to acquire franchises from the respective communities. It was further ruled with request to the proposed service to the military installation at Fort Leonard Wood that Gas Service had not made out a *prima facie* case.

[14] *Cf.*, *Southern Natural Gas Co., et al.*, Docket No. CP63-26, Opinion No. 424, issued April 6, 1964, 31 FPC 789.

Natural Gas Act for an order by the Commission directing Oklahoma Illinois to construct appropriate facilities to provide initial natural-gas service and are each intervenors in this proceeding. Each city desires to construct its own municipally-owned distribution systems. All own their own water systems and the Town of Sullivan also owns its own electric system.

The exhibits with respect to economic feasibility include maps reflecting the location of each city in relation to Oklahoma Illinois' proposed transmission line and the location of the proposed distribution system within each city. The data submitted indicated the number of customers by classification proposed to be attached in the first, second and third year as well as the estimated annual requirements, maximum day requirements and the basic day factors used in estimating each class and number of customers. Also shown is the estimated cost of each distribution system, the proposed method of financing, the proposed rate to be charged, estimates of cash flow, revenues, expenses and income and the estimated earnings and debt service coverage. In no instance was the debt coverage less than 1.64 times and in one instance ran as high as 2.5 times thus adequately meeting the minimum Commission requirements of at least 1.5 times, *Re Village of Franklin*, 17 FPC 119. Witness John S. Ranson, of Ranson and Company, Inc., a firm engaged in the investment banking business, testified that his company has agreed to purchase the bonds required to finance the individual proposals and that it was highly improbable that there would be any difficulty in carrying out their agreement.

It appears from the evidence that, although the projects are deemed otherwise acceptable, it would be more economical for the Cities of Bourbon, Sullivan, St. Clair and Washington to derive the necessary gas supplies from a common lateral. As a matter of fact, the Cities of Steelville and Cuba, lying south of the Oklahoma Illinois pipeline, have already entered into an agreement to share the cost of a common lateral. Accordingly, on the basis of the evidence of record, it is found that the foregoing projects are feasible and financeable and a certificate granting an allocation of natural gas to the municipalities of all eight communities will be granted, conditioned however upon (1) elections to be held approving the issuance of bonds to finance the projects as proposed and advising the Commission thereof and (2) the execution of an agreement by the municipalities of Bourbon, Sullivan, St. Clair, and Washington for the construction and use of a common lateral from the Oklahoma Illinois mainline.

The municipalities of Rolla and St. James, intervenors in this proceeding, also seek an allocation of natural gas from Oklahoma Illinois. Each plans a municipally-owned distribution system and each presently owns and operates its own water and electrical system. On the basis of the engineering reports submitted in connection with the application indicating the economic feasibility of the project and the commitment by an investment banking firm to buy the proposed bonds of both municipalities at a discount of 5 to 6 percent, it is ordered that a certificate be issued granting an allocation of natural gas to those municipalities conditioned upon elections to be held approving the issuance of bonds to finance the project as proposed with advice to the Commission as to the result of such election.

Oklahoma Illinois proposed to make available for purchase by Laclede Gas Co. volumes of up to 15,000 Mcf maximum daily delivery at an annual load factor of 30 percent for the first year, 40 percent for the second year and 66⅔ percent for each year thereafter, with firm winter peaking service of 15,000 Mcf per day available for the period November 15 through March 15. Laclede, however, has positively expressed no interest in the purchase of gas from Oklahoma Illinois and has actively supported the Natural-Transmission-Fuel applic tion.

Laclede was one of the prime movers in the complaint proceedings heretofore brought against Fuel which resulted in a reallocation by the Commission in Opinion No. 355, *supra*, of Mississippi's total gas supply so as to give the utilities a larger share thereof with a corresponding reduction in the portion allotted to the industrials. In the *Granite City Steel* case, *supra*, the Court reversed the Commission insofar as the reallocations of gas were concerned. This would appear to leave Laclede and the other utilities in the same position they were in prior to instituting the complaint proceeding. Laclede's answer, and the reason given for its support of the Mississippi application and refusal to buy from Oklahoma Illinois in the event Oklahoma Illinois were certificated, is that its increased requirements will be met from the supplies of propane under its 10-year contract with Phillips Petroleum Company, the increased development of storage facilities, and its reliance upon a contract with Fuel to use its "best efforts" to provide the required quantities. Laclede's Exhibit 62, Schedule 1, shows an increase in total maximum day requirements of 84,000 Mcf in 1963, 45,000 Mcf in 1964, 40,000 Mcf in 1965 and 20,000 Mcf in 1966. It is intended that such increases will be met by increased purchases of 15,000 Mcf per day from Fuel until 1966. Reliance is thus necessarily placed on Fuel to use its "best efforts" to provide the increased requirements of pipeline gas.

When questioned as to the basis of Mississippi's "best efforts" in view of the past stormy relationship between them, Laclede's vice-president testified that "we think with the Commission's help we have brought them to heel" and that "I don't think they want to go through another complaint case and I think they will perform," to which was added, "My judgment may be very bad, I don't know." It thus appears that some doubt as to Fuel's best efforts still lingers in the mind of Laclede's directorate and on the basis of past history as hereinbefore discussed it is possible such misgivings may well be justified.

In the complaint proceeding in 1960, *supra*, Laclede's President testified as follows:

> Q. Tell me, Mr. Derrick, what is your position with respect to Mississippi's obligation to supply Laclede with its increasing gas needs?
>
> A. We believe that Mississippi * * * has the responsibility to make every reasonable effort to supply our actual gas requirements. But whatever the reason, Mississippi has failed to do so. We believe that in these circumstances we are entitled to seek the assistance of this Commission in increasing our stated demand if any of the gas is available on Mississippi's system and in modifying Mississippi's tariff to the extent that it will make it possible for us to take more gas without subjecting ourselves to the payment of outrageously high penalties.
>
> Q. Now, if Mississippi is not able or is unwilling to meet your requirements, then what do you plan to do?
>
> A. In that event we would feel that we have no alternative but to look elsewhere for part of the gas supply which we simply must have if we are going to continue meeting our public utility obligations to the people of St. Louis.

In view of the above, it does not appear that the situation has changed so drastically since that time as to presently preclude the possibility of sales to Laclede, in the event another source of supply should appear on the scene.

The record shows that at one time negotiations were carried on between Oklahoma Illinois and Laclede with respect to participation as a stockholder of Oklahoma Illinois. It appears that the deal collapsed by reason of Laclede's insistence on ownership of more than 50 percent of the Oklahoma Illinois stock. The mere fact that negotiations for participation took place would indicate that Laclede at least considered doing business with Oklahoma Illinois. The

circumstances herein appear very similar to the situation which existed in *Midwestern Gas Transmission Co.* v. *F.P.C.*, 258 F. 2d 660, 666 where the court said:

> As we have shown above, Midwestern solicited commitments from the various distributors in Natural's service area. Peoples, the largest of the distributors and Natural's parent company, flatly refused to buy gas from Midwestern. Natural's other distributors, though in need of additional gas and willing to buy it from any certificated supplier, quite naturally would not commit themselves to Midwestern's proposal while Natural was still in competition for the certificate. To say that they would not buy gas from Midwestern even if it became a certificated supplier is unrealistic.

Industrial Sales

The 14 industrial concerns which contracted with Oklahoma Illinois for supplies of natural gas are each nationally prominent and among the leaders in their respective industries. Listed below are the individual concerns and a comparison of the firm and interruptible gas purchases projected for each by Fuel and Oklahoma Illinois in 1964.

PROPOSED ANNUAL VOLUMES FOR 1964

	Mississippi River Fuel (exh. 58) mcf at 14.9 psia		Oklahoma Illinois (exh. 89) mcf at 14.65 psia	
	Firm	Interruptible	Firm	Interruptible
American Oil Co.		3,506,000	2,745,000	2,671,000
American Steel	200,000	181,000	419,000	104,900
American Zinc Co.	800,000		366,400	58,500
Cerro Corp.	900,000	33,000	934,000	182,500
Dow Chemical		633,000	1,220,000	328,000
Granite City Steel	4,600,000	3,779,000	8,500,000	2,750,000
Laclede Steel	2,150,000	1,815,000	3,263,200	1,095,000
National Lead Co.	300,000	50,000	175,000	
National Lead Titanium		2,762,000	2,555,000	2,007,500
Olin Mathieson	675,000	200,000	846,300	248,000
Owens Illinois Glass	2,000,000	1,700,000	4,380,000	460,000
Pittsburgh Plate Glass	1,650,000	200,000	1,058,500	441,000
Shell Oil Co.		5,681,000	6,588,000	3,300,000
C. K. Williams & Co.	180,000		227,200	
	13,455,000	20,540,000	33,277,600	13,646,400

Total Mississippi River Fuel firm and interruptible at 14.9 psia, 33,995,000.
Total Mississippi River Fuel firm and interruptible at 14.65 psia, 34,574,955.
Total Oklahoma Illinois firm and interruptible at 14.65 psia, 46,924,400.

Fuel argues that the industrial sales volumes estimated by Oklahoma Illinois are grossly overstated. But on the evidence of record such contention cannot be sustained. Each of the industrials presented a responsible officer of the company, each of whom testified with regard to their respective gas requirements. In rebuttal, Fuel's witness, Miller testified that the historical load factors of these 14 industrial customers were considerably less than the anticipated 89 percent load factor for all industrial sales reflected by the projected Oklahoma Illinois volumes.

In the first place, it is assumed that the industrial company officials who testified are more familiar with the operations and the gas requirements of their respective companies than Fuel's witness. Secondly, it should be pointed out that the historical load factors referred to by Mr. Miller would of necessity be lower than the Oklahoma Illinois projected load factors, since the former are based on gas purchases of only those volumes made available to the industrials by Fuel in past years, whereas the latter are based on anticipated actual requirements.

Had Fuel in the past made available the actual natural gas requirements of the industrials, the historical load factor, based on the resulting increased volume of sales, would have been considerably higher. Fuel points to the fact that the projected gas requirements of several of the industrial concerns are speculative since they are based on contemplated future expansions and new uses for gas not yet fully researched. But what Fuel does not take into account is that without the possibility and availability of increased volumes these expansions and the application of natural gas to new processes, with the resultant benefits to the economic welfare of the public in the St. Louis area, would be completely frustrated. It is therefore found that the projected volumes of gas sales to the industrial concerns are reasonable.

Financeability

As set forth under the "C" series of exhibits, it is contemplated that the total cost of the proposed facilities will be approximately $61,798,000, which will be financed by issuance of the following securities:

First

	Principal amount	Percent
First mortgage pipeline bonds, 5½ percent	$46,500,000	74.4
6 percent subordinated debentures	6,000,000	9.6
Common stock	10,000,000	16.0
Total	62,500,000	100.0

Oklahoma Illinois presently has no commitments for the sale of the proposed securities and a definite plan of financing has not as yet been established. It is proposed that the common stock be distributed as follows:

	Shares	Amount
Initial sale at $1 per share (outstanding)	300,000	$300,000
In units with debentures at $10 per share	240,000	2,400,000
Sale to shareholders at $10 per share	730,000	7,300,000
Total	1,270,000	10,000,000

The 300,000 shares of common stock presently outstanding are owned as follows:

	Shares	Percent
Pan American Petroleum Corp	139,500	46.5
Shell Oil Co	100,500	33.5
The Fish Engineering Corp	60,000	20.0
Total	300,000	100.0

The present stockholders are also committed to purchase, at the price offered to the public, over 60 percent of the common stock to be issued in the same proportions in which the stock is presently held by them.

It is intended that the bonds will be sold privately to financial institutions under a contract providing for the take-down of the money and the sale of bonds as construction proceeds. Mr. Francis Kernan, a partner in the firm of White Weld & Company, investment bankers with long experience in the financing of pipelines, testifying in support of the financeability of the Oklahoma Illinois project, stated that interest would have to be paid at the rate of 5½ percent on the first mortgage bonds and 6 percent on the subordinated debentures. The $6 mil-

lion in debentures would be sold to the public in units consisting of a $100 debenture and either four or five shares of common stock at $10 per share, depending on the market conditions at the time of issuance. The balance of the stock is to be offered to the public at $10 per share with approximately $5 million thereof being purchased by the original stockholders. Mr. Kernan testified, with respect to the necessity for satisfactory coverage of the interest on the proposed subordinated debentures, that as a "rule of thumb", earnings should be about one and one-half times the interest coverage after taxes and two times before taxes, although financial institutions preferred a better proportion. Mr. Kernan stated that he considered the total interest coverage in the fifth year, shown in Exhibit 176 as 1.42 times, adequate and thought the financing might be accomplished with 1.25 times. He stated:

> I think that would be very lean, but you are selling a unit, and assuming that the purchaser of the units can consider that he has got a reasonable chance to make some money out of his common stock, you can sell this debenture on a basis where you couldn't without the common stock. It is not a very fine art, but around those ratios I think would permit this to be done, particularly with the company being controlled by strong stockholders with presumably good management which I think has a substantial effect too.

It is estimated that the rate of return in the third year of operation will be 7.45 percent with an interest coverage ratio after taxes of 1.49 times and before taxes of 2.04 times. Without sales to Laclede it is estimated that the coverage ratio of the project, after taxes, will be approximately 1.32 times and, in the opinion of Mr. Kernan, would still be financeable.

It is anticipated that the first mortgage bonds will be retired in 35 semi-annual installments of $1,290,000 beginning in the third year of operations and one final installment of $1,350,000. The debentures will be retired in 21 years after date of issuance. The first $200,000 semi-annual payment applied thereto to be made in the sixth year of operations. It was recommended by Mr. Kernan that the sinking fund to retire the bonds should be reduced to 80 percent of the maturity value and the annual amounts to the sinking fund for the subordinated debentures should be reduced from $400,000 to $200,000. In addition, it was further recommended that provision for conversion of the subordinated debentures, after six months at the option of the company, would be financially feasible.

The total long-term debt proposed by Oklahoma Illinois represents 84 percent of the total capitalization for the project. This is in excess of the 75 percent limit which the Commission has used as a standard in prior certificate cases.[15] Where the excess amount, however, was represented by securities which could be converted at the option of the pipeline company, the Commission has permitted long-term debt to exceed 75 percent.

Accordingly, the certificate to be issued to Oklahoma Illinois will contain a condition that the common equity be maintained at not less than 15 percent of the total capitalization; that the subordinated debentures be convertible at the option of the company without restriction; that the long-term debt, exclusive of the subordinated debentures not exceed 75 percent; and that no dividends be paid on the common stock as long as the subordinated debentures are outstanding, unless the total long-term debt, including the debentures is less than 75 percent of the total capitalization.

---

[15] *San Juan Pipe Line Company*, 9 FPC 170, 187, *Virginia Gas Transmission Corporation, et al.*, 9 FPC 453, 455, *Transcontinental Gas Pipe Line Corporation*, 9 FPC 32, 61, *Permian Basin Pipeline Company, et al.*, 12 FPC 85, 93, *Houston Texas Gas and Oil Corporation, et al.*, 16 FPC 118, 140.

The staff expresses concern with Oklahoma Illinois' intention to sell stock and debt securities in unit as a "package deal." The present plan is for White Weld & Company to act as the underwriter with a sale of the unit at a price which will be determined by the parties at the time of sale, the money to be paid by the underwriters to Oklahoma Illinois. The unit will then be sold by the underwriting group to the public who will then be able to split the unit and sell the debentures or common stock separately.

Also remaining to be settled is the question of accounting for the allocation of the proceeds received from the underwriters between the common stock and the debentures, which question it is intended will also be determined at the time of sale of the units. Staff proposes that since there will be no free market for the common stock when the units are sold, the difference between the offering price per unit to the public and the price per unit received by Oklahoma Illinois should be taken as a percentage of the offering price and treated as the rate of discount on the debenture. This method has previously been employed by the Commission[16] and it will therefore be required that the discount on the debentures sold as a part of a unit be determined in the manner suggested by staff.

In view of the absence of any definitive plan of financing, the Oklahoma Illinois certificate will further be conditioned to require that Oklahoma Illinois submit to the Commission for approval the plan which Oklahoma Illinois proposes to use to finance its project before putting it into effect. Such plan will contain detailed information on all securities to be issued or assumed, including estimated cost, the manner of financing and copies of any prospectus which is intended to be used. Upon approval by the Commission, and after execution of the plan, Oklahoma Illinois will immediately notify the Commission of the result and the actual costs of financing.

Economic Feasibility

Based on projected third year sales of 52,168,583 Mcf, Oklahoma Illinois' Exhibit 94–C shows an overall rate of return of 7.45 percent. In arriving at this figure, Oklahoma Illinois calculated the revenues to be derived from the following proposed rate schedules, more fully explained in its proposed tariff:

(a) The CD–1 schedule which would be available to any gas distributing company when the contract demand specified in an executed service agreement is 5,000 Mcf or higher. This rate contains a demand charge of $3.10 per month per Mcf of billing demand and a commodity charge of 25¢ per Mcf. The minimum bill is on an annual basis consisting of the annual demand charge and 66⅔% of the contract demand times the number of days in the year times the commodity charge.

(b) The G–1 schedule which would be available to any gas distributing company when the contract demand specified in an executed service agreement is less than 5,000 Mcf. The rate is set at 49¢ per Mcf. The minimum bill is $1,000 per month for each delivery point having a contract demand of more than 2,000 Mcf. If the contract demand is less than 2,000 Mcf, then the minimum bill is $500 per month for each delivery point.

(c) The WPS–1 schedule which would be available to any gas distributing company purchasing gas under the proposed rate schedules CG–1 or G–1. Service under this schedule would be firm but limited to the period November 15 through March 15. There is no minimum bill and the rate is set at 70¢ per Mcf.

---

[16] *Florida Gas Transmission Co., et al.*, Docket No. G–9262, *et al.*

Since the Oklahoma Illinois revised project, as reflected in the "C" series of exhibits to which the discussion herein is limited eliminates any consideration of transportation contracts between Oklahoma Illinois and the industrials, the proposed T–1 rate schedule was not utilized in the computation of overall rate of return. Instead, Oklahoma Illinois utilized a demand and commodity component equal to that proposed in the CD–1 schedule. The result is to equate the total cost to the industrial customers to what they would have paid to the producers and to the pipeline under the so-called non-jurisdictional contracts.

Based on the testimony of Mr. Kernan, Oklahoma Illinois' financial witness, that in order for a project to be economically feasible it is necessary to have at least a 7 percent overall rate of return and a minimum return of 12 percent on common equity (which figures are not disputed) it would appear that the Oklahoma Illinois project, based on total sales of 52,168,583 Mcf annually is economically feasible.

Mississippi, however, points to the fact that the total sales upon which these return percentages are calculated, include sales to Laclede with whom Oklahoma Illinois has no contract. Exhibit 89–C indicates projected sales to Laclede in the third year, of 2,838,600 Mcf. Eliminating these sales to Laclede from the total projected third year sales and calculating the rate of return on sales of 49,329,983 Mcf, the balance remaining, results in an overall rate of return of 6.62 percent and a rate of return of 7.55 percent on common equity which according to the standards enunciated by Mr. Kernan would appear to make the Oklahoma Illinois project not economically feasible. None of the briefs supporting the Oklahoma Illinois application address themselves to this point. Staff's brief notes that at the end of the third year Oklahoma Illinois would have a net cash buildup of approximately $11 million, the income from which would to some extent increase the rate of return on common equity, but not sufficient to raise the rates of return, both overall and on common equity, above or equal to the standards set out by Mr. Kernan.

It is realized that Oklahoma Illinois' proof of economic feasibility, without the sales to Laclede, is somewhat less than marginal. These facts to the contrary notwithstanding, since the Oklahoma Illinois project is in other respects considered acceptable and required by the public convenience and necessity a certificate herein will not be denied because of this defect.

There is reason to believe that Laclede's firm denial of any intention to make purchases from Oklahoma Illinois may not be as resolute as it appears. As recognized by the court in the *Midwestern Gas Transmission Company* v. *F.P.C.* case, *supra*, a situation on all fours with the instant case insofar as the relationship between distributor and pipeline is concerned, to say that Laclede would not buy gas from Oklahoma Illinois even if it became a certificated supplier is unrealistic.

Assuming further that there would be no sales to Laclede, a considerable potential for additional sales would appear in the application of Gas Service Company to serve additional towns and Fort Leonard Wood, an active military establishment, all evidence with respect to which was stricken from the record by reason of Gas Service Company's failure to secure franchises from the towns in question as required by the regulations and because of the paucity of evidence with respect to Fort Leonard Wood. It is presumed that a more appropriately supported application with respect to these towns and Fort Leonard Wood will be presented within a reasonable time. The sales to be derived therefrom would no doubt help to offset the apparent deficit in the rate of return purportedly necessary to make this project economically feasible.

Also to be considered is the fact that the principal stockholders in Oklahoma Illinois are two of the largest oil and gas producers in the world, namely Pan

American Petroleum Corp., which is 100 percent owned by Standard Oil Company of Indiana, and the Shell Oil Company. It would not appear to be within the realm of reason that companies as financially well situated as these, having a large investment in the Oklahoma Illinois project, would permit such project to go by the boards in the event that the rate of return during the formative years thereof were not up to expectations, or in fact even operated at a loss. Under the circumstances, it is considered that the Oklahoma Illinois project is both economically feasible and financeable.

Reserves

Oklahoma Illinois' Exhibits 86, 86–A, 166 and 167 indicate the reserves and deliverability of the Oklahoma Illinois project. Exhibits 86 and 86–A establish that as of January 1, 1963 there was available to the Oklahoma Illinois project proven contracted for remaining recoverable reserves of 1,072,288 MMcf at 14.73 psia from the Red Oak-Norris Field and northwest Oklahoma area combined. Not included are the reserves in the so-called "unaccounted for but available to Oklahoma Illinois" category. The available amounts are summarized below:

	As of July 1962 (exh. 86, Tabs 15, 32, 36)	As of Jan. 1, 1963 (exh. 86–A)	As of Jan. 1, 1963 (total)
Red Oak-Norris Field	808,925	905,608 (total)	905,608
Northwest Oklahoma	100,556 plus	12,690	113,246
Pipeline	45,471 plus	7,963	53,434
Total			1,072,288

For the 6-month period ending January 1, 1963 the reserves available to the Oklahoma Illinois project were increased by 117,336 MMcf by the addition of 7 new well completions in the Red Oak-Norris Field.

Mr. Robert W. Harrison, a consulting engineer and geologist with long experience in the appraisal of oil and gas properties, limited his calculation of the reserves in the northwest Oklahoma committed area to an 11 township reserve area only, thereby eliminating those reserves contained within the remaining 31 townships of the "committed area." He estimated that a total of 367,458 MMcf which he presently classifies as "probable reserves" will also be available to the Oklahoma Illinois project when the 11 township area is fully developed. The amount of 24,853 MMcf was placed in the "probable" category for the Red Oak-Norris Field.

Consistent with Commission precedent only proven, contracted for, reserves will be relied upon in determining the proposed requirements of the Oklahoma Illinois project. However, the 42 township committed area in northwest Oklahoma lies in a portion of the Anadarko Basin where exploration is continuing and ultimate reserves are presently unknown. Moreover, the extent of the localized deposits of hydrocarbons already discovered have not been completely defined. Practically every 640 acres (section) requires the drilling of a well before it can be eliminated as non-productive of gas, unlike other areas where accumulations of gas are controlled by, and confined to, major structural features found only at widely scattered locations. Inspection of the lithographic characteristics of the geological formations and the frequent occurrences of gas within these formations leads to the conclusion that the area must be classified as a "gas area."

Oklahoma Illinois' Exhibit 167 presents a deliverability study reflecting scheduled deliveries from proven reserves under contract as of January 1, 1963 from its various sources of supply to meet the daily and annual requirements of

customer classifications. Revision of the Oklahoma Illinois original project, eliminating non-jurisdictional sales, further eliminated any issue with respect thereto concerning the availability and duration of specific supplies of gas from specific acreage to meet specific customer classification requirements. With the dedication of all the acreage for sales of gas to Oklahoma Illinois, the deliverability study on its face reflects an ability to meet the totality of customer requirements for a period beyond the twelfth year.

On August 27, 1962 Oklahoma Illinois entered into a contract with Colorado Interstate Gas Company for the purchase of up to 40,000 Mcf of natural gas in the field where produced on an interruptible basis. The Presiding Examiner has taken official notice of the application filed January 18, 1963 in connection therewith. While this supply of gas has not been included in the available reserves relied upon by Oklahoma Illinois for this project, or in consideration of the Oklahoma Illinois project as a whole, this agreement does demonstrate the availability of alternate sources of supply.

THE MIDWEST MISSOURI APPLICATION

Midwest Missouri Gas Company, pursuant to its application in Docket No. CP63–6, filed pursuant to Section 7(a) of the Natural Gas Act, seeks an order directing Mississippi Fuel to establish a physical interconnection of its transportation facilities with those facilities proposed to be constructed by the applicant and to sell and deliver to the latter its natural gas requirements. Fuel has responded that when authorized to do so by this Commission, it will serve the applicant, or any other gas distributor, certificated to render natural gas service to the northern area of Jefferson County, Missouri. The Application was opposed by Missouri Natural Gas Company and Laclede.

Since conclusion of the instant hearing, Laclede has entered into an option agreement to acquire all of Midwest Missouri's stock from its present owner and has agreed to sell 40 percent thereof to Missouri Natural, all subject to approval by the Missouri Public Service Commission. The Commission has been advised that following receipt of such regulatory authority, Laclede and Missouri Natural will file with this Commission applications to withdraw Midwest's pending application.

In view of the foregoing, the issues raised by Midwest Missouri's application and the opposition filed thereto would appear to be moot. Therefore, pending the action of the Missouri Public Service Commission with respect to a sale of Midwest Missouri stock to Laclede, no further action will be taken at this time in this proceeding with respect thereto. It is directed that, should the Missouri Public Service Commission fail to act favorably on the aforementioned proposed sale, the Commission and the Presiding Examiner be so advised and appropriate action will thereafter be taken.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the entire record herein, the evidence adduced, and the briefs filed, it is found and concluded, in addition to the findings and conclusions heretofore set out, that:

(1) Oklahoma Illinois Gas Pipeline Company (Oklahoma Illinois), applicant in Docket No. CP62–260, a Delaware corporation, having its principal place of business in Tulsa, Oklahoma, and authorized to do business in the States of Oklahoma, Kansas, Missouri, Illinois, Arkansas, and Texas, upon commencement of operations of the facilities authorized herein, will be engaged in the trans-

portation and sale of natural gas in interstate commerce for resale and will be a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The proposed facilities of Oklahoma Illinois, as fully described in its application and as herein authorized and conditioned will be used in the transportation of natural gas in interstate commerce and in the sale of natural gas in interstate commerce for resale for ultimate public consumption, and the construction and operation thereof, as herein authorized and conditioned, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Natural Gas Pipeline Company of America (Natural), applicant in Docket Nos. CP62–243 and CP63–99, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission. The proposed facilities of Natural, as more fully described in its application, would be used in the transportation of natural gas in interstate commerce and in the sale in interstate commerce for resale for ultimate public consumption, and the construction and operation thereof, as proposed by Natural would, if authorized, be subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Mississippi River Transmission Corporation (Transmission) is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission, and, upon commencement of the operation of facilities and sales as proposed by Transmission in Docket Nos. CP62–242 and CP63–100, and as proposed in motions to amend the certificate issued in Docket Nos. CP61–339 and CP62–76, would be engaged in the transportation of natural gas in interstate commerce and in the sale of natural gas in interstate commerce for resale for ultimate public consumption, and the operation thereof, if authorized, would be subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Mississippi River Fuel Corporation (Fuel) is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission, and, upon commencement of operation of facilities and sales as proposed in Docket No. CP63–105 and as proposed in a motion to amend a certificate issued in Docket No. CP61–341, would be engaged in the transportation of natural gas in interstate commerce and in the sale of natural gas in interstate commerce for resale for ultimate public consumption, and the operation thereof, if authorized, would be subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(6) Panhandle Eastern Pipe Line Company (Panhandle) is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission, and the facilities proposed, as more fully described in the application in Docket No. CP63–106, would be used in the transportation of natural gas in interstate commerce and in the sale of natural gas in interstate commerce for resale for ultimate public consumption, and the construction and operation thereof would, if authorized, be subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(7) The applications of Oklahoma Illinois, Natural, Transmission, Fuel and Panhandle are mutually exclusive, since each proposal includes the sale and delivery of natural gas to substantially the same persons in the same marketing area, namely, metropolitan St. Louis, and the granting of a certificate to Oklahoma Illinois, or to Natural-Transmission-Fuel, or to Panhandle, renders the applications of the others infeasible.

(8) Public convenience and necessity require that initial natural gas service be rendered to the central Missouri area, as hereinafter authorized, and that additional supplies of natural gas be provided to the metropolitan St. Louis area by means of an additional source of supply, as hereinafter authorized, to meet the present unsatisfied natural gas requirements and to assure that the increasing future domestic needs of that area will be satisfied. The increase in rate, if any, which may inure to the consumers by reason of the entry of an additional source of supply in the St. Louis area will be offset by the advantages to be gained thereby as hereinbefore more fully discussed.

(9) The independent producer applicants, in Dockets consolidated with Docket No. CP62-260, proposing to sell natural gas to Oklahoma Illinois, will, upon commencement of such sales, as hereinafter ordered and conditioned, be engaged in the sale of natural gas in interstate commerce for resale and each will be a "natural-gas company" within the meaning of the Natural Gas Act.

(10) The transportation, sale, and delivery of natural gas by Oklahoma Illinois, as depicted in the "C" series of exhibits and other exhibits related thereto to the extent authorized herein, are required by the public convenience and necessity, and a certificate therefor should issue, as hereinafter ordered, upon the terms and conditions in such order.

(11) The construction and operation of facilities and rendering of service as proposed by Oklahoma Illinois as herein authorized and conditioned are required by the public convenience and necessity and a certificate therefor should issue, as hereinafter ordered and conditioned, authorizing the sales of natural gas on an interruptible basis as therein proposed, and the following maximum day firm service:

ESTIMATED MAXIMUM DAY NATURAL GAS REQUIREMENTS FOR THIRD YEAR OF OPERATION

SERVICE CLASSIFICATION

	Mcf
Sales for resale:

Total, all classes (14.73 psia)	158,379

(12) Public convenience and necessity requires the construction and use of a common lateral by the municipalities of Sullivan, St. Clair, Pacific and Washington.

(13) As hereinbefore discussed the project of Oklahoma Illinois is economically feasible.

(14) Oklahoma Illinois has an assured and adequate supply of natural gas sufficient to meet the present and projected requirements of central Missouri and the present unsatisfied and reasonably foreseeable future requirements of the metropolitan St. Louis area.

(15) Oklahoma Illinois proposes to finance the cost of the project through issuance of first mortgage bonds aggregating $46,500,000, debentures convertible into preferred stock at the option of the company six months after the commencement of operation aggregating $6,000,000, and shares of common stock aggregating $10,000,000, providing total cash proceeds of $62,500,000; subject to the provisions and conditions hereinafter set forth, such plan is adequate and reasonable and the project can be financed in accordance therewith.

(16) The participation of Pan American Petroleum Corporation, Shell Oil Company, and The Fish Engineering Corporation in the furtherance of the Oklahoma Illinois project, as more fully set forth in their respective contracts, falls within the Definitions 5(A) and 5(B) of the Commission's Uniform System of Accounts Prescribed for Natural Gas Companies. Consequently, any finding herein relating to the economic feasibility of the Oklahoma Illinois project shall not be construed as a determination, or waiver, of the proper accounting procedures applicable to profits realized by these affiliated interests nor in the treatment to be accorded such profits in future rate making proceedings.

(17) Oklahoma Illinois is able and willing properly to do the acts and to perform the service herein authorized and to conform to the provisions of the Natural Gas Act, as amended, and the requirements, rules and regulations of the Commission thereunder.

(18) The proposed sales of natural gas to Oklahoma Illinois by the independent producers, as more fully described in their respective applications, consolidated herein with Docket No. CP62-260, as heretofore noted, will be sales of natural gas in interstate commerce for resale for ultimate public consumption

and such sales are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(19) Public convenience and necessity require that the applications of independent producers consolidated herein with Docket No. CP62–260 to sell natural gas to Oklahoma Illinois be granted, conditioned, however, so that the initial contract rate shall not be in excess of the interim area price as herein determined by the Commission, and subject also to the order or orders of the Commission to be issued in Rule Making Docket No. R–199.

(20) The construction and operation of facilities proposed by Natural in Docket Nos. CP62–243 and CP63–99 would continue the status of Mississippi as the sole supplier in the St. Louis area and as hereinbefore discussed are not required by the public convenience and necessity.

(21) The construction and operation of the facilities proposed, and service to be rendered thereby as more fully stated in the docketed applications of Fuel and Transmission are not required by the public convenience and necessity for the reasons more fully hereinbefore set forth.

(22) The construction and operation of the facilities proposed by Panhandle in Docket No. CP63–106 as hereinbefore discussed are not required by the public convenience and necessity.

ORDER

WHEREFORE, *It is ordered*, subject to review by the Commission on appeal, or upon its own motion, as provided by the Commission's Rules of Practice and Procedure, that:

(A) All applications consolidated in the proceedings of Natural Gas Pipeline Company of America, Mississippi River Transmission Corporation and Mississippi River Fuel Corporation, and the related motions to amend previously issued certificates of public convenience and necessity, are hereby denied.

(B) The application of Panhandle Eastern Pipe Line Company, is hereby denied.

(C) Subject to the terms and conditions of this Order a certificate of public convenience and necessity is hereby issued to Oklahoma Illinois Gas Pipeline Company to construct and operate the facilities hereinbefore described, all as more fully depicted in the "C" series of exhibits and other exhibits related thereto in these proceedings, for the transportation of natural gas in interstate commerce and sale of natural gas in interstate commerce for resale, and direct sales to industrial customers as more specifically set forth in Finding of Fact No. 11. The granting of this certificate is conditioned upon the acceptance of, and full compliance with, all of the following conditions found to be required by the public convenience and necessity:

(i) Rescission of the transportation agreements between the pipeline and the industrial customers herein and the filing of proof thereof with the Commission.

(ii) Execution of agreements, satisfactory and acceptable to the Commission, between Oklahoma Illinois and all of the industrial customers involved herein within 30 days of final authorization by the Commission, to be accompanied also by the above-mentioned rescission under condition (i). Such agreements shall set forth the requirements of the industrial customers and the prices to be charged by Oklahoma Illinois in full conformance with the representations made in the "C" series of exhibits. Such agreements shall clearly state that in the event of an emergency the service to be rendered to the industrial customers shall be subservient to the requirements of the pipeline's existing or future resale markets, and to that extent the instant industrial service will be curtailable.

(iii) All capacity available on the proposed system over that required to meet the resale market's requirements and the industrial requirements herein author-

ized other than sales of interruptible gas, shall be, and is, reserved for a period of three years, from the date of completion of construction, for present or future resale markets.

(iv) Filing proof, satisfactory to the Commission, within 30 days of final Commission authorization, that all natural gas heretofore committed by the independent producers to industrial customers under acreage heretofore dedicated to the producer-industrial contracts has been committed to Oklahoma Illinois.

(v) Separate detailed accounts will be kept relating to the costs of construction of lateral lines to the plants of industrial customers. The grant of a certificate to Oklahoma Illinois here, wherein the pipeline does not propose to contribute toward the cost of construction of resale customers' lateral lines, shall not be deemed dispositive of that issue insofar as future proceedings are concerned.

(vi) Oklahoma Illinois will submit to the Commission for its approval and before putting it into effect, the plan which Oklahoma Illinois proposes to use to finance its project. Such plan will contain, among other things, detailed information on all securities to be issued or assumed, including estimated costs, the manner of financing, and copies of any prospectuses which are to be used. At such time as a plan of financing is approved by the Commission and after execution of said plan Oklahoma Illinois will immediately notify the Commission of the result of the plan and the actual costs of financing.

(vii) In addition to the conditions set forth above in (vi) relating to financing, Oklahoma Illinois will:

(a) Maintain its common equity at not less than 15% of the total capitalization.

(b) Make its Subordinated Debentures convertible at the option of the company, without restriction.

(c) Not allow its long-term debt, exclusive of the Subordinated Debentures, to exceed 75%.

(d) Not pay dividends on the common stock as long as the Subordinated Debentures are outstanding unless the total long-term debt including the debentures is less than 75% of the total capitalization.

(e) Determine the discount on the debentures, sold as a part of a Unit, in the following manner. If there is no free market for the common stock when the Units are sold, the difference between the offering price per Unit to the public and the price per Unit received by Oklahoma Illinois will be taken as a percentage of the offering price and treated as the rate of discount on the debenture.

(D) The certificates issued to Oklahoma Illinois herein shall be accepted in writing by a responsible official of Oklahoma Illinois, and the general terms and conditions set forth in paragraphs (a), (c) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act shall attach to the issuance of such certificate, and to the exercise of the rights granted thereunder.

(E) Any contract entered into between The Fish Engineering Corporation and Oklahoma Illinois for engineering and construction of facilities herein authorized shall be submitted to this Commission for approval thereof.

(F) Construction of the facilities herein authorized shall be commenced on or before February 28, 1965.

(G) Oklahoma Illinois will file, within 30 days of final Commission authorization, an appropriate tariff, acceptable to the Commission, consistent with the certifications herein granted.

(H) Certification of the Oklahoma Illinois proposal above is further conditioned on the acceptance of, and compliance with, by the producer-applicants herein, all of the conditions applicable thereto as set forth below.

(I) Consistent with the presentation of Oklahoma Illinois' "C" series of exhibits, certification of the applications of the producers herein is hereby authorized conditioned upon the acceptance of, and full compliance with, all of the

following conditions found to be required by the public convenience and necessity and supported by the evidence of record:

(i) Rescission of the producer-industrial contracts and the filing of proof thereof with the Commission within 30 days of final Commission authorization.

(ii) Excision of the proposed 18¢ per Mcf initial price and the substitution thereof of 17¢ per Mcf in those contracts dedicating acreage in the Northwest Oklahoma counties of Ellis and Woodward, 15¢ per Mcf in those contracts dedicating acreage in Dewey County, and 15¢ per Mcf in those contracts dedicating acreage in the Red-Oak Norris field, as the total initial price for the respective areas in those existing contracts between the producers and Oklahoma Illinois. Proof thereof shall be submitted to the Commission within 30 days of final Commission authorization.

(iii) All of the producer contracts are subject to the Commission's ultimate determination in the proceeding designated Docket No. R-199.

(iv) Certification here shall not be deemed dispositive of any issues to be raised in future proceedings relating to the affiliations existing between the Oklahoma Illinois pipeline and certain producer suppliers.

(J) Certification of the producer applications as conditioned above is further conditioned on Oklahoma Illinois' acceptance of, and compliance with, all of the conditions applicable to its certification.

(K) Due to the uncertainty at this time as to who shall construct and operate any plant for the processing of the volumes of gas to be produced from the acreage dedicated herein, all of the above certifications are further conditioned on the submission, for Commission approval and imposition of any conditions found to be required by the public convenience and necessity, of any definitive plan for construction and operation of said plant or plants.

(L) Subject to waiver by the Commission of the pertinent Regulations as hereinbefore discussed the request for an allocation of gas for the City of Buffalo, Missouri, by Associated Natural Gas Company and the application of The Gas Service Company for an allocation of gas to serve the Cities of Lebanon, Missouri, and Bolivar, Missouri, are hereby granted.

(M) With the acceptance of, and compliance with, all of the above conditions, allocations of gas are hereby granted, to the extent requested, to the Municipalities of Bourbon, Cuba, Pacific, St. Clair, Steelville, Sullivan, Washington, Waynesville, Rolla, and St. James, conditioned on the submission of proof, by each municipality, within 30 days of final Commission authorization, of elections having been held approving the issuance of bonds to finance the respective projects, provided further, that the Municipalities of Sullivan, St. Clair, Pacific and Washington, submit proof within the same period of the execution of an agreement for the construction and use of a common lateral.

MARTIN E. RENDELMAN,
Presiding Examiner.

OPINION NO. 451-A

SOUTHWESTERN PUBLIC SERVICE COMPANY, DOCKET NO. E-7038

OPINION AND ORDER ON REHEARING

(Issued September 9, 1965)

Syllabus

Upon rehearing, Commission *rejects*, as inappropriate, Southwestern's proposed substitute demand and energy charges for investor-owned customers; and *modifies* and *reaffirms* prior order.

Commissioner Bagge *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

Ross, *Commissioner:*

On March 2, 1965, 33 FPC 343, the Commission issued Opinion No. 451 and Order, "Opinion and Order Allowing Suspended Rates to Become Effective and Finding Just and Reasonable Wholesale Rates", in this proceeding. Applications for rehearing were filed on March 30, 1965 and April 1, 1965, by Southwestern Public Service Company (Southwestern) and Community Public Service Company (Community) respectively. In an order on rehearing issued April 26, 1965, 33 FPC 891, the Commission denied Community's application as well as Southwestern's application insofar as it proposed a rate increase for Lea County Electric Cooperative (Lea County), while granting rehearing for the purpose of considering whether, (1) Southwestern's proposed rate schedule for its investor-owned customers is an appropriate and equitable method of bringing the rates of such customers down to the level in Opinion No. 451; and (2) whether the rate schedule prescribed in Opinion No. 451 for Southwestern's sales to Lea County should be modified to provide for the retention of the demand ratchet provision now applicable to the Denver City delivery point (FPC Electric Rate Schedule No. 35) and to prescribe a rate schedule for the Plains delivery point similar to that applicable to the Denver City point of delivery.

The order permitted the other parties to the proceeding to file comments on the rate schedule proposed by Southwestern, as well as Southwestern to file comments on the suggested revision in the Lea County rate schedule within 30 days. Comments were filed by Southwestern, Community and Lea County on June 1, 1965. Pursuant to an order of the Commission, issued June 21, 1965, Southwestern filed a reply to the comments of Community and Lea County on June 29, 1965.

In its application for rehearing Southwestern, while accepting the Commission's determination of overall revenue, states that the charges to its three investor-owned customers under the rate schedule prescribed by the Commission do not reflect a reasonable distribution of revenue, being too low as to Community and Cochran Power Lighting Company (Cochran). It contends that with the impending loss as a customer in 1967 of New Mexico Electric Service Company (New Mexico), which is constructing its own generating facilities, the overall rate of return on Community and Cochran will be well below the rate of 6% approved by the Commission in Opinion No. 451. Southwestern proposes a substitute rate schedule whose rate design is intended to render more equal the respective rates of return on its investor-owned customers.

Community, in its comments objects to Southwestern's proposed rate schedule, expressing the view that a revision of the Commission's rate schedule because of Southwestern's projected loss of the New Mexico load in 1967 is unnecessary since the resultant rates of return earned under the Commission's schedule will be at a fair level and, in any event, a change now would be premature.

While the record before us indicates that New Mexico has acquired a site and is proceeding toward construction of its own generating facilities for completion in 1967, this fact is not determinative of the rate design. Both the Commission's prescribed rate schedule and Southwestern proposed substitute are based on 1962 test year figures, and that five years will have elapsed when Southwestern presumably ceases service to New Mexico. Considerable change in Southwestern's operations may take place during this period. As we stated in Opinion No. 451, *supra*, pp. 351, 352, "it is significant that Southwestern is now adding

large, efficient generating units to its system and undoubtedly will meet its future growth with even more efficient and economic facilities." We believe that such improvements in operation, load growth and other factors should result in providing a greater return in 1967 from the remaining two investor-owned customers than is now anticipated. In any event, Southwestern will have an opportunity when it ceases service to New Mexico to submit for filing with the Commission new rate schedules based on a revised cost of service study. We therefore, conclude that the adoption now of the substitute demand and energy charges proposed by Southwestern would be inappropriate.

In addition to a change in the demand and energy charges, Southwestern proposed the following modifications of the Commission's prescribed rate schedule: (1) Limit the service to that available from the existing facilities; (2) Provide for billing of individual points of delivery on a non-conjunctive basis; (3) Provide for purchase of entire requirements, and not for standby service; (4) Establish 13 kv as the minimum delivery voltage; (5) Provide for the contract demand to be a billing demand determinant; (6) Establish a power factor clause providing for adjustments if the power factor is below approximately 90%; and (7) Provide for an initial contract period of not less than five years.

In view of our determination that an adjustment of demand and energy charges of the schedule prescribed by the Commission would not be appropriate at this time, we are not inclined to undertake the extensive alteration of the prescribed schedule sought by Southwestern, particularly since these changes were not in issue during the course of the proceedings and are therefore not the subject of a record upon which these matters could be determined. We believe the rate schedule which we prescribed in Appendix C of Opinion No. 451 is just and reasonable and need not be modified except as hereinafter provided, with respect to power factor adjustment and the provision for a minimum delivery voltage.

Our disposition of Southwestern's proposed schedule modifications makes it unnecessary to consider Community's objections thereto except insofar as they relate to Southwestern's proposed power factor adjustment clause, the submission of which was permitted by the Commission in Opinion No. 451. In opposing its adoption, Community contends that the power factor adjustment is not imposed on cooperatively-owned customers, that the proposed adjustment differs from the standard heretofore used by Southwestern and that Southwestern has not made a showing that the adjustment is required in accordance with Opinion No. 451. In its reply to Community's objections, Southwestern points out that Community's power factor in 1962 ranged from a low of 94.3% to a high of 100% with an average monthly figure during the year of 99.218%, and that if Community's usage continues as in the past the proposed power factor adjustment will have no effect on Community's charges. As we indicated in Opinion No. 451, we believe that the incorporation of a power factor adjustment clause into the ordered rate schedule would be appropriate.

On the basis of data submitted by Southwestern in support of its proposed power factor adjustment provisions, we conclude that it is reasonable and appropriate and we shall order its incorporation into the Commission's prescribed rate schedule as follows:

> Demand will be increased one kw for each whole ten kvar by which the 30-minute reactive demand exceeds one-half the 30-minute kw demand at the time of maximum 30-minute kw demand.

With regard to Southwestern's proposal for a minimum delivery voltage under the rate schedule, we agree that one should be established for the prescribed

rate. However, since Southwestern reports several deliveries at the 12 kv level, we would establish it at 12 kv rather than at 13 kv. Accordingly, we are revising the schedule and adding a provisions that service at less than 13 kv will be at a charge of $1.50 per kw for the first 5,000 of monthly billing demand in lieu of $1.15 per kw. The additional 35¢ per kw would cover the cost of additional transformation investment calculated on the basis of 15% fixed charges on substation investment of $28 per kw.

The Commission in its order on rehearing, issued April 26, 1965, proposed two modifications of Southwestern rate schedule for Lea County and afforded Southwestern and Lea County an opportunity to express their views thereon. Southwestern and Lea County have indicated in their comments that the first modification which provides for the retention of the demand ratchet provision now applicable to the Denver City delivery point (FPC Electric Rate Schedule No. 35) would be acceptable. We believe that the demand ratchet provision is just and reasonable and should be retained in the Lea County schedule for the Denver City delivery point; we shall so order.

The second modification which would prescribe a rate schedule for the Plains delivery point similar to that applicable to the Denver point of delivery while acceptable to Southwestern is opposed by Lea County. Lea County contends that the service at the Plains point is not standby and supplementary as it is at Denver City but rather that it is firm service to a small section of its system. Southwestern maintains that it is standby and supplementary service. Since this matter was not in issue during the course of the hearings in this proceeding there is little evidence of record upon which to resolve the issue. Under the circumstances, we conclude that this modification should not be adopted.

The Commission finds:

(1) Southwestern's proposed rate schedule for its investor-owned customers is inappropriate except as hereinafter provided.

(2) The rate schedule prescribed in Opinion No. 451 for Southwestern's sales to its three investor-owned customers should be modified to incorporate a power factor adjustment clause and a provision for a higher demand charge for service at less than 12 kw as hereinafter provided.

(3) The proposed modification of the rate schedule ordered by the Commission for Southwestern's sales to Lea County, providing for the retention of the demand ratchet provision now applicable to the Denver delivery point (FPC Electric Rate Schedule No. 35), is just and reasonable.

(4) The proposed modification of the rate schedule ordered by the Commission for Southwestern's sales to Lea County prescribing a rate schedule for the Plains delivery point similar to that applicable to the Denver City delivery point is unsupported by the evidence of record and should not be adopted.

The Commission orders:

(A) Southwestern's application for rehearing with respect to its proposed rate schedule for sales to its three investor-owned customers is denied, except to the extent that it proposes modifications of the Commission's prescribed rate schedule in Opinion No. 451, ordered as follows:

(1) Add the following Power Factor clause:

POWER FACTOR

Demand will be increased one kw for each whole ten kvar by which the 30-minute reactive demand exceeds one-half the 30-minute kw demand at the time of maximum 30-minute kw demand.

(2) Substitute the following Demand Charge:

For service at 12 kv and above, $1.15 per kw for the first 5,000 kw of monthly billing demand; $0.95 per kw for all additional kw of monthly billing demand.

For service at less than 12 kv, $1.50 per kw for the first 5,000 kw of monthly billing demand; $0.95 per kw for all additional kw of monthly billing demand.

(B) The demand ratchet provision now applicable to Lea County at the Denver City delivery point (FPC Electric Rate Schedule No. 35) shall be retained in the revised schedule.

(C) Southwestern shall file within 30 days from the date of this order new schedules of rates and charges for the transportation and sale of electric energy to New Mexico Electric, Community and Cochran in accordance with the schedule set out in Appendix C of Opinion No. 451, as modified by this order, such new schedules of rates and charges shall be effective as of April 2, 1965.

(D) Southwestern shall file within 30 days from the date of this order new schedules of rates and charges for the transportation and sale of electric energy to Lea County in accordance with Findings 11 and 12 set out in Opinion No. 451, as modified by this order with respect to the Denver City delivery point, such new rate schedules shall be effective as of April 2, 1965.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TRANSWESTERN PIPELINE COMPANY, ET AL., DOCKET NO. G–20464, ET AL.; ARKANSAS LOUISIANA GAS COMPANY, DOCKET NOS. CP62–219 (PHASE I) AND CP62–219 (PHASE II)

ORDER GRANTING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND DENYING TEMPORARY CERTIFICATE

(Issued September 9, 1965)

On July 7, 1965 Arkansas Louisiana Gas Company (Arkla) filed a request for temporary authorization to construct and operate the 4,000 hp additional compression facilities at its Dunn station, included in its application of December 2, 1963 in Docket No. CP62–219 which is consolidated with Transwestern Pipeline Company, *et al.*, Docket No. G–20464, *et al.* In the alternative, Arkla requested that the proceedings in Docket No. CP62–219 be severed from the consolidated proceedings in Docket No. G–20464, *et al.* and set for immediate hearing. Arkla alleges the need for this added compression to enable it to take additional gas from producers in the Arkoma Basin.

We do not believe that the reason set forth by Arkla constitutes an emergency situation requiring the issuance of a temporary certificate within the meaning of our Regulations. However, none of the parties to the consolidated proceedings in Docket No. G–20464, *et al.* has filed opposition to Arkla's request herein to construct and operate the additional 4,000 hp, and Arkla has demonstrated in the supplemental data filed with its request for a temporary authorization that the facilities are useful to Arkla even if we were to deny its application for the remainder of Docket No. CP62–219 and all of CP64–125. Thus, there is no reason why this portion of Docket No. CP62–219 cannot be severed from the overall contested aspects of that proceeding and permanently certificated at this time. The remainder of the facilities being requested can be considered as Docket No. CP62–219 (Phase II) in the further proceedings to be held in accordance with our

Opinion No. 472 issued August 31, 1965, in *Transwestern Pipeline Company, et al.*, Docket No. G-20464, *et al.*, 34 FPC 659.

The Commission orders:

(A) Arkansas Louisiana Gas Company's request for temporary certificate is denied.

(B) A certificate of public convenience and necessity is granted to Arkansas Louisiana Gas Company in Docket No. CP62-219 (Phase I) for the construction and operation of 4,000 hp additional compression at its Dunn compressor station.

(C) The certificate issued by paragraph (B) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(D) The facilities authorized in paragraph (B) above shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within twelve months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

AREA RATE PROCEEDING, DOCKET NO. AR61-1; CLAUDE E. AIKMAN, ET AL., G-18466, ET AL.; NORTH CENTRAL OIL CORPORATION (OPERATOR), ET AL., CI60-435, ET AL.

ORDER PROVIDING FOR JOINT CONSIDERATION OF APPLICATIONS FOR REHEARING

(Issued September 10, 1965)

On August 5, 1965, the Commission issued its Opinion No. 468, 34 FPC 159, in the above-entitled proceeding. A number of participants have submitted applications for rehearing. The first duly verified application was filed by Skelly Oil Company on August 11, 1965; a number of others were not filed until some three weeks later near the end of the statutory period provided for such applications which expired on September 7.

In considering the numerous petitions filed on different dates by numerous respondents in the consolidated area proceeding it is obvious that considering the applications on a seriatim basis would greatly complicate the proceeding. Such a course of action might well lead to the disposition of particular issues without the benefit of the presentation of all the parties and could even result in the Commission's denial of one application for rehearing but granting a later application which may have presented different considerations with respect to the same issue. The possibility for such confusion is eliminated by considering and disposing of all petitions simultaneously.

It is thus apparent that an orderly conclusion of the proceeding will be facilitated by a consolidated, simultaneous disposition of the overlapping and in some instances mutually inconsistent points made in the numerous applications for rehearing of the opinion and order herein. The Natural Gas Act does not require the Commission to finally dispose of applications for rehearing within 30 days under such circumstances but merely provides that in the absence of any Commission action on the application within such period they may be deemed to have been denied.

ACCORDINGLY, we are hereby acting to defer completion of our consideration of the Skelly application and all other applications filed prior to the expiration of

the statutory period, to permit all timely filed applications for rehearing of Opinion No. 468 to be considered and passed upon together, and it is so ordered. This action is not to be deemed a grant or denial of such petitions on their merits in whole or in part.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S Black and Carl E. Bagge.

PAN AMERICAN PETROLEUM CORPORATION AND SOUTHLAND ROYALTY COMPANY

ORDER REJECTING RATE FILINGS

(Issued September 10, 1965)*

Pan American Petroleum Corporation (Pan American) and Southland Royalty Company (Southland) on August 13, 1965 and August 20, 1965, respectively, tendered for filing proposed rate increases for sales in the Permian Basin Area of Texas which exceed the just and reasonable ceilings prescribed by Opinion No. 468, issued August 5, 1965, 34 FPC 159. Both of the producers herein are producer-respondents in the Area Rate Proceeding, (Permian) in Docket No. AR61–1, *et al.*

Pan American proposes a rate increase from 16.0¢ to 20.5¢ per Mcf for a sale of residue gas obtained from gas-well gas and oil-well gas to Transwestern Pipeline Company under its FPC Gas Rate Schedule No. 329. The contract involved was executed on March 8, 1962, and thus covers a sale for "new gas" under Opinion No. 468. The contract conforms to the quality standards prescribed in Opinion No. 468 for pipeline quality gas, with the exception of delivery pressure. The contract provides that the delivery pressure shall not exceed 600 psig, whereas Opinion No. 468 prescribes a minimum delivery pressure of 800 psig. The proposed increased rate exceeds the 16.5¢ per Mcf ceiling for residue gas obtained from new gas-well gas and the 14.5¢ per Mcf ceiling for residue gas obtained from casinghead gas. Pan American seeks to make its proposed rate effective as of September 1, 1965, the contractually provided effective date.

Southland proposes a rate increase from 15.6488¢ to 16.6584¢ per Mcf for a sale of gas-well gas and low pressure flash gas to El Paso Natural Gas Company under its FPC Gas Rate Schedule No. 14. The contract involved was executed on February 16, 1952, and thus covers a sale for "old gas" under Opinion No. 468. The contract conforms to the quality standards prescribed in Opinion No. 468 except for total sulphur content and delivery pressure. The contract provides for a maximum of 1000 grains of total sulphur per 100 cubic feet of gas whereas Opinion No. 468 provides for a maximum of 20 grains per 100 cubic feet. As for pressure, the contract provides that the delivery pressure shall be at the natural wellhead flowing pressure not to exceed, however, 1000 psig. If the average well-head flowing pressure declines to less than 1000 psig, then the buyer agrees to lower the pressure of its gathering system or install compression facilities to permit the delivery of gas at wellhead flowing pressure down to 250 psig. The proposed rate exceeds the 14.5¢ per Mcf ceiling for gas-well gas sold under contracts executed before January 1, 1961. Southland requests an effective date of August 20, 1965, for its proposed rate increase.

For the reasons set forth in our order rejecting rate filing issued on August 26, 1965, in the matter of *Socony Mobil Oil Company, Inc. (Operator), et al.*, 34

*See orders granting rehearing re Pan American Petroleum Corp., Docket No. RI66–154 issued November 5, 1965, 34 FPC 1250; Southland Royalty Co., Docket No. RI66–231 granting reconsideration issued January 3, 1966, 35 FPC 11.

FPC 595, which matter presented similar circumstances as involved here, we conclude that Pan American and Southland's subject rate increases should be rejected as hereinafter ordered.

The Commission orders:

Pan American's proposed rate increase under its FPC Gas Rate Schedule No. 329, and Southland's proposed increased rate for sales under its FPC Gas Rate Schedule No. 14, tendered for filing on August 13, 1965 and August 20, 1965, respectively, are hereby rejected.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP61-311

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING SUPERSEDING TARIFF SHEET FOR FILING

(Issued September 13, 1965)

On July 12, 1965, Arkansas Louisiana Gas Company (Applicant) filed in Docket No. CP61-311 an application to amend the order of the Commission issued November 21, 1961, 26 FPC 749, as heretofore amended July 23, 1962, 28 FPC 204, July 22, 1963, 30 FPC 364, and September 4, 1964, 32 FPC 700, authorizing among other things the sale of natural gas to Texas Eastern Transmission Corporation.

Applicant requests by the instant application that the authority for the sale to Texas Eastern Transmission Corporation (Texas Eastern) be extended for another year, to July 22, 1966, as more fully stated in the application to amend.

Applicant concurrently filed with the application for an extension of time its First Revised Sheet No. 131 of its FPC Gas Tariff Original Volume No. 3 in order that its rate schedule XFS-19, which covers this sale will be conformed to the new termination date.

Due notice of the filing of the application to amend and opportunity for hearing thereon have been given by publication in the Federal Register on August 18, 1965 (30 F.R. 10261). No protest, petition to intervene or notice of intervention has been filed in the proceeding concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that (1) the Commission's order issued November 21, 1961, in Docket No. CP61-311 be amended as hereinafter ordered and (2) Applicant's First Revised Sheet No. 131 of its FPC Gas Tariff Original Volume No. 3 be accepted for filing.

The Commission orders:

(A) The Commission's said order issued in Docket No. CP61-311 is further amended so as to extend the authorization for the sale of natural gas by Applicant to Texas Eastern Transmission Corporation to July 22, 1966, as requested in the application to further amend.

(B) Applicant's proposed First Revised Sheet No. 131 Superseding Original Sheet No. 131 to its Rate Schedule XFS-19 is accepted for filing effective as of July 22, 1965.

(C) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

BLUEBONNET GAS CORPORATION, DOCKET NO. CP65-417

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 13, 1965)

On June 28, 1965, Bluebonnet Gas Corporation (Applicant), filed in Docket No. CP65-417 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities and the transportation and sale of natural gas to Florida Gas Transmission Company (Florida), all as more fully set forth in the application.

Applicant proposes to construct and operate metering, regulating and interconnecting facilities in St. Landry Parish, Louisiana, and sell gas to Florida in accordance with the terms and conditions of Applicant's Rate Schedule X-1 which governs service to Florida heretofore authorized by the Commission in its order issued May 21, 1965, in Docket No. CP65-326.

The gas will be acquired from George J. Despot, Operator (Despot). Despot will construct a 4-inch gathering line from which Applicant's facilities will extend to Florida's transmission system. The estimated reserves dedicated to Applicant under the Despot contract are 6,755 MMcf. Estimated initial deliveries are 1,500 Mcf per day.

Applicant estimates its cost of construction to be $14,000, which will be financed through the sale of common stock.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing on September 10, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Bluebonnet Gas Corporation, a Texas corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of May 21, 1965 in Docket No. CP65-326 (33 FPC 1032).

(2) The proposed construction and operation of facilities and transportation and sale of natural gas by Applicant as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities and transportation and sale of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and transportation and the sale of natural gas as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 6 months of the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

LONE STAR GAS COMPANY, DOCKET NO. CP66-32

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 13, 1965)

On July 29, 1965, Lone Star Gas Company (Applicant) filed in Docket No. CP66-32 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately five miles of 3-inch transmission pipeline in Harmon County, Oklahoma, in order to supply its proposed natural gas distribution system in the Town of Gould, Oklahoma. Applicant will utilize its existing A-System to provide the proposed service. The estimated third year annual and peak day requirements of Gould, Oklahoma are 13,393 Mcf and 314 Mcf respectivley.

Total estimated cost of the proposed facilities is $42,880. Applicant's distribution and related measuring facilities will cost an estimated $30,939. The total, $73,819, will be financed with working capital.

Inasmuch as the project will result in revenues exceeding the incremental costs for the service involved, the proposal will have no adverse effect on Applicant's existing customers.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 10, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Lone Star Gas Company, a Texas corporation having its principal place of business in Dallas, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) The proposed construction and operation of facilities by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commisison thereunder.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Lone Star Gas Company, authorizing construction and operation of the facilities hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CHANGES BY NATURAL GAS PIPELINE COMPANIES IN A TARIFF, DOCKET NO. R-281

ORDER NO. 304

AMENDING §154.63 OF REGULATIONS UNDER THE NATURAL GAS ACT

(Issued September 15, 1965)*

This order amends § 154.63(e)(4)(i) of the Commission's Regulations under the Natural Gas Act to omit the requirement that an additional set of working papers be furnished to the Head, Houston Field Office. This requirement for change in a tariff has become unnecessary by reason of the abolition of the Houston Field Office.

The Commission finds:

(1) Compliance with the notice provisions of section 4 of the Administrative Procedure Act is unnecessary since the amendment herein adopted is of a clarifying nature in that it merely deletes a requirement which can no longer be complied with.

(2) The amendment adopted herein is necessary and appropriate for the purposes of administration of the Natural Gas Act.

The Commission, acting pursuant to the authority granted by the Natural Gas Act, as amended, particularly sections 4(d) and 16 thereof (52 Stat. 822, 830; 15 U.S.C. 717c(d), 717o) *orders:*

---

*Published in the Federal Register on September 22, 1965 (30 F.R. 12069).

(A) Section 154.63(e)(4)(i), Part 154, Subchapter E of Chapter I, Title 18 of the Code of Federal Regulations, is amended by deleting the last sentence, which reads "An additional set of the working papers is to be furnished to the Head, Houston Field Office." As thus amended the subdivision will read as follows:

§ 154.63 changes in a tariff, executed service agreement or part thereof.

* * * * * * *

(e) * * *

(4) *Working papers and supporting data.* (i) In the Statements described in paragraph (f) of this section, certain items are designated as being included in working papers. There is to be furnished to the Chief, Pipeline Division (Bureau of Natural Gas) upon filing the rate increase, one set of working papers for use by the staff and six additional copies of such working papers to be available to intervenors according to their needs after intervention, has been approved by the Commission.

(B) The amendment prescribed herein shall become effective on October 21, 1965.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PAN AMERICAN PETROLEUM CORPORATION, DOCKET NO. CI65-584

ORDER GRANTING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 15, 1965)

On December 21, 1964 Pan American Petroleum Corporation (Pan American) filed in Docket No. CI65-584 an application for a certificate of public convenience and necessity to sell natural gas to Florida Gas Transmission Company (Florida) pursuant to the terms and conditions of a gas sales contract dated November 20, 1964 between Pan American and Austral Oil Company, Inc. (Austral) as sellers and Florida as buyer.[1] While the contract does not provide for the present commitment or dedication to Florida of specific leases or fields, under the terms of the contract, the sellers agree to sell a total of 584,400,000 Mcf of gas over the life of the contract. In the event specific acreage were dedicated, as provided in the contract, the contract would terminate on January 1, 1987. Pursuant to a supplement to its application filed May 13, 1965, Pan American indicated that a substantial part of initial deliveries under the gas sales contract would originate from its interests and those of Austral in the North Fresh Water Bayou Field, Vermilion Parish (on-shore), within the taxing jurisdiction of the State of Louisiana and Off-shore Block 14 Field, Vermilion Parish, Louisiana, not subject to state production taxes. Under the contract, the initial price for the gas will be 19.25 cents at 15.025 psia. The price escalates by 1¢ per Mcf on January 1, 1972, and on each of the succeeding two five-year periods. The contract also provides for a 6 percent annual penalty payment for gas not taken as required. There is a five-year make-up period during which this gas can be taken without further penalty payment.

---

[1] The application as supplemented provides that Pan American is filing as "Seller's Representative" under the gas sales contract, on behalf of Austral and other parties whose shares of gas may from time to time be delivered to Florida pursuant to the contract.

Notice of the application was issued on December 31, 1964, 30 F.R. 179. No petitions to intervene or protests to the granting of the certificate were filed.

Florida will use the gas which is the subject of this application for its system needs. Authorization to construct the facilities to attach this gas was granted in the certificate issued in Florida Gas Transmission Company, Docket No. CP65–165, order issued June 8, 1965, 33 FPC 1223. Under the terms of the contract, Florida is required to take a daily contract quantity of 80,000 Mcf. Florida agreed to take-or-pay for each month a quantity of gas equal to 60 percent of the effective daily contract quantity multiplied by the number of days in each month. The sellers are required to have available for delivery on any day 125 percent of the daily contract quantity. Florida is obligated to take a yearly minimum of 80 percent of the daily contract quantity multiplied by the number of days in the year with a five-year make-up period for deficient takes. As noted above, Florida must pay the sellers an annual penalty payment equal to 6 percent of the deficient gas multiplied by the price at the end of the year in which the deficiency occurred. The gas is to be delivered to Florida in Vermilion Parish or such other points on the buyers line as may be agreed upon at a delivery pressure not in excess of 1,000 psig. The contract provides for the delivery of pipeline quality gas with a specific downward Btu adjustment from 1,000 Btu's and no upward Btu adjustment. Commencing with the 6th contract year, Florida is obligated to reimburse the sellers for ¾ of any applicable tax in excess of 2.3¢/Mcf. Pan American stated in its supplement that it is currently intended that initial deliveries under the contract will originate wholly from the North Freshwater Bayou Field and the Off-shore Block 14 Field, with the North Freshwater Bayou Field contributing an estimated 50 percent of total initial deliveries; it is presently intended that the remainder of initial deliveries will originate from the Off-shore Block 14 Field.

Pan American's proposed sale is another in a series of producer warranty-type sales of gas from southern Louisiana which have become more prevalent in recent years.[2] In these cases the producers have generally warranted to make available to the pipeline purchaser specific quantities of gas for a limited term. In at least one instance no specific fields or reservoirs were dedicated to the contract. *Gulf Oil Corporation*, 30 FPC 1559. In the other cases definite volumes were contracted to be sold over a limited term with certain fields or reservoirs being named as the principal source for gas and other as yet unnamed sources could be attached. In the latter instance when the presently unknown sources are attached, we have required that the producer file a statement with this Commission specifying which fields have been attached. In each of the earlier cases, as here, the producers who warranted to have the reserves available showed to the satisfaction of the Commission that there were in the area involved either known reserves, estimates of which appeared reasonable, or that current exploration activities in the area justified a conclusion that the total warranted reserves would be available.

In each of these cases the pipeline customers must depend upon the producer's obligation to deliver gas in planning to meet their market requirements. Were there not some assurance of the ability of the producer to fulfill his obligation, there would be a substantial chance that the pipeline's requirements could not be met, all to the detriment of the consumer. In the present case adequate reserve information has been made available to the Commission staff to justify the warranty approach adopted by Pan American.

---

[2] *Cf.: Humble Oil & Refining Co., et al.*, 30 FPC 1297; *Gulf Oil Corporation*, 30 FPC 1559; *Texaco Inc.*, 31 FPC 1125.

The warranty-type sale presented here does have the advantage of assuring to the pipeline definite quantities of gas over a specific period of time. By use of this technique pipelines can safely attach reserves without fear of overly rapid development of a dedicated field, which might result in expensive prepayments for gas. The technique has a potential disadvantage in that existing as well as yet undiscovered fields may be attached to a pipeline and abandoned without regulatory action in future years. Here Pan American has indicated that the sales will be made from two specific fields, at least initially; namely, the North Freshwater Bayou Field and Off-shore Block 14 Field. Pan American is an established company with a good record of continuing gas exploration and development. In the circumstances, and without intending a broad precedent, we believe the proposed sale may be approved, but a better understanding of the implications of this type of sale may lead to a different view in the future.

The initial price for this gas under the contract is 19.25¢ per Mcf at 15.025 psia. This indicates a blend of gas sold from on-shore (within the state tax jurisdiction) and off-shore (within the federal domain) sources resulting in sales not in excess of the price "line" for south Louisiana as long as more than 50 percent of the gas comes from on-shore sources in south Louisiana. We note that if more sales were to come from off-shore sources, the result would be that Florida would be paying a price in excess of the line we have previously found for the area, *Union Texas Petroleum, et al.*, Opinion No. 436, 32 FPC 254. We shall, consequently, require that all of the gas for sale hereunder shall come from sources in south Louisiana and that no more than 50 percent of the gas sold under this contract in any contract year shall come from off-shore sources.

At a hearing held on September 1, 1965 the Commission on its own motion received and made a part of the record in these proceedings, all evidence, including the application, supplement, and exhibits thereto, submitted in support of the authorization sought herein. Upon consideration of the record,

The Commission finds:

(1) Pan American Petroleum Corporation is or by the sale of gas hereunder will be a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The sale of natural gas hereinbefore described, as more fully described in Pan American's application and supplement thereto, will be made in interstate commerce subject to the jurisdiction of the Commission and such sale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The sale of natural gas by Pan American together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as herein conditioned are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Pan American is able and willing properly to do the acts and perform the service proposed and conform to the provisions of the Natural Gas Act and requirements of the rules and regulations thereunder.

The Commission orders:

(A) A certificate of public convenience and necessity is issued, upon the terms and conditions of this order, authorizing the sale by Pan American of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, all as described above and as more fully described in the application, supplement and exhibits in this proceeding.

(B) The certificate granted in paragraph (A) above is not transferable and shall be effective only so long as Pan American continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(C) The grant of the certificate issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Applicant. Further, our action in this proceeding shall not foreclose or prejudice any further proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract herein involved.

(D) The certificate issued by paragraph (A) above is subject to the following conditions:

(1) At such time as deliveries of gas by applicant to Florida Gas Transmission Company commence from any particular field, Pan American shall file as a supplement to its related rate schedule, a letter notifying the Commission as to (a) the identity of each particular field involved and (b) the identity of each party whose share of gas produced therefrom is being delivered to Florida, including, where applicable, copies of the appropriate instruments of ratification of said contracts by such party or parties;

(2) Pan American shall file a statement with the Commission as a supplement to its related rate schedule indicating any change which may occur in the identity of any party whose share of gas is being delivered under the contract;

(3) Pan American shall file a statement at such time as there is a cessation of deliveries of gas from any particular field notifying the Commission of the identity of the producers involved and the occurrence of cessation of such deliveries;

(4) The sale of gas under this certificate shall be limited to fields or reservoirs located within the south Louisiana area, as defined by the Commission's Statement of General Policy No. 61–1, as amended. In no event shall more than 50 percent of the gas sold under this certificate in any contract year originate from areas outside the tax jurisdiction of the State of Louisiana.

(E) The certificate herein is conditioned upon its acceptance, in writing, by Pan American Petroleum Corporation within 30 days of the issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

SOUTHERN TIER GAS CORPORATION, DOCKET NO. CP66-26

DECLARATION OF EXEMPTION

(Issued September 15, 1965)

Southern Tier Gas Corporation (Applicant) filed an application on July 22, 1965, for exemption from the provisions of the Natural Gas Act, pursuant to Section 1(c) thereof.

Applicant is engaged in the transportation and distribution of natural gas in the State of New York. Pursuant to certificate authorization Consolidated Gas Supply Corporation (formerly New York State Natural Gas Corporation) sells and delivers natural gas to Applicant for resale in the State of New York.

Applicant serves its market by means of a twenty-two mile gas transmission line extending from a point of connection with Consolidated Gas Supply Corporation, its sole supplier at Woodhull, New York, to the Village of Bath, New York. In addition Consolidated can supply gas to the Applicant through an emergency connection authorized by the Commission in Docket No. G–17544, 21 FPC 796, from a point of delivery midway between Woodhull and Bath. Sales of natural gas are made (1) to the Village of Bath for resale and distribution by the Village of Bath, and (2) to Applicant's customers in the vicinity of the Village of Bath, all in the State of New York.

All natural gas received by Applicant for transportation and distribution through its system is consumed ultimately within the State of New York, and all of its facilities are located within said State.

The New York Public Service Commission has certified to the Federal Power Commission that it has regulatory jurisdiction over the rates and services and facilities of the Applicant and is exercising such jurisdiction.

Wherefore, the Commission declares, by reason of the foregoing:

Southern Tier Gas Corporation is exempt from the provisions of the Natural Gas Act, and the orders, rules and regulations of the Commission issued thereunder.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

EASTERN MAINE ELECTRIC COOPERATIVE, INC., PROJECT NO. 2501

ORDER ISSUING PRELIMINARY PERMIT

(Issued September 16, 1965)

Application was filed on December 14, 1964, by Eastern Maine Electric Cooperative, Inc. (Applicant) of Calais, Maine, for a preliminary permit under Section 4(f) of the Federal Power Act (Act) for proposed Project No. 2501, to be known as the Stratton Rips Project, to be located on the Mattawamkeag River a principal tributary of the Penobscot River, in Penobscot and Washington Counties, Maine, in the vicinity of Mattawamkeag, Kingman, and Winn.

The Secretary of the Army and the Chief of Engineers have advised that they have no objection to the issuance of a permit.

The Department of the Interior, in commenting on the application, recommended for inclusion in any preliminary permit special conditions in the interests of fish and wildlife and archeology, in addition to the conditions set forth in attached Form P–1. The special conditions are included herein as Articles 10 and 11.

The Department of Health, Education, and Welfare, in commenting on the application requested that due consideration be given to potential water quality problems that may be affected by the project and that Applicant maintain liaison with the Public Health Service in regard thereto, as herein provided for by Article 12.

The Mattawamkeag River has been used for the transportation of forest products by water from points upstream from the proposed Stratton Rips project to points downstream on the Penobscot River.

Applicant requests a preliminary permit for a period of 36 months. It appears appropriate, however, that the initial period of the permit should be 24 months as hereinafter provided.

No construction is authorized under a preliminary permit. Such a permit gives the permittee, during the period of the permit, the right of priority of application for license over other non-Federal entities, while the permittee undertakes the necessary studies and examinations required by Section 9 of the Federal Power Act in order to determine the economic feasibility of the proposed project, the means of securing the necessary financial arrangements for construction, the market for power, and all other information necessary for inclusion in an application for license, should one be applied for under the permit. A license would authorize construction of a project.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Maine.

(2) Public notice of the filing of the application has been given as required by the Act. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The proposed Stratton Rips project would be located in and along a navigable water of the United States.

(4) The proposed project would not affect a Government dam.

The Commission orders:

(A) This preliminary permit is hereby issued to Eastern Maine Electric Cooperative, Inc. (Permittee) of Calais, Maine, for a period of 24 months, effective as of September 1, 1965, for the sole purpose of maintaining priority of application for license for Project No. 2501, to be located on Mattawamkeag River, in Penobscot and Washington Counties, Maine, in the vicinity of Mattawamkeag, King and Winn, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this permit, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) The project, as tentatively proposed in the application, would consist of: (1) an earth-fill dam about 100 feet high located about 3.85 miles above the confluence of the Mattawamkeag River and the Penobscot River; (2) a forebay excavated in the right bank crossing an ox-bow in the river; (3) a reservoir with a usable storage of about 16,000 acre-feet; (4) an intake structure; (5) penstocks; (6) a gated spillway from the forebay; (7) a powerhouse with an installation of about 30,000 kilowatts; (8) a control structure to control releases from Baskahegan Lake located on a tributary of Mattawamkeag River; and (9) appurtenant facilities.

(C) This preliminary permit is also subject to the terms and conditions set forth in Form P–1 entitled "Terms and Conditions of Preliminary Permit" (16 FPC 1303–1305) which terms and conditions, designated as Articles 1 through 8, are attached hereto and made a part hereof; and further subject to the following special conditions set forth herein as additional articles:

Article 9. The Permittee shall submit at the close of each six-month period from the effective date of this permit to the Regional Engineer, Federal Power Commission, New York, New York, having supervision over the project, or to such other officer as the Commission may designate, accurate statements of the work accomplished during the period and of the work contemplated under this permit for the ensuing period.

Article 10. The Permittee shall, during the period of project planning, cooperate with the United States Fish and Wildlife Service and the Maine Department of Inland Fisheries and Game for the purpose of planning and designing adequate conservation measures: (1) to prevent loss or damage to existing fish

and wildlife resources, (2) to mitigate and compensate for the loss or damage to those resources, and (3) to develop and improve those resources where practicable.

Article 11. The Permittee shall employ a representative designated by the Board of Directors of the Farnsworth Museum, Rockland, Maine, to conduct a preliminary archeological survey of the project area to determine the cost of salvage, if any. The cost of making such preliminary survey shall be paid by the Permittee, in an amount not exceeding $1,000.

Article 12. The Permittee shall, during the period of project planning, maintain liaison with the Public Health Service, Department of Health, Education, and Welfare, in order that due consideration be given to any potential water quality problems that may be affected by this project.

Article 13. The Permittee shall, during the period of project planning, consult with the appropriate State and local agencies to determine any necessary mosquito control measures.

Article 14. The Permittee shall, during the early period of project planning, consult with Federal, State, and local agencies having an interest in outdoor recreation on project lands and waters, in the preparation of an "Exhibit R" required for the filing of an application for license pursuant to Section 4.41 of the Commission's Regulations under the Federal Power Act.

Article 15. The Permittee shall, for the purpose of assuring the cooperation required by the terms of the permit, designate a liaison officer to act for the Permittee in keeping the several agencies specified in this permit currently informed, and such liaison officer shall communicate with such agencies within 60 days from the date of issuance of this permit.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this preliminary permit. In acknowledgment of the acceptance of this preliminary permit, it shall be signed for the Permittee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

THE EMPIRE DISTRICT ELECTRIC COMPANY, DOCKET NO. E-6711

DETERMINATION OF ANNUAL CHARGES FOR HEADWATER BENEFITS

(Issued September 16, 1965)

Pursuant to Section 10(f) of the Federal Power Act and in accordance with provisions of Section 11.27 of the Commission's Regulations under the Federal Power Act, the staff of the Bureau of Power has investigated the possibility of headwater benefits accruing in calendar year 1964 to the Ozark Beach hydroelectric plant of The Empire District Electric Company as a result of streamflow regulation by the upstream Table Rock and Beaver reservoir projects of the United States. All three projects are in the White River basin in Arkansas and Missouri.

Both Federal projects were constructed for the primary purposes of flood control and the generation of hydroelectric power. The Table Rock project has an installation of 200,000 kilowatts and has been in commercial operation since August 1961. Closure of the Beaver dam was completed in January 1964. The

powerhouse has an ultimate capacity of 112,000 kilowatts in two 56,000-kilowatt units both of which went into commercial operation in May 1965.

Empire's Ozark Beach hydroelectric development, licensed project No. 2221, is located about 23 miles downstream from the Table Rock project and 103 miles downstream from the Beaver project. It is essentially a run-of-river development with an installed generating capacity of 16,000 kilowatts and about 9,000 acre-feet of usable pondage. The plant has been in operation since 1913.

The staff's investigation indicates that the two federally-owned projects provided no headwater benefits to the Ozark Beach plant in 1964, either by increasing the generation of energy or the dependable capacity.

Using the same method for computing energy gains and losses at the Ozark Beach plant in 1964 resulting from regulation of streamflow by the Table Rock and Beaver reservoirs as was used in computing gains and losses resulting from Table Rock in the 1960–1963 period, the staff estimated that the amount of energy actually generated in 1964 (31.3 million kilowatt-hours) was less by more than a million kilowatt-hours than it would have been without regulation by the upstream reservoirs. The method of computing energy gains and losses is described in the staff report of November 1964, on Investigation of Headwater Benefits, White River Basin, Arkansas and Missouri, September 9, 1956, through December 31, 1963. The staff also made a study of the dependable capacity of Ozark Beach and found that it was not affected by the operation of the Table Rock and Beaver projects. Average annual generation at Ozark Beach without upstream regulation has been estimated by the staff to be 58.4 million kwh. The very low generation in 1964 was due largely to the adverse streamflow available during that year, and in part to the initial filling of the upstream Beaver reservoir.

The staff report on its investigations was sent to the Company, the Chief of Engineers of the Department of the Army, and the Secretary of the Interior, all of which have submitted comments.

Both the Company and the Corps of Engineers concur in the results of the staff's investigations. However, the Department of the Interior takes issue with the staff's method of computation.

Interior comments that regulation of streamflow by Table Rock produced some gain in generation at Ozark Beach in 1964. The staff did not compute the effect of regulation by the individual Table Rock reservoir on Ozark Beach generation in 1964, but considered Table Rock and Beaver as a unit and computed the net effect of regulation by the two reservoirs.

Interior's position is that the effects of regulation by the Table Rock and Beaver reservoirs on Empire's Ozark Beach plant should be treated individually. Interior contends that losses in generation at Ozark Beach caused by the filling of the Beaver reservoir should be offset only by benefits subsequently received from Beaver. However, under the circumstances, the Commission deems it appropriate to consider the two upstream federal installations as one integrated headwater improvement for purposes of computing energy gains to Ozark Beach resulting from streamflow regulation by federal installations. Subsection 10(f) does not define the term "headwater improvement", and the Commission may therefore give that phrase a meaning which is reasonable in view of the facts of the case at hand. The facts here are that both of the upstream reservoirs are owned and operated by the federal government, that both were built by the Army Engineers as part of a comprehensive plan for the development of the river basin and that both will be used primarily for flood control and power production. These federal projects are geographically con-

tiguous, and it is inconceivable that they could operate successfully without close working interrelationship. For these reasons, it is reasonable and proper to regard the two federal reservoirs as one headwater improvement.

Upon consideration of the staff report and the aforesaid comments the Commission determines:

During the calendar year, 1964, the value of any power gains received by Empire District Electric Company's Ozark Beach project from the upstream federal Table Rock and Beaver projects was offset by the value of power losses caused by the filling of the Beaver Reservoir and as a result the Company's Ozark Beach project was not directly benefited by the headwater improvements of the United States during the calendar year 1964.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

ILLINOIS POWER COMPANY, DOCKET NO. E–7245

ORDER PROVIDING FOR INVESTIGATION AND HEARING

(Issued September 16, 1965)

By this order we shall institute an investigation and provide for hearing to determine whether certain of the filed wholesale rates and charges of Illinois Power Company (Illinois Power) are lawful within the meaning of Sections 205 and 206 of the Federal Power Act. Illinois Power's schedules of these rates and charges to the Villages of Fithian, Ladd, Ogden, Oglesby, and Sawyerville, Illinois, Cedar Point Light and Water Company, and Central Illinois Electric and Gas Company are set forth in the attached Appendix.

Examination and analysis of the rate schedules and other data currently available to the Commission indicate that Illinois Power's wholesale rates and charges to the seven customers named in the preceding paragraph may result in excessive rates or charges; may place an undue burden upon ultimate customers; and may be unjust, unreasonable, unduly discriminatory or preferential, or otherwise unlawful within the meaning of the Federal Power Act.

As we held in our opinion in the *Southwestern Public Service Company* proceeding,[1] rate of return from service to one group of wholesale customers can not be considered in isolation from the return on the Company's other wholesale business. Accordingly, while we are not placing in issue in this proceeding any question as to the validity of the rates charged for other sales, we are sending a notice of our order in this proceeding to each of Illinois Power's wholesale customers.

The Commission further finds:

In view of the foregoing, it is necessary and appropriate for the purposes of carrying out the provisions of the Federal Power Act, and particularly, but not in limitation of the foregoing, Sections 205, 206, 208, 301, 307, 308 and 309, that an investigation and hearing be instituted to determine the lawfulness of Illinois Power's rates and charges for wholesale electric service to the seven purchasers set forth in the Appendix hereto.

---

[1] Opinion No. 451, *Southwestern Public Service Company*, Docket No. E–7038, issued March 2, 1965, 33 FPC 343 at p. 354.

The Commission orders:

(A) A public hearing shall be held concerning the lawfulness of Illinois Power's rate schedules for wholesale electric service to the seven purchasers referred to in the finding paragraph above and all as set forth in the Appendix hereto, at a time and place and before a hearing examiner to be specified.

(B) A prehearing conference shall be held before a presiding examiner at a time to be specified by notice of the Secretary in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C. 20426, for purposes as specified in the Commission's Rules of Practice and Procedure.

(C) In order that the issues involved herein may be properly determined, an investigation is hereby initiated and Illinois Power is hereby directed pursuant to the provisions of Sections 301(b), 307 and 309 of the Federal Power Act to grant to authorized members of the staff of the Federal Power Commission during regular business hours, free access to its property and access to and the right to inspect and examine all of its accounts, records and memoranda including, but not limited to, the following: books, papers, correspondence, contracts, agreements, maps, reports of engineers, meter readings, and log sheets upon their request; and shall either furnish copies of such material at the request of the staff, or make such material available for reproduction by the staff or shall produce such material for use by the staff prior to and during said hearing at the Offices of the Commission, 441 G Street, N.W., Washington, D.C. 20426.

(D) Notices of intervention or petitions to intervene in this proceeding may be filed with the Federal Power Commission, Washington, D.C. 20426, on or before October 8, 1965, in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.37).

(E) Illinois Power shall within 45 days from the date hereof, submit a special report setting out cost and revenue data using 1964 as the test year, showing Illinois Power's costs of rendering service to each of the seven purchasers referred to in Paragraph (A) above, calculated in accordance with applicable Commission precedents and submitted in the form as prescribed in Statements A through O, Section 35.13(b) (4) (IV) of the Commission's Regulations under the Federal Power Act. An original and nine conformed copies of the report shall be submitted.

APPENDIX

Rate schedule designation	Other party	Instrument date
Rate Schedule FPC No. 25	Village of Fithian	Nov. 10, 1958 and July 7, 1954.
Supplement No. 1 to Rate Schedule FPC No. 25	do	July 2, 1964.
Rate Schedule FPC No. 26	Village of Ladd	Nov. 10, 1958 and July 7, 1954.
Supplement No. 1 to Rate Schedule FPC No. 26	do	July 2, 1964.
Rate Schedule FPC No. 27	Village of Ogden	Nov. 10, 1958 and July 7, 1954.
Supplement No. 1 to Rate Schedule FPC No. 27	do	July 2, 1964.
Rate Schedule FPC No. 28	Village of Oglesby	Nov. 10, 1958 and July 7, 1954.
Supplement No. 1 to Rate Schedule FPC No. 28	do	July 2, 1964.
Rate Schedule FPC No. 29	Village of Sawyerville	Nov. 10, 1958 and July 7, 1954.
Supplement No. 1 to Rate Schedule FPC No. 29	do	July 2, 1964.
Rate Schedule FPC No. 30	Cedar Point Light and Water Co.	Nov. 10, 1958 and July 7, 1954.
Supplement No. 1 to Rate Schedule FPC No. 30	do	July 2, 1964.
Rate Schedule FPC No. 31	Central Illinois Electric & Gas Company.	Mar. 8, 1954.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

LAKE SUPERIOR DISTRICT POWER COMPANY, PROJECT NO. 2430

ORDER ISSUING LICENSE (MAJOR)

(Issued September 16, 1965)

Application was filed on December 2, 1963 by Lake Superior District Power Company (Applicant) of Ashland, Wisconsin, for a license under Section 4(e) of the Federal Power Act (Act) for constructed major Project No. 2430, known as the Ladysmith Hydro Plant, located on the Flambeau River, in the City of Ladysmith, Rusk County, Wisconsin. No lands of the United States are affected by the project.

The original dam was built in 1903, the forebay of which directed the water into several flumes serving small turbines which furnished power for pulp and paper mills on the south and north banks of the river. In 1940, the old turbines were replaced by the existing turbines and generators. No substantial alteration has been made to the project since 1940.

Project No. 2430 is located on the Flambeau River approximately 16 miles downstream from Applicant's Big Falls Hydro Plant Project No. 2390, a license for which was issued on May 25, 1965 (33 FPC 1067). Based upon the facts set forth in our May 25 order, and in accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of January 1, 1940 and a termination date of December 31, 1989, since the replacement of the original project turbines in 1940 with new turbines and generators constituted a substantial alteration to the project after 1935.

The Secretary of the Army and the Chief of Engineers have approved the plans of the project structures insofar as the interests of navigation are concerned, pursuant to Section 4(e) of the Act.

The Department of the Interior, in reporting on the application, has advised that the project as currently operated does not affect adversely the fish and wildlife resources and no fishways or other specific measures are required at this time, and recommendation was made that the provisions contained in attached Form L–3 in the interests of fish and wildlife and recreational resources should be included in any license for the project.

The Department of Health, Education, and Welfare (H.E.W.) has advised that while the operational procedure followed at the project does not cause a pollution problem at present, there is a potential problem with the paper mill effluent discharged on the south side of the river below the dam, and the Department suggested that one of the flood gates on the dam be partially opened to insure a steady current along the south bank of the river. The Wisconsin Conservation Department has advised that while the recreational use of the project flowage is adequate at present, it noted that daily pond fluctuations amounted to as much as three feet, and the suggestion was made that daily fluctuations be limited to one foot on any given day. Following exchanges among H.E.W., the Wisconsin Conservation Department, the Wisconsin Committee on Water Pollution, the Wisconsin Public Service Commission and our staff on the fluctuation problem, Applicant is agreeable to a license provision requiring a 1.5 feet maximum allowable daily fluctuation of the Ladysmith reservoir. This provision is included herein as Article 31.

While Applicant submitted as a part of its application for license an Exhibit R outlining the present recreational use and development of the project area, which we are herein approving, the exhibit does not show the nature and extent of

Applicant's cooperation with State and local agencies, nor does the exhibit show any future plans for development of outdoor recreation potential should such a need arise. By Article 33 herein we are requiring Applicant to cooperate with State and local agencies in future recreational planning and to submit within a stated period for Commission approval a revised Exhibit R in conformance with the Commission's Regulations.

Although we are herein approving Exhibit K as a part of this license the exhibit shows only that portion of the project boundary in the vicinity of the dam, and we are by Article 32 herein requiring the filing of a revised Exhibit K in conformity with our rules and regulations. Article 32 also requires the filing of a revised Exhibit F showing the ownership of the lands within the project boundary. Commission approval of the latter exhibit is not required.

The Commission finds:

(1) The project is situated on navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the State of Wisconsin, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 2,400 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the cost of administration of Part I of the Act is reasonable.

(7) The generator leads, the 33-kv step-up substation, the 33-kv short transmission line to the Big Falls-Bruce 33-kv line, and the appurtenant facilities mentioned in paragraph (B) below are parts of the project and are included under this license.

(8) The exhibits designated in paragraph (B) below conform substantially to the Commission's Rules and Regulations and should be approved as part of this license.

(9) Exhibit R filed as part of the application conforms substantially to the Commission's Rules and Regulations, insofar as it indicates present recreational use, and should be approved as a part of this license.

The Commission orders:

(A) This license is hereby issued to Lake Superior District Power Company (Licensee) of Ashland, Wisconsin, under Section 4(e) of the Federal Power Act (Act) for a period effective January 1, 1940, and terminating December 31, 1989, for the continued operation and maintenance of constructed Project No. 2430, located on the Flambeau River, a navigable water of the United States, subject to the terms and conditions of the Act, which is incorporated herein by

reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Ladysmith Hydro Plant Project No. 2430 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purposes of the project, whether such lands or interests therein are owned or held by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2430–1) General Map.

Exhibit J–1: (FPC No. 2430–2) General Map.

Exhibit K: (FPC No. 2430–3) Map of Project in Vicinity of Dam and Powerhouse Area.

(ii) Project works consisting of: A dam consisting of two sections separated by an island, one, a rock-filled timber crib spillway section tying to the right bank with eight flood gates (16 ft. x 10 ft.) and a smaller sluice gate (12 ft. x 10 ft.); and the other a powerhouse intake section tying to the left bank; a reservoir with an area of about 236 acres extending 3.7 miles upstream and pondage; a powerhouse containing two 1,500-horsepower turbines each connected to a 900-kilowatt generator; a substation; a short 33-kv transmission line extending to the 33-kv Big Falls-Bruce transmission line; and appurtenant electrical and mechanical facilities; the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit L: Sheet 1 (FPC No. 2430–4) Generator Floor Plan; Sheet 2 (FPC No. 2430–5) Section through Turbine and Generator; Sheet 3 (FPC No. 2430–6) Powerhouse Plan and Sections; Sheet 4 (FPC No. 2430–7) Powerhouse Elevations; and

Exhibit M: Two typewritten pages, giving a general description of mechanical, electrical and transmission equipment of the project, filed in the Commission on December 2, 1963.

(iii) All of the structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–3 (Revised August 1, 1964) entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States" (32 FPC 1114), which terms and conditions, designated as Articles 1 through 29, are attached hereto and made a part hereof, except Article 25 thereof, and subject to the following special conditions set forth herein as additional articles:

Article 30. The Licensee shall pay to the United States the following annual charge, effective as of January 1, 1940:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from

time to time. The authorized installed capacity for such purposes is 2,400 horsepower.

Article 31. The Licensee shall operate the project in such a manner that the maximum daily pool level fluctuation will not exceed 1.5 (one and one-half) feet, and shall cooperate with the Wisconsin Conservation Department in regard to project operations during fish spawning season in the interest of conserving the fishery resources of the project reservoir. In the interest of water quality control below the dam, when additional water is available for such purpose, the Licensee shall periodically open the spillway gates to prevent an accumulation of waste in the pool area below the flood gates.

Article 32. The Licensee shall within one year from the date of issuance of this license file for Commission approval revised Exhibits F and K prepared in accordance with the Commission's Rules and Regulations.

Article 33. Licensee shall cooperate with State and local agencies and individuals in the development and maintenance of access areas and roads and such other facilities necessary for full recreational utilization by the public of project lands and waters, consistent with the terms of the license and the operation of the project and shall within a period of three (3) years from the date of issuance of this license file for Commission approval a revised Exhibit R in conformance with Section 4.41 R of Commission Regulations under the Federal Power Act.

Article 34. On the application of any person, association, corporation, Federal agency, State or municipality, the Licensee shall, after notice and opportunity for hearing, permit such reasonable use of its reservoirs or other project works or parts thereof as may be ordered by the Commission in the interest of comprehensive development of the waterway or waterways involved and the conservation and utilization of water resources of the region for water supply for steam-electric, irrigation, industrial, municipal or similar purposes consistent with the primary objective of the project. The Licensee shall receive such reasonable compensation as may be appropriate for use of its reservoirs or other project works or parts thereof for such purposes, any such compensation to be fixed either by Commission approval of an agreement between the Licensee and the party or parties benefiting or by the Commission in the event the parties are unable to agree. Applications shall contain information in sufficient detail to afford a full understanding of the proposed use, including satisfactory evidence that the applicant possesses necessary water rights pursuant to applicable State law, or a showing of cause why such evidence cannot be submitted, and a statement as to the relationship of the proposed use to any State or municipal plans or orders which may have been adopted with respect to the use of such waters.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as a part of this license.

(E) The Exhibit R referred to in finding (9) above is hereby approved as part of this license.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7238

ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE BONDS

(Issued September 16, 1965)

Pacific Power & Light Company (Applicant), a corporation organized under the laws of the State of Maine and doing business in the States of Oregon, Washington, Wyoming, California, Montana and Idaho with its principal business office at Portland, Oregon, filed an application on August 13, 1965, seeking an order pursuant to Section 204 of the Federal Power Act authorizing it to issue and sell at competitive bidding $30,000,000 principal amount of First Mortgage Bonds.

Applicant proposes to issue the Bonds pursuant to its presently existing Mortgage and Deed of Trust between Applicant and Guaranty Trust Company of New York (now Morgan Guaranty Trust Company) and Oliver R. Brooks (Wesley L. Baker, Successor), dated as of July 1, 1947, as heretofore supplemented and as to be further supplemented by a proposed new Eighteenth Supplemental Indenture. The new Bonds are to be dated October 1, 1965, are to bear interest at the rate per annum to be fixed by competitive bidding, and are to mature on October 1, 1995.

Applicant proposes on or about September 17, 1965 to invite sealed, written bids for the purchase of the proposed Bonds by newspaper publication and by distribution of a public invitation for bids together with a statement of terms and conditions related thereto and a form of purchase contract.

Each bid whether made by a single bidder or a group of bidders must be for the purchase of all of the Bonds and must be in writing on the Form of Bid provided by the Applicant. Each bid for the Bonds must specify: (1) the coupon rate to be borne by the Bonds, which rate shall be a multiple of ⅛ of 1%; and (2) the price of said Bonds plus accrued interest, from October 1, 1965 to the date of delivery thereof and payment thereof, which price shall be expressed as a percentage of the principal amount of the Bonds and shall not be less than 98½% nor more than 102¾% of the principal amount thereof. Each bid for the Bonds must be accompanied by a certified bank check or checks in the aggregate amount of $900,000.

Unless postponed, all bids for the purchase of the proposed Bonds must be received by Applicant before 11:00 a.m. New York Time on September 29, 1965 at Room 2033, Two Rector Street, New York, New York, 10006. Unless Applicant rejects all bids for the proposed issuance of Bonds or excludes a bid or bids for reasons specified in the terms and conditions it will accept the bid which will provide it with the lowest annual cost of money.

The net proceeds from the issuance and sale of the new Bonds are proposed to be applied (a) to payment of all promissory notes (not expected to exceed $15,000,000 in principal amount) outstanding under a Credit Agreement dated October 1, 1963, as supplemented by a Letter Agreement dated March 10, 1965[1] at the time of the consummation of the issuance and sale of the new Bonds; and (b) to finance in part Applicant's 1965, 1966, 1967 construction program. Applicant's construction expenditures for the years 1965, 1966 and the first half of 1967 are presently estimated at $110,654,000, approximately $14,734,000 of which

[1] Order authorizing issuance of promissory notes under the Credit Agreement was issued Feb. 14, 1964, in *Pacific Power & Light Company*, Docket No. E-7129, 31 FPC 414, and supplemented by order issued June 3, 1965, 33 FPC 1207.

had been expended through June 30, 1965. The proposed construction program is the same as described in detail in the Commission's order issued June 3, 1965, *Pacific Power & Light Company* in Docket No. E–7129, with one minor change, the deletion of the Libby-Trego 115 kv transmission lines. In completing the financing of said construction program, Applicant expects to use funds available from the sale of the New Bonds in the approximate amount of $15,000,000 funds to be borrowed under the Credit Agreement, as supplemented, funds to be generated internally, and funds to be derived from additional financing expected to be undertaken prior to June 30, 1967, when notes issued under the Credit Agreement as supplemented, will mature. The precise amount, nature and timing of such further financing is not now determinable.

Written notice of the application has been given to the Public Utilities Commission of the State of Maine, the Public Utilities Commissioner of Oregon, the Wyoming Public Service Commission, the Washington Utilities and Transportation Commission, the Public Utilities Commission of the State of California, the Public Service Commission of Montana and the Idaho Public Utilities Commission and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on August 25, 1965 (30 F.R. 11004), stating that any person desiring to be heard or to make any protest with reference to the application should on or before September 3, 1965, file a petition or protest with the Federal Power Commission, Washington, D.C., 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore determined and set forth in the Commission's order issued March 28, 1962, *Pacific Power & Light Company*, Docket No. E–7025 (27 FPC 620).

(2) The proposed issuance and sale of Bonds, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act; and the proposed issuance of securities is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

(5) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance and sale of Bonds upon the terms and conditions and for the purposes specified in the application, as described above, is hereby authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(1) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of those Regulations relating to affiliation, and shall have either filed

such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations;

(ii) The Commission, by a further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

(C) This authorization shall expire unless the transactions hereby authorized are consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States with respect to any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

CITY OF PETERSBURG, ALASKA, PROJECT NO. 2521

ORDER ISSUING PRELIMINARY PERMIT

(Issued September 16, 1965)

Application was filed on May 10, 1965, by City of Petersburg, Alaska (Applicant) for a preliminary permit under Section 4(f) of the Federal Power Act (Act) for proposed Project No. 2521, to be known as the Thomas Bay Project, to be located on Cascade Creek within the Swan Lake and Falls Lake Drainage Basin in the First Judicial District, Alaska, about 16 miles northeast of Petersburg, Alaska, and affecting lands of the United States within the Tongass National Forest.

The Secretary of the Army and the Chief of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in commenting on the application, recommended for inclusion in any preliminary permit for the project special conditions in the interest of fish and wildlife and Archeology, in addition to the conditions set forth in the attached Form P–1. The special conditions are set forth herein as Articles 10 and 11.

The Department of Health, Education, and Welfare, has advised that the project is not expected to have any adverse effects on water supply or pollution control and that the Alaska Division of Health concurs with the Department.

The Chief, Forest Service, acting for the Secretary of Agriculture, who has supervision over the Tongass National Forest, in commenting on the application, recommended for inclusion in any preliminary permit for the project, the terms and conditions for the protection of National Forest interest as set forth in attached Form P–1 and Article 12 herein.

No construction is authorized under a preliminary permit. Such a permit gives the permittee, during the period of the permit, the right of priority of application for license over other non-Federal entities, while the permittee undertakes the necessary studies and examinations required by Section 9 of the Federal Power Act in order to determine the economic feasibility of the proposed project, the means of securing the necessary financial arrangements for construction, the market for power, and all other information necessary for inclusion in an ap-

plication for license, should one be applied for under the permit. A license would authorize construction of a project.

The Commission finds:

(1) Applicant is a municipality organized under the laws of the State of Alaska.

(2) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

The Commission orders:

(A) This preliminary permit is hereby issued to City of Petersburg, Alaska (Permittee) for a period of 24 months, effective as of September 1, 1965, for the sole purpose of maintaining priority of application for license for Project No. 2521, to be located on Cascade Creek, in the First Judicial Division, Alaska, and affecting lands of the United States within the Tongass National Forest, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this permit, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

As tentatively proposed in the application, the project would be constructed in four stages and would consist of: *Stage I*—(1) water flow control structures at the outlets of Swan Lake and Falls Lake; (2) power water conduit from Falls Lake to slope above Thomas Bay; (3) penstock to powerhouse at tidewater on Thomas Bay; (4) powerhouse structure housing two 5,000-kw generating units; (5) transmission line, sized for ultimate project capacity, from the plant to Petersburg; and (6) appurtenant facilities; *Stage II*—(1) a dam on the outlet works of Swan Lake, increasing that reservoir to its ultimate capacity; (2) another penstock from the conduit to the powerhouse on Thomas Bay; (3) an additional powerhouse structure for Stages II and III units; (4) one 10,000-kw unit; and (5) appurtenant facilities; *Stage III*—(1) another penstock from the conduit to the powerhouse; (2) one 10,000-kw unit; and (3) appurtenant facilities; and *Stage IV*—power development of about 380 feet of head between Swan Lake and Falls Lake (justification to be resolved in remote future) by means of: (1) the completion of regulatory facilities at Swan Lake; (2) an intake and power tunnel to a powerhouse on Falls Lake housing an ultimate installation of about 8,000 kw; and (3) appurtenant facilities.

(B) This permit is also subject to the terms and conditions set forth in Form P–1 entitled, "Terms and Conditions of Preliminary Permit" (16 FPC 1303–1305) which terms and conditions (designated as Articles 1 through 8) are attached hereto and made a part thereof; and further subject to the following special conditions set forth herein as additional articles:

Article 9. The Permittee shall submit at the close of each six-month period from the effective date of this permit to the Regional Engineer, Federal Power Commission, San Francisco, California, having supervision over the project, or to such other officer as the Commission may designate, accurate statements of the work accomplished during the period and of the work contemplated under this permit for the ensuing period.

Article 10. The Permittee shall, during the period of project planning, cooperate with the U.S. Fish and Wildlife Service and the Alaska Department of Fish and Game for the purpose of planning and designing adequate conservation measures: (1) to prevent loss of or damage to existing fish and wildlife resources, (2) to mitigate and compensate for the loss of or damage to these resources and (3) to develop and improve these resources where practicable.

Article 11. The Permittee shall during the period of this permit consult with the Department of Anthropology, University of Alaska, College, Alaska, and arrange for a preliminary archeological survey of the project area to determine the cost of archeological salvage operations if any are necessary in the area to be affected by the project. The cost of making such preliminary survey shall be paid by the Permittee in an amount not to exceed $500.00.

Article 12. The Permittee shall, prior to undertaking any investigation work under this preliminary permit on National Forest lands, consult with the Regional Forester, United States Forest Service, Juneau, Alaska, or his representative, as to reasonable requirements relative to operations, field surveys, and explorations, and shall abide by such requirements; and shall cooperate with the United States Forest Service during the period of this permit to develop a plan for alleviation of damage to, and achieving maximum utilization of, National Forest resources insofar as affected by the proposed project.

Article 13. The Permittee shall, during the period of project planning consult with the appropriate State and local agencies to determine any necessary mosquito control measures.

Article 14. The Permittee shall, during the early period of project planning, consult with Federal, State and local agencies having an interest in outdoor recreation on project lands and waters, in the preparation of an "Exhibit R" required for the filing of an application for license pursuant to Section 4.41R of the Commission's Regulations under the Federal Power Act.

Article 15. The Permittee shall, for the purpose of assuring the cooperation required by the terms of the permit, designate a liaison officer to act for the Permittee in keeping the several agencies specified in this permit currently informed, and such liaison officer shall communicate with such agencies within 60 days from the date of issuance of this permit.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this preliminary permit. In acknowledgment of the acceptance of this preliminary permit, it shall be signed for the Permittee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

AREA RATE PROCEEDING, ET AL. (SOUTHERN LOUISIANA AREA), DOCKET NO. AR61-2, ET AL.

ORDER REJECTING APPEAL FROM PRESIDING EXAMINER'S RULINGS DENYING MOTION TO EXCLUDE CERTAIN EVIDENCE

(Issued September 17, 1965)

On August 18, 1965, the Associated Gas Distributors (AGD), interveners in this proceeding, filed an appeal with the Commission from the Presiding Examiner's ruling on July 21, 1965, denying a motion made by AGD on July 12, 1965, to exclude certain portions of the testimony and exhibits sponsored by producers' witnesses, D. W. Auten and W. G. Davis, dealing with the subject matter of time lag between exploration expenditures and receipt of revenues. In the appeal, AGD states that the producers' Auten-Davis time lag presentation is based on certain producer company responses which have been made available only in

coded form and that AGD has been seriously prejudiced by the Presiding Examiner's refusal to grant its requests for subpoenas either of the individual company data or work sheets behind them in uncoded form.

By memorandum dated September 10, 1965, the Presiding Examiner notified the Commission that at the hearing session on September 8, 1965, he made a ruling finally denying the motion to strike the Auten-Davis time lag study but subject to the condition that the sponsoring producer respondents make available to AGD and the staff the uncoded questionnaire responses underlying that study, together with certain other data requested by AGD. The Presiding Examiner also notified us that the parties agreed that in the event the Commission denied the AGD appeal, the requested material would be made available to AGD and staff. Since it is presumed that the requested uncoded material will be made available to AGD and the staff, AGD's appeal to this extent is rendered moot.

The Presiding Examiner in rejecting AGD's request to certify an appeal from his original ruling denying its motion to exclude, found no extraordinary circumstances which would justify the certification to the Commission of his ruling. Questions as to the admissibility or exclusion of evidence must be determined initially by the Presiding Examiner and his rulings are subject to our review at the time of consideration of the Examiner's decision. In accordance with Section 1.28(a) of the Commission's Rules of Practice and Procedure, we shall not examine on appeal interlocutory rulings in the absence of extraordinary circumstances. Accordingly, in view of the final ruling by the Presiding Examiner and the disposition of the matter above referred to, and since AGD has failed to make a persuasive showing of extraordinary circumstances, the appeal should be rejected.

The Commission orders:

That the appeal filed herein by AGD on August 18, 1965, is rejected.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65-374

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 17, 1965)

On May 27, 1965, El Paso Natural Gas Company (Applicant) filed in Docket No. CP65-374 an application, as supplemented on August 2, 1965, and August 27, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the sale and delivery of natural gas to Cascade Natural Gas Corporation (Cascade) for resale in the community of Quincy, Washington, and environs, as more fully set forth in the application.

Applicant will construct and operate in Chelan County, Washington, a meter station, approximately 2.6 miles of 4½-inch O.D. lateral pipeline and appurtenances extending from a point of connection with Applicant's 8⅝-inch O.D Northwest Division Wenatchee Lateral in a southeasterly direction to a point of connection with facilities proposed to be constructed and operated by Cascade.

Cascade's estimated annual and maximum daily requirements during the third year of the proposed service will be 286,000 Mcf and 2,125 Mcf, respectively.

The total estimated cost of the facilities proposed to be constructed by Applicant is $66,000, which is to be financed by means of the normal financial sources available to it. The project appears to be economically feasible.

Due notice of the filing of the application was published in the Federal Register on June 11, 1965 (30 F.R. 7624). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

At a hearing held on September 16, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G–242 and G–257 (3 FPC 851).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, El Paso Natural Gas Company, authorizing the construction and operation of facilities and the transportation and sale of natural gas, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

HUMBLE GAS TRANSMISSION COMPANY, DOCKET NO. CP65-395

ORDER TO SHOW CAUSE

(Issued September 17, 1965)*

On June 9, 1965, Humble Gas Transmission Company (Humble) of New Orleans, Louisiana, filed, pursuant to Section 7 of the Natural Gas Act, an application for a certificate of public convenience and necessity, as amended on July 6, 1965, for authorization to construct a measuring station and one four-inch pipeline approximately 4,100 feet in length, to maintain and operate approximately 2,350 feet thereof, and to transport, sell, and deliver natural gas to Diamond National Corporation (Diamond), as hereinafter described. The proposed lateral line will extend from a point of connection with Humble's existing facilities near Natchez in Adams County, Mississippi, to Diamond's plant.

Humble agreed that upon completion of the construction of such facilities it would assign title to Diamond, free of cost, of that portion of the connecting line extending from the discharge side of its measuring station to the terminal end of the line at the plant. The proposed facilities are estimated to cost $21,000. The line section of approximately 1,750 feet in length that Humble intends to assign to Diamond represents approximately $8,400 of the estimated total cost of the proposed facilities.

Humble seeks authority to construct the aforementioned facilities in order to make a direct sale of natural gas to Diamond. Diamond will use this gas in boilers to produce steam for processing, for direct-fired driers, and miscellaneous plant uses in a facility that it is presently constructing near Natchez, Mississippi. Humble, in its application, requests permission to sell 500,000 Mcf of gas to Diamond on an annual basis and a maximum of 3,000 Mcf on a daily basis.

On July 12, 1965, Mississippi Valley Gas Company (Mississippi) filed a petition to intervene in opposition to the application. Diamond, on August 5, 1965, filed a petition to intervene in the above-styled proceeding. On August 12, 1965, Humble filed an answer in opposition to Mississippi's petition to intervene.

Mississippi alleges in its petition to intervene that it is a local gas distribution company serving over one hundred communities in Mississippi and that the Diamond plant will be located within the geographical confines which are designated as being within its service area by the Mississippi Public Service Commission. Mississippi purchases gas to serve its customers in this area under a service agreement dated September 11, 1963, with Humble. Humble's effective gas tariff on file with the Commission contains a provision that could preclude Mississippi from attaching industrial loads of any significant size in this area.[1]

Mississippi also alleges in its petition to intervene that it worked with the Mississippi Agricultural and Industrial Board in order to induce Diamond to locate a plant in the Natchez, Mississippi area and that it had negotiated with Diamond to supply the natural gas requirements for this plant. Mississippi further claims that Humble has continuously refused to consent to provide it with the additional gas supply necessary for it to serve the requirements of Diamond even

*See order issued October 11, 1965 granting reconsideration, etc., 34 FPC 1127.

[1] Paragraph 10 of the General Terms and Conditions of Humble's FPC Gas Tariff Original Volume No. 1 provides as follows:

Buyer shall not sell gas purchased under Seller's Rate Schedule G-1 to any one industrial consumer in excess of 100,000 cubic feet per month except by written consent of Seller.

though it offered Diamond a contract to supply its gas requirements at a price lower than the price herein proposed by Humble.

Humble in its answer filed in opposition to Mississippi's petition to intervene places strong emphasis on Paragraph 10 of the General Terms and Conditions of its effective FPC gas tariff. Humble contends that under the above-mentioned provisions of this tariff it is only required to meet a customer's request for additional gas to be consumed for industrial purposes when such requirements do not exceed a maximum of 100 Mcf per month.

Mississippi cites *Southern Natural Gas Company*, 25 FPC 925 (1961) and *Northern Natural Gas Company*, Opinion No. 453, 33 FPC 501, issued March 9, 1965 to support its petition to intervene in opposition to Humble's application. The situation that has been directed to the Commission's attention herein by Mississippi is not analogous to our holding in *Southern Natural Gas Company, supra*, wherein we expressed the view that, in general, the wholesale-supplier should not compete directly with its distributor customers. Nor are the reflections in *Northern Natural Gas Company, supra*, helpful in resolving the situation presented herein. In the latter proceeding the Commission indicated that it did not endorse a policy in *Southern* that would limit the making of industrial sales solely to distribution companies, to the exclusion of potential competition by their pipeline suppliers. The ramifications of the tariff provision that we are now considering are of far different consequence than the issues discussed in the proceedings *supra*, because it may serve to restrict local distribution companies from making any direct industrial sales in competition with their pipeline supplier. This provision in Humble's tariff may be unduly restrictive and unjust and unreasonable under the provisions of the Natural Gas Act.

Under the circumstances, the Commission believes that the question of the propriety of this provision in the Humble tariff should be examined. In order to provide an opportunity in a formal hearing, the Commission will direct an order to Humble that it show cause why the above-noted tariff provision should not be held to be unjust and unreasonable. The Commission will invite any of Humble's customers or other persons who are affected by this tariff provision to intervene in this proceeding in order to submit its views on this matter.

The Commission will further consolidate Humble's request for a certificate of public convenience and necessity under Section 7 of the Natural Gas Act in the above-styled proceeding with the issue relating to the necessity and propriety of Paragraph 10 of the General Terms and Conditions of Humble's FPC Tariff Original Volume No. 1.

The Commission will also set a date for a prehearing conference in connection with this matter in order to endeavor to determine whether or not gas service can be afforded to Diamond on an interim basis pending the final determination of this proceeding.

The Commission finds:

Pursuant to the Natural Gas Act, particularly Sections 4, 5 and 7 thereof, it is necessary and appropriate that Humble Gas Transmission Company be directed to show cause in a formal hearing why the Commission should not find and determine that the above-mentioned provision in Humble Gas Transmission Company's filed tariff is unjust and unreasonable.

The Commission orders:

(A) Notice of intervention or petitions to intervene in this proceeding may be filed with the Commission on or before October 4, 1965, in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8).

(B) A prehearing conference be convened in the proceeding entitled Humble Gas Transmission Company, Docket No. CP65-395, in a hearing room of the

Federal Power Commission, 441 G Street NW., Washington, D.C., 20426, on October 11, 1965, at 10:00 a.m. (EDST). The Chief Examiner will designate in appropriate officer of the Commission to preside at the prehearing conference and at the formal hearing of these matters, pursuant to the Commission's Rules of Practice and Procedure.

(C) On or before November 19, 1965, Humble Gas Transmission Company shall serve the testimony and exhibits that it intends to present in response to this order upon the various parties to this proceeding.

(D) A formal hearing be commenced in the proceeding entitled Humble Gas Transmission Company, Docket No. CP65-395, in a hearing room of the Federal Power Commission, 441 G Street NW., Washington, D.C., 20426, on December 8, 1965 (EDST).

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

UTAH POWER & LIGHT COMPANY, PROJECT NO. 671

ORDER ACCEPTING SURRENDER OF LICENSE (MAJOR)

(Issued September 17, 1965)

Application was filed on March 8, 1965 under Section 6 of the Federal Power Act by Utah Power & Light Company, licensee for major Project No. 671, for surrender of the license for the project located on Alpine or Dry Creek in the vicinity of Lehi, in Utah County, Utah, and affecting lands of the United States within the Uinta National Forest. The licensee's copy of the license was returned with the application.

According to the application: (1) the 30 inch wood stave pipe line comprising an essential part of the project works is 55 years old and needs to be completely replaced in order to continue operating the plant; (2) the replacement cost is prohibitive due to the present high labor and material costs; and (3) energy can be supplied more economically from other sources in Applicant's interconnected system. Data submitted as part of the application, showing the operating and maintenance costs of the project for 1959 through 1964 supports Applicant's application for surrender.

The Forest Service, which has supervision over the National Forest lands occupied by the project, recommends that surrender of the license be accepted subject to the removal of the project structures and equipment from such lands as proposed in the application, within one year from our acceptance of surrender of the license, and subject to restoration of the lands to a condition satisfactory to the Service.

Public notice of the application has been given. No protests or petitions to intervene have been received.

The Commission finds:

Acceptance of surrender of the license for Project No. 671 is appropriate, as hereinafter provided.

The Commission orders:

Surrender of the license for Project No. 671 is hereby accepted, effective as of August 31, 1966, subject to the restoration within that time of the National Forest lands occupied by the project to a condition satisfactory to the Forest Service and subject to the payment of annual charges under the license through August 31, 1966 within 30 days of rendition of a bill therefor by the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

TOWN OF BRIGHTON, IOWA AND NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP65-312

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued September 20, 1965)

On April 5, 1965, the Town of Brighton, Iowa (Applicant), filed in Docket No. CP65-312 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Natural Gas Pipeline Company of America (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver to Applicant its third year peak day requirements of 439 Mcf of natural gas, all as more fully set forth in the application on file with the Commission and open to public inspection.

Applicant proposes to construct and operate a municipally-owned natural gas distribution system within its borders and a lateral transmission pipeline approximately 13.1 miles in length extending south from a point of interconnection with Natural's main transmission line to Applicant's city gate.

Total volumes of natural gas involved to meet Applicant's anticipated annual and peak day requirements are stated to be:

	First year	Second year	Third year
Annual (Mcf)	27,810	41,700	52,260
Peak day (Mcf)	283	351	439

The total estimated cost of Applicant's proposed construction including the 13.1 miles of lateral, is estimated to be $240,000, which will be financed by Gas Revenue Bonds in the amount of $200,000 and General Obligation Bonds in the amount of $40,000. The data reflected in the application indicates the proposals with reference to Applicant are economically feasible.

On April 22, 1965, Respondent filed an answer to the application in the proceeding, stating it had no unallocated capacity available for the service requested by the Applicant, but would be able and willing to render the request for service should the Commission approve its application in Docket No. CP65-404. Respondent was authorized to construct and operate the said facilities proposed in Docket No. CP65-404 on August 24, 1965, 34 FPC 568.

The Illinois Commerce Commission has approved the proposals of the Applicant made in the instant application.

Due notice of the filing of the subject application and opportunity for hearing thereon have been given by publication in the Federal Register on April 17, 1965 (30 F.R. 5544). No protest, petition to intervene, notice of intervention or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) Applicant is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, up to 439 Mcf per day of natural gas for distribution and resale as hereinbefore described and as more fully described in the application in this proceeding.

(4) Applicant should be prepared to receive natural gas from Respondent for distribution in Brighton, Iowa, and environs, within one year from the date of the issuance of this order.

(5) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon it nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Natural Gas Pipeline Company of America, Respondent, is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as herein described, and to sell and deliver up to 439 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations for distribution and resale as hereinbefore described and as more fully described in the application in the proceeding. Such service shall be rendered pursuant to Respondent's presently filed appropriate rate schedule.

(B) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65-400

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 20, 1965)

On June 16, 1965, El Paso Natural Gas Company (Applicant) filed in Docket No. CP65-400 an application, as supplemented on August 2, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of three metering and regulating stations, and appurtenant facilities, and the sale of natural gas to Washington Natural Gas Company (Washington Natural), an existing customer, for transportation to and resale and general distribution in the communities of Toledo, Winlock, Fall City, Snoqualmie and North Bend, Washington, and their respective environs, as more fully set forth in the application.

The measuring and regulating stations will consist of one each for service to Toledo and Winlock and the third for service to Fall City, Snoqualmie and North Bend. Deliveries to Washington Natural will be made at the outlets of the measurnig stations, and Washington Natural will transport the gas to points of

resale and distribution in the communities. Washington Natural will be served under Applicant's Rate Schedules DL–1, DS–1, and I–1.

Washington Natural estimates that the maximum daily and annual gas requirements during the third full year of the proposed service will be 1,310 Mcf and 171,435 Mcf, respectively.

The total cost of the facilities to be constructed by Applicant is estimated to be $21,400, which will be financed from currently available working funds. The proposed construction and service appears to be economically feasible.

Due notice of the filing of the application was published in the Federal Register on June 26, 1965 (30 F.R. 8243). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

At a hearing held on September 16, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation with its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G–242 and G–257 (3 FPC 851).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities and to transport and sell natural gas as hereinbefore described, as more fully described in the application, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities shall be constructed and placed in actual operation and the transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65-412

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 20, 1965)

On June 22, 1965, El Paso Natural Gas Company (Applicant) filed in Docket No. CP65-412 an application, as supplemented on August 2, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the sale and delivery of natural gas to Black Mountain Gas Company (Black Mountain) for transportation to and resale and general distribution in the unincorporated communities of Carefree and Cave Creek, Arizona, and their respective environs and rural areas of Maricopa County, Arizona, as more fully set forth in the application.

Applicant will construct and operate a measuring and regulating station adjacent to its 20-inch O.D. San Juan-Maricopa pipeline in Maricopa County, Arizona, and will make deliveries of natural gas to Black Mountain at the outlet of the station. The total estimated cost of Applicant's proposed station is $6,050, which is to be financed from current working funds.

Black Mountain proposes to construct and operate approximately 18.2 miles of transmission pipeline and facilities necessary to provide natural gas service in the two communities and surrounding rural areas. The total estimated cost of Black Mountain's proposed project is $288,425, which it plans to finance through bank loans and the sale of common stock.

Black Mountain estimates that during the five-year prospective period its annual and maximum daily requirements for natural gas will aggregate 67,329 Mcf and 616 Mcf, respectively. Service will be rendered under Applicant's firm service Rate Schedule A-1 and B-1. The proposal appears to be economically feasible.

Due notice of the filing of the application was published in the Federal Register on July 7, 1965 (30 F.R. 8597). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

At a hearing held on September 16, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation with its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G-242 and G-257 (3 FPC 851).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, El Paso Natural Gas Company, authorizing the construction and operation of facilities and the sale of natural gas as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP66-36

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 20, 1965)

On July 30, 1965, El Paso Natural Gas Company (Applicant) filed in Docket No. CP66-36 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application.

Applicant's facilities in the Monument area of Lea County, New Mexico, consist, in part, of a purification and dehydration plant (Monument Plant) and two 16-inch O.D. discharge pipelines extending from the plant. One line extends 6.7 miles to the Eunice Plant. The other line extends 5.2 miles to Applicant's Plains-Eunice pipeline.

Applicant proposes to increase the daily design capacity of the Monument Plant from 110,000 Mcf to 180,000 Mcf per day and to install 5.2 miles of 20-inch O.D. pipeline, looping the 16-inch line which connects the Monument Plant with the Plains-Eunice pipeline. Applicant will also remove the 16-inch Monument-Eunice line from high pressure service, but it will remain in place and will be utilized for low pressure gathering service.

The reason for the proposed construction is that residue gas available to the Monument Plant has been increasing due to increased oil production and increas-

ing gas-oil ratios in some areas. For this reason, the Monument Plant is at times seriously overloaded and some flaring of gas has been necessary. The 16-inch Monument-Eunice line is old and now in too hazardous condition to be continued in high pressure service. Applicant therefore proposes to utilize this line only for low pressure gathering purposes.

The estimated cost of the transmission line and the proposed purification and dehydration plant expansion is $604,000, which will be financed from currently available working funds. The proposal appears to be economically feasible.

Due notice of the filing of the application was published in the Federal Register on August 18, 1965 (30 F.R. 10257). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

At a hearing held on September 16, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation with its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G–242 and G–257 (3 FPC 851).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, El Paso Natural Gas Company, authorizing the construction and operation of facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized by this order shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

MICHIGAN GAS STORAGE COMPANY, DOCKET NO. CP65-383

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 20, 1965)

On June 1, 1965, Michigan Gas Storage Company (Applicant) filed in Docket No. CP65-383 an application, as supplemented August 9, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the establishment and operation of a new interchange and delivery point with Consumers Power Company (Consumers) and the transportation of natural gas for and in behalf of Consumers, all as more fully set forth in the application.

The proposed interchange, to be known as Rochester Junction, is to be located in Oakland Township, Oakland County, Michigan. Consumers is to construct approximately 21 miles of 26-inch pipeline extending from its St. Clair Compressor Station now under construction in Macomb County, Michigan to the proposed interconnection with Applicant's existing 20-inch pipeline in Oakland County, Michigan. This pipeline and interchange will permit the utilization by Consumers in its service area of a greater volume of its natural gas production in St. Clair and Macomb Counties, Michigan. The proposed interchange will also be used for the delivery of gas by Applicant to Consumers for storage in Consumer's facilities in St. Clair County, Michigan.

No facilities are to be constructed by Applicant, and Consumers will construct and pay for all facilities required to establish and operate the proposed interchange.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 16, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Michigan Gas Storage Company, a Michigan corporation having its principal place of business in Jackson, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) The establishment of the proposed interchange and its operation by Applicant for the transportation and delivery of natural gas for and to Consumers Power Company are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The proposed establishment and operation of said interchange are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Michigan Gas Storage Company, authorizing the establishment of the proposed

interchange with Consumers Power Company and authorizing the operation of such interchange by Applicant for the transportation and delivery of natural gas for and to Consumers, all as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3) and (e) of Section 157.20 of such Regulations.

(C) The interchange authorized above shall be placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

NORTHERN STATES POWER COMPANY (MINNESOTA), DOCKET NO. E-7140

ORDER ACCEPTING RATE SCHEDULE FILINGS EFFECTING RATE REDUCTIONS AND TERMINATING PROCEEDING

(Issued September 20, 1965)

Northern States Power Company (Minnesota) [Company] at various times between June 11 and August 16, 1965, submitted proposed rate schedules for filing pursuant to Section 205 of the Federal Power Act whereby Company would reduce its rates and charges to 41 municipal investor-owned and cooperatively-owned customers by $254,468 based upon Company's 1963 operations. This amount would be increased $281,596 based upon 1964 operations of Company.

The subject rate reductions are occasioned by, and proffered in settlement of, the formal rate investigation directed by order of the Commission issued December 6, 1963, 30 FPC 1430, in the above-docketed matter.

Pursuant to the proposed filings, Company would reduce its rates and charges for firm power service to 15 municipal and one investor-owned wholesale customer served from Company's Minnesota-South Dakota system by 6.5 per cent per annum, $153,074 (1963) and $159,811 (1964).[1] Company's rates and charges for wheeling services to 11 municipal and 16 cooperatively-owned wholesale customers would be reduced by 8 per cent per annum, $101,394 (1963) and $121,785 (1964).[2] All of the proposed rate reductions would be effective for billing pur-

[1] Company serves the following all requirements firm power customers in Minnesota, Cities of: Anoka, Arlington, Bayport, Brownton, Buffalo, Chaska, Granite Falls, Kasota, Kasson, Lake City, North St. Paul, St. Peter, Shakopee, Waseca, Winthrop, and Home Light and Power Company.

[2] Company furnishes wheeling service to the following ten municipalities in Minnesota and to the University of North Dakota: Olivia, St. James, Sauk Centre, Ada, East Grand Forks, Marshall, Melrose, Redwood Falls, Fairfax, and Sleepy Eye.

In addition, Company furnishes wheeling service to the following four cooperatives: Lyon-Lincoln and Traverse Electric Cooperative, Renville Sibley Cooperative, Nobles Cooperative Electric Association, and Minnesota Valley Cooperative Light and Power Assn. Company also furnishes wheeling service to Cooperative Power Association for the account of the following 12 cooperatives: Dakota County Electric Cooperative, Goodhue County Electric Association, McLeod Cooperative Power Association, Meeker Cooperative Light & Power Association, Blue Earth-Nicollet Cooperative, Minnesota Valley Electric Cooperative, Steel-Waseca Electric Cooperative, Brown County Rural Electric Association, South Central Electric Association, Stearns Cooperative Electric, Redwood Electric Cooperative, and Runestone Electric Association.

poses as of the first metering dates from and after June 1, 1965. Attached Appendix A sets forth rate schedule designations covering the proffered filings and detailed dollar reductions applicable to individual customers. Attached Appendix B summarizes principal differences in present and proposed rate forms through which the rate reductions would be accomplished.

During the pendancy of the subject proceeding, Company reduced its rates and charges for transformation service supplied to five municipal customers [3] and the University of North Dakota. That reduction amounts to 30 per cent per annum, $22,820 based upon Company's 1963 operations. Additionally, under the proposed rate schedules the Company's corporate affiliate Northern States Power Company (Wisconsin) will receive, effective July 1, 1965, a nominal rate reduction ($4,300 based on 1963–64 operations) through the Company's revision of its standard fuel adjustment clause.

The Commission's order of December 6, 1963, instituting this proceeding directed a general investigation of Company's rates and charges for various classes of service to municipal, investor and cooperatively-owned electric systems including certain services rendered to Company's affiliate, Northern States Power Company (Wisconsin), Eau Claire, Wisconsin. Company operates an interconnected electric system in the States of Minnesota and South Dakota. An isolated electric system of Company serves the Fargo-Grand Forks, North Dakota, area.[4] The Company's corporate affiliate, Northern States Power Company (Wisconsin), operates in the western and northern portions of the State of Wisconsin.

On July 20, 1964, Company submitted a cost of service study showing annual revenue deficiencies for service to the above-mentioned wholesale customers. Thereafter, the Commission staff completed a cost of service study which indicates excess revenues over costs for Company's firm power service to municipals and one non-affiliated investor-owned electric system purchasing from Company's interconnected Minnesota-South Dakota system. Staff's study also indicates excess revenues over costs for Company's wheeling services to municipal and cooperatively-owned electric systems. Staff's study indicates no excess revenues over costs for firm power service rendered from the Fargo-Grand Forks System or for various services rendered to the Company's corporate affiliate, Northern States Power Company (Wisconsin). Based upon Company's prior reduction of $22,820 in charges for transformation service, staff's study shows no excess revenues over costs for that service.

The cost of service study as prepared by the staff, reflects the Commission's cost of service ratemaking principles. Ultimate unresolved dollar differences between the respective cost of service studies of Company and staff reflect differences in cost assignment and allocation procedures. For settlement purposes, Company is willing to concede the major portion of those differences without prejudice to its contentions if this matter were disposed of on a litigated basis. Staff's overall cost of service totals $3,486,342 based upon a 1963 test year. Company's cost of service totals $4,653,770.

We believe this proceeding should be disposed of through acceptance of the proffered rate schedule filings. These schedules will eliminate charges by Company of $254,468 in the test year (1963) or $281,596 when applied to the 1964 usage by the customers affected. The settlement proposal presents an acceptable compromise of contested issues involving numerous judgment factors.

---

[3] Those five Minnesota municipal customers are: Olivia, Sauk Centre, St. James, East Grand Forks and Ada.

[4] Company's Minot division which operates in North Dakota has no wholesale customers. That division's rates were not investigated in this proceeding.

In presenting this matter for Commission consideration, the staff study reflects an allowance for return at the rate of 6 percent per annum. We, of course, by accepting Company's schedules do not determine what would be the fair rate of return for Company and neither do we herein determine the basis for disposition of other disputed items in the respective cost of service studies by Company and staff as would be done were this proceeding terminated following a complete trial of all issues. Our rate making authority is a continuing process and disposition of this proceeding on the indicated basis in no way limits our ability to re-examine Company's wholesale rates and charges at any time hereafter.

No party of interest in this proceeding has requested the Commission to refuse to allow the proffered rate settlement to become effective. Intervenor Wisconsin Public Service Commission does not object. Minnesota Valley Co-operative Light and Power Association was granted intervention by order of the Commission issued March 9, 1964, in this proceeding. By filing a "Notice of Withdrawal of Intervention" on May 28, 1965, that Association indicated its intent to withdraw from further participation herein.[5]

Pursuant to individual arrangements Company obtains certain standby electric services from five municipal customers with installed generating capacity. Under the proposed rate schedules, Company will credit three of the cities, Fairfax, Redwood Falls and Sleepy Eye, Minnesota, for their installed generating capacity on a basis equivalent to .65 mills/kwh wheeled by Company to the cities as preference customers of the Bureau, as more fully explained in attached Appendix B. Marshall and Melrose, Minnesota, electing to continue service under Company's presently effective rate schedules will receive a .75 mill/kwh credit as provided in the Company's existing contracts and will continue to pay a 2.5 mill/kwh total wheeling charge. Presently, the customers receiving wheeling service in addition to payment of 1 mill/kwh to the Bureau, pay Company 1.5 mills/kwh wheeled. The proposed wheeling rate is 2.3 mills/kwh, 1 mill being paid to the Bureau and 1.3 mills to Company.

In disposing of this case upon the basis of the proffered rate schedules and resulting revenues, we take note of the immediate rate relief which will be afforded thereby. Also, we note that the effective date of the proposed rate schedule supplements will be on the date service is provided subsequent to the first regular meter reading on or after June 1, 1965. (July 1, 1965 in the case of Northern States Power Company (Wisconsin)).

The Commission finds:

(1) Good cause has been shown that the 30-day notice period provided in Section 205(d) of the Federal Power Act be waived with respect to Company's rate schedule filings as referred to and designated in Appendix A, and that such rate schedules be allowed to take effect on the effective dates shown in Appendix A.

(2) It is necessary and appropriate for the purposes of the Federal Power Act to terminate the above-entitled proceeding in the manner hereinafter ordered.

---

[5] Representatives of the City of Hillsboro, North Dakota, a customer of Company's Fargo-Grand Forks System and the City of St. James, Minnesota, a customer of Company's interconnected system, conferred at various times with staff and Company representatives. Neither City formally sought intervention in this proceeding or requested that the Commission reject the proposed settlement. Moreover, the City of St. James has executed a new contract for service by Company at the proposed reduced rates.

The Commission orders:

(A) The 30-day notice period provided in Section 205(d) of the Federal Power Act is hereby waived with respect to the proposed rate schedules as referred to and designated in Appendix A and they are hereby allowed to take effect on the effective dates as indicated in Appendix A.

(B) The issuance of this order shall constitute full notice of the filing and publication of the rate schedules in question insofar as their effective dates are concerned.

(C) Acceptance of Company's rate schedules as herein provided is without prejudice to any findings or order which have been or may hereafter be made by this Commission in any proceeding by or against Northern States Power Company (Minnesota). Moreover, nothing in this order shall be construed as waiver in any other respect of the requirements of Section 205(d) of the Federal Power Act or Section 35.11 of the Commission's Regulations under the Federal Power Act; nor shall this order be construed as constituting approval by this Commission of any service, rate, charge, classification, or any rule, regulation, contract, or practice affecting such service or rate provided for in the rate schedules referred to and designated in Appendix A; nor shall this order be deemed as recognizing any claimed contractual right or obligation affecting or relating to such service or rates.

(D) The above-entitled proceeding, Docket No. E-7140, is hereby terminated.

APPENDIX B

NORTHERN STATES POWER COMPANY (MINNESOTA), DOCKET NO. E-7140

	Rates for all requirements firm power customers	
	Present rate	Proposed rate
Demand charge:		
	per Kw	*per Kw*
First 25 Kw or less	$75.00	$75.00
Next 125 Kw	3.00	3.00
Next 150 Kw	2.00	2.00
All over 300 Kw	1.50	1.50
Energy charges:		
	per Kwh	*per Kwh*
First 10,000 Kwh	.01882	.0141
Next 90,000 Kwh	.00882	.0081
All over 100,000 Kwh	.00782	.0071

The present energy rate includes an adjustment of 0.132¢ per Kwh to reflect the fuel clause which is based on a heat rate of 22,000 Btu per Kwh and a cost of fuel of 20¢ per million Btu. The proposed fuel clause reflects a present zero adjustment based on a heat rate of 12,000 Btu per Kwh and a cost of fuel of 25¢ per million Btu.

Rates for Wheeling Services

Presently, wheeling customers pay total charges equivalent to 2.5 mills per Kwh. Under the proposed rates such customers would pay total charges equivalent to 2.3 mills per Kwh. Five municipalities,[1] the University of North Dakota, and four cooperatives[2] receive their power from the Bureau of Reclamation over Company's lines. Presently, Company bills the Bureau 1 mill per Kwh (the 1.0 mill is included in the customers cost of power from the Bureau) and bills the individual customers 1.5 mills per Kwh for wheeling Bureau power. The proposed rates provide for a total wheeling charge of 2.3 mills per Kwh with a 1 mill credit to the individual customers for the payment received by Company from the Bureau or a net charge by Company to the customer of 1.3 mills.

Company's present rates to municipalities which have generating facilities provide for a wheeling charge of 1.5 mills per Kwh with a credit of 0.75 mills per Kwh for making their generating facilities available to Company as standby. The proposed rate provides for a total charge of 2.3 mills per Kwh with a credit to the customer for the payment received by Company from the Bureau (1.0 mill per Kwh) and separately provides that Company will purchase the municipalities' existing generating capacity for use by Northern States as standby capacity for 0.65 mills per Kwh.

Company's present agreement with Cooperative Power Association provides that Company will wheel power to CPA member cooperatives from the Bureau at a rate of 2.5 mills per Kwh and from the Upper Mississippi Valley Power Pool at a rate of $10.50 per kw per year which in 1963 was the equivalent of 2.5 mills per Kwh. Under the proposed rate all wheeling service for CPA members will be at the same rate of 2.3 mills per Kwh.

[1] The five are all in Minnesota: Oliva, St. James, Sauk Centre, Ada, and East Grand Forks.

[2] The four are: Lyon-Lincoln and Traverse Electric Cooperative, Renville Sibley Cooperative, Nobles Electric Association and Minnesota Valley Cooperative Light and Power Association.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

TRUNKLINE GAS COMPANY, DOCKET NO. CP65-117

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 20, 1965)

On August 9, 1965, Trunkline Gas Company (Petitioner) filed in Docket No. CP65-117 a petition to amend the order issued in said docket on March 15, 1965, 33 FPC 567, to provide authorization for increased contract quantities of natural gas to two of its existing resale customers, as more fully set forth in the petition to amend.

On March 15, 1965, the Commission issued a certificate of public convenience and necessity authorizing additional horsepower at various existing compressor stations, the construction of a new compressor station at Ambia, Indiana, and the installation of an additional river crossing at the Red River to provide increased contract quantities of natural gas to Consumers Power Company.

Subsequent to the issuance of the certificate on March 15, 1965, Illinois Power Company (Illinois Power) and the City of Rensselaer, Indiana (Rensselaer) requested increased contract demand quantities to meet their requirements for the 1965-1966 heating season.

Illinois Power seeks to increase its contract demand from 350 Mcf per day to 700 Mcf per day, and Rensselaer seeks to increase its contract demand from 2,300 Mcf per day to 2,700 Mcf per day, resulting in a net increase in the contract demand for the two customers of 750 Mcf per day. These increases are required to meet normal market growth.

The proposed increased sales are to be made under Petitioner's Rate Schedule SG-2 at a rate of 42.6 cents per Mcf.

Petitioner states that upon completion of the facilities authorized by the certificate issued on March 15, 1965, it will have adequate capacity to provide these increased contract quantities. No new facilities are proposed in the petition to amend

Due notice of the filing of the petition to amend was published in the Federal Register on August 24, 1965 (30 F.R. 10958). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate of public convenience and necessity issued in Docket No. CP65-117 on March 15, 1965, be amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity issued to Trunkline Gas Company in Docket No. CP65-117 on March 15, 1965, is hereby amended by authorizing the sale of up to 700 Mcf per day of natural gas to Illinois Power Company and the sale of up to 2,700 Mcf per day of natural gas to the City of Rensselaer, Indiana.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP60-14

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 20, 1965)

On August 11, 1960, United Gas Pipe Line Company (Petitioner) was issued a certificate of public convenience and necessity in Docket No. CP60-14, 24 FPC 216, authorizing the construction and operation of facilities and delivery of natural gas to industrial customers. Deliveries of gas to Chemstrand Company (Chemstrand) for use in its synthetic fiber plant located in Escambia County, Florida were limited by said order to 56,000 Mcf per day.

On August 9, 1965, Petitioner filed herein a petition to amend the above order by requesting authorization to increase deliveries of gas to the Chemstrand plant to 75,000 Mcf per day. Petitioner also seeks authorization to install additional valves and replace regulators in the meter station serving the Chemstrand plant in order to increase its capacity, since the existing station has a capacity of only 66,000 Mcf per day. Estimated cost of these facilities is $9,448.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order of the Commission issued August 11, 1960, in Docket No. CP60-14 be amended as hereinafter ordered.

The Commission orders:

(A) The order of the Commission issued August 11, 1960, in Docket No. CP60-14, is amended by authorizing Petitioner to deliver to Chemstrand Company up to 75,000 Mcf of natural gas per day, and by authorizing construction and operation of facilities necessary for such delivery of gas, all as more fully set forth in the petition to amend.

(B) This amendment shall not entitle Chemstrand Company to any priorities to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

(C) In all other respects the order issued in this docket on August 11, 1960 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP66-3

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 20, 1965)

On July 2, 1965, as supplemented on August 2, 1965, United Gas Pipe Line Company (Applicant), filed in Docket No. CP66-3 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and

necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application.

Applicant proposes to construct and operate the following items of facilities:

Item 1. Install 9.90 miles of 30-inch pipe line loop, beginning at a point near Milepost 311.4 on Applicant's existing Refugio to Sterlington 30-inch pipe line in the John B. Gaines Survey, Abstract 110, Sabine County, Texas, and extending in a northeasterly direction parallel to the existing line to a point near Milepost 321.3 on the existing line in Section 6, Township 6 North, Range 12 west, Sabine Parish, Louisiana;

Item 2. Anchor 30-inch pipe line beginning at a point in the A. L. Frazier Survey, Abstract 102, Sabine County, Texas, and ending at a point in the Ira McDaniel Survey, Abstract 163, Sabine County, Texas, and anchor 30-inch pipe line at a point in the James S. Ogden Survey, A–172, Sabine County, Texas;

Item 3. Replace all 20-inch and 30-inch pipe and other facilities with a single 30-inch concrete coated pipe, beginning near Milepost 312.95 on Applicant's existing Refugio to Sterlington 30-inch pipe line in the James Gaines Survey, Abstract 16, Sabine County, Texas, and ending near Milepost 313.22 in Section 31, Township 6 North, Range 13 West, Sabine Parish, Louisiana;

Item 4. Replace 0.3 mile of 6-inch field line in Joaquin Field beginning in Section 33, Township 12 North, Range 16 West, DeSoto Parish, Louisiana, and ending in the James Blankenship Survey, Abstract 74, Shelby County, Texas;

Item 5. Replace 2.8 miles of 16-inch Latex-Beaumont line beginning in the Elizabeth Daniels Survey, Abstract 889, and ending in the Lucy Maragle Survey, Abstract 438, all in Panola County, Texas;

The Refugio-Sterlington line (West 30-inch) will be anchored for approximately one mile at a tributary of the reservoir.[1] The present Sabine River crossing consisting of 20-inch and 30-inch pipe will be replaced by 0.3 miles of concrete-coated 30-inch pipe. This section of the line including the river crossing, as flooded, will be looped with the 9.9 miles of 30-inch pipe (Item 1). The main line and loop line will be weighted with concrete for a distance of seven miles.

The facilities are being constructed as a safety measure due to the proposed construction by the Sabine River Authorities of Texas and Louisiana of the Toledo Bend Dam Project. Applicant further states that once the reservoir has been completed, it will become very difficult, time consuming, and expensive to repair the present facilities should any failure occur and such facilities proposed in the application will help to assure the continued and uninterrupted flow of natural gas to Applicant's customers.

The estimated cost of the facilities is $2,820,341. Applicant has entered into a reimbursement agreement with the Sabine River Authorities of Texas and Louisiana for $2,285,600 of this amount.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 16, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application as supplemented, and exhibits submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas com-

[1] Toledo Bend Reservoir.

pany" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The proposed construction and operation of facilities by Applicant as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding authorizing the construction and operation of facilities as more fully described in the application as supplemented, and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 12 months of the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

W. H. BLACK, DOCKET NO. RI63-52

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING REFUNDS, SEVERING AND TERMINATING PROCEEDING

(Issued September 21, 1965)

On August 10, 1965, W. H. Black (Black) submitted an offer of settlement, pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, involving a sale of natural gas in the Kansas-Hugoton Field, Kearny County, Kansas to Colorado Interstate Gas Company (CIG) under Black's FPC Gas Rate Schedule No. 6. Under the terms of the offer, Black proposes to eliminate the indefinite pricing provisions from said Rate Schedule and substitute a schedule of periodic price increases in conformity with the Seventh Amendment to the Statement of General Policy No. 61-1, 30 FPC 1370 (18 CFR 2.56). Additionally,

Black proposes to reduce the present rate of 12¢, which is being collected subject to refund, to 11.6¢ per Mcf and to make refunds. With its proposal Black filed an executed contract amendment effectuating the terms of the proposal.[1]

Under the proposed settlement, Black's annual revenues would be decreased approximately $200, and refunds would approximate $435, exclusive of interest.

The proposed settlement is consistent with the provisions of the Seventh and Ninth Amendments to the Commission's Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107, as amended, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Black's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservation of the right to file increases under the subject rate schedule, and is without prejudice to any findings or order of the Commission in any future proceedings including area rate or other similar proceedings, involving Black's rates and rate schedules.

The Commission finds:

The proposed settlement of the above-designated proceeding on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Black on August 10, 1965, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Black on August 10, 1965, is hereby approved in accordance with the provisions of this order.

(B) Supplement No. 3 to Rate Schedule No. 6, filed by Black with the offer of settlement herein on July 19, 1965, is accepted for filing, and the settlement rate and charge of 11.6¢ per Mcf at 14.65 psia, shall be effective as of the date of issuance of this order, and within 30 days from the issuance of this order Black shall file a notice of change to reflect such settlement rate.

(C) Black shall compute the difference between the rate collected subject to refund and the settlement rate of 11.6¢ per Mcf at 14.65 psia, with applicable interest, to the date of this order, and shall within 30 days from the date of this order submit a report to the Commission, and serve a copy on CIG setting out the amount of refund related to the subject rate schedule (showing separately the principal and applicable interest). Within 10 days thereafter, Black shall file CIG's written concurrence in the refund amounts computed in compliance with the above, and shall within 10 days of such filing make refund to CIG of such amounts of monies.

(D) Upon compliance by Black with the provisions of this order, the proceeding in Docket No. RI63–52 shall be deemed severed from the Hugoton-Anadarko Area Proceeding, Docket No. AR64–1, and terminated without further order of the Commission.

(E) The acceptance by the Commission of Black's offer of settlement and the termination of Docket No. RI63–52 are without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Black, including area rate or other similar proceedings.

[1] The amendatory agreement is designated herein as Supplement No. 3 to Black's FPC Gas Rate Schedule No. 6.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP65-396

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 21, 1965)

On June 11, 1965, Michigan Wisconsin Pipe Line Company (Applicant) filed in Docket No. CP65-396 an application, as supplemented August 13, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application.

Applicant proposes to construct and operate 12.2 miles of 12-inch loop and 26 miles of 16-inch loop on its lateral extending to Madison, Wisconsin. The proposed facilities will complete the looping of Applicant's Madison lateral, and are required to correct low pressure conditions experienced during the 1964-65 heating season and to assure continuity of firm service to communities served from this line. No new service is proposed as a result of construction of the above facilities.

The annual cost of service attributable to the proposed project is estimated to be $287,755, which is 0.693 percent of Applicant's total operating expense exclusive of purchased gas for the year ending March 31, 1965. This cost will have no significant effect on Applicant's presently effective rates.

Total estimated cost of Applicant's proposed construction is $1,925,000, and will be financed with treasury funds and bank loans.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 16, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) The proposed construction and operation of facilities by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Michigan Wisconsin Pipe Line Company, authorizing construction and operation of the facilities hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The authorized facilities shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within one year from the date on which this order issues.

OPINION AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY, DETERMINING IN-LINE PRICE, AND PROVIDING FOR REFUNDS

(Issued September 22, 1965) *

Syllabus

1. The issue of public need for gas should be confined to pipeline certificate proceedings, not producer applications. P. 900.
2. Sales to gatherer should be eliminated in determination of in-line price; these sales are not comparable since gatherer purchases at a lower price in order to resell at price acceptable to pipeline. PP. 900, 901.
3. In past Commission has emphasized contract prices, but now that some of these sales have been certificated with reduced prices, original prices are no longer outstanding and should not be given primary consideration—how-

---

*Initial decision appears on page 914. See order issued November 17, 1965 denying rehearing and granting stay and order issued December 15, 1965 on motion for clarification, etc., 34 FPC 1330, 1472. See Opinion No. 498 on refunds issued July 22, 1966, 36 FPC 149. Set aside and remanded, *Public Service Commission of New York, et al.* v. *F.P.C.*, 373 F. 2d 816 (CADC–1967); Affirmed, 391 U.S. 9 (1968).

ever contract prices whether reduced by conditions or not, do show economic trends in area and are entitled to some weight. PP. 901, 902.

4. In prior proceedings Commission has given some consideration to prices under temporary certificates, while finding them less persuasive than permanently certificated prices—were determination based wholly on permanent certificates, result would be a freeze of price line and proceeding would accomplish nothing. P. 902.
5. 16 cents per Mcf at 14.65 psia is appropriate in-line price for instant sales in Texas Railroad District No. 3 in pre-Policy Statement period and 17.0 cents for period following September 28, 1960. PP. 902, 903.
6. Estimated first-month billings, rather than actual 1962 volumes sold, approved as appropriate method for determining relative importance of gas sold in each category. P. 903.
7. Suspect price doctrine under Commission and Court decisions has been used to prevent price line being raised on basis of prices still subject to litigation—to strike three 16-cent prices representing the line and several steps below the highest would represent a misuse of suspect price doctrine. P. 903.
8. Absent evidence of intrastate or other non-jurisdictional sales comparable to that relating to interstate sales, Commission is not able to weigh its determination with intrastate prices here. P. 904.
9. Exclusion of cost or economic evidence in Section 7 certificate proceeding was correct. P. 904.
10. Following past practice, Commission *prescribes* moratorium on rate increase filings in excess of 19 cents per Mcf for specified period. P. 904.
11. Where certificates had refund conditions and prices above in-line price determined here, Commission provides for refunds but requires producers to hold amounts pending determination of entitlement thereto. P. 905.
12. In a proceeding under Section 7 of the Natural Gas Act, Commission *issues* certificates of public convenience and necessity; *determines* in-line price and *provides* for refunds.

Commissioner Bagge *concurring.*

Commissioners Black and Ross *dissenting.*

William J. LeBuhn for Trunkline Gas Company.

Stuart J. Scott, Bernard A. Foster, Jr. and *Sherman S. Poland* for The Atlantic Refining Company.

David K. Kadane, Edward M. Barrett and *Bertram D. Moll* for Long Island Lighting Company.

J. P. Hammond and *Clifford O. Stone, Jr.* for Pan American Petroleum Corporation.

Oliver L. Stone and *Thomas G. Johnson* for Shell Oil Company.

Albert C. McClain, Jesse Foster, Jr. and *Sherman S. Poland* for Humble Oil & Refining Company.

J. Evans Attwell for W. S. Kilroy (Operator), *et al.* and Robert Mosbacher, Operator, *et al.*

Morton L. Simons and *Kent H. Brown* for Public Service Commission of the State of New York.

William T. Kilbourne II, and *H. W. Varner* for Superior Oil Company.

John A. Ward III, Phillip D. Endom, Robert E. May and *Francis H. Caskin* for Sun Oil Company.

Sherman S. Poland and *Richard Dent* for Skelly Oil Company.

R. Joseph Opperman, Morton Taylor and *Harold L. Kennedy* for Marathon Oil Company.

Thomas G. Crouch and *Robert W. Henderson* for H. L. Hunt, Hassie Hunt Trust, Caroline Hunt Sands, Caroline Hunt Trust Estate, Lamar Hunt Trust Estate and N. B. Hunt.

Paul W. Hicks for Placid Oil Company.

Richard F. Generelly and *Ollie D. Brown, Jr.* for H. L. Hawkins & H. L. Hawkins, Jr.

Richard F. Generelly for Callery Properties, Inc.

Richard F. Generelly, P. H. Swearingen, Jr., and *W. V. Ballen, Jr.* for Oil Reserves Corporation.

Carroll L. Gilliam for Pan American Petroleum Corporation.

Tom P. Hamill, R. D. Haworth and *D. L. Smith* for Socony Mobil Oil Company, Inc.

Clyde E. Willbern for Tidewater Oil Company.

J. Harry Mulhern, Edward S. Kirby and *James R. Lacey* for Public Service Electric and Gas Company.

Jacques Adove for A. F. Childers, Jr. (Operator), *et al.*

David S. Lichtenstein for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

O'Connor, *Commissioner:*

This is a proceeding involving 36 applications for certificates of public convenience and necessity under Section 7 of the Natural Gas Act for sales of gas by producers in Texas Railroad District No. 3. The buyers are Florida Gas Transmission Company, Tennessee Gas Transmission Company, Trunkline Gas Company, and Natural Gas Pipeline Company of America. The sales are proposed to be made at prices ranging from 16.17 cents to 20.0 cents per Mcf (at 14.65 psia) under contracts executed between September 16, 1958, and October 1, 1963. Those pre-dating the Policy Statement[1] are listed in Appendix A; those post-dating the Policy Statement are listed in Appendix B. The gas is now being delivered under temporary certificates.

There are consolidated here by order of March 30, 1964, 31 FPC 725, applications severed from *Florida Gas Transmission Company, et al.*, Docket No. G–18338, *et al.*, and from *Hassie Hunt Trust*, Docket No. G–19115, and other applications.

Hawkins & Hawkins, Docket No. G–18077, produced gas under their temporary certificate but have sold the properties to Johnson and McCurdy, who are now producing no gas and have applied for abandonment, but such abandonment has not yet been granted. Hawkins & Hawkins are thus not applicants for a certificate, but may be required to make a refund. We shall therefore dismiss their application for a permanent certificate. Stewart & Cougar Drilling Company, *et al.*, Docket No. CI60–541, have delivered no gas under their temporary certificate, and by letter of the Secretary of July 6, 1964, have been permitted to withdraw their application and the temporary certificate has been vacated. Therefore this party is no longer part of the proceeding. Kilroy Properties, Incorporated, *et al.*, Docket No. CI60–478, have been permitted to abandon their sale by order of December 22, 1964 in *Neuner, et al.*, Docket No. G–3833, *et al.*, but still may be subjected to refund, and their application will also be dismissed. Skelly Oil Company in Docket No. G–20155 has sold the properties involved to The Superior Oil Company, whose temporary certificate in Docket No. G–20359, consolidated herewith, has been amended to include these properties. The

[1] Statement of General Policy No. 61–1, issued September 28, 1960, 24 FPC 818.

application of Skelly in Docket No. G–20155 should thus likewise be dismissed subject to possible refund requirements; and the certificate issued to Superior herein will, of course, include the sale of gas from these properties. In addition Ben H. Schnapp (Operator), *et al.*, Docket No. CI60–642, were permitted to abandon their sale in *James D. Heldt (Operator), et al.*, Docket No. G–3277, *et al.*, order issued July 14, 1965, subject to any necessary refund, so that this application will be dismissed.

The applications of The Atlantic Refining Company, Docket No. CI60–459, H. B. Lively, Docket No. CI62–1220, and Socony Mobil Oil Company, Inc., Docket No. G–18384, formerly consolidated, have now been severed, and certificates have been granted, so that these dockets are no longer part of this proceeding.

The principal issue here is the initial price at which the producers shall be permitted to sell their gas, although a question has been raised by the Public Service Commission of the State of New York that there is an absence of public need for the gas. The proceeding is before the Commission on the decision by Presiding Examiner Harry C. Shriver dated December 2, 1964, who found that the in-line price for the periods both before and after the Policy Statement is 16 cents per Mcf at 14.65 psia. Exceptions have been filed by the New York Commission, the Staff and a number of producers, and answers have been filed by some producers to the exceptions of the New York Commission.

New York contends that public need is an essential element of public convenience and necessity and that the producers have not shown any such demand. In addition, New York argues that three purchasers of the gas, Tennessee Gas, Florida Gas, and Trunkline, are beset by take-or-pay problems under their contracts with producers. We note that New York has presented no evidence to support these allegations. We agree with the examiner that, because of the nature of the gas business and the obligation of pipeline companies to the consuming public, it is to be expected that such companies will occasionally have long-term contractors for supplies which will give them gas for the future, even though the supplies may be slightly in excess of their present-day needs. The issue of public need should be confined to pipeline certificate proceedings, not producer applications.

As in other proceedings of this nature the price at which the producers should be permitted to sell their gas must be "in-line" with other prices in the area. *Atlantic Refining Co.* v. *P.S.C. of New York* (CATCO), 360 U.S. 378 (1959). For this purpose evidence was presented by the producers and our Staff setting forth price arrays for sales in District No. 3. A summary tabulation of the Staff array, which shows the initial prices permitted under permanent certificates, was included by the examiner in his decision and used by him in reaching his result. (In some cases the Staff array uses the original contract price; in other cases it shows the prices as conditioned to a lower level by the temporary certificate). The array covers the period January 1, 1958 through December 31, 1963, and divides the prices arising under contracts dated before September 28, 1960, the date of the Policy Statement, from those arising under contracts dated later. In the Policy Statement we determined guideline ceiling prices for District No. 3, as well as other areas.

As contended by the producers the Staff price arrays should be modified in certain particulars. Thus the Staff in its pre-Policy Statement tabulation includes 3 sales to Valley Gas Transmission Company among 6 sales at 14 cents per Mcf, and in the post-Policy Statement period includes 10 sales to Valley among 12 sales at 14 cents. We think the Valley sales should be eliminated, because, as we said in the *Amerada* case,[3] these sales are not comparable since

[3] *Amerada Petroleum Corporation*, 31 FPC 623, 635 note 33 (1964).

Valley purchases at less than the price line in order to resell at a price acceptable to major interstate pipelines. Certain producers also point out that the 15-cent sale by Gene Smitherman to Tennessee Gas Transmission Company under contract of June 12, 1961, in Docket No. CI61–1751 has been cancelled and no deliveries made under it. As explained below, we do not accept other modifications of the Staff array suggested by the producers, but with these changes and the elimination of the 20 cent price for the reasons discussed below the Staff prices are tabulated as follows:

DISTRIBUTION OF PRICES PERMANENTLY CERTIFICATED
(Dated Jan. 1, 1958 through Sept. 27, 1960)

Total initial price (¢)	Number of sales	Estimated first month volumes (Mcf)	Total volume (percent)
Less than:			
10.0	3	120,000	4.50
13.5	8	116,100	4.35
14.0	3	60,750	2.28
14.2	1	45,000	1.69
14.4	1	90,000	3.38
14.5	4	132,000	4.95
14.6	2	96,000	3.60
15.0	8	295,075	11.07
15.1	1	60,000	2.25
15.2	3	166,170	6.23
16.0	4	968,000	36.81
16.2	4	514,000	19.28
17.5	1	2,190	0.08
18.0	1	731	0.03
Total	44	2,666,016	100.00

DISTRIBUTION OF PRICES PERMANENTLY CERTIFICATED
(Dated Sept. 28, 1960 through Dec. 31, 1963)

Total initial price (¢)	Number of sales	Estimated first month volumes (Mcf)	Total volume (percent)
12.0	2	24,000	2.13
13.0	2	75,000	6.64
13.5	2	33,615	2.98
14.0	2	42,000	3.72
14.5	3	75,000	6.64
15.0	9	213,100	18.88
16.2	3	155,000	13.73
16.5	1	30,000	2.66
18.0	3	481,040	42.62
Total	27	1,128,755	100.00

The quality specifications of the contracts tabulated above, with some minor variations, are approximately the same as those involved in this proceeding, and thus form an appropriate basis for comparison. The average price, weighted by volume, for the pre-Policy period, is 15.16 cents per Mcf, and is lower than the average price for the post-Policy period, 16.17 cents per Mcf.

The principal witness for the producers, Mrs. Celia Star Gody, based her array on the contract prices rather than permanently certificated prices, and the producers argue that the examiner should have considered the contract prices. In past cases we have emphasized contract prices, but now that some of these sales have been certificated with reduced prices, the original prices are no longer outstanding in the area and should not be given primary consideration.

However, the contract prices, whether reduced by conditions or not, do show economic trends in the area and are entitled to some weight.

The producers also argue that the examiner should have given consideration to the inital prices under temporary certificates because they reflect current conditions. In some prior proceedings we have given some consideration to prices under temporary certificates, but have found that they are not as persuasive as the prices under permanent certificates. *Skelly Oil Co., supra*, 28 FPC 401 at p. 409. Here the record shows only three sales under temporary certificates, at 16.0, 15.0 and 16.17 cents, which are not at issue in these proceedings. In recent in-line proceedings all or a greater part of the sales under temporary certificates in the area have been included, and sales at issue would go unrepresented in determining the line if they were given no consideration. Furthermore, if we based our determination wholly on permanent certificates, the result would be a freeze of the price line, and the proceeding would accomplish nothing. The producers' witness, Mrs. Gody, using the initial contract prices and including sales under temporary certificate found a weighted average price of 18.05 cents per Mcf for the 1958–1963 period.

For the pre-Policy Statement period we agree with the examiner that 16 cents per Mcf at 14.65 psia is the appropriate in-line price. The Commission has already determined a 16-cent ceiling in District No. 3 in *Texaco Seaboard, Inc.*, 29 FPC 593, Opinion No. 383 (1963), and *Hassie Hunt*, 30 FPC 1438, Opinion No. 412 (1963), and there is no reason based on the present record to disturb that determination. As can be seen from the table above, there are comparatively large volumes of gas sold at the 16.0 and 16.2-cent levels and small volumes at 17.5 and 18.0. Thirty-eight sales (72 percent) are at 16 cents or below, while a little more than half the volume is sold at 16 cents or below. The pattern is roughly the same as in *Texaco Seaboard*. Arithmetically the large volumes at 20 cents would have a strong effect on the weighted average of 15.16 cents per Mcf, but these should be discounted as was done in *Texaco Seaboard*, for six of the nine sales were involved in *Trunkline Gas Co., et al.*, 21 FPC 704 (1949), with respect to which New York's petition for review was dismissed because not timely. *P.S.C. of New York* v. *F.P.C.*, 284 F. 2d 200 (CADC-1960).[3] Concerning these sales and those in other categories above 16 cents, the Commission said in *Texaco Seaboard:*

> It is thus apparent that prices at the 17.5-cent level and above must all be discounted since they either have subsequently been set aside (and are presently before us for new decision) or would have been set aside, for failure to permit a proper party to intervene, save for the procedural defect in the PSC review action in the *Trunkline* case. (29 FPC at p. 597)

The producers, on the other hand, argue that the 20-cent sales, if not given full weight, should be given some weight. The Commission adopted this consideration in *Sun Oil Co.*, 32 FPC 1183, Opinion No. 445, Docket No. G–8592, *et al.*, October 24, 1964. A ceiling at 16 cents for the pre-Policy Statement period, in effect, gives some weight to the prices above 16 cents as well as the contract prices and the prices under temporary certificate, for if we gave no consideration to the prices above 16 cents, the ceiling would be set at a lower level, since ordinarily we do not set the ceiling price at the highest level.

As for the post-Policy Statement period, it may be observed that there are nine sales and moderate volumes at 15 cents, three sales and moderate volumes at 16.2 cents, one sale and a small volume at 16.5 cents, and three large sales at

---

[3] Two of the sales, Docket Nos. G–16975 and G–17263, were consolidated with *Austral Oil Co., Inc.*, Docket No. G–15819. On review, the PSC's petition was likewise dismissed. *P.S.C.* v. *F.P.C.* (CADC No. 15601, July 1960).

18.0 cents. As the producers argue, the fact that the 18-cent prices were established in abridged hearings should not detract from their weight in setting the line. *Amerada Petroleum Corp., et al.*, 31 FPC 623, 631, Opinion No. 422 (1964).

We are of the opinion that 17.0 cents per Mcf at 14.65 psia is the in-line price for the period following September 28, 1960. It is our judgment that this conclusion gives appropriate weight to the comparatively large volumes sold under permanent certificates at 18.0 cents per Mcf while reflecting the weighted average price of 16.17 cents per Mcf. In addition, a 17.0 cent price clearly gives some weight to the unconditioned contract prices and to the prices under temporary certificates. Finally, some 43 percent of the gas has been permanently certificated at a price higher than 17.0 cents. One proposed sale, Humble to Natural Gas Pipeline in Docket No. CI64–677 is at 17.0 cents, under a contract dated October 1, 1963. Giving due consideration to all sales in the area during the period in question, an in-line price of 17.0 cents is fully justified.

The producers object to the examiner using estimated first-month billings rather than actual 1962 volumes sold. While certain of the producer witnesses make use of such 1962 volumes in connection with their price arrays, the annual volumes were not available for use in connection with sales under contracts executed in 1962 and 1963, and the Staff employed only estimated first-month billings. The use of actual volumes for the pre-Policy Statement contracts tends to increase the percentage of the 20-cent gas (to which in any case we give little weight), but for the post-Policy Statement period the highest priced gas, at 18 cents, is actually decreased relatively by the use of the annual figures. In any case we are of the opinion that the monthly estimates are an appropriate method by which to determine the relative importance of the gas sold in each price category.

Some of the producers argue that it would be discriminatory to limit their prices to a level below the 18-cent level permitted in earlier certificates, in some cases relating to the same field. The earlier certificates were issued when the guideline was 18 cents under the Policy Statement. Because the Commission applied a different standard in earlier non-contested proceedings is no reason that the same standard must now be applied on the basis of a full record.

For the pre-Policy Statement period several producers argue that the examiner improperly listed three sales at 16 cents, *Hassie Hunt*, Docket No. G–19115; *H. L. Hunt, Operator*, Docket No. G–19116; and *Placid Oil Company*, Docket No. G–19125, because these were involved in Opinion No. 412, December 9, 1963, 30 FPC 1438, now subject to litigation in *Margaret Hunt Hill Trustee* v. *F.P.C.*, CA5 No. 21575, and therefore should be disregarded under the suspect price doctrine. See *United Gas Improvement Co.* v. *F.P.C.*, 283 F. 2d 817 (CA9–1960), certiorari denied 365 U.S. 881. The suspect price doctrine under our decisions and those of the Courts [4] has been used to prevent the price being raised on the basis of prices still subject to litigation. To strike out three 16-cent prices, which in our opinion represent the line and which are several steps below the highest, would represent a misuse of the suspect price doctrine. Those prices were determined by the Commission after notice and hearing, and they represented reductions in many contract prices. Having exercised our discretion we cannot presume our action was improper. In any event the remaining prices would define the line at approximately 16 cents for the pre-Policy Statement period.

The producers also contend the examiner mistakenly refused to take into account intrastate sales, which the record shows to be of increasing importance;

---

[4] See also *United Gas Improvement Co.* v. *F.P.C.*, 290 F. 2d 133 (CA5), certiorari denied 368 U.S. 823.

however, the record does not contain evidence of the intrastate or other nonjurisdictional sales comparable to that relating to the interstate sales. Only a limited amount of such information is available to the public. In 1958 Florida Power and Light Co. contracted for gas with Sun Oil Co. for 19.5 cents per Mcf and in 1959 Texas Electric Service Corporation wrote contracts at a price of approximately 21.5 cents. Pan American Petroleum Corporation showed that since January 1, 1959, it had entered into contracts for ten intrastate sales involving quantities in excess of 1,000 Mcf per day in District No. 3. Its witness stated that the weighted average price for the ten certificates, apparently for gas sold during 1963, was 19,329 cents per Mcf. However, these prices do not cover the entire area nor is there anything to show that they are representative so as to make them comparable to the interstate arrays.

Because of this record we are not able to weight our determination with the intrastate prices in this proceeding. Furthermore, there is no evidence that the pipeline customers in District No. 3 are unable to obtain contracts for the purchase of gas. Of course, where there is a substantially complete record on the intrastate prices and they are shown to have impact on the interstate market, it may be that we would take them into account in determining the price line. Such a case is not presently before us.

Some of the producers objected to the examiner's refusal to receive cost or economic evidence. In review of the position taken by the Commission in *Skelly*, 28 FPC 401 (1962), and *Texaco Seaboard, Inc.*, 29 FPC 593 (1963); its reiteration in *Union Texas Petroleum*, 32 FPC 254 (1964) and its affirmance by the courts in *P.S.C. of N.Y.* v. *F.P.C.*, 329 F. 2d 242 (CADC-1964), certiorari denied 377 U.S. 963 (1964), *California Oil Co.* v. *F.P.C.*, 315 F. 2d 652, 660 (CA10), and *The Atlantic Refining Co.* v. *F.P.C.*, 316 F. 2d 677, 680 (CADC), we think the examiner was correct in excluding this kind of evidence in a Section 7 certificate proceeding. We are, of course, aware of the opposite result reached in *Callery Properties, Inc.* v. *F.P.C.*, 335 F. 2d 1004 (CA5-1964). The mandate of the Court of Appeals has been stayed in that proceeding, and certiorari has been granted by the Supreme Court of the United States. In these circumstances pending final judicial action we see no reason to depart from the opinions cited above.

The New York Commission argues that the price line should be 15 cents per Mcf contending that the level of prices in District No. 3 was raised by the 17.5-cent sales made in 1955 and 1956 to Coastal Transmission Corporation.[5] We have, of course, made no use of these Coastal sales in this proceeding, and we see no reason to depart from the result reached in *Texaco Seaboard* and *Hassie Hunt*, *supra*, where we sought to avoid giving effect to the Coastal sales.

As in previous proceedings we shall prescribe a moratorium on rate increase filings above a certain level although we realize that the *Callery* case, *supra*, has held that practice improper. In order to protect the public we think the appropriate level is 19.0 cents per Mcf until January 1, 1968, or until the issuance of a final decision in the Texas Gulf Area Proceeding, Docket No. AR64–2, whichever is earlier. The level at which prices will be triggered or redetermined is apparently at the 19-cent price level, which reflects other prices now in effect in the area (although subject to refund) and represents the highest increased price which we have previously permitted to be filed without ordering an immediate hearing. We note that this triggering level is, consistent with our Order No. 296 issued April 5, 1965, 33 FPC 682, which, of course, related only to applications filed after April 15, 1965. The in-line moratorium level must be based on the triggering level; therefore, if any of the producers involved here

[5] *Houston Texas Gas and Oil Corp.*, 16 FPC 118, 141–142, 17 FPC 303, 310.

have a factual basis for taking a contrary view of the establishment of a moratorium at this level, they have opportunity so to state in applications for rehearing.

Ordinarily, where there are appropriate provisions in the temporary certificates we provide for refunds of the difference between the amounts collected by the producers and what should have been collected under the in-line prices determined. However, where there are no refund provisions in the temporary certificates in other proceedings, we have deferred action until the equities involved could be determined in accordance with *P.S.C. of New York* v. *F.P.C.*, 329 F. 2d 242 (CADC-1964).

In the present proceeding there are only two applications involving certificates with refund conditions and prices above the in-line price here determined. These are the applications of *The Superior Oil Company* in Docket No. CI63–584 and *Pan American Petroleum Corporation* in Docket No. CI63–1445, both relating to sales at 17.5 cents per Mcf under contracts dated in the post-Policy Statement period. In the case of these two applications we shall provide for refunds but require that the producers hold the amounts involved until it is determined who is entitled to them as we have done in other proceedings. In the case of all other applications where the price charged under the temporary certificates is greater than the in-line prices here prescribed we shall defer determination of whether refunds should be ordered.

In accordance with the recommendations of the examiner and our past practice we shall condition the certificates issued in these proceedings to provide that take-or-pay clauses are subject to the Commission's ultimate disposition with respect to such provisions in the rule-making provision in Docket No. R–199, subject to the limitation that producers will not be required to file amended take-or-pay provisions for less than 80 percent of the annual contract quantities. Some of the producers contend there is no evidence in support of this condition and that it is too indefinite. In our opinion no evidence is necessary to show that consumers involved should receive the protection of the final result of the proceedings in R–199, subject to a limitation specifically designed to make the producer certificates sufficiently definite.

The Commission further finds:

(1) Applicants listed in Appendices A and B of this opinion are engaged in the sale of natural gas in interstate commerce for ultimate public consumption and each is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The sales of natural gas hereinbefore described, as more fully described in the applications, are made in interstate commerce, subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Subject to the requirements of our order herein and the conditions attached to the certificate herein issued, the applicants listed in Appendices A and B except for those in (6) below are able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sales of natural gas by the independent producers listed in Appendices A and B, except for those in (6) below together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are and have been required by the public convenience and

necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) The applications of Hawkins & Hawkins in Docket No. G–18077, Kilroy Properties in Docket No. CI60–478, Ben H. Schnapp (Operator), *et al.*, Docket No. CI60–642, and Skelly Oil Company in Docket No. G–20155 should be dismissed.

(7) Except as herein granted, the exceptions to the examiner's decision should be denied.

The Commission orders:

(A) Certificates of public convenience and necessity are issued to the several applicants listed in Appendices A and B (except for Hawkins & Hawkins, Docket No. G–18077, Kilroy Properties, Docket No. CI60–478, Ben H. Schnapp (Operator), *et al.*, Docket No. CI60–642, and Skelly Oil Company, Docket No. G–20155) for the sale of natural gas in interstate commerce for resale as proposed in the several applications, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, upon the terms and conditions set forth below.

(B) Certificates issued to the applicants listed in Appendix A are conditioned to prohibit a total initial price, including all reimbursements and charges, greater than 16.0 cents per Mcf at 14.65 psia, and certificates issued to the applicants listed in Appendix B are conditioned to prohibit a total initial price, including all reimbursements and charges, greater than 17.0 cents per Mcf at 14.65 psia. In each case these prices shall remain in effect until lawfully changed in the manner provided by the Natural Gas Act.

(C) Each certificate issued in paragraph (A), is further conditioned to provide for a moratorium on the filing of all price increases in excess of 19 cents per Mcf at 14.65 psia, inclusive of tax reimbursement until January 1, 1968, or until issuance of a final decision in Docket No. AR64–2, whichever is earlier.

(D) Within 60 days from the date of issuance of this order each of the applicants receiving certificates in paragraph (A) hereof, whose proposed total initial price exceeds the limits set forth in paragraph (B) shall file a supplement to its presently filed rate schedule effective as of the date of this order, related to its respective application, reflecting the conditioned price as the total initial price in lieu of the higher initial price provided in the contract; provided that with respect to the reduction in rates hereby ordered, applicants need not comply with the detailed submittal provisions of Section 154.94(f) of the Regulations under the Natural Gas Act.

(E) The Superior Oil Company in Docket No. CI63–584 and Pan American Petroleum Corp. in Docket No. CI63–1445 shall compute amounts to be refunded to Florida Gas Transmission Co. The refund shall include the difference between the amount charged and collected from Florida Gas and 17 cents per Mcf applied to all volumes paid for by Florida Gas from the date of the first delivery of natural gas under temporary authorization until the date of this order. Interest shall be included at a rate of 7 percent per annum to the date of this order. Within 90 days from the date of this order Superior and Pan American shall submit a report to the Commission, and serve a copy on Florida Gas, setting forth the amount of refund related to each subject rate schedule (showing separately the principal and applicable interest), the basis used for such determination, the period covered, and a letter from Florida Gas agreeing to the corrections of the amounts.

(F) Superior and Pan American shall retain the amounts shown in the report required under paragraph (E) above, subject to further order of the Commission directing the disposition of those amounts.

(G) If Superior and Pan American elect to commingle these retained refunds with their general assets and use them for their corporate purposes, they shall pay interest thereon at the rate of 4½ percent per annum on all funds thus available from the date of this order to the date on which they are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission.

(H) If Superior and Pan American elect to deposit the retained refunds in a special escrow account, they shall each tender for filing within 90 days of the issuance of this order an executed Escrow Agreement, conditioned as set out below, accompanied by certificate showing service of a copy thereof upon Florida Gas. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between each producer and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(i) The producer, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(ii) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(iii) Such bank or trust company shall be liable only for such interest as the invested funds described in paragraph (2) above will earn and no other interest may be collected from it.

(iv) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(v) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the bank or trust company for the quarterly period.

(I) With respect to the applications of all producers listed in Appendices A and B except The Superior Oil Co., Docket No. CI63–584, Humble Oil & Refining Co., Docket Nos. CI63–1057 and CI64–677, Tidewater Oil Company, Docket No. CI63–1134, and Pan American Petroleum Corp., Docket No. CI63–1445, the decision whether refunds should be ordered as a condition to the permanent certificates is deferred for subsequent determination. Within 30 days from the date of issuance of this order the parties to this proceeding, to the extent desired, may file briefs directed to the issue whether refunds should be ordered in any or all of the dockets and the extent of such refunds, if any. Replies may be filed

within 10 days of service of the briefs. Any party who wishes to introduce into the record evidence as to additional facts which might bear upon the ultimate determination of this matter shall file with its brief, within 30 days from the date of issuance of this order, a statement of such additional facts and of the evidence by which it is proposed to establish such facts.

(J) The certificates herein issued, are upon the express condition that the allowance of the take-or-pay provision in the applicant's contracts or amendment is subject to the Commission's ultimate disposition with respect to such provisions in the rule-making proceeding in Docket No. R–199. Upon the establishment, by regulation or policy statement, of a general policy governing such provisions in producer contracts, each applicant shall within 30 days, file its amended rate schedule in conformity therewith, acceptable to the Commission, provided that the applicant shall not be required to file a take-or-pay provision for less than 80 percent of the annual contract quantity and, provided further, that any rate schedule changes or modifications to be made in accordance with this paragraph shall be prospective only.

(K) The certificates issued by paragraph (A) hereof are not transferable and shall be effective only so long as each respective applicant continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(L) The grant of the certificates and amendments herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or of Part 154 of the Regulations thereunder except as specifically provided in paragraph (C) hereof. Such grant is without prejudice to any findings or order which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants or any one of them. Further, the action in this proceeding shall not foreclose nor prejudice any further proceedings or objections by the Commission relating to the operation of any price or related provision in the gas purchase contracts or amendments here involved.

(M) The applications of Hawkins & Hawkins, Docket No. G–18077, Kilroy Properties, Docket No. CI60–478, Ben H. Schnapp (Operator), *et al.*, Docket No. CI60–642, and Skelly Oil Company, Docket No. G–20155, are dismissed, subject however to the proceedings relating to refunds provided for in paragraph (I) above.

(N) The examiner's decision is adopted as the decision of the Commission except where inconsistent herewith as in the determination of the in-line price during the post-Policy Statement period.

(O) Exceptions not granted are hereby denied.

Commissioner Bagge *concurring.*

Commissioner Black *dissenting*, joined by Commissioner Ross.

BAGGE, *Commissioner, concurring:*

I agree with the result of this proceeding. I am compelled to add a word, however, because I believe that something else needs to be said about in-line determinations generally.

In considering the proper in-line price here, I started as we all must with the basic proposition that our essential task is to hold the line as it in fact existed as of the period of the contracts in issue rather than as it existed at some other period of time. The critical point here, as the Commission decision points out, is that the weighted average of nonsuspect prices of permanent

certificates during the post-policy statement period was approximately one cent (16.17¢ per Mcf) more than the price for the weighted average for such sales in the pre-policy period (15.23¢ per Mcf). The fact that we here find the in-line price for the later period to be one cent higher than the earlier one is, therefore, hardly surprising. The weighted average prices, of course, do not in themselves determine the proper in-line price here any more than the *Texaco Seaboard* case. Moreover, I agree with my colleagues in the majority that unless we give some consideration to the sales temporarily certificated in the post-policy period, we would necessarily be ignoring a substantial portion of the relevant evidence.

The question is, of course, how much weight should be given to such evidence. The answer to this question is not subject to any precise mathematical formula. It necessarily involves a matter of informed judgment upon which, in the final analysis, our in-line determination ultimately rests.

The specific price determination resulting from these exercises of judgment have been expressed in the past in terms peculiar to these proceedings. I do not find them helpful. I assume that they exist only because there may be no alternative for the contesting parties to express or for the Commission to adjudicate divergent economic interests pending a just and reasonable determination under Section 5 other than through these pious incantations. I am, as yet, however, not committed to the dogma of in-line price determination apologetics. I would prefer to realistically recognize the fact that the final figure to be determined necessarily is essentially a judgment factor. In my case this judgment also recognizes the existence of and takes into account the existing guideline price.

Even if the guideline price in Texas District No. 3 were not 17¢, however, I am convinced that an in-line price determination approximating this figure would be a proper one on the present record. That the two prices coincide is to me, however, a matter of satisfaction rather than dismay. The Commission makes clear that the guidelines cannot determine the in-line price. Here, in fact, the guidelines in existence during most of the period was a higher 18¢ price. There is certainly no merit, however, in this already complex methodology of fixing initial prices during the period immediately prior to the establishment of area rates in artificially separating guideline and in-line prices. On the contrary to the extent to which, within the dialectics of in-line price determination, they can be made to coincide, the public and the industry will substantially benefit from the certainty derived therefrom.

BLACK, *Commissioner, dissenting:*

In my opinion there is no valid support for an in-line price in Texas Railroad District 3 in excess of 16¢ per Mcf. The majority errs in relying on temporaries to support its findings, in affording weight to the sales certificated under Commission policies which since have been repudiated by the Courts and the Commission, and in affording weight to our guideline policy statement.

The majority relies on the Amerada proceeding[1] as precedent for its use of temporary certificates in establishing an in-line price. Although I participated with the majority in that proceeding, were that case before us now I would express different views. I do not believe that it is consonant with our responsibilities under the Natural Gas Act as interpreted by the courts for us to rely

[1] *Amerada Petroleum Co., et al.*, Docket No. CI62–1544, *et al.*, Opinion No. 422, 31 FPC 623 (1964).

on temporary prices in cases at issue before us in determining an in-line price. As the Court in *U.G.I. Co.* v. *F.P.C.*, 283 F. 2d 817 at 824 noted:

> When an order certificating an initial rate is under Court or *Commission* review, it is possible that the certificate may be eventually denied or price conditions may be attached. In our opinion an existing rate subject to such a hazard does not provide a reasonably reliable basis upon which to predicate a price line. [Emphasis added]

The majority here does violence even to the justification for its use of the temporaries in *Amerada*. It there argued that the examiner's basic error in refusing to give weight to the temporary certificates was that in doing so he ignored the bulk of the evidence; that substantial volumes of gas were not moving under permanent certificates; and, that this distinguished it from Skelly [2] where substantial volumes of gas moving under permanent certificates were available for study. In the present proceeding there are but 441,317 Mcf (estimated first month volumes) under temporary certificates in the post-policy statement period as contrasted to more than 1,630,000 Mcf under permanent certificates in the same period. Thus, even assuming the propriety of the majority's reliance on temporary certificates under the limited exception to the general rule recognized in *Amerada*, there is no justification for the use of such evidence in this proceeding.

In the *Union Texas* case,[3] we held that an in-line price, once established is presumed to continue in the absence of evidence to the contrary. The Commission on essentially the same evidence as here at issue but without reliance on the temporary certificates or affording weight to the suspect certificates at 20¢ per Mcf found the appropriate in-line price for this area to be 16¢ per Mcf. There has been presented here no evidence of new facts of significance to justify a change in that finding. I, therefore, concur in the majority's conclusion that the appropriate in-line price for the area continues to be 16¢ per Mcf at 14.65 psia.

Turning to the period following the issuance of our General Policy Statement on September 28, 1960, several facts emerge. First, as Respondent's evidence clearly shows, there is no significant difference in contract pricing levels in the area between the pre and post policy statement eras. Secondly, as Staff evidence clearly shows, the average certificate pricing levels are inflated by the influence of certificates issued under Commission policies which have since been reversed. Thus, where the majority table outlines but a few sales certificated at prices above 16.2¢ (11 out of 53 in the pre-policy period), it has properly noted that these are suspect by virtue of Court reversal of the principles applied by the Commission in their issuance. However, what the majority fails to recognize is that the *post-policy* statement 18¢ permanent certificates are subject to essentially the same defect. For, in issuing Texaco Seaboard, Inc.,[4] we corrected an error in the level at which the guideline price was established for Texas Railroad District 3, adjusting that price from 18¢ to 17¢ per Mcf. Surely where, as here, the principle permitting the issuance of certificates at 18¢ has been proven erroneous, those certificates like their 20¢ counterparts in the pre-policy period should be discounted.

---

[2] *Skelly Oil Company, et al.*, Docket No. G–18638, *et al.*, Opinion No. 362, 28 FPC 401 (1962).

[3] *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, Opinion No. 486, 32 FPC 254, 260 (1964).

[4] *Texaco Seaboard, Inc., et al.*, Docket No. CI61–118, *et al.*, Opinion No. 383, 29 FPC 593, 599 (1963).

It is of interest to note that the 17¢ price found for the post-policy period is higher than the price at which other gas is sold under permanent certificates except for the comparatively large volumes at 18¢ per Mcf, and is higher than 24 sales out of 27 (89%) representing 47% of estimated first month volumes. It is also higher than the weighted average price under permanent certificates of 16.17¢ per Mcf. In these circumstances the legally relevant evidence for this period dictates a price not in excess of 16¢.

The majority, however, elects a quite contrary course. Since it cannot support its predetermined 17¢ level by reliance on permanent certificates, it seeks to support its conclusions by alluding to the support to be had in the prices at which temporary certificates were issued during this period, and to the fact that this price coincided with the guideline prices. Even assuming the validity of relying on the temporary certificates here at issue, those issued during this post-policy period under policies which have since been recognized as erroneous and discontinued should be afforded little, if any, weight. Those temporaries issued at prices above the pricing levels now recognized as constituting the appropriate guideline should be at least discounted in weight, if not, as I believe, disregarded in their entirety.

I am perplexed by the majority's insistence that stability of gas prices can be achieved only by giving the Commission's guideline prices consideration in arriving at the in-line determination. Stability is precisely the objective I would hope to achieve. I have made no suggestion that we should "roll back" the price of gas in Texas District 3. I would maintain the in-line price level and the guideline price level most recently determined. This, in my view, achieves stability. The majority, though, by its action today has *raised* the price of gas. This concept of "stability" is a strange one.

The Commission majority misunderstands the nature and purpose of our guideline prices. They are determined by the Commisison *in camera* without the benefit of any hearing or record to assist us and with no rationale to inform the industry or the consumer how they were arrived at. They are, in fact, *only* guidelines.

A review of the Commission opinions[5] wherein corrections have been made to the original guideline pricing levels shows that the Commission has sought to maintain its guideline prices at approximately 1¢ above the in-line price. This has merit. The guideline price is essentially a statement of settlement policy authorizing issuance of permanent certificates without litigation provided no parties intervene. In issuing our original policy statement, we expressly provided "their use will not deprive any party of substantive rights."[6]

Our policy statement has provided a valuable administrative tool which has greatly simplified the administration of the Act and has expedited our certificate work. The producers have largely accepted our guideline prices because they are generous and because the parties have been spared lengthy and costly litigation. They have, therefore, served a useful purpose. But when the issue of initial price is forced to hearing and is brought before us on a formal record for in-line determination, it is not logical that such determination should be influenced in any substantial way by our seat of the pants guideline prices. The certificates we issue now at prices influenced by the higher guideline prices in turn become the evidentiary subject matter for future cases, and if past Commission practice is followed, we can expect the guideline price to be increased to 18¢.

Commissioner Ross joins me in this dissenting statement.

[3] Billing statement not filed.
[4] Includes 0.25 cent per Mcf dehydration reimbursement.

INITIAL DECISION

OF THE PRESIDING EXAMINER RESPECTING PRODUCER PRICES UPON APPLICATIONS FOR PUBLIC CONVENIENCE AND NECESSITY FILED PURSUANT TO SECTION 7 OF THE NATURAL GAS ACT

(Issued December 2, 1964)

SHRIVER, *Presiding Examiner:* This is a consolidated proceeding upon forty applications for certificates of public convenience and necessity filed pursuant to Sections 7(c) and (e) of the Natural Gas Act, 52 Stat. 821, 825, 56 Stat. 84; 15 U.S.C. 717f(c), 717f(e). The Commission consolidated the applications and fixed a prehearing conference on them by order issued March 30, 1964, 31 FPC 725. The applicants are independent producers from an area in Texas known as the Texas Railroad District No. 3. They seek authorization to sell natural gas to four pipelines[1] for resale in interstate commerce. Each of the applicants have executed initial contracts for the sale of gas at prices ranging between 16.17 cents to 20.0 cents per Mcf (at 14.65 psia) and have filed their contracts with the Commission. The sales were executed between September 16, 1958 and October 1, 1963.[2] Temporary certificates have heretofore been issued to the applicants by the Commission and delivery of gas is being made pursuant to these certificates. The producers now seek permanent certificates. The primary issue in the proceeding is the price at which the producers shall be permitted to sell their gas.

A prehearing conference was held in this case on April 23, 1964, and hearings were held on July 8, 9, 10, 13, 14, 15, 16 and 17, 1964. At the prehearing conference the parties stipulated, except as hereafter noted, among other things, that the sales contracts were entered into after arm's-length negotiations, that each applicant is ready, willing and able to perform under their respective contracts and to comply with the Natural Gas Act and all valid Commission rules and regulations promulgated thereunder. The New York Public Service Commission, however, refused to stipulate that Callery Properties, Inc., and Kilroy Properties, Inc., were ready, willing, and able to perform under their respective contracts.

It should be observed that Kilroy Properties (CI60–478) is now seeking to abandon its sale, and that Hawkins & Hawkins (G–18077) and the Stewart and Gouger Drilling Company, *et al.* (CI60–541) are no longer applicants for certificates and did not agree to the stipulation. It is also to be observed that pursuant to the Commission's order of October 8, 1964, 32 FPC 933, in Atlantic Refining Company, Docket Nos. G–9283 and G–9284, *et al.*, Atlantic's Docket No. CI60–459 was severed from the instant proceeding and a settlement was reached therein at 16.00 cents per Mcf at 14.65 psia.

In its order of March 30, 1964, 31 FPC 725, the Commission consolidated into this proceeding eleven applications severed from Florida Gas Transmission Company, *et al.*, Docket No. G–18338, *et al.*, as well as seven applications previously severed from Hassie Hunt Trust, Operator, *et al.*, Docket No. G–19115, (Opinion No. 412, December 9, 1963), 30 FPC 1438, and twenty-two other applications not previously consolidated. As to the eleven applications, permanent certificates were issued on them by an order of August 9, 1961, which provided

[1] The pipeline companies are Florida Gas Transmission Company; Tennessee Gas Transmission Company; Trunkline Gas Company; and the Natural Gas Pipeline Company of America.

[2] One of the contracts, however, was executed on January 31, 1951 and ratified April 10, 1962. See Appendix to Commission's order of March 30, 1964, reproduced as Appendix A hereto.

that they were subject to the condition that the applicant refund to the pipeline with interest at 7 percent per annum any amounts collected "in excess of the ultimate rates determined to be required by the public convenience and necessity." 26 FPC 318, 331, 334. Thereafter, on November 2, 1961, after a rehearing the Commission set aside the certificates previously issued and issued temporary certificates. 26 FPC 677, 683, 686.

In respect to the seven applications, these involve sales by the Hunt interests. These applications were the subject of a 1962 hearing together with nine other applications in *Hassie Hunt Trust, Operator, et al.* (Opinion No. 412, December 9, 1963, *supra*, and Opinion No. 412–A, January 24, 1964), 31 FPC 181, but by order of the Commission of December 9, 1963, the seven applications were severed and later consolidated into the instant proceeding.

The proposed initial price under which Callery Properties, Inc. began to sell and deliver gas to Coastal in 1959 was 17.5 cents per Mcf. On December 1, 1962, pursuant to action taken in Docket No. RI62–463, Callery began collecting a new rate of 18.5 cents per Mcf under a Trust Agreement to assure refunds pending a determination of the justness and reasonableness of the new rate.

At the hearing, Callery offered no evidence in support of its initial contract price of 17.5 cents per Mcf but attacked the Staff's use of estimated first month billing statement volumes rather than actual delivery volumes in arriving at a recommended "in line" price. It is self-evident that actual volumes are more accurate than estimated volumes but this alone does not disprove the validity of the use of first month billing statement volumes, particularly when actual volumes are unavailable. It is of interest, for example, that the total billing statement volumes contained in Exhibit 10 sponsored by the Hunt Oil Company on some 130 contracts dated between April 1, 1956 and July 28, 1961 exceeded the actual volumes in 1962 by less than 4 percent. The billing statement volumes have previously been utilized by the Commission and they provide an effective and appropriate measure in determining comparability. The use of estimated volumes has the advantage of using the volume yardstick which the parties had in mind when the contract was executed.

If a weighted average price is a criterion in the determination of a market at which proposed prices will be certificated then some volume measure must be utilized in arriving at a weighted average price, but it is misleading to arbitrarily select particular sales or a year, or years, for this purpose in which there are large volumes of actual delivery at a high price. This is shown by the illustrations below.[3]

[3] It will be seen that the large volumes at high prices in Illustration 1 as contrasted with high volumes at low prices in Illustration 2, produce a weighted average of 16.8 cents as compared to 13.2 cents.

ILLUSTRATION 1

[Weighted average price—16.8 cents]

Year	Price per Mcf	Volume	
1959	12	100,000	$12,000
1960	14	150,000	21,000
1961	16	1,000,000	160,000
1962	18	1,500,000	270,000
		2,750,000	$463,000

Footnote continued at bottom of following page.

At the hearing, Mr. Robert L. Norris appeared as a witness on behalf of the Hunt Oil Company. Although he testified in support of the "in-line" issue, he made no firm recommendations. In exhibit No. 10, he indicates that on the basis of actual volumes of gas delivered in 1962, the average price for gas sold under permanent uncontested certificates was 17.5081 cents per Mcf.

Although the first sales contract involved in this proceeding is dated September 16, 1958, Mr. Norris begins his tabulations with January 1956. By doing so he was able to utilize some seven sales in that year at a price of 17.50 cents and another at 18 cents per Mcf involving 1962 deliveries of more than 16,000,000 Mcf. This had the effect of unduly raising his weighted average price. By contrast Mrs. Gody who also testified in behalf of the producers selected January 1, 1958 to December 31, 1963 as the critical period in her basic exhibit. But aside from the fact that the contracts utilized were executed in mid-1956, these sales as stated by the Commission in *Texaco Seaboard, Inc.*, 29 FPC 593. 598, March 27, 1963, "were to a new company that had neither been given a certificate nor was yet in operation, and so may have taken place at higher prices than would have occurred under contracts with an established pipeline because of the inclusion in the price of an additional risk factor." Moreover, Mr. Norris made use of large volumes of gas deliveries in 1962 at 20 cent prices which represented pre-CATCO sales (*Trunkline Gas Company*, 21 FPC 704) characterized by the courts as suspect. Although Mr. Norris was conversant with gas industry matters his conclusions as to what is an appropriate "in-line" price in this case based on the weighted average sales prices which he considered are not well founded.

Mr. H. L. McDonald testified on behalf of the Pan American Petroleum Corporation in support of its contract executed February 12, 1963 and temporarily certificated by the Commission at 17.5 cents per Mcf. Pan American's application was filed on May 23, 1963, temporarily certificated October 7, 1963, and deliveries of gas were commenced on December 31, 1963. Mr. McDonald testified as to the intrastate market compared with the interstate market of gas from Texas District No. 3, stating that the intrastate market was large and had grown in recent years. He expressed the view that the intrastate market was more favorable than the interstate market and that this supported a higher conract rate for gas sold interstate and that this justified the permanent certification at 17.5 cents per Mcf. On cross-examination, however, he admitted that his company had no bona fide intrastate offers for the gas covered by the subject sale. As to the intrastate market it would appear that this can be put on one side and that that market is irrelevant in determining an "in line" price in the instant pro-

ILLUSTRATION 2

[Weighted average price—13.2 cents]

Year	Price per Mcf	Volume	
1959	12	1,500,000	$180,000
1960	14	1,000,000	140,000
1961	16	150,000	24,000
1962	18	100,000	18,000
		2,750,000	$362,000

If it were necessary to certificate a few sales made almost at the same time, it is reasonable in doing so, that consideraton be given to comparable sales made at or about the same time which have been permanently certificated. If several sales scattered over a period of years are to be certificated it follows that consideration must be given to comparable sales covering approximately the same period which well might include a reasonable time before and after. But to include sales two or three years before the sales in issue without extenuating circumstances, would be misleading, and to determine a weighted average based on such sales would be equally fallacious.

ceeding. Moreover, Mr. McDonald's testimony when considered with other evidence herein does not support a rate of 17.5 cents per Mcf.

Mr. L. L. Byars, who testified for the Skelly Oil Company (Docket Nos. G–20155 and CI63–672), stated that the contract in the first docket was executed on August 1, 1959, and the other on October 16, 1962, and that the contracts were temporarily executed at 17.5 cents and 18 cents per Mcf, respectively. Deliveries on the first contract were commenced on November 22, 1961, and on the second December 18, 1962. Mr. Byars testified that the Pan American Petroleum Corporation and Tidewater Oil Company executed contracts on October 16, 1962 (Docket Nos. CI63–656 and CI63–650) to sell gas to the same purchaser as Skelly, *i.e.*, Natural Gas Pipeline Company of America, and were given permanent certificates for such sales at a price of 18 cents per Mcf, and that the gas sold came from the same location as that under Skelly's contract of October 16, 1962. He stated that Skelly had only an unconditional temporary certificate at 18 cents per Mcf. Mr. Byars pointed out that the gas was sold from the same unit at different prices. He stated that this would create serious problems, but he was rather vague as to what they were and why. We must disagree with this conclusion. In *Ohio Oil Company, Operator, et al.*, 27 FPC 551, 566, Examiner Kelly was confronted with the same contention and he stated:

> Each brief filed by the Applicants stresses the fact that a permanent certificate was issued to Gulf by the Commission on July 8, 1959, authorizing the sale of gas to United at 18.5 cents per Mcf. It is argued by them that the Gulf sale is of gas produced from the Ada field of Bienville Parish, just as are 8 of the 14 sales here involved, and that their contractual initial price being the same, should be permanently certificated by the Commission, as was Gulf's rate * * *"

Examiner Kelly was upheld by the Commission in its order of March 21, 1962, 27 FPC 551.

The principal witness for the producers was Mrs. Celia Star Gody. Mrs. Gody is an economic statistician. She testified that she had been asked "to present testimony on prices for sales of natural gas in Texas Railroad Commission District No. 3 and to compare the proposed price for the subject sales with prices for other sales of natural gas in the same part of the market." Mrs. Gody expressed the opinion that the price negotiated by the parties reflects the underlying economic forces which determine the value of gas as a commodity, and that the first line of inquiry in determining whether certifications of the docketed sales is in the public convenience and necessity is to determine whether the proposed sales are within the *dominant range of market prices* for comparable supplies. She testified that the prices negotiated by buyers and sellers are affected by the fact of regulation by the Commission but that the initial contract prices are the best indication of the value of gas. Mrs. Gody preferred, however, to testify to the high contract prices for gas and the high volumes sold at a high price, rather than to the prevailing certificated prices in a particular year or over a period of years. Her testimony reveals that she concerned herself chiefly with initial contracts rather than certificated contracts. She asserted that relatively few contracts were executed in any single year and that price behavior must be appraised by reference to the experience over a period of years rather than by reference to short term changes.

A careful examination of Mrs. Gody's testimony reveals, however, that her ultimate conclusions are subject to question on several counts. Mrs. Gody did not follow the usual practice of an expert witness in stating her opinion and then supporting it by explanatory testimony and documentary evidence. She

chose rather to state her own premises and assumptions, to provide what she characterized as "information on market prices" or a "dominant range of market prices," and then conclude that such data established a basic price for certificating the subject contracts. She did not define what she meant by "dominant range of market prices," nor did she attempt to determine a price level objectively which would be applicable to the contracts involved in this proceeding.

Since she dealt essentially with initial contracts rather than certificated contracts her conclusions are largely hypothetical in respect to a certificate proceeding. Moreover, to assume as she did, that the prices negotiated by the parties determine the value of gas when producer prices of gas sold in interstate commerce are subject to regulation is misleading and provides no sound basis for determining whether the subject sales can be certified as in the public convenience and necessity. Although Mrs. Gody utilized contracts covering the period January 1, 1958 to December 31, 1963, a period covered by the subject sales, she ignored or gave but little consideration to the low priced sales. Indeed on cross-examination when speaking of intrastate sales she stated, "The lowest price of such sales would be of no particular interest to me." Her search was directed in large measure to large volume deliveries at high prices. This necessarily resulted in weighted averages which suited her purposes.

The tables and charts prepared by Mrs. Gody are meaningful statistically but their relevance is limited in determining an appropriate price at which the subject sales should be certificated. For example, the chart captioned, *Annual Delivery Volumes Committed Under Long Term Contracts, Texas Railroad Commission District No. 3, by Year of Contract 1952–1963* (Exhibit 5, p. 2) shows, among other things, a commitment of new contract volumes of more than 80 million cubic feet of gas for the year 1952, some 33 million for 1958, and declining volumes in succeeding years to 2.7 million in the year 1963, but the witness did not contend that the number of sales or the volumes committed between 1959 and 1963 were insufficient to indicate a market during these years. In her direct testimony, Mrs. Gody stated in respect to another chart that it shows prices in a range of 13 to 20 cents per Mcf in the period 1958–1963 but in the chart following containing the same sales, she lumped volumes by price and concluded that the weighted average of initial contract prices was 18.05 cents per Mcf, and that half the total volumes under the new contracts was at the 20-cent price. The latter chart (Exhibit 5, p. 7) includes the subject sales in the array with which the subject sales are compared in arriving at an appropriate price for certifying the subject contracts. This is a strange procedure and in the instant proceeding certainly cannot be justified either in law or logic.

Mrs. Gody's conclusions in respect to the sales consolidated in this proceeding are, that "if the subject contracts were evaluated by reference to prices under comparable contracts written at about the same time, the proposed prices could be found to be within the range of current market prices, and at or below the 20-cent price at which the largest proportion of the new-contract volume was committed," and further "assuming that from a legal standpoint, the certificated sales at a price of 20 cents were not to be relied upon" then "the 18-cent price is the appropriate upper price limit for the subject sales." In her direct testimony, Mrs. Gody stated that the conspicuous feature of the price distribution is the concentration of delivery volumes at the 20-cent price, and that a substantial proportion of the volume under the certificated sales dated 1958–1963 is at the 20-cent price. Further inquiry will now be made to determine whether these assumptions and conclusions are valid.

In Exhibit 5 Mrs. Gody indicates that there were 18 contracts executed at an initial base price of 20 cents involving annual delivery volumes of 44,042 MMcf at 14.65 psia. Five of these dockets, however, are consolidated herein (CI61–1221, CI61–1282, CI61–1283, CI61–1682, and CI60–348). Since these dockets are in issue they provide no true basis of comparison. Two dockets, G–19115 and G–19116, were conditioned at 16 cents in, *Hassie Hunt Trust, Operator, et al.*, Opinion No. 412, issued January 24, 1964, *supra*. Two additional dockets, namely, G–19559 and G–20383, involved sales by the Cities Service Oil Company and the Gulf Oil Corporation to the Trunkline Gas Company and were certificated on the basis of settlement proposals at 18 cents and at 16 cents, respectively. (Orders October 31, 1963 and August 8, 1963.) The contract in Docket No. CI61–157 was conditioned at 16 cents in *Texaco Seaboard, Inc.*, 29 FPC 593, dated March 27, 1963. The eight remaining dockets (G–16975, G–17044, G–16551, G–15471, G–15472, G–16147, G–16267 and G–17263) were permanently certificated at 20 cents in *Trunkline Gas Company*, 21 FPC 704, on May 22, 1959. This opinion, however, was issued prior to the decision in the *CATCO* case, *Atlantic Refining Company* v. *Federal Power Commission*, 360 U.S. 378, wherein the Supreme Court admonished the Commission to hold the line against further increases in the price of gas.

It will thus be perceived that in this group of 18 sales there is none higher than 16 cents which can rightfully be employed for comparison in establishing an "in line" price. The one sale at 18 cents represented a compromise settlement and for obvious reasons must be put on one side. The eight 20-cent sales having been certificated prior to *CATCO* are commonly regarded as suspect. In *Hunt Oil Company* v. *Federal Power Commission* (CA5) No. 19218, May 28, 1964, the Court indicated that "several Courts of Appeals, including this Court and the District of Columbia Circuit, held that the Commission had erred in using the improperly certificated *CATCO* prices in determining the public interest price level for initial sales, and the Supreme Court consistently denied certiorari." Citing:[4]

The sale listed at 18.05 cents in Exhibit 5, p. 7 (CI61–553) was withdrawn by the applicant. In respect to six sales at 18 cents, three are consolidated in this proceeding and are in issue, while three others were certificated under abridged hearings in March 1963. As to the 17.5–cent sales, 15 of the 19 listed are again consolidated herein; two others (Docket Nos. G–18376 and CI60–412) were permanently certificated at 16 cents; one (Docket No. CI61–334) is of limited import here under *Texaco Seaboard, Inc.*, 29 FPC 593, 598, March 27, 1963, since the contract was executed on February 22, 1960, (pre-CATCO); and as to the last sale (G–19971) the witness admitted that it was withdrawn. Thus, only

Superior Oil Co.* v. *United Gas Improvement Co.*, 366 U.S. 965 (1961). Only the third Circuit sustained such an order by the Commission, but that decision was summarily reversed by the Supreme Court. *Transcontinental Gas Pipe Line Corp.*, 20 FPC 264, rehearing denied, 20 FPC 571 (1958), affirmed, *sub nom. United Gas Improvement Co.* v. *Federal Power Com'n*, 3 Cir., 269 F. 2d 865, reversed, *sub nom. Pub. Serv. Comm'n of N.Y.* v. *F.P.C.*, 361 U.S. 195 (1959) (*per curiam*).

one of the 19 sales listed was in fact permanently certificated at 17.5 cents. The contracts listed at 16.75 cents (Docket No. CI61–468) and at 17 cents (CI64–677) are consolidated herein. Of the contracts listed at 16.17 cents, seven are consolidated herein (Docket Nos. CI60–495, CI60–459, CI60–496, CI60–343, CI60–434, CI60–642, and CI62–1220). Six others (Docket Nos. G–19099, G–20323, CI61–810, CI60–635, CP60–94, and CI61–1183) were permanently certificated.

When the sales contracts at the initial prices between 16.17 cents and 20 cents referred to above are eliminated from consideration, or they are fairly evaluated along with other contracts executed at lower prices during the period 1958-1963, it is clearly evident that there is no rational support either for a 20-cent or an 18-cent price.

Mrs. Gody's tabulation of initial prices, as well as her tabulation of permanently certificated sales, range in price for the period 1958–1963 between 9.26 cents and 20 cents. Nearly half of the sales in the first tabulation fall between 9.26 and 16 cents and approximately half in the second tabulation between 9.26 and 15 cents. Although there were substantial delivery volumes at these prices, it is a curious fact that Mrs. Gody contends that the range of current market prices—the price at which she says the subject sales should be certificated—is at the highest price, namely, at or below 20 cents.

Although the producers' principal witness testified that it would be inappropriate to place exclusive reliance upon permanently certificated prices, she nevertheless found that "a substantial proportion of the volume" under such sales for the period in question were at the 20-cent price. By using permanently certificated sales—oddly enough the witness allegedly obtains almost the same result as when using initial prices. The witness arrived at this result by including or excluding particular sales in the preparation of her charts.

In the testimony on which reliance is placed upon permanently certificated sales Mrs. Gody again utilizes eight of the 20-cent prices which are pre-CATCO prices, and three sales at 18 cents which were certificated under abridged hearings. The only sale at 17.5 cents is subject to the Commission's suspect price doctrine and the annual deliveries at this price are very small.

The contracts of Hassie Hunt, Docket No. G–19115 and H. L. Hunt, Operator, Docket No. G–19116 as well as Placid Oil Company, Docket No. G–19125 were included by Mrs. Gody in her chart and tabulation of initial prices at 20 cents. The same contracts, however, were excluded by the witness in her chart and tabulation of permanently certificated sales. The Commission conditioned these contracts at 16 cents in *Hassie Hunt Trust, Operator, et al.*, Opinion No. 412 on December 9, 1963, *supra*. The explanation for omission given was that the Commission stayed its order contained in Opinion No. 412 pending judicial review by its order in Opinion No. 412–A, January 24, 1964, *supra*. A more plausible explanation for omitting these contracts in the array of certificated sales it that since they involve large volumes of gas they would have lowered the weighted average price had they been included, and thus would not have suited her purpose.

A more serious omission, however, relates to the sales by producers to the Valley Gas Transmission Company amounting to approximately nine and one half billion cubic feet of gas per annum. The witness' reason for excluding these sales is that they are not comparable to normal producer-pipeline sales, citing as authority, *Amerada Petroleum Corporation, et al.*, (Opinion No. 422, footnote 33, 31 FPC 635), wherein it is stated, "In Skelly we specifically referred to the activities of Valley, indicating that its sales are not comparable to the normal producer-pipeline sales." The Staff argues, however, that a sale *by*

Valley is not comparable to sales by producers since it is a gathering company, but that sales by producers *to* Valley are jurisdictional and are comparable-producer sales. *Skelly Oil Company*, 28 FPC 401, 408, August 30, 1962; *Superior Oil Company* (Opinion 437, July 23, 1964, 32 FPC 243–244). We conclude that it was erroneous to disregard the sales to the Valley Gas Transmission Company.

In her direct testimony, Mrs. Gody states, "Assuming that, from a legal standpoint, the certificated sales at a price of 20 cents *were not to be relied upon* * * * I would conclude * * * the 18 cent price is the appropriate upper price limit." (Emphasis supplied). On cross-examination she revealed that if the 20 cent price were to be accorded no weight then the 18 cent price should control (Tr. 1035–36). Mrs. Gody's conclusions in effect are "take one or the other—if not 20 cents then 18 cents." Although she strenuously emphasizes the significance of annual delivery volumes, when she falls back to 18 cent sales (permanently certificated sales), her price is supported by only three sales and 5,572 MMcf annually as an indicia of the market for 1958–1963 at which the subject sales should be certificated.

In view of the foregoing the conclusion is inescapable that the witness' findings are based almost solely on mathematical calculations and allocations rather than an objective appraisal of all the sales which were made during the 1958–1963 period. Her contentions that the subject sales should be certificated at 20 cents or at 18 cents based on previous sales are without foundation and accordingly are rejected.

The Staff's witness, Mr. Russell T. Jones, testified in respect to the contracts for the sale of gas in interstate commerce from the Texas Railroad Commission District No. 3, and to an "in line" price. His testimony as to an "in line" price falls into two parts; namely, that covering the subject contracts negotiated prior to September 28, 1960, the date on which the Commission issued its Statement of General Policy No. 61–1, and that following September 28, 1960. For the pre-Policy Statement period, Mr. Jones considered that the "in line" price of 16 cents per Mcf at 14.65 psia for Texas District No. 3 found by the Commission in *Texaco Seaboard, Inc., et al.*, 29 FPC 593, March 27, 1963, and reaffirmed in *Hassie Hunt Trust, Operator, et al.*, Opinion No. 412, December 9, 1963, referred to above, was controlling, *i.e.*, for the contracts entered into up to September 28, 1960. As to the post-Policy Statement period, Mr. Jones was of the opinion that the "in line" price applicable to such contracts based on his analysis should not exceed 16.2 cents per Mcf at 14.65 psia. In arriving at this determination, the witness said he took into account the permanently certificated sales entered into prior to September 28, 1960, but relied primarily upon the sales executed after that date. The witness did not include rates resulting from any settlements unless the settlement was at the total initial rate, that is, the contract rate. In other words, only permanently certificated initial rates rather than compromise settlement rates were included. Mr. Jones testified that in determining the "in line" price in the Texaco Seaboard case the Commission utilized a Staff exhibit which presented in tabular form substantially the same information as contained in Exhibit I of this proceeding. The sales which were excluded since they represented compromise settlement rates consisted of the following: Tidewater Oil Company, Docket Nos. G–17578 and G–18376; Shell Oil Company, Docket No. G–19571; Gulf Oil Corporation, Docket Nos. G–20383 and CI60–412 and Cities Service Oil Company, Docket No. G–19559.

The following charts, reproduced from the Staff's exhibit (Exhibit No. 2), show the distribution of permanently certificated sales before and after the Commis-

sion's Statement of General Policy No. 61-1 and during the period January 1, 1958 through December 31, 1963:

CHART 1

DISTRIBUTION OF PRICES

PERMANENTLY CERTIFICATED SALES

(Contracts dated January 1, 1958 through December 31, 1963)

Total initial price	Number of sales	Estimated first month volumes (Mcf)	Percent of total volume
Less than 10.0	3	120,000	1.96
12.0	2	24,000	.39
13.0	2	75,000	1.23
13.5	10	149,715	2.45
14.0	18	884,270	14.48
14.2	1	45,000	.74
14.4	1	90,000	1.47
14.5	7	207,000	3.39
14.6	2	96,000	1.57
15.0	18	523,675	8.57
15.1	1	60,000	.98
15.2	3	166,170	2.72
16.0	4	968,000	15.85
16.2	7	669,000	10.96
16.5	1	30,000	.49
17.5	1	2,190	.04
18.0	4	481,771	7.89
20.0	9	1,515,650	24.82
Total	94	6,107,441	100.00

CHART 2

DISTRIBUTION OF PRICES

PERMANENTLY CERTIFICATED SALES

(Contracts dated January 1, 1958 through September 27, 1960)

Total initial price	Number of sales	Estimated first month volumes (Mcf)	Percent of total volume
Less Than 10.0	3	120,000	2.68
13.5	8	116,100	2.59
14.0	6	353,250	7.90
14.2	1	45,000	1.01
14.4	1	90,000	2.01
14.5	4	132,000	2.95
14.6	2	96,000	2.15
15.0	8	295,075	6.59
15.1	1	60,000	1.34
15.2	3	166,170	3.71
16.0	4	968,000	21.64
16.2	4	514,000	11.49
17.5	1	2,190	.05
18.0	1	731	.02
20.0	9	1,515,650	33.87
Total	56	4,474,166	100.00

CHART 3

DISTRIBUTION OF PRICES

PERMANENTLY CERTIFICATED SALES

(Contracts dated September 28, 1960 through December 31, 1963)

Total initial price	Number of sales	Estimated first month volumes (Mcf)	Percent of total volume
12.0	2	24,000	1.47
13.0	2	75,000	4.59
13.5	2	33,615	2.06
14.0	12	531,020	32.51
14.5	3	75,000	4.59
15.0	10	228,600	14.00
16.2	3	155,000	9.49
16.5	1	30,000	1.84
18.0	3	481,040	29.45
Total	38	1,633,275	100.00

For the period after September 28, 1960, Mr. Jones found that 38 sales were permanently certificated, 22 of which were entered into at prices of 14 cents and 15 cents per Mcf; and that although 481,040 Mcf of gas were estimated as the first month's volumes for three sales at 18 cents, a greater volume was estimated to be sold under 12 contracts at 14 cents with a substantial volume to be sold at 15 cents per Mcf. Mr. Jones indicated that the pattern of sales for the period January 1, 1958 through September 27, 1960 was essentially no different than for the period following September 28, 1960. For the earlier period, he said there were 41 sales at prices of 16 cents or less with 15 sales ranging from prices of 16.2 (4 sales) to 20 cents (9 sales). The witness disclosed that when the sales for the two periods are grouped together it was apparent that there were six concentrations of sales involving substantial volumes of gas, namely, at 14, 15, 16, 16.2, 18 and 20 cents per Mcf. He noted that prices at 17.5 cents and above including the 20-cent sales should be discounted quoting the *Texaco Seaboard* case "since they either have subsequently been set side (and are presently before us for new decision) or would have been set aside, for failure to permit a proper party to intervene, save for the procedural defect in the PSC review action in the *Trunkline* case." 29 FPC 593, 597. He also noted in respect to the four sales at 18 cents that three were entered into subsequent to September 28, 1960 and were certificated by the Commission pursuant to abridged procedure in March 1963. He said he gave these sales some weight but not controlling weight.

It will be observed from the foregoing distribution of prices for the period September 28, 1960 through December 31, 1963, that the largest concentration of sales occurred at 14 cents and 15 cents per Mcf-57.9 percent, and that the largest volumes of gas were sold at or below 15 cents per Mcf. The average numerically weighted sales price for the period was approximately 14.67 cents and the average sales price by volume was approximately 15.51 cents per Mcf. In respect to the period January 1, 1958 through September 27, 1960 more than 73 percent of the sales occurred at 16 cents or below and these sales account for more than half the volume. The average numerically weighted sales price for this period is 15.41 cents per Mcf and the average sale price by volume is approximately 16.76 cents per Mcf. When the two periods are combined (January 1, 1958 through December 31, 1963) it is apparent that there are two major concentrations of sales namely at 14 cents and 15 cents and minor concentrations at 13.5, 14.5, 16.2 and 20 cents. The average numerically weighted price of the 94 sales is 15.11 cents per Mcf and the average by volume is 16.43 cents per Mcf.

In view of the foregoing and the evidence adduced there is ample support for finding that 16 cents per Mcf at 14.65 psia is an appropriate "in line" price applicable to producer contracts in this proceeding for the period prior to September 28, 1960. The Staff witness found, however, that 16.2 cents was the appropriate "in line" price applicable to the period following September 28, 1960 and in doing so stressed the significance of the sales which were made at 16.2 cents per Mcf. (Four sales before September 28, 1960 and three afterwards.) We do not think that this is decisive. Indeed there is evidence which tends to show that a higher price may be justified for the pre-Policy Statement period than for the post-Policy Statement period.

It is manifest that the "in line" price is neither the highest price nor the lowest price at which gas is sold from a particular area in interstate commerce. It is also clear that it is not the general average of prices at which gas is sold in a particular period or indeed the mathematical weighted average. Consideration necessarily must be given, however, to the number of sales as well as to the volume—large volumes frequently selling at higher prices than low volumes. Consideration should be given to numerous factors depending upon individual circumstances from one case to another. Consideration must also be given to

the Commission's Statement of General Policy No. 61–1, and to policy of the Natural Gas Act as heretofore construed by the Commission and by the courts particularly by the United States Supreme Court in the CATCO case. *Atlantic Refining Co.* v. *P.S.C. of New York*, 360 U.S. 378. In view of these factors and all the facts of record we conclude that the subject sales in this proceeding from the Texas Railroad District No. 3 made under contracts executed both before and after the Policy Statement dated September 28, 1960, should be conditioned at a price no greater than 16 cents per Mcf at 14.65 psia.

The quality specifications of the contracts involved in this proceeding are generally the same as those contained in other contracts executed during the years 1958 to 1963 and utilized as to comparability of price. The gas delivered under the contracts is of pipe line quality as that term is used and generally understood in District No. 3.

At the hearing the applicants adduced evidence to support their contention that refunds should not be ordered in the event that the "in line" price should be determined to be below the proposed initial price. Evidence was also presented of "equitable considerations" as a bar to the making of refunds. On October 5, 1964, 32 FPC 914, however, in respect to the Sinclair Oil & Gas Company, *et al.*, Docket No. G–16760, *et al.*, and Turnbull & Zoch Drilling Co. (Operator), *et al.*, Docket No. G–17960, *et al.*, the Commission ordered that where the temporary certificate does not contain an express refund condition then consideration of refunds should be deferred until further order by the Commission. In an order issued on October 13, 1964, 32 FPC 991, this ruling was also made applicable to the instant case. Since the initial price in Docket Nos. CI63–1445, CI63–584, CI63–1057, and CI63–1134 are subject to the condition that the seller refund any amounts collected plus interest at 7 percent per annum in excess of 16 cents per Mcf at 14.65 psia an order will be issued herein ordering refunds in these dockets.

The Public Service Commission of New York contends that the pipeline purchasers are in a take-or-pay situation and have no need for the gas of the Applicants, particularly the Tennessee Gas Transmission Company, Florida Gas Transmission Company, and the Trunkline Gas Company. Some of the applicants argue that need is not an issue in the proceeding, others that PSC has no direct interest, and others that PSC's action amounts to a collateral attack upon an order of the Commission in issuing certificates to the pipelines. The chief argument of the applicants, however, is that the contracts and temporary certificates are matters of record. They contend that deliveries are being made under the contracts and in some instances have been made for several years. There was no evidence to refute this. It is unnecessary to pass on all of these contentions. The Florida Gas Transmission Company, an intervenor, says that the gas delivered by its producer-applicants is being transported and resold to its customers in Florida. It denies that it is in a "severe take-or-pay situation," and contends that it has now substantially recouped its gas paid in advance. By reason of the nature of the gas business and the obligation of the pipeline companies to the consuming public, it is to be expected that such companies frequently will be in over supply rather than under supply. But however this may be, in view of the contracts and deliveries and the paucity of evidence as to lack of need it must be concluded on a balancing of interests that the statutory requirements in the granting of certificates in the instant case in regard to need are clearly met.

It will be observed from Appendix A, page 928, that the Applicant, H. B. Lively (Operator), *et al.*, CI62–1220 sells gas to the Tennessee Gas Transmission Company under Rate Schedule No. 3 at the proposed initial price of 15.95016

cents at 14.65 psia. It is also noted Lively's price is subject to the condition that it refund any amount (plus interest) in excess of the amount computed at the rate determined to be required by the public convenience and necessity in Docket No. CI62–1220. Lively has not been specifically represented in the proceeding and filed no brief. After the close of the hearing, however, on November 9, 1964, Lively filed a Motion for Severance, with a settlement agreement, and a request for the issuance of a permanent certificate pursuant to abridged procedure. Under the circumstances, no order will be issued herein in respect to H. B. Lively's Docket No. CI62–1220.

FINDINGS AND CONCLUSIONS

Upon consideration of the record, the briefs, and arguments of counsel, it is found and concluded, in addition to the findings and conclusions heretofore stated that:

(1) The following applicants:

are "natural-gas companies" within the meaning of the Natural Gas Act as independent producers of natural gas, as that term is defined in Section 154.91(a) of the Commission's Regulations, engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, and such sales, and the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas act.

(2) The Applicants named in (1) above are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(3) The sale of natural gas as proposed by each of the Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor are required by the public convenience and necessity and a certificate authorizing the same should issue to each of them upon the terms and conditions of the order herein, which terms and conditions are required by the public convenience and necessity.

(4) The public convenience and necessity requires that the initial prices charged by the Applicants named in (1) for the sales proposed in this proceeding be not greater than 16 cents per Mcf at 14.65 psia.

ORDER

WHEREFORE, *It is ordered*, subject to review by the Commission on appeal, or review on its own motion, as provided in its Rules of Practice and Procedure that:

(A) A certificate of public convenience and necessity is hereby issued to each of the Applicants referred to in Finding (1) for the sale of natural gas in interstate commerce for resale as proposed in their applications, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor upon the terms and conditions of this order.

(B) The certificates issued to the Applicants in Finding (1) are hereby conditioned to prohibit any total initial price, including all reimbursements and charges, greater than 16 cents per Mcf at 14.65 psia from the date of the issuance of this order until such prices may be lawfully changed in the manner provided by the Natural Gas Act.

(C) The certificates to the producer Applicants referred to above are conditioned so that the take-or-pay requirements of each contract is subject to the provisions of the Commission's final order in Docket No. R-199 as of the effective date of that order, provided, however, that the producers shall not be required to file take-or-pay provisions for less than 80 percent of the annual contract quantities.

(D) The certificates issued herein are not transferrable and shall be effective only so long as each of said Applicants continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and order of the Commission.

(E) The certificates issued herein are conditioned upon their acceptance in writing by the respective producer Applicants within 30 days of the issuance of this order.

(F) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 of the Commission's Regulations under said Act. Such grant is without prejudice to any findings or order which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the

Applicants. Further, the action in this proceeding shall not foreclose or prejudice any further proceedings or objection relating to the operation of any price or related provisions in gas purchase contracts here involved.

(G) In accordance with the conditions imposed in the temporary authorizations granted to the Applicants in Docket Nos. CI63–584, CI63–1445, CI63–1057 and CI63–1134 such Applicants shall within 60 days from the date of the issuance of this order refund to the pipeline purchasers, with interest at 7 percent per annum to continue until full refund is made, a sum equal to the difference between the price charged to and collected from such purchaser and the price set forth in Paragraph (B) above, applied to all volumes paid for by such purchaser from the date of deliveries under the temporary authorizations until the date on which this order shall issue.

HARRY C. SHRIVER,
Presiding Examiner.

*Reproduced from Appendix to the Commission's order issued Mar. 30, 1964 in H. L. Hawkins & H. L. Hawkins, Jr., (Operator), *et al.*, in Docket No. G-18077, *et al.*, 31 FPC 728.

[1] Initial price is subject to the condition that the seller will refund any amounts collected in excess of 16 cents per Mcf (plus interest), which may be determined to be in excess of the price required by the public convenience and necessity.

[2] Temporary certificate issued without condition.

[3] The price is subject to the condition that H. B. Lively will refund any amounts (plus interest) in excess of the amount computed at the rate determined to be required by the public convenience and necessity in Docket No. CI62-1220.

[4] The price is subject to the condition that the total initial price shall not exceed 18 cents per Mcf at 14.65 psia with such rate to be effective for the duration of the temporary authorization and until a different prospective rate is established.

[5] The price is subject to the condition that the total initial price shall not exceed 18 cents per Mcf at 14.65 psia.

OPINION AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 22, 1965)*

Syllabus

1. Commission fixes 16 cents in-line price for Texas Railroad Commission District No. 2 for period after September 28, 1960. PP. 993; 949.
2. Beginning point in any in-line price decision is *CATCO* which requires Commission to scrutinize level of initial prices for new sales to assure they do not establish higher pricing levels. P. 933.
3. Generally, line to which initial producer prices must be related is level at which substantial volumes of gas, not under judicial review or otherwise suspect, move in interstate commerce during period under consideration. PP. 933-934.
4. Where substantial volumes of gas moving in interstate commerce have been permanently certificated, Commission has relied principally upon initial prices of gas under such certificates in determining in-line price. P. 934.
5. Where volumes of gas moving under permanent certificates were relatively insubstantial or failed to adequately reflect current conditions, Commission

*Initial decision appears on p. 945. Opinion No. 476-A and order issued November 22, 1965 denying application for rehearing, etc., 34 FPC 1357. Set aside and remanded, *Public Service Commission of New York*, et al. v. *F.P.C.*, 373 F. 2d 816 (CADC-1967); Affirmed 391 U.S. 9 (1968).

has given consideration to initial prices of substantial volumes sold under temporary certificates. P. 934.

6. Consistently Commission has excluded financial and cost evidence in certificate cases; otherwise they would be converted into individual company rate cases, found inappropriate in certificate proceedings and impracticable as means for fixing rates. PP. 934; 947.
7. Permanently certificated sales at less than 14 cents per Mcf included here in determination of post-policy in-line price since their exclusion had effect of unduly narrowing statistical price base for District No. 2. P. 936.
8. Prices received by producers selling to gatherer are not comparable to other producer prices and their exclusion is in order. P. 936.
9. Evidentiary weight given here to 33 temporarily certificated sales is fully warranted—to limit consideration to those permanently certificated would permit price freeze and render hearing meaningless. P. 936.
10. Since Lone Star functioned here more as pipeline than gatherer, sales to it should be included in calculation of in-line price. PP. 936–937.
11. Contract prices, whether reduced by conditions or not, do show area trends and are entitled to some weight. P. 937.
12. For period prior to September 28, 1960, 15 cents per Mcf is correct in-line price for District No. 2. PP. 937; 953.
13. Commission has consistently used estimated first month's delivery volumes in its in-line price decisions. PP. 938; 953–954.
14. Commission has not given intrastate sales any weight in previous in-line proceedings and sees no basis here for so doing. P. 938.
15. Exceptions to in-line price require a compelling justification; Sinclair is not entitled to an exception merely because it is not receiving same price as another producer for gas from same well. P. 939.
16. State Commission's evidence as to lack of public need for gas is not persuasive. P. 940.
17. Commission *issues* certificates of public convenience and necessity under Section 7 of the Natural Gas Act.

Commissioner Bagge *concurring.*

Commissioners Black and Ross *dissenting.*

Charles E. McGee, James D. McKinney, Jr., and *Angus A. Davidson* for Sinclair Oil & Gas Company.

Bruce R. Merrill, Joseph C. Johnson, and *Thomas Burton* for Continental Oil Company.

Charles E. McGee, James D. McKinney, Jr., and *Grover B. Cobb* for Houston Natural Gas Production Company.

Robert W. Maris and *William T. Coleman, Jr.*, for Philadelphia Gas Works Division of The United Gas Improvement Company.

Manuel J. Edling, F. Edwin Smith, John W. Scott, and *Louis L. DaPra* for Lone Star Producing Company and Lone Star Gathering Company.

Bernard A. Foster, Jr., Sherman S. Poland, and *Lewis Carroll* for Tex-Star Oil & Gas Corporation, Carrl Oil, W. A. Stockard, Mrs. James R. Dougherty, and Edwin M. Jones Oil Company.

Robert M. Scott for George Parker.

Richard F. Generelly and *B. L Allen* for Monsanto Company.

J. Evans Attwell for MPS Production Company and H. D. Bruns.

Gentry Lee, R. J. Leithead and *Graydon D. Luthey* for Cities Service Company.

Jack D. Head, Joseph F. Weiler, Bolivar C. Andrews, and *Keith M. Pyburn* for Texas Eastern Transmission Corporation.

Thomas G. Crouch and *Robert W. Henderson* for Lamar Hunt (Operator), *et al.*

George P. Morrill for Mrs. James R. Dougherty, *et al.*

Carroll L. Gilliam for Reserve Oil and Gas Company (Successor to Producing Properties, Inc.).

Morton L. Simons for Public Service Commission of the State of New York.

Thomas G. Johnson for Shell Oil Company.

Harwood G. Martin for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SWIDLER, *Chairman:*

This proceeding involves 41 applications for permanent certificates of public convenience and necessity for sales of gas by producers in Texas Railroad Commission District No. 2. The buyers are Florida Gas Transmission Company, Lone Star Gathering Company (for resale to United Gas Pipe Line Company), Natural Gas Pipeline Co. of America, Tennessee Gas Transmission Co., and United Gas Pipe Line Company. The sales are proposed under contracts executed between May 12, 1958 and January 1, 1964, at prices ranging from 15.192 cents to 20.05 cents per Mcf (at 14.65 psia), with the exception of one contract for the sale of sour gas at 12 cents per Mcf. Gas is now being delivered under temporary certificates by many of the applicants.

The applications were consolidated for hearing by Commission order dated March 25, 1964. On March 3, 1965, the Presiding Examiner, Harry W. Frazee, issued an initial decision which, proposed that certificates be issued to the applicants conditioned to an "in-line" price of 15 cents per Mcf for gas sold under contracts executed on or before September 28, 1960, the date of the Commission's Statement of General Policy No. 61–1 (24 FPC 818), and of 16 cents per Mcf for gas sold under contracts executed after that date. The sale of sour gas under contract dated December 3, 1962, was authorized at the price of 12 cents per Mcf. In the case of Sinclair Oil & Gas Company (Sinclair), Docket No. G–16760, the Examiner authorized the sale of gas to United Gas Pipe Line Company (United) under a contract negotiated on May 12, 1958, at the price of 17.59509 cents per Mcf.

The proceeding is before the Commission on Exceptions to the Examiner's decision, filed by the Public Service Commission of the State of New York (the New York Commission), the Staff, interveners and a number of producers, and answers filed by certain producers. The principal issues presented are whether the Examiner was correct in setting 16 cents per Mcf as the in-line price for gas sold under contracts executed after September 28, 1960, and in recognizing 17.59509 cents per Mcf as the price for Sinclair's sales to United. Other questions raised by the exceptions involve (1) the New York Commission's assertion that the applications should be denied because of the absence of any evidence of a public need for the gas, and because of indications that pipelines in the Gulf Coast area are suffering from take-or-pay problems; (2) the allegations of certain producers that the concept of in-line pricing is incorrect, and that testimony and exhibits relating to the gas industry's costs, economic background, and intrastate sales were improperly excluded; and (3) the assertion of some producers that the Examiner's rulings as to refunds were in error.

The facts have been set forth in the initial decision of the Examiner, and will be referred to here only to the extent necessary to make plain the reasons for our findings and conclusions.

Background

Guideline prices for natural gas sold by independent producers in Texas Railroad Commission District No. 2[1] were established by the Commission in Statement of General Policy No. 61–1, on September 28, 1960, at 18 cents per Mcf (at 14.65 psia) for gas sold under contracts executed after the policy date, and at 14 cents per Mcf for gas sold under contracts executed on or prior to the policy date. On December 9, 1963, we issued Opinion No. 412 in *Hassie Hunt Trust, Operator, et al.*, 30 FPC 1438 (1963), holding the in-line price for producer sales under pre-policy contracts in District No. 2 to be 15 cents per Mcf. On that same date the guideline ceiling for the future was reduced from 18.0 cents per Mcf to 16.0 cents. In Opinion No. 412 we rejected the Examiner's finding that 15 cents was also the in-line price for producer sales under post-policy contracts in the District, stating that the record was insufficient to determine an in-line price for such sales. We thereupon severed for consideration in a separate proceeding the dockets involving post-policy contracts; and the present proceeding represents an outgrowth of that action.

We permitted intervention by the following: Long Island Lighting Company, Lone Star Gathering Company, Natural Gas Pipeline Company of America, Philadelphia Electric Company, and The Philadelphia Gas Works Division of The United Gas Improvement Company.

Hearings were held at Washington, D.C., from September 1 through September 4, 1964, and again on September 24, 1964.

In-Line Price for the Post-Policy Period

The principal question in this proceeding is whether the Examiner was correct in finding that the in-line price in Texas Railroad Commission District No. 2 for gas sold under contracts executed after September 28, 1960, is 16 cents per Mcf. A price of no more than 15 cents per Mcf was recommended by the Staff, the New York Commission, and the following interveners: Long Island Lighting Company, Philadelphia Electric Company, and The Philadelphia Gas Works Division of The United Gas Improvement Company (Long Island and Philadelphia Interveners). On the other hand, the producer applicants asserted that the in-line price should be no lower than 18 cents.

We agree with the Examiner that the in-line price in Texas Railroad Commission District No. 2 for gas sold under contracts executed after September 28, 1960, is 16 cents per Mcf.

The Examiner correctly observed that the beginning point in any in-line price decision is *Atlantic Refining Co.* v. *Public Service Commission of New York*, 360 U.S. 378 (1959) (CATCO), in which the Court stressed the importance of the Commission's responsibilities to scrutinize the level of initial prices for new sales by producers to assure that they do not establish higher pricing levels in the area without explanation. Following that decision, we enunciated definitive standards for exercising our responsibilities in a series of opinions beginning with *Skelly Oil Company*, Opinion No. 362, 28 FPC 401 (1962), and *Texaco Seaboard, Inc.*, Opinion No. 383, 29 FPC 593 (1963), and continuing through *Union Texas Petroleum*, Opinion No. 436, 32 FPC 254 (1964). Generally, we have held that the line to which initial producer prices must be related is the level at which substantial volumes of gas, not under judicial review, or otherwise suspect, move

[1] Texas Railroad Commission District No. 2 is composed of Bee, Jackson, Calhoun, Live Oak, Victoria, De Witt, Goliad, Refugio, Lavaca, and Karnes Counties in the State of Texas. This District is one of the three Texas Gulf Coast gas supply areas, and is located between District No. 3 which lies to its northeast and District No. 4 which lies to its south and west.

in interstate commerce during the time period under consideration. Where the substantial volumes of gas so moving have been under permanent certificates, we have relied principally upon the initial prices of natural gas sold under such permanent certificates in determining the in-line price. *Skelly Oil Company, supra, Texaco Seaboard, Inc., supra.* On the other hand, where the volumes of gas moving under permanent certificates were relatively insubstantial or failed adequately to reflect current conditions in the industry, we have given consideration to the initial prices of substantial volumes of natural gas sold under temporary certificates. *Amerada Petroleum Corporation*, Opinion No. 422, 31 FPC 623 (1964); *Union Texas Petroleum, supra.*

At the opening of the hearings the applicants offered the same array of financial and cost data plus prices paid for interstate sales of natural gas, and prices paid for sales of natural gas in areas outside of District No. 2 as have been offered and rejected in previous cases. The Examiner excluded this evidence, citing *Public Service Commission of New York* v. *F.P.C.*, 329 F. 2d 242 (CADC-1964), cert. denied, 377 U.S. 963.[2] The Commission's consistent policy has been to exclude such evidence in certificate cases for otherwise they would be converted into individual company rate cases, which we have found inappropriate as an adjunct of a certificate proceeding, and impracticable as a means for fixing rates. The Examiner's ruling was clearly correct.

The Examiner determined on the basis of evidence of record that the total estimated first month's delivery of jurisdictional gas moving in interstate commerce from District No. 2 during the post-policy period from September 28, 1960 through March 10, 1964 amounted to 4,390,500 Mcf. This total was made up of an estimated 1,933,986 Mcf moving under permanently certificated sales, and an estimated 2,456,514 Mcf moving under temporary certificated sales.

At the hearings Staff urged that in drawing the price line, sole reliance be placed upon the permanently certificated sales, and recommended an in-line price of 15 cents per Mcf for sales under contracts negotiated after the policy date, asserting that from September 28, 1960 through March 10, 1964, 94 percent of the permanently certificated volumes of gas were contracted at a price of 15 cents per Mcf or less. The applicants, on the other hand, contended that the in-line price should be 19 cents per Mcf on the basis of initial contract prices, or at least 18 cents on the basis of sales previously certified by the Commission. The applicants maintained that little weight was to be accorded the sales at prices of less than 14 cents per Mcf, although these accounted for 25 percent of the total volume, and argued that the number of other permanently certificated sales in the District after the policy date was insufficient to provide a satisfactory base upon which to determine an in-line price. The applicants therefore recommended that the base be enlarged to include sales under temporary certificates.

The Examiner decided that in determining the post-policy in-line price he would exclude from consideration all permanently certificated sales at less than 14 cents per Mcf, stating that the Commission invariably had started with initial contract prices of 14 cents and higher in adopting Staff presentations on in-line prices. He also excluded sales of 330,000 Mcf of gas at 14 cents per Mcf made under permanent certification to Valley Gas Transmission, Inc. (Valley), on the ground that these sales were not representative in that they were made to a gathering company. The elimination of the above sales left a balance of only 14 permanent certificated sales for the post-policy period with

[2] He permitted the applicants to make offer of proof as provided by Section 1.28(b) of the Rules of Practice and Procedure of the Commission.

an estimated first month's volume of 460,575 Mcf. The Examiner concluded that this base was inadequate for the determination of a proper in-line price, and he decided to increase the base by adding 33 temporarily certificated sales, including those involved in this proceeding. The consequences of the Examiner's action are demonstrated in the chart below:

CERTIFICATED SALES IN TEXAS RAILROAD COMMISSION DISTRICT NO. 2 UNDER CONTRACTS DATED AFTER SEPT. 28, 1960 THROUGH MAR. 10, 1964

	Certificated price (cents per Mcf)	Number of contracts	Estimated first month volumes (Mcf)
I.—Permanently certificated sales listed by staff but excluded by Examiner.	Under 10.00	4	51,500
	10.00	11	236,286
	11.00	18	358,796
	12.00	17	391,329
	13.00	2	105,500
	14.00	[1] 11	330,000
Total		63	1,473,411
II.—Permanently certificated sales listed by staff and included by Examiner.	14.00	5	210,000
	14.18	2	45,000
	15.00	3	93,500
	15.20	1	60,000
	15.25	2	42,000
	17.59	1	10,075
Total		14	460,575
III.—Temporarily certificated sales (including those of applicants) included by Examiner.	15.00	3	92,500
	16.00	2	90,500
	17.00	3	151,000
	17.59	1	75,000
	18.00	24	1,837,402
Total		33	2,246,402
Combined totals of II and III		47	2,706,977

[1] Sales to Valley.

The Examiner observed that the initial contract prices in the 47 contracts selected by him ranged from 14 cents to 20.045 cents per Mcf, and that 83.36 percent of the gas moving in interstate commerce under the contracts was priced at 16 cents or more. The Examiner held that he was required to give evidentiary weight to the temporarily certificated prices and volumes in arriving at an in-line price. He calculated that the numerically weighted average price of the 47 contracts was 16.68 cents per Mcf, and the volumetrically weighted average price was 17.18 cents. He then determined that the greatest weight was to be given to the permanently certificated sales, and concluded that the public convenience and necessity required an in-line price of 16 cents per Mcf.

The producers, for whom briefs on exceptions are filed by H. D. Bruns, Continental Oil, MPS Production, Reserve Oil and Gas, Cities Service, Mrs. James R. Dougherty, Edwin M. Jones Oil, W. A. Stockard, Lamar Hunt, George Parker, and Shell Oil, disagree with the Examiner's conclusion that 16 cents is the correct in-line price, and argue for prices ranging from 18 cents to 20 cents per Mcf. The producers contend that the Examiner erred in giving too much weight to the prices of the permanently certificated sales, in considering the temporarily certificated prices as being suspect, in excluding evidence as to prices for intrastate sales in District No. 2, as well as evidence relating to prices for interstate and intrastate sales in Districts No. 3 and No. 4, and in not giving sufficient weight to contract prices.

The Staff's exceptions are directed against the Examiner's action in (1) excluding the permanently certificated sales at less than 14 cents per Mcf, (2)

excluding the sales to Valley at 14 cents, and (3) including the temporarily certificated sales, particularly certain sales at 18 cents per Mcf to Lone Star Gathering Company. Exceptions similar to Staff's were filed by the New York Commission and by the Long Island and Philadelphia Interveners.

We find that there is merit in Staff's exception to the Examiner's exclusion of the permanently certificated sales at less than 14 cents per Mcf. The Examiner's decision to exclude these sales in his determination of the in-line price appears to have been based on his misreading of our language in *Skelly Oil Company*, Opinion No. 362, 28 FPC 401 (1962), and in the other opinions cited by him. In fact, the force of *Skelly* is that we do take notice of sales at less than 14 cents per Mcf. Accordingly, in our consideration of the post-policy in-line price we shall include these sales, particularly so since the Examiner's exclusion has had the effect of unduly narrowing the statistical price base for District No. 2.

The Examiner's exclusion of 11 sales to Valley at 14 cents, with an estimated first month volume of 330,000 Mcf, is based upon his finding that this action is in accordance with our precedent in *Skelly Oil Company*, Opinion No. 362, 28 FPC 401, 408, fn. 14 (1962), and in *Amerada Petroleum Corp.*, Opinion No. 422, 31 FPC 623, 635, fn. 33 (1964). The Examiner's action in this respect is correct. Valley's function as a gatherer is undisputed. Producers who find it necessary to sell to a gatherer are generally compelled to sell at a discount below the pipeline price. The prices received by these producers from Valley thus are not comparable to other producer prices, and their exclusion in this case is in order.

We further find that the Examiner had adequate grounds for giving some evidentiary weight to the 33 temporarily certificated sales with an estimated first month volume of 2,246,402 Mcf, and that his action is in accord with our previous holdings in *Amerada Petroleum Corporation*, Opinion No. 422, 31 FPC 623 (1964), and in *Union Texas Petroleum*, Opinion No. 436, 32 FPC 254 (1964). In our opinion consideration of these temporarily certificated sales is fully warranted.

The permanently certificated prices reflect only a part of the market activity in the post-policy period. Permanent certification is granted only where the proposed price is within the applicable guideline price, and where there is no contest by any interveners. Thus to limit the consideration to permanent certificates would permit a price freeze and would render the hearing in this proceeding meaningless. The pre-policy price would automatically control because almost all contracts above 15.0 cents were contested.

At the time of the hearing the producers and the pipeline purchasers had experienced more than three years of doing business under the provisions of Statement of General Policy No. 61–1, and their transactions under temporarily certificated prices constituted a heavy and significant percentage of all jurisdictional sales in District No. 2. To the extent that "the price line is intended to reflect *current* conditions in the industry," *United Gas Improvement Co.* v. *F.P.C.*, 283 F. 2d 817, 824 (CA9), the determination of an in-line price calls for a scrutiny of all pertinent sales activity, whether under permanent or under temporary certification. See *Hassie Hunt Trust, Operator, et al.*, Opinion No. 412, 30 FPC 1438, 1442–1443 (1963). We therefore approve the Examiner's action in giving consideration to the temporary certificated sales.

Staff has urged that if the sales to Valley at 14 cents per Mcf are to be disregarded because made to a gatherer (and hence at a discount), then the sales to Lone Star Gathering Company (Lone Star), which comprise most of the sales at the 18 cents price, should similarly be disregarded because these were also made to a gatherer Lone Star's reply was that it functioned in these instances

more as a pipeline than as a gatherer. We find that the evidence in the record supports Lone Star's position, and that the sales to Lone Star should be included in our calculation of the in-line price.

The producers contend that the examiner should have taken into consideration the contract prices rather than the conditioned certificate prices. While we have emphasized contract prices in past cases,[3] the original prices that have now been conditioned, are no longer outstanding in the area and should not be given primary consideration. The contract prices, whether reduced by conditions or not, do show economic trends in the area and are entitled to some weight.

A totaling of all permanently and temporarily certificated sales in District No. 2 under contracts dated after September 28, 1960 and through March 10, 1964, exclusive of the sales to Valley at 14 cents, shows a listing of 101 sales involving a combined estimated first month volume of 4,060,388 Mcf.[4] The median price on a volumetric basis is 16.00 cents and the volumetric weighted average price is 15.29 cents. Approximately 53 percent of the estimated first month volume covered by these sales moved in the price range of from 16 cents to 18 cents. On the basis of these calculations, and with recognition of the fact that the temporarily certificated sales represented most of the sales above the 16 cents price level, and should not be accorded undue weight, and giving some weight to the unconditioned contracts we conclude that the price of 16 cents per Mcf represents the correct post-policy in-line price of jurisdictional sales of natural gas in District No. 2. In reaching this result we may observe that if we confined ourselves to permanently certificated sales we would not find a line as high as 16 cents, for the next highest sales are at the 15.25 cents level.

In-Line Price for the Pre-Policy Period

The Examiner concluded that the in-line price for the pre-policy period, covering gas sold under contracts executed on or before September 28, 1960, is 15 cents per Mcf. This conclusion is the same as that reached for District No. 2 in *Hassie Hunt Trust, Operator, et al.*, Opinion No. 412, 30 FPC 1438 (1963). Exceptions to the Examiner's decision have been filed by George Parker, Docket No. G–19718, who alleges error on the Examiner's part in not following the precedent of *Callery Properties, Inc.* v. *F.P.C.*, 335 F. 2d 1004 (CA5-1964), certiorari granted, March 8, 1965, and in not considering evidence of an economic nature or of intrastate sales.

We find that the evidence of record as well as applicable legal precedent amply support the Examiner's conclusion that the correct pre-policy in-line price for District 2 is 15 cents per Mcf. The Examiner stated that he relied upon Staff's submission of permanently certificated sales in District No. 2 under contracts dated from January 1, 1957 through September 28, 1960, as listed in Staff's Exhibit 5, Chart 2, and that he excluded 140 sales with a total estimated first month's volume of 5,007,952 Mcf, representing more than 57 percent of the sales volume listed, because these sales were all made at prices of less than 14 cents per Mcf. For the reasons set forth in connection with the post-policy in-line price, it is our view that the Examiner should have included these sales in his computations. However, even without such sales the Examiner had adequate basis for his finding. He considered a selection of 29 permanently certificated

[3] *Skelly Oil Co.*, 28 FPC 401 (1962), remanded on refund point *P.S.C. of N.Y.* v. *F.P.C.*, 329 F. 2d 242 (CADC-1964), certiorari denied 377 U.S. 963; *Texaco Seaboard, Inc.*, 29 FPC 593 (1963).

[4] This total includes in addition to the sales listed on page 935 *supra* (exclusive of the 14 cents sales to Valley), 2 temporarily certificated sales at 12 cents per Mcf with an estimated first month volume of 210,000 Mcf.

sales of gas from District No. 2 during the period in question, with an estimated first month's delivery volume totaling 3,157,104 Mcf, and found that 22 of these sales, representing 70.2 percent of the total volume, were made at prices ranging from 14 cents to 14.75 cents per Mcf, and that the remaining 7 sales, although made at prices ranging from 15 cents to 17 cents per Mcf, were suspect because of involvement in litigation.

On our part we agree with the argument of the producer, George Parker, that the seven sales should not be considered suspect. The litigation applies only to the sale in Docket No. G–19119 by the Lamar Hunt Trust Estate. In *Hassie Hunt Trust, Operator, et al.*, Opinion No. 412, 30 FPC 1438, we conditioned that sale to 15.0 cents per Mcf, and the whole proceeding is now pending in the Court of Appeals for the Fifth Circuit upon petition of the producers only. (*Margaret Hunt Hill Trustee, et al.*, CA5, No. 21286). However, we do not believe that this change affects the result. The 15 cent price is exceeded only by three sales at 15.2 cents and two sales at the highest level of 17 cents.

Reliance Upon Estimated First Month's Delivery Volumes

The Examiner's in-line price determinations have been attacked by Lamar Hunt, Docket No. CI61–1736, on the ground that the Examiner committed error in "relying upon unreliable, estimated volumes rather than actual reported volumes." We find that there is no merit in this attack.

During the hearings, a witness testifying on behalf of Lamar Hunt attempted to show that Staff's reliance upon estimated first month's delivery volumes was unsound because in certain instances, where he claimed he made a first-hand investigation, the actual sales volumes were much lower than the original estimates. In considering this testimony, the Examiner correctly pointed out that the Commission, beginning with *Skelly Oil Company*, Opinion No. 362, 28 FPC 401 (1962), has consistently used estimated first month's delivery volumes in its in-line price decisions. The Examiner also explained that reliance upon actual delivery volumes based upon the producers' report, FPC Form No. 30–B, and upon the annual report of the purchasing pipeline, FPC Form No. 2, did not necessarily assure full accuracy since these reports were based upon annual sales only, and it frequently was not possible to ascertain from these annual reports the actual first month's delivery volume in any specific case. The Examiner noted that apart from a few isolated instances of actual reports of annual average volumes submitted by the witness for Lamar Hunt, the record did not contain the average volumes of the sales under consideration during the periods involved in this proceeding. In light of this background, we agree with the Examiner that for the purposes of determining an in-line price the use of estimated first month's delivery volumes was warranted since these volumes represented the best judgment figure of the sellers and the buyers at the time of negotiating the initial contracts.

Other Points Raised by the Producers

In addition to the points raised above, the producers object that the evidence on intrastate prices was excluded by the Examiner. This consisted of testimony, a price array and exhibit material showing the increasing importance of intrastate prices. The witness excluded prices of less than 14 cents per Mcf, so that the array is less than complete, and there is nothing to show that the array is otherwise representative of intrastate sales in the area. Furthermore, there is no evidence that the pipeline customers in District 2 are unable to obtain contracts for the purchase of gas. We have not given intrastate sales any weight in previous in-line proceedings and see no basis on this record for doing so here.

Of course, where there is a substantially complete record on the intrastate prices, and they are shown to have impact on the interstate market, it may be we would take them into account in determining the price line.

Some of the producers also object to the Examiner's refusal to receive cost or economic evidence. In view of the position taken by the Commission in *Skelly*, 28 FPC 401 (1962), and *Texaco Seaboard, Inc.*, 29 FPC 593 (1963); its reiteration in *Union Texas Petroleum*, 32 FPC 254 (1964) and its affirmance by the courts in *P.S.C. of N.Y.* v. *F.P.C.*, 329 F. 2d 242 (CADC-1964), certiorari denied, 377 U.S. 963 (1964), *California Oil Co.* v. *F.P.C.*, 315 F. 2d 652, 660 (CA10), and *The Atlantic Refining Co.* v. *F.P.C.*, 316 F. 2d 677, 680 (CADC), we think the Examiner was correct in excluding this kind of evidence in a Section 7 certificate proceeding. We are, of course, aware of the opposite result reached in *Callery Properties, Inc.* v. *F.P.C.*, 335 F. 2d 1004 (CA5–1964). The mandate of the Court of Appeals has been stayed in that proceeding, and certiorari has been granted by the Supreme Court of the United States. In these circumstances pending final judicial action we see no reason to depart from the opinions cited above.

Sinclair's Sale in Docket No. G–16760

The examiner recognized an exception to the pre-policy in-line price of 15 cents in the case of Sinclair Oil & Gas Company (Sinclair), Docket No. G–16760, with respect to the sale of about 32,000 Mcf of gas per month by Sinclair to the United Gas Pipe Line Company from the Normanna Field, Bee County, Texas, under a contract negotiated by Sinclair's predecessor in interest, Western Natural Gas Company, dated May 12, 1958. An unconditioned temporary certificate was issued to Western on June 18, 1959, and this sale is being continued by Sinclair under authority of our letter-order dated November 26, 1963, at the price of 17.0 cents per Mcf plus tax reimbursement of 0.59509 cents per Mcf at 14.65 psia.

Sinclair and Tennessee Oil Company (Tenneco) jointly own interests in the wells from which the above gas is produced. Tenneco is selling its gas under a permanent certificate issued on April 13, 1959, to Tenneco's predecessor in interest, Midstates Oil Corporation, at the contract price of 17.59509 cents per Mcf. Under the doctrine of "the same price for an identical product from a single well", the Examiner found that Sinclair was entitled to receive the same price of 17.59509 cents as Tenneco.

Exceptions to this ruling of the Examiner have been filed by Staff, the New York Commission, and the Long Island and Philadelphia Interveners, who assert that the Examiner has misapplied the force of Justice Jackson's observation in a concurring opinion in *Colorado Interstate Gas Company* v. *F.P.C.*, 324 U.S. 581 (1945), and has ignored the rulings of *City of Detroit* v. *F.P.C.*, 230 F. 2d 810 (CADC-1956), and *Ohio Oil Company, Operator, et al.*, Docket No. G–15385, *et al.*, 27 FPC 551 (1962). It is our opinion that these exceptions are well taken, and that the price to Sinclair should be no higher than the applicable in-line price. Exceptions to the in-line price require a compelling justification. There is little more justification for equalizing all well prices at the highest level applicable to any owner than for a similiar equalization for all producers in the field. Sinclair has demonstrated no justification for an exception in its own right, and is entitled to none.

The Sour Gas Sale in Docket No. CP63–192

The New York Commission has filed exception to the Examiner's authorization of a 12 cents per Mcf price for the sale of sour gas in Docket No. CP63–192 under contract dated December 3, 1962, by Texas Eastern Transmission Corpora-

tion to the Lone Star Gathering Company (Lone Star), alleging that this price should be 11.5 cents per Mcf. The New York Commission contends that the 12 cents price was computed on the assumption and showing that Lone Star's charges for processing would total 3 cents per Mcf, and it asserts that Lone Star intends, however, to charge 3.5 cents per Mcf, as demonstrated by a notice filed in a separate proceeding, *Lone Star Gathering Co.*, Docket No. CP62–179, Notice of Application, March 26, 1964. The New York Commission's assertion is not supported by evidence of record in this proceeding, and its exception accordingly is not well founded.

The Need for Gas

The New York Commission has raised the assertion in its exceptions that the producer applications should be denied because of the absence of any evidence of a public need for the gas, and because of indications that pipelines in the Gulf Coast area are suffering from take-or-pay problems. This issue was not raised at the pre-hearing conference in this proceeding, nor was it brought up at the hearings. The contracts and temporary certificates here involved are matters of record. In many instances deliveries have been made under the contracts for several years. The New York Commission's evidence as to lack of need is not, in our judgment, persuasive. We find the exceptions of the New York Commission not appropriate in the present posture of this proceeding, particularly so, since such exceptions were raised after the certification of the pipeline purchasers had been authorized, and on the basis of a record which discloses no question as to need for the gas supply involved.

Refunds in Docket Nos. G–19718 and G–18389

Exceptions have been filed by George Parker, Docket No. G–19718, and Union Oil Company of California, Docket No. G–18389, to the Examiner's ordering paragraph (F) requiring these two applicants to refund any amounts collected in excess of 15 cents per Mcf. This paragraph appears to be inconsistent with our order of October 5, 1964, 32 FPC 914, and the Examiner's ruling that the question of refund requirements by applicants selling under unconditioned certificates will be deferred until a later stage of the proceedings. We therefore grant these exceptions to the extent that we shall defer action as to refund obligations on the part of these applicants until the issue is raised regarding all unconditioned certificates in these proceedings.

The exceptions not discussed herein are immaterial to the result in this case or are without substantial support of reasonable basis in law and should be denied. The Examiner's decision, to the extent not inconsistent herewith, should be approved and adopted as part of this opinion and order.

The Commission further finds:

(1) The following applicants:

Sinclair Oil & Gas Company, *et al*	G–16760.
Union Oil Company of California	G–18389.
Trice Production Company (Operator), *et al*	G–19340.

are each engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption and each is, therefore, a "natural-gas company" as that term is defined in Section 154.91(a) of the Commission's Regulations, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(2) Subject to the requirements of the order herein and the conditions attached to the certificates of public convenience and necessity herein issued, the applicants named in paragraph (1) above are each able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(3) The sale of natural gas as proposed by each of the applicants named in paragraph (1) above, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity and a certificate authorizing the same

should issue to each of them upon the terms and conditions of the order herein, which terms and conditions are required by the public convenience and necessity.

(4) The public convenience and necessity requires that the initial prices charged by the applicants named in paragraph (1) above for the sales proposed in their certificate applications upon contracts executed on, or before, September 28, 1960, the date on which the Commission issued its Statement of General Policy No. 61–1, 24 FPC 818, as amended, be not greater than 15.0 cents per Mcf at 14.65 psia.

(5) The public convenience and necessity requires that the initial prices charged by the applicants named in paragraph (1) above for the sales proposed in their certificate applications upon contracts executed after September 28, 1960, the date on which the Commission issued its Statement of General Policy No. 61–1, 24 FPC 818, as amended, be not greater than 16.0 cents per Mcf at 14.65 psia except as hereinafter specifically provided in paragraph (6).

(6) The public convenience and necessity requires that the initial price charged by Texas Eastern Transmission Corporation in Docket No. CP63–192 to the Lone Star Gathering Company be not greater than 12.0 cents per Mcf at 14.65 psia.

(7) Except as herein granted, the exceptions to the Examiner's decision should be denied.

The Commission orders:

(A) Certificates of public convenience and necessity are hereby issued to each of the applicants named in paragraph (1) above for the sale of natural gas in interstate commerce for resale as proposed in their respective applications, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefore, upon the terms and conditions hereinafter set out in this order.

(B) A certificate of public convenience and necessity is hereby issued to the Texas Eastern Transmission Corporation authorizing the sale of natural gas from the Kawitt Field, Karnes and De Witt Counties, Texas, to the Lone Star Gathering Company at the initial contract price of 12.0 cents per Mcf at 14.65 psia as set out in Docket No. CP63–192, Texas Eastern Rate Schedule No. F–8.

(C) Except as ordered in paragraph (B) above, a certificate of public convenience and necessity is issued to the other applicants named in paragraph (1) above and not referred to in paragraph (B), conditioned as to those initial contracts executed on or before September 28, 1960, to prohibit any total initial price, including all reimbursements and charges, greater than 15.0 cents per Mcf at 14.65 psia, and conditioned as to those initial contracts executed after September 28, 1960, to prohibit any total initial price, including all reimbursements and charges, greater than 16.0 cents per Mcf at 14.65 psia; all such conditioned prices are effective from the date of the issuance of this order and until such price may be lawfully changed in the manner provided by the Natural Gas Act.

(D) In those cases where the applicants have not already accepted temporary certificates, the certificates issued herein are further conditioned upon their acceptance in writing by the respective applicants within 30 days of the issuance of this order.

(E) In accordance with the several conditions attached to the temporary authorizations in CI62–698, The Jupiter Corporation (Operator), *et al.;* CI62–780, Ralph E. Fair, Inc.; CI62–824 and CI62–889, Monsanto Company (Operator), *et al.;* CI62–959, Cities Service Company; CI62–961, Continental Oil Company, CI62–962, Rodney DeLange (Operator), *et al.;* CI62–1023, H. B. Zachry Company, Gasoline Production Division; CI63–5, George R. Brown (Operator), *et al.;*

CI63–56, Ralph E. Fair; CI63–58, Monsanto Company; CI63–790, Montego Oil Company (Operator), *et al.*; CI63–814, Producing Properties, Inc. (Operator), *et al.*; CI63–820, H. D. Bruns (Operator), *et al.*; CI64–346, Highland Oil Company; CI64–788, Tidewater Oil Company; and CP63–193, Texas Eastern Transmission Corporation, each of such applicants shall compute the amounts to be refunded to their respective purchasers. The refund shall include the difference between the amount charged and collected by each of the above-named applicants from his respective purchaser and 16 cents per Mcf applied to all volumes paid for by such purchaser from the date of the first delivery of natural gas under the applicable temporary authorization until the date of this order. Interest shall be included at the rate provided in the applicable temporary authorization to the date of this order. Within 90 days from the date of this order each of the above-named applicants shall submit a report to the Commission, and serve a copy on his respective purchaser, setting forth the amount of refund related to each subject rate schedule (showing separately the principal and applicable interest), the basis used for such determination, the period covered, and a letter from each respective purchaser agreeing to the correctness of the amounts.

(F) Each of the applicants named in paragraph (E) above shall retain the amounts shown in the report required under such paragraph, subject to further order of the Commission directing the disposition of those amounts.

(G) If any of the applicants named in paragraph (E) elects to commingle the retained refunds with its general assets and use such refunds for business or corporate purposes, such applicant shall pay interest thereon at the rate of 4½ percent per annum on all funds thus available from the date of this order to the date on which the funds are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission.

(H) If any of the applicants named in paragraph (E) elects to deposit the retained refunds in a special escrow account, such applicant shall tender for filing within 90 days of the issuance of this order an executed Escrow Agreement, conditioned as set out below, accompanied by a certificate showing service of a copy thereof upon the applicable purchaser. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between each producer and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(i) The producer, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(ii) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(iii) Such bank or trust company shall be liable only for such interest as the invested funds described in subparagraph (ii) above will earn and no other interest may be collected from it.

(iv) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(v) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the bank or trust company for the quarterly period.

(I) The decision as to whether refunds should be ordered as a condition to the remaining certificates herein issued is, in accordance with the Commission's order issued herein on October 5, 1964, deferred to the further order of the Commission.

(J) Each certificate issued in paragraph (A) above is further conditioned to provide for a moratorium on the filing of all price increases in excess of 18 cents per Mcf at 14.65 psia, inclusive of tax reimbursement, pending the issuance of a final decision in the Texas Gulf Coast Area Rate Proceeding, Docket No. AR64-2, or until January 1, 1968, whichever is earlier.

(K) The certificates issued herein are granted upon the further express condition that the allowance of the take-or-pay for provisions in the applicants' contracts is subject to our ultimate disposition with respect to such provisions in the rule-making proceeding in Docket No. R-199. Upon the establishment, by regulation or policy statement, of a general policy governing such provisions in producer contracts, the applicants shall within 30 days file amended rate schedules in conformity therewith, acceptable to the Commission. The producers shall not be required to file take-or-pay provisions for less than 80 percent of the annual contract quantities. Any changes or modifications to be made in accordance with this paragraph shall be prospective only.

(L) The certificates herein issued are not transferable and shall be effective only so long as each of the applicants continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(M) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 of the Commission's Regulations under said Act requiring the filing of rate schedules for the service herein authorized and is without prejudice to any findings or orders which may have been or hereafter may be made by the Commission in any proceeding now pending or hereinafter instituted by or against the applicants. Further, the action taken in these proceedings shall not foreclose nor prejudice any further proceedings or objections by the Commission relating to the operation of any price or related provisions in the gas contracts here involved.

(N) Within 30 days from the date of issuance of this order each of the applicants receiving certificates in paragraph (A) above who now have rate schedules on these dockets filed with the Commission shall file supplements to such presently filed rate schedules reflecting the conditioned price as the initial price in lieu of the initial price provided in the contract; provide that the notice provisions of Section 154.94(f) of the Commission's Regulations Under the Natural Gas Act are waived insofar as they apply to the reductions in rates hereby ordered.

(O) Except as herein granted, the exceptions to the Examiner's decision are hereby denied.

(P) The Examiner's decision, to the extent not inconsistent herewith, is hereby adopted as part of this Opinion and Order.

Commissioner Bagge *concurring* for the reasons set forth in his concurring statement accompanying Opinion No. 475 issued September 22, 1965, in Docket No. G–18077, *et al.*, *supra*, p. 908.

Commissioners Black and Ross *dissenting* for the reasons set forth in their dissenting statement accompanying Opinion No. 475 issued September 22, 1965, in Docket No. G–18077, *et al.* H. L. Hawkins & H. L. Hawkins, Jr., Operator, *et al.*, *supra*, p. 909.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATION FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY FOR THE SALE OF NATURAL GAS FROM TEXAS RAILROAD COMMISSION DISTRICT NO. 2

(Issued March 3, 1965)

FRAZEE, *Presiding Examiner:* This consolidated proceeding concerns forty-nine producer applications, (or applications to amend previously issued certificates), for permanent certificates of public convenience and necessity, under Section 7 of the Natural Gas Act, to sell and deliver natural gas produced in Texas Railroad District No. 2[1] to four interstate pipeline companies and to a gathering company for resale to one of the interstate pipelines for transportation, and to further determine whether such sales, as proposed in the applications, are or will be required by the present or future public convenience and necessity.

By an order issued on March 25, 1964, the Commission severed Socony Mobil Oil Company, Incorporated (Operator), *et al.*, Docket No. G–18385,[2] Socony Mobil Oil Company, Incorporated, Docket No. G–18386,[3] Union Oil Company of California, Docket No. G–18389, Trice Production Company (Operator), *et al.*, Docket No. G–19340, and George Parker, Docket No. G–19718, from the Coastal Transmission Corporation, *et al.*,[4] Docket No. G–18338, *et al.*, and consolidated them together with 44 additional dockets with this proceeding for hearing and decision.

On April 30, 1964, Alfred C. Glassell and Gene M. Woodfin, Trustee, for the Jean Curry Glassell Trust, filed notices of withdrawal of their respective certificate applications in Docket Nos. CI63–221 and CI63–229, and on May 7, 1964, The Superior Oil Company filed its notice of withdrawal in Docket No. CI63–51. These sales proposed in these three dockets were to the Lone Star Gathering Company from the Dubose Field, De Witt and Gonzales Counties under temporary authorization granted on September 7, 1962. No deliveries were ever made under these sales agreements, and the contracts, according to the withdrawal notices, have been cancelled. By its order herein on July 22, 1964, the Commission severed these dockets from this hearing and terminated the proceedings therein.

Also, by a notice of withdrawal filed on June 22, 1964, the Tex-Star Oil & Gas Corp. (Operator), *et al.*, in Docket No. CI63–67 stated no deliveries had been made from the acreage dedicated to the contract. By a letter dated July 30, 1964, the Secretary authorized the withdrawal of the Tex-Star application effective July 22, 1964, and closed the record in Docket No. CI63–67 as of that date.

---

[1] Texas Railroad District No. 2 is composed of Bee, Jackson, Calhoun, Live Oak, Victoria, De Witt, Goliad, Refugio, Lavaca, and Karnes Counties in the State of Texas.

[2] See FPC order issued herein on March 25, 1964.

[3] See FPC order issued herein on March 25, 1964.

[4] Now designated as the Florida Gas Transmission Company.

By its order issued herein on March 25, 1964, the Commission consolidated four Socony Mobil Oil Company, Inc. dockets as follows, for hearing herein:

G–18385, Socony Mobil Oil Co., Inc. (Operator), *et al.* from Kentucky Mott Field, Victoria County, Texas, to Florida Gas Transmission Co. under a contract dated February 17, 1959, and filed as Rate Schedule No. 264.

G–18386, Socony Mobil Oil Co., Inc. from N. LaWard Field, Jackson County, Texas, to Florida Gas Transmission Co. under a contract dated February 18, 1959, and filed as Rate Schedule No. 206.

CI63–874, Socony Mobil Oil Co., Inc. from Kawitt Field, Karnes and De Witt Counties, Texas, to Lone Star Gathering Company under a contract dated October 12, 1962, and filed at Rate Schedule 327.

CI63–875, Socony Mobil Oil Co., Inc. from Speary, Kawitt and Yorktown Field, Karnes and De Witt Counties, Texas, to the Lone Star Gathering Co., under a contract dated October 12, 1964, and filed as Rate Schedule No. 328.

On October 14, 1964, the Commission in Socony Mobil Oil Company, Inc., Docket No. G–6030, *et al.* issued permanent certificates to Socony, after a statutory hearing, beginning with Docket No. G–18385, p. 5, Item 15; Docket No. G–18386, p. 6, item 1; Docket No. CI63–874, p. 6, item 9, and Docket No. CI63–875, p. 6, item 10. These dockets have therefore not been considered by the Examiner in this proceeding.

Each of the remaining 36 applicants executed initial contracts, which they filed as 41 rate schedules, for the sale of natural gas from Texas District No. 2 at prices ranging between 15.1920 cents [5] per Mcf to 20.045 cents per Mcf at 14.65 psia. Some 13 of these contracts were executed prior to the issuance of the Commission's Statement of General Policy No. 61–1, on September 28, 1960, 24 FPC 818, as amended. These 13 contracts are considered separately under the heading of "In-Line Price For Period Prior to September 28, 1960" in order to reflect any distinction in the in-line price level before and after the issuance of the Commission's Statement of General Policy. *Skelly Oil Co., et al.*, 28 FPC 401, 412, 417–18, 1069, *Hassie Hunt Trust, (Operator), et al.*, 30 FPC 1438, 1442–43.

Petitions to intervene [6] and a Statement of Intention to Participate [7] in the hearing were timely filed and permitted by the Commission's order issued on June 8, 1964.

As directed in the March 25, 1964, order, a prehearing conference was convened on May 11, 1964, at which time it was stipulated and agreed:

(1) The rate schedules and applications involved in the proceeding will be identified as items by reference to the Commission's files and received in evidence.[8]

(2) The contracts involved in this proceeding were entered into after arm's-length negotiations.[9]

---

[5] A pipeline field sale of sour gas is being made by Texas Eastern Transmission Corp. from the Kawitt Field in Karnes and De Witt Counties, Texas, to the Lone Star Gathering Company, at 12.0 cents per Mcf at 14.65 psia under Rate Schedule No. F–8, under a contract dated December 3, 1962, Docket No. CP63–192.

[6] Permitted to intervene were: (a) United Gas Improvement Company, Philadelphia Gas Works Division; (b) Long Island Lighting Company; (c) Philadelphia Electric Company; (d) Natural Gas Pipeline Company of America; and (e) Lone Star Gathering Company.

[7] New York State Public Service Commission.

[8] See Tr. p. 13, Lines 9–13, and Tr. p–14, Lines 5–6.

[9] See Tr. p. 15, lines 1–3 and Tr. p. 16, lines 17–18.

(3) Each applicant is ready, willing, and able to perform under his respective contracts and to comply with the terms and provisions of the Natural Gas Act and the Rules and Regulations of the Commission promulgated thereunder.[10]

Also, at the prehearing conference, dates were fixed for the filing of prepared written testimony and supporting exhibits[11] and for the filing of written motions[12] directed to the admissibility of the filed prepared written testimony and supporting exhibits. The hearing was scheduled to convene on September 1, 1964.

On June 30, 1964, the Continental Oil Company, one of the applicants herein, filed a motion requesting a ruling (1) to clarify whether or not refunds were to be an issue herein; (2) if an issue, Continental requested a ruling deferring same until after a final decision herein on the producer prices. The Staff of the Commission filed an answer on July 14, 1964, to the Continental motion for clarification contending the Commission is empowered to order refunds of amounts collected under temporary certificates containing no price condition, therefore the determination of necessary refunds is an essential issue which should be considered and decided at the time of issuance of certificates. The Staff rely upon a decision of the Court of Appeals, District of Columbia Circuit, in *Public Service Commission of the State of New York* v. *F.P.C.*, 329 F. 2d 242, cert. den. 377 U.S. 963. The Examiner ruled that final determination of the price at which the present or future public convenience and necessity will require the natural gas is a prerequisite to the consideration of any refund issue in those cases where a temporary certificate, unconditioned as to price, has been issued to and accepted by the applicant. From this ruling the Examiner certified an appeal by the Staff to the Commission. On October 5, 1964, 32 FPC 914, the Commission in ruling on the Staff appeal directed "that any consideration of refunds in cases where the temporary certificate does not contain an express refund condition be deferred until further order of the Commission."

When the prehearing conference was held on May 11, 1964, the admissibility of evidence of an economic nature (Tr. pp. 11–12) was discussed. The Examiner then ruled such evidence would not be received, but stated the parties would be permitted to make an offer of proof thereon as provided in Section 1.28(b) of the Commission's Rules of Practice and Procedure. Subsequently, but before the convening of the hearing, the Fifth Circuit Court of Appeals filed its decision in *Callery Properties, Inc., et al.* v. *F.P.C.*[13], 335 F. 2d 1004. It found that "the Commission erred in rejecting the proffered evidence on cost and other economic data" bearing on the issue of the price at which the natural gas sales under consideration in a Section 7 hearing is or will be required by the present or future public convenience and necessity.

Relying on the *Callery* decision, *supra*, the producer applicants offered extensive prepared testimony and supporting exhibits of an economic nature which included revenue-cost relationship data, the problems of a very small independent producer in both finding and marketing natural gas, the prices paid for intrastate sales of natural gas and prices paid for natural gas in areas outside Texas Railroad District No. 2. Motions attacking the admissibility of this type of evidence, *Callery* notwithstanding, were filed and fully argued. The Examiner relying upon the District of Columbia Court of Appeals decision in *Public*

[11] Applicants to file their prepared written testimony and supporting exhibits on or before July 20, 1964; the Staff and Intervenors to file their prepared written testimony and exhibits on or before August 3, 1964.

[12] Motions to be filed in writing on or before August 17, 1964.

[13] Remanding *Placid Oil Co., et al.*, 30 FPC 283.

Service Commission of New York v. *F.P.C.*, 329 F. 2d 142[14] thereupon excluded the evidence, but permitted the parties to make an offer of proof as provided by Sec. 1.28(b) of the Rules of Practice and Procedure of the Commission.

Hearings were held at which an opportunity was afforded all parties desiring to do so to offer evidence, and a substantial volume was offered and received. Further, those desiring to do so were permitted to file briefs.

In-Line Price for the Period after September 28, 1960

The applicants' direct evidence was presented mainly through one witness who, based upon the initial contract prices, concluded the in-line price for the sales in issue should be 19.0 cents per Mcf; however, if reliance were to be placed on sales previously certified by the Commission, then the in-line price should be 18.0 cents per Mcf. The witness contended the initial contract prices, as negotiated by the parties, properly reflect the underlying economic forces which determine the value of the natural gas as a commodity and that these initial prices should be the starting point in determining any in-line price. This witness also was of the opinion that the Commission's Statement of General Policy No. 61–1 issued on September 28, 1960, had a general depressant effect on contract prices negotiated thereafter and that the Commission should take this into consideration in determining in-line prices for sales after that date.[15]

The direct evidence of the applicants indicated that jurisdictional sales of natural gas have been made from Texas Railroad Commission District No. 2 under long term contracts since 1958 at initial prices of 18.0 cents and 20.0 cents per Mcf. According to Chart 1, Schedule 1, Exhibit 3 of this witness, there were 30 contracts at 18.0 cents per Mcf and above made since September 28, 1960, out of a total of 87 contracts executed during that period. This witness testified that about one-third of the total volume of gas sold from Texas District No. 2 under contracts made between January 1, 1958, and September 28, 1960, was at prices of 18.0 cents or higher and that 47 percent of such total volume was at prices of 17.0 cents or higher. As to contracts executed after September 28, 1960, it was said that 60 percent of the total volume was sold at 18.0 cents or higher and 65 percent at 17.0 cents or higher (Chart 2, Exhibit 3). The testimony of this witness further shows there were large volumes of gas sold under contracts executed between January 1, 1958, and December 31, 1963, at 17.0, 17.5, and 18.0 cents per Mcf. (Chart 4, Exhibit 3.) Chart 4, Exhibit 3, shows there were large volumes sold during this period at less than 14.0 cents (79 contracts showing annual delivery volumes of 22,679.0 MMcf or 17.0 percent of the total) and at a price of 22.0 cents (One contract showing annual delivery volumes of 28,800.0 MMcf or 21.6 percent of the total.) The witness said the prices below 14.0 cents were not given any consideration and the 22.0 cent price was given relatively little weight in determining an in-line price.

The witness for the applicants contended that reliance in determining an in-line price should not be confined solely to permanently certificated prices since such reliance would not reflect relevant current economic considerations and, further, such a confined reliance would not meet the requirement of Section 7(e)

[14] This was a review of Commission Opinion No. 362 in *Skelly Oil Co., et al.*, 28 FPC 401 and *Skelly Oil Co., et al.*, 28 FPC 1065.

[15] The Commission recognized there might be some distinction between prices contained in contracts before the promulgation of the Policy Statement on September 28, 1960, and contracts negotiated after that date and the Commission carefully stated that the record should reflect any such distinction. *Skelly Oil Co., et al.*, 28 FPC 401, 412, 417–18, 1069, *Hassie Hunt Trust, Operator, et al.*, 30 FPC 1438, 1442–43.

of the Natural Gas Act as to whether the sale "is or will be required by the present or future public convenience and necessity." Complete reliance by the Commission on permanently certificated prices would, the witness said, only result in a rollback of prices of new gas for each new certificate proceeding. It was also contended by this witness there were an insufficient number of permanently certificated sales or volumes in Texas District No. 2 to provide a satisfactory base upon which to determine an in-line price, therefore the base should be enlarged to include temporary certificates.

The Staff presented its evidence through a single witness. With some exceptions, which will be discussed later, Exhibit 4 and Exhibit 5 of the Staff follow pattern of the Staff exhibits upon which the Commission has substantially relied in *Skelly Oil Company*, 28 FPC 401; *Placid Oil Company*, 30 FPC 283, remanded on other grounds, *Callery Properties, Inc.*, v. *F.P.C.*, 335 F. 2d 1004; *Texaco Seaboard, Inc.*, 29 FPC 593; *El Paso Natural Gas Co.*, 29 FPC 1175; *Hassie Hunt Trust, (Operator)*, 30 FPC 1438; *Amerada Petroleum Corp.*, Opinion No. 422, 31 FPC 623; *Union Texas Petroleum Co.*, Opinion No. 436, 32 FPC 254; *Superior Oil Co.*, Opinion No. 437, 32 FPC 241; and *Sun Oil Co.*, Opinion No. 445, 32 FPC 1183. These decisions were subsequent to the Supreme Court's decision in *Atlantic Refining Co., et al.* v. *P.S.C. of N.Y., et al.*, 360 U.S. 378 (the *Catco* case) and establish the standards under which in-line prices are to be determined.

In its Exhibits Nos. 4 and 5, the Staff included sales below 14.0 cents per Mcf and the sales to Valley Gas Transmission, Incorporated, as well as the sale of sour gas at 12.0 cents by Texas Eastern to Lone Star Gathering Company in Docket No. CP63-192. The Staff excluded from consideration all sales made under temporary certificates.

In the numerous decisions of the Commission establishing the standards under which in-line prices are to be determined, the Commission in adopting the Staff presentations invariably started with initial contract prices of 14.0 cents per Mcf and higher. In *Skelly Oil Co., et al.*, 28 FPC 401, 408, the Commission said in adopting Staff Exhibit No. 24 "the study shows only contracts at prices of 14.0 cents per Mcf and higher." In *Texaco Seaboard, Inc., et al.*, 29 FPC 593, 596, the Commission said in adopting Staff's Exhibit No. 48 "the Staff has introduced evidence to show * * * rates of 14.0 cents per Mcf and higher as accepted by us for both permanently and temporarily certificated sales." In *El Paso Natural Gas Company, et al.*, 29 FPC 1175, 1179, the Commission re-examined and reaffirmed its decisions in *Skelly* and *Texaco, supra* and again considered only prices of 14.0 cents per Mcf and higher. In *Hassie Hunt Trust, (Operator), et al.*, 30 FPC 1438, 1444, the Commission said in adopting Staff Exhibit No. 236, "A tabulation of the producer contracts executed in this District (Texas Railroad Commission District No. 2) in the three years immediately prior to the Policy Statement having total initial prices of 14.0 cents per Mcf and higher" were used. In *Amerada Petroleum Corp., et al.*, Opinion No. 422, 31 FPC at 631, the Commission said "This study shows pertinent data for all sales in Texas District No. 4 with total initial rates of 14.0 cents per Mcf or more." Furthermore, many of the sales proposed herein by the applicants are being made under temporary authorizations, conditioned so that all monies collected at a rate in excess of the in-line price, but no less than 14.0 cents per Mcf, are to be refunded. The Staff witness testified upon cross-examination that in preparing his direct testimony and his supporting Exhibits (4 and 5), he relied upon the Staff Exhibits as presented in *Skelly, Amerada* and *Hassie Hunt Trust, supra*, for the format of his testimony, and supporting exhibits therein, placing particular reliance upon the *Hassie Hunt Trust* decision since it concerned Texas District No. 2 (Tr. 3, pp. 355-57).

Having placed his reliance upon the format of the Staff exhibits in *Hassie Hunt Trust, (Operator), et al.*, Opinion No. 412, *supra*, the Staff witness then promptly turned away from that format to one of his own selection and only included in his exhibit all permanently certificated prices thus abandoning the Commission precedent of considering only prices of 14.0 cents and above. The Commission had said, in conditioning several of the temporary certificates here under consideration, that no refunds would be ordered below 14.0 cents. Therefore, in determining a proper in-line price in this proceeding, only initial contract prices of 14.0 cents and above will be considered. Also, upon the grounds set forth by the Commission in *Skelly Oil Company, et al.*, 28 FPC 401, 408, fn. 14, and *Amerada Petroleum Corporation, et al.*, Opinion No. 422, p. 635, fn. 33, sales *to* or *by* Valley Gas Transmission have been eliminated from consideration in determining an in-line price herein.

In its original Statement of General Policy No. 61–1, issued on September 28, 1960, 24 FPC 818, 820, the Commission established a guideline price of 18.0 cents per Mcf for initial service for gas sold in interstate commerce from Texas District No. 2. Thereafter, on December 9, 1963, by its Eighth Amendment to the Statement of General Policy, 30 FPC 1435, the Commission reduced the price to 16.0 cents per Mcf. On this same date the Commission issued its Opinion No. 412, *Hassie Hunt Trust, (Operator), et al.*, 30 FPC 1438, in which it re-examined the question of the in-line price for Texas District No. 2 prior to September 28, 1960, in light of subsequent court decisions dealing with the initial price question in producer certificate cases and determined the in-line price for sales of natural gas from Texas District No. 2 prior to September 28, 1960, to be 15.0 cents per Mcf. In its Opinion No. 412–A, *Hassie Hunt Trust, (Operator), et al.*, issued January 24, 1964, 31 FPC 181, the Commission denied a rehearing of Opinion No. 412, *supra*, but granted a conditional stay of the rate reduction and refund requirements pending judicial review. In a later order issued on February 24, 1964, 31 FPC 447, the Commission modified the conditions of the rate reduction provisions of its stay order and ordered a moratorium on all price increases in excess of 18.0 cents per Mcf for sales of gas in interstate commerce from Texas District No. 2 until January 1, 1968, or until a final decision in the *Texas Gulf Coast Area* Rate proceeding, Docket No. AR64–2, depending on which came first.

The beginning point in any in-line price decision is, of course, *Atlantic Refining Co.* v. *F.P.C.*, (Catco), 360 U.S. 378. Following the Catco decision there have been a long series of court and Commission cases establishing the standards for the determination of in-line prices to comply with the requirements of Section 7 of the Natural Gas Act. In applying the standards, thus established, to the evidence of record, the starting point is, as was contended by the witness for the applicants and as stated by the Commission in *Amerada Petroleum Corp., et al.*, Opinion No. 422, p. 633, the initial "contract prices at which substantial volumes of jurisdictional gas were sold during the period under consideration."

In beginning his consideration of prices for the period subsequent to the date of the Policy Statement, the Examiner has eliminated from consideration all sales under 14.0 cents, (Exhibit 5, Chart 3), together with all sales made to or by Valley Gas Transmission, the remaining 14 permanently certificated sales have estimated first month's delivery volumes of 460,575 Mcf.[16] These 14 sales and associated volumes are only 10.5 percent of the total estimated first month's delivery volumes of 4,390,500 Mcf of jurisdictional gas moving in interstate com-

[16] Of these 14 sales, 13 were being made at or below 15.25 cents per Mcf and for estimated first month delivery volumes of 450,500 Mcf. The other, or 14th sale, was being made at 17.595 cents per Mcf with a first month estimated delivery volume of 10,075 Mcf.

merce from District No. 2 during the period from September 28, 1960, through March 10, 1964.[17] This 10.5 percent of the total volumes does not provide a broad enough base upon which to determine a proper in-line price.

The Examiner has prepared a tabulation (set forth below), which includes 33 temporarily certificated sales, together with the foregoing 14 permanently certificated sales. These 47 sales represent estimated first month's delivery volumes of 2,706,977 Mcf, or 61.6 percent of 4,390,500 Mcf, the latter being the total estimated first month's delivery volumes of all jurisdictional gas moving in interstate commerce from District No. 2 during the time period under consideration.

Contract price (cents per Mcf)	Number of contracts	Permanent or temporary certificate price (cents per Mcf)	Estimated first month volumes (Mcf)
14.00	5	14.00	210,000
14.18	2	14.18	45,000
15.00	3	15.00	93,500
15.00	3	15.00	92,500
15.20	1	15.20	60,000
15.25	2	15.25	42,000
16.00	1	16.00	28,500
16.00	1	16.00	62,000
17.00	3	17.00	151,000
17.59	2	17.59	85,075
18.00	19	18.00	1,354,457
20.00	1	18.00	31,000
20.045	4	18.00	451,945
Total	47		2,706,977

From this tabulation it can be seen that the total initial *contract* prices range from 14 cents per Mcf to 20.045 cents per Mcf. By volumes, 16.64 percent of the sales were contracted at prices between 14.0 and 15.25 cents per Mcf, 9.78 percent at prices between 16.00 and 17.59 cents per Mcf, and 73.58 percent of the production is priced by contract at 18 cents per Mcf or more. Thus, the sales at prices of 16 cents per Mcf and above account for fully 83.36 percent of the gas presently moving in interstate commerce under contracts executed in the time period here under consideration.

In considering, or giving evidentiary weight to, temporarily certificated prices, even though they are in line with the guideline prices established by the Statement of General Policy, the Examiner is aware they are in a suspect category. However, not to give consideration to them would leave the Examiner with an incomplete and narrow picture on which to base his in-line price decision. The fact that 83.36 percent of the gas moving in interstate commerce from District No. 2 during the period was contracted for and temporarily authorized at initial prices between 16.0 and 18.0 cents compels the Examiner to consider and give evidentiary weight to such prices and volumes in arriving at a proper in-line price. To ignore these temporarily certificated prices and volumes and to look only at the prices and volumes which have been permanently certificated is to see but a fractional part of the total volumes currently flowing in interstate commerce. To determine a proper in-line price based on current conditions in the industry, the Examiner must consider the total volumes currently flowing.

As the Court of Appeals, Ninth Circuit, said in *United Gas Improvement Co.* v. *F.P.C.*, 283 F. 2d 817, 824, "the price line is intended to reflect current condi-

[17] The 4,390,500 Mcf is comprised of 1,933,986 Mcf from Chart 3, Exhibit 5 and 2,456,514 Mcf relating to 35 temporarily certificated sales from Staff Exhibit No. 4.

tions in the industry. Therefore, comparative prices upon which it is based must be prices under which a substantial amount of natural gas presently moves in interstate commerce." The Court then went on to observe that "* * * by restricting the comparison to a small number of contracts under which little gas moves today" would defeat the objective sought and could require a rollback to prices having no current relevancy.

Applying the criteria for the determination of an in-line price, as developed by the numerous Commission and Court decisions following *Catco*, to the data in the foregoing tabulation, resulted in a numerically weighted average price of 16.68 cents per Mcf and a volumetrically weighted average price of 17.18 cents per Mcf. In according the proper evidentiary weight to the evidence of record, most reliance or the greatest weight has been accorded the 14 permanently certificated sales with an estimated first month's delivery volume of 460,575 Mcf. These sales and volumes do not "reflect current conditions in the industry" because of their limited nature. Having accorded the greatest weight to the permanently certificated sales and in giving appropriate consideration to temporary certificated sales at substantial volumes presently moving in interstate commerce, it is concluded the public convenience and necessity requires the natural gas here under consideration at an in-line price of 16.0 cents per Mcf at 14.65 psia.

The in-lineness of the 16.0 cents per Mcf here determined may be further demonstrated. The Commission said in *Texaco Seaboard, Inc., et al.*, 27 FPC 482, 485, and *Hassie Hunt Trust (Operator), et al.*, 30 FPC 1438, 1445, "* * * as brought out in *Catco* and * * * in Texaco Seaboard, the price line does not accord with the highest price or prices permanently authorized but falls between the highest group of prices and the median price." Applying this test to Staff Chart 3, Exhibit 4, after eliminating prices under 14.0 cents and the Valley Gas sales, reveals a median price of 14.57 cents (volumetric weighted average) which, when averaged with the highest price of 17.59 cents, produces an in-line price of 16.08 cents per Mcf.

A similar test further illustrates the in-lineness of the 16.0 price per Mcf.

Using *all* permanently (77) and *all* temporarily (35) certificated sales related to *all* volumes of natural gas (4,390,500 Mcf) moving in interstate commerce during the period after September 28, 1960, and through March 10, 1964, from District No. 2, a volumetrically weighted average price of 15.15 cents per Mcf is indicated. This median price when averaged with the highest temporarily certificated price of 18.00 cents per Mcf produces an in-line price of 16.57 cents per Mcf.

The Sour Gas Sale

In fn. 5, *supra*, reference was made to a pipeline field sale of sour gas by Texas Eastern to Lone Star Gathering [18] at an initial contract price of 12.0 cents per Mcf. A temporary certificate conditioned at 11.0 cents per Mcf was issued to and accepted by *Texas Eastern* in Docket No. CP63-192. Lone Star states its processing costs approximate 3.0 cents per Mcf to bring this sour gas up to pipeline quality. Thus the cost of the gas (12.0 cents) plus the cost of processing (3.0 cents) amounts to 15.0 cents for pipeline quality gas. The Staff says in its brief the public convenience and necessity requires this gas at 15.0 cents per Mcf when processed to pipeline quality. It is therefore found the public convenience and necessity requires the gas described in Docket No. CP63-192, *Texas Eastern* Rate Schedule No. F-8, at 12.0 cents per Mcf and a permanent certificate will be issued.

[18] By its order issued herein on March 25, 1964, the Commission consolidated for hearing herein a sour gas sale by Socony Mobil Oil Company, Inc., to the Lone Star Gathering

In-Line Price for Period Prior to September 28, 1960

In *Hassie Hunt Trust (Operator), et al.*, issued December 4, 1963, 30 FPC 1438, the Commission determined an in-line price of 15.0 cents per Mcf for the only sale (Docket No. G–19119) remaining in that opinion for District No. 2 applicable to a contract executed prior to September 28, 1960. In that opinion the Commission arrived at the 15.0 cent price, after examining a tabulation of temporarily and permanently certificated prices for contracts in that District for the three years immediately prior to the Statement of General Policy No. 61–1 issued September 28, 1960.

The Staff's Chart 2, Exhibit 5, lists all sales and all volumes permanently certificated under initial contracts executed during the period January 1, 1957 through September 28, 1960 in District No. 2. Chart 2 includes all sales under 14.0 cents per Mcf, together with sales to or by Valley Gas. Because the Examiner has excluded these sales from consideration, a revised tabulation has been prepared as follows:

Total initial price (cents per Mcf)	Number of sales	Estimated first month volumes (Mcf)
14.00	3	150,480
14.18	14	1,246,124
14.30		
14.50	4	218,500
14.75	1	600,000
15.00	2	309,000
15.20	3	195,000
15.25		
17.00	2	438,000
17.59		
Total	29	3,157,104

The Examiner's tabulation shows a total of 29 permanently certificated sales (of jurisdictional gas from District No. 2 during the period January 1, 1957, through September 28, 1960) with an estimated first month's delivery volumes totaling 3,157,104 Mcf. These volumes are approximately 36.47 percent of the total volumes of 8,655,016 Mcf shown on Chart 2, Exhibit 5, by the Staff. This percentage affords an ample base upon which to determine a proper in-line price without having to consider the temporary certificates issued during this period.

The permanently certificated prices range from 14.0 cents to 17.0 cents per Mcf. By volumes 70.2 per cent of these sales are being made at prices from 14.0 cents to 14.75 cents per Mcf and 29.8 percent at prices from 15.0 cents to 17.0 cents per Mcf. There are seven sales in the 15.0 to 17.0 cent category with volumes of 942,000 Mcf. One of these (G–19119) is the Lamar Hunt Trust Estate sale to the Natural Gas Pipeline Company of America from the Zotler Field in Calhoun and Aransas Counties at 15.0 cents per Mcf with an estimated first month's volume of 219,000 Mcf. This sale was one of those considered by the Commission in *Hassie Hunt Trust, (Operator)*, 30 FPC 1438, *supra*, and is presently under review but held in abeyance by the Circuit Court of Appeals for the 5th

Co., Docket No. CI63–874, Socony Mobil Rate Schedule No. 327, from the Kawitt Field in Karnes and De Witt Counties, at an initial contract price of 12.0 cents per Mcf. Thereafter, the Commission, by its order issued October 14, 1964, in Socony Mobil Oil Company, Inc., Docket No. G–6030, *et al.*, issued a permanent certificate to Socony Mobil for this sale of sour gas to Lone Star at 12.0 cents per Mcf at 14.65 psia in Socony's Rate Schedule No. 327.

Circuit in Case No. 21286, entitled *Margaret Hunt Hill Trustee, et al.*, pending a final decision in *Callery Properties, Inc., et al.*, decided by the 5th Circuit on August 14, 1964. Petition for writ of certorari has been filed. This litigation on this sale at the 15.0 cent per Mcf price level not only causes it to fall into the suspect class but causes the remaining six sales also to be suspect. In the category of being non-suspect there remains only the 22 permanently certificated sales with prices ranging from 14.0 cents to 14.75 cents per Mcf with estimated first month's volumes of 2,215,104 Mcf, or 70.2 percent of the 3,157,104 Mcf total shown in the above tabulation.

As brought out in *Catco* and referred to by the Commission in *Texaco Seaboard* and *Hassie Hunt Trust, supra*, "* * * the price line does not accord with the highest price or prices permanently authorized but falls between the highest group of prices and the median price." This rule cannot be literally applied here for the reason that 70.2 percent of the sales volumes under consideration are being made under permanently certificated authorizations and 29.8 percent are in the median to high group of prices and are suspect because of the Margaret Hunt Hill review petition above.[19] Therefore, the greatest evidentiary weight, or consideration, must be accorded the 70.2 percent of the sales and less weight, or consideration, accorded the 29.8 percent, which are the suspect sales. However, only one of the seven sales being made in the 15.0 to 17.0 cent price category is in litigation. No petitions to review the other six sales have been filed. As the Commission said in *Texaco Seaboard, Inc.*, 29 FPC 593, 598, "* * * the suspect price doctrine was not intended as a rigid exclusionary rule." The Commission then went on to say "* * * we think that merely because prices are in litigation or have been set aside after litigation and further proceedings ordered thereon, we should not entirely overlook the economic tendencies which they represent. But in such cases the prices cannot be taken at face value as reflecting firm prices in the area at the time * * * " For the 22 sales being made in the 14.0 to 14.75 cent price level in the above tabulation the numerically weighted average price is 14.24 cents and the volumetrically weighted average price is 14.35 cents per Mcf at 14.65 psia. However, the numerically weighted average price for the 29 sales is 14.58 cents per Mcf and the volumetrically weighted average price is 14.84 cents per Mcf at 14.65 psia. Considering the foregoing data and the evidence of record showing the history of prices and the price patterns in District No. 2, the Examiner is of the opinion that the present or future public convenience and necessity requires the natural gas here under consideration at an in-line price of 15.0 cents per Mcf at 14.65 psia.

Estimated Versus Actual First Month's Delivery Volumes (Mcf)

Beginning with *Skelly*, the Commission has consistently used estimated first month's delivery volumes in its decisions. FPC Form No. 301–B, the independent producers' report, as well as FPC Form No. 2, the annual report of the purchasing pipeline, furnish actual sales volumes (Mcf) on an annual basis only. Therefore, to obtain the first month's delivery volumes, it is necessary to divide the reported delivery volumes of a particular sale by the number of months covered by the report or a lesser number of months as related to the date of first delivery of the particular sale. This produces an average monthly delivery volume from which the actual first month's delivery volume is derived. Since Form No. 301–B and Form 2 do not show, nor do the rate schedules in many

[19] See *United Gas Improvement Co.* v. *F.P.C.*, 283 F. 2d 817; *Texaco Seaboard, Inc., et al.*, 29 FPC 593, 597.

cases indicate, the date of the commencement of deliveries, it is frequently not possible to ascertain the actual first month's delivery volumes in this fashion.

The estimated first month's delivery volume is set forth in the initial contract executed by the seller and the buyer which is filed with the Commission as the rate schedule. This represents the best judgment figure of the parties at the time the agreement was executed. As was indicated by the rebuttal witness for the applicants, there may be a wide variance between estimated and actual volumes in certain instances; however, his examples were too few in number of sales to form a basis for concluding broadly that there is an inaccuracy or unreliability in the use of estimated first month's delivery volumes. In one instance this witness furnished actual first month's delivery volume figures obtained from a personal inspection of a purchasing pipeline's records. In other instances he determined the first month's delivery volumes by the method heretofore described—the averaging of the reported sales volumes. There can be no question but that the average volumes would produce more accurate results. However, except for the few instances in rebuttal, average volumes are not in this record. Therefore, it is concluded that for the purposes of determining an in-line price the use of estimated first month's delivery volumes are sufficiently acceptable and reliable to warrant their use.

Sinclair's Sale in Docket No. G–16760

Sinclair sells about 32,000 Mcf of gas per month to the United Gas Pipe Line Company from the Normanna Field, Bee County, Texas, under a contract negotiated by Sinclair's predecessor in interest, Western Natural Gas Company, and dated May 12, 1958. On October 23, 1958, Western filed its application with the FPC for a certificate of public convenience and necessity to make this sale. Western's application was assigned Docket No. G–16760, which is the lead docket in this hearing. An unconditioned temporary certificate was issued to Western on June 18, 1959. This sale is being continued by Sinclair under authority of an FPC letter-order dated November 26, 1963, extending the temporary certificate. The gas is being sold at 17.0 cents per Mcf plus tax reimbursement of 0.59509 cents per Mcf at 14.65 psia. The May 12, 1958 contract is on file with the FPC as Sinclair's Rate Schedule No. 285. Sinclair and Tennessee Oil Company jointly own interests in the wells from which this gas is produced. Tenneco is the operator of the two units.[39]

On March 31, 1958, Tenneco's predecessor in interest, Midstates Oil Corporation, contracted to sell its portion of the gas from these units to United for 17.0 cents per Mcf plus tax reimbursement of 0.59509 cents per Mcf at 14.65 psia. Midstates filed its application with the FPC on April 4, 1958, for a certificate of public convenience and necessity to make the sale. The application was assigned Docket No. G–14836, and, after a hearing thereon, the FPC in *Middle States Petroleum Corporation* (formerly Midstates Oil Corporation), 21 FPC 492, on April 13, 1959, issued a certificate of public convenience and necessity to make the sale at the contract price of 17.59509 cents per Mcf. Thus, Tenneco, as the operator of these two units, is selling its gas under a permanent certificate at the contract price of 17.0 cents per Mcf plus tax reimbursement of 0.59509 cents per Mcf at 14.65 psia. Sinclair contends its sale of gas from these two units should receive the same price certification as was issued to Tenneco's predecessor in interest, that the imposition upon its sale at a price below the level of the current Tenneco price would be inequitable, unlawful and highly discriminatory.

[39] The Magnus-Beck and the Johnson-Beck units located in the Normanna Field, Bee County, Texas.

In issuing the permanent certificate on April 13, 1959 to Tenneco's predecessor in interest, the Commission there held the applicant had established a *prima facie* case for the issuance of a certificate and that, "There is no evidence showing that the proposed rate adversely affects the public convenience and necessity." Two months later, and on June 23, 1959, the Supreme Court decided *Atlantic Refining Company, et al.* v. *Public Service Commission of New York, et al.*, 360 U.S. 378 (Catco). This was the first of numerous Commission and court decisions establishing the standard under which producer prices are to be considered before a temporary or permanent certificate is issued. Consequently, these standards should be considered in determining the price at which Sinclair's gas under this docket is required by the public convenience and necessity. It has been determined herein that the in-line price for District No. 2 is 15.0 cents per Mcf prior to the Statement of General Policy (September 28, 1960) and 16.0 cents per Mcf thereafter. To require Sinclair to conform its sale herein to the in-line price brings to mind what Mr. Justice Jackson said in *Colorado Interstate Gas Co.* v. *F.P.C., et al.*, 324 U.S. 581, 610, "Any method of rate making by which an identical product from a single well, going to the same consumers, has three prices depending on who owns it does not make sense to me." The Commission, however, has been confronted with this particular discrimination problem at least once since *Catco* was decided, namely: *Pure Oil Company*, 23 FPC 704, issued May 16, 1960. In that case Pure and Petroleum Incorporated were selling gas from the same field "and in part from the same well to the same purchaser, Colorado Interstate," under identical contracts. Because sales under Pure's rate schedule began prior to January 1, 1959, it was required by FPC regulations to file an amended rate schedule for the new contract price of 16.0 cents per Mcf which the Commission then suspended and made subject to a formal hearing. Since Petroleum's sales did not commence until January 8, 1959, it was permitted to file and collect the 16.0 cents rate without suspension or hearing. The Commission said "* * * it appears that the element of time caused the difference in the treatment of the two producers; that in this instance, this element should not have decisive weight in the determination of lawful rates; that in view of the identical nature of a part of the gas being sold, the identical source thereof, and the co-ownership in the Neff Unit, the allowing of one producer's rate to become effective without suspension and refund, while subjecting the other producer's identical rate of 16.0 cents to suspension and public hearing, denies to the latter a certain equality of treatment devoid of any counterbalancing advantage to the public interest in the effective administration of the Natural Gas Act." The Commission thereupon eliminated the discrimination and issued Pure the same permanent certificate as had been issued to Petroleum.

In the matter here at issue Tenneco's predecessor in interest filed its initial contract as its rate schedule with the Commission on April 4, 1958, and it was promptly acted upon by the Commission by the issuance of a permanent certificate at the initial contract price on April 13, 1959. On October 23, 1958, six months and 19 days after the Tenneco filing, Sinclair's predecessor in interest filed its initial contract as its rate schedule. Each initial contract contained identical pricing provisions. On June 18, 1959, eight months after the filing, Sinclair was issued an unconditioned temporary certificate. Sinclair here seeks an unconditioned permanent certificate the same as was issued to Tenneco nearly six years ago. The Commission said in *Graridge Corporation (Operator)*, issued October 31, 1963, 30 FPC 1156, 1162, that in producer succession proceedings, non-transferability provision of certificate is intended to focus on successor himself, not on the full scope of the 7(e) requirements and that while out of line

rates are not to be perpetuated, the Commission said it was presently conducting area rate proceedings to fix just and reasonable rates and it is in such proceedings that any question as to the reasonableness of permanently certificated sales is to be resolved. Here, as in *Graridge, supra*, the Commission has an area rate proceeding in hearing in which all rates will be adjusted to a just and reasonable level. To require Sinclair here to accept a permanent certificate conditioned at the in-line price herein determined would, under the Commission decision above, be unjust discrimination. Therefore, a permanent unconditioned certificate of public convenience and necessity is hereby issued to Sinclair in Docket No. G-16760, Rate Schedule No. 285, at the initial contract price of 17.0 cents per Mcf, plus tax reimbursement of 0.59509 cents per Mcf, at 14.65 psia.

FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, the evidence adduced and the briefs filed, the Examiner finds and concludes, in addition to the findings and conclusions hereinabove stated, that:

(1) the following applicants:

are each engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption and each is, therefore, a "natural-gas company" as that term is defined in Section 154.91(a) of the Commission's Regulations, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(2) Subject to the requirements of the order herein and the conditions attached to the certificates of public convenience and necessity herein issued, the applicants named in paragraph (1) above are each able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(3) The sale of natural gas as proposed by each of the applicants named in paragraph (1) above, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity and a certificate authorizing the same should issue to each of them upon the terms and conditions of the order herein, which terms and conditions are required by the public convenience and necessity.

(4) The public convenience and necessity requires that the initial prices charged by the applicants named in paragraph (1) above for the sales proposed in their certificate applications upon contracts executed on, or before, September 28, 1960, the date on which the Commission issued its Statement of General Policy No. 61–1, 24 FPC 818, as amended, be not greater than 15.0 cents per Mcf at 14.65 psia, except as hereinafter specifically provided in paragraph (7).

(5) The public convenience and necessity requires that the initial prices charged by the applicants named in paragraph (1) above for the sales proposed in their certificate applications upon contracts executed after September 28, 1960, the date on which the Commission issued its Statement of General Policy No. 61–1, 24 FPC 818, as amended, be not greater than 16.0 cents per Mcf at 14.65 psia except as hereinafter specifically provided in paragraph (6).

(6) The public convenience and necessity requires that the initial price charged by Texas Eastern Transmission Corporation in Docket No. CP63–192 to the Lone Star Gathering Company be not greater than 12.0 cents per Mcf at 14.65 psia.

(7) The public convenience and necessity requires that the initial prices charged by the Sinclair Oil & Gas Company, Docket No. G–16760, to the United Gas Pipe Line Company be not greater than 17.0 cents per Mcf plus tax reimbursement of 0.59509 cents per Mcf at 14.65 psia.

ORDER

WHEREFORE, *It is ordered*, subject to review by the Commission on appeal, or review by the Commission on its own motion, as provided in its Rules of Practice and Procedure, that:

(A) Certificates of public convenience and necessity are hereby issued to each of the applicants named in paragraph (1) of Findings and Conclusions above for the sale of natural gas in interstate commerce for resale as proposed in their respective applications, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, upon the terms and conditions hereinafter set out in this order.

(B) A certificate of public convenience and necessity is hereby issued to the Texas Eastern Transmission Corporation authorizing the sale of natural gas from the Kawitt Field, Karnes and De Witt Counties, Texas, to the Lone Star Gathering Company at the initial contract price of 12.0 cents per Mcf at 14.65 psia as set out in Docket No. CP63–192, Texas Eastern Rate Schedule No. F–8.

(C) A certificate of public convenience and necessity is hereby issued to the Sinclair Oil & Gas Company authorizing the sale of natural gas from the Normanna Field, Bee County, Texas, to the United Gas Pipe Line Company at the initial contract price of 17.0 cents per Mcf, plus tax reimbursement of 0.59509 cents per Mcf at 14.65 psia as set out in Docket No. G–16760, Sinclair's Rate Schedule No. 285.

(D) Except as ordered in paragraphs (B) and (C) above a certificate of public convenience and necessity is issued to the remaining applicants, not hereinabove referred to in paragraphs (B) and (C), named in Findings and Conclusions paragraph (1) above, conditioned as to those initial contracts executed on or before September 28, 1960, to prohibit any total initial price, including all reimbursements and charges, greater than 15.0 cents per Mcf at 14.65 psia; and as to those initial contracts executed after September 28, 1960, the certificates of public convenience and necessity are conditioned to prohibit any total initial price, including all reimbursements and charges, greater than 16.0 cents per Mcf at 14.65 psia; all such conditioned prices are effective from the date of the issuance of this order and until such price may be lawfully changed in the manner provided by the Natural Gas Act.

(E) The certificates issued herein are further conditioned upon their acceptance in writing by the respective applicants within 30 days of the issuance of this order.

(F) In accordance with the conditions attached to the temporary authorizations in Docket No. G–18389, Union Oil Company of California and Docket No. G–19718, George Parker, each of such applicants shall refund to their respective purchasers within 60 days of the issuance of this order any sums collected from such purchasers in excess of 15.0 cents per Mcf, with interest thereon at the rate provided in the temporary authorization from the time of receipt to the date of refund and shall report to the Commission in writing the details of such refunding within 15 days after such revenues have been made.

(G) In accordance with the several conditions attached to the temporary authorizations in Docket Nos. CI62–698, The Jupiter Corporation (Operator), *et al.*; CI62–780, Ralph E. Fair, Inc.; CI62–824 and CI62–889, Monsanto Chemical Company (Operator), *et al.*; CI62–959, Cities Service Company; CI62–961, Continental Oil Company; CI62–962, Rodney DeLange (Operator), *et al.*; CI62–1023, H. B. Zachry Company, Gasoline Production Division; CI63–5, George R. Brown (Operator), *et al.*; CI63–56, Ralph E. Fair; CI63–58, Monsanto Chemical Company; CI63–790, Montego Oil Company (Operator), *et al.*; CI63–814, Producing Properties, Inc. (Operator), *et al.*; CI63–820, H.D. Bruns (Operator), *et al.*; CI64–346, Highland Oil Company; CI64–788, Tidewater Oil Company; and CP63–193, Texas Eastern Transmission Corporation, each of such applicants shall refund to their respective purchasers within 60 days of the issuance of this

order any sums collected from such purchasers in excess of 16.0 cents per Mcf, with interest thereon at the rate provided in the temporary authorization from the time of receipt to the date of refund and shall report to the Commission in writing the details of such refunding within 15 days after such refunds have been made.

(H) The decision as to whether refunds should be ordered as a condition to the remaining certificates herein issued is, in accordance with the Commission's order issued herein on October 5, 1964, deferred to the further order of the Commission.

(I) The certificates herein issued are not transferable and shall be effective only so long as each of the applicants continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(J) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 of the Commission's Regulations under said Act requiring the filing of rate schedules for the service herein authorized and is without prejudice to any findings or orders which may have been or hereafter may be made by the Commission in any proceeding now pending or hereinafter instituted by or against the applicants. Further, the action taken in these proceedings shall not foreclose nor prejudice any further proceeding or objection relating to the operation of any price or related provisions in the gas contracts here involved.

HARRY W. FRAZEE,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

PERRY R. BASS (OPERATOR), ET AL.

ORDER REJECTING RATE FILING

(Issued September 23, 1965)*

Perry R. Bass (Operator), *et al.* (Bass) on August 24, 1965, tendered for filing a proposed rate increase from 16¢ to 17¢ per Mcf for the sale of residue gas from gas-well gas to El Paso Natural Gas Company under its FPC Gas Rate Schedule No. 1, from the Brown-Bassett Field, Terrell County, Texas (R. R. Dist. No. 7c). Bass requests that the statutory 30-day notice requirement be waived, and that the proposed increased rate be made effective as of August 24, 1965, for the reason that the increase was contractually due on January 1, 1963. Bass has not shown good cause for a waiver of the notice requirement; consequently, the notice period would expire September 24, 1965.

In Opinion No. 468, issued August 5, 1965, in Docket No. AR61–1, 34 FPC 159, we determined, among other things, that the just and reasonable ceiling under Section 5(a) of the Natural Gas Act effective as of September 1, 1965, for the sale of "new" residue gas (from gas-well) was 16.5¢ per Mcf [1], subject to adjustment for quality differentials below the standards applicable to pipeline quality gas. The Section 5(a) determination there made is applicable to all producer-respond-

---

* See order granting rehearing issued November 22, 1965, 34 FPC 1353.

[1] Since the contract comprising Bass' FPC Gas Rate Schedule No. 1 was entered into on December 16, 1961, the gas is "new gas" under Opinion No. 468.

ents for all sales of natural gas made by them in the Permian Basin Area. Since Bass was a producer-respondent in Permian and the sale under its FPC Gas Rate Schedule No. 1 is and was being made in that area, the Section 5(a) determination is applicable to Bass' sale. We also imposed in Opinion No. 468 a moratorium effective as of September 1, 1965, prohibiting any increased rate filing in excess of the just and reasonable rate ceilings determined there.

The circumstances of the instant filing are similar to those involved in a filing tendered by Socony Mobil Oil Company, Inc. (Operator), *et al.* (Socony) on June 28, 1965. Socony's proposed rate increase filing was rejected by order issued August 26, 1965, 34 FPC 595. For all of the reasons set forth in that order, we are rejecting the instant proposed rate increase tendered by Bass.

The Commission orders:

The proposed increased rate of 17¢ per Mcf tendered by Bass on August 24, 1965, for sales under its FPC Gas Rate Schedule No. 1, is rejected.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CENTRAL ILLINOIS ELECTRIC AND GAS COMPANY AND PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-23

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued September 24, 1965)

On July 20, 1965, Central Illinois Electric and Gas Company (Applicant), filed in Docket No. CP66-23 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant up to 502 Mcf per day of natural gas for resale and distribution in the villages of Metcalf and Sidell, Illinois, and their environs, all as more fully set forth in the application.

The application states that Respondent's facilities extend approximately 1,500 feet from the southern village limits of Metcalf. Applicant proposes to construct an odorizer station at the proposed point of connection and construct a high pressure 4-inch pipeline lateral north from the odorizer station to Metcalf and Sidell. Sidell is approximately seven miles north of Metcalf. Applicant will also construct and operate the town border stations and distribution systems in each village.

Applicant estimates that the requirements for the villages for natural gas will be as follows:

	First year	Second year	Third year
Annual (Mcf)	17,420	34,330	44,770
Peak day (Mcf)	345	401	502

The estimated cost of construction of the facilities proposed by Applicant is $218,190 in the third year. Applicant proposes to finance the construction with funds available for this purpose.

On July 23, 1965, Respondent was duly advised of the application filed in this proceeding, and due notice of the filing and opportunity for hearing thereon has been given by publication in the Federal Register on July 31, 1965 (30 F.R. 9603). No protest, petition to intervene or request for hearing has been filed in this proceeding. The Applicant's gas requirements will be taken from the gas allocated in Respondent's expansion program approved in Docket No. CP65-255.

The Villages of Metcalf on October 9, 1963, and Sidell on December 4, 1963 granted Citizens Gas Company (Citizens) and its successors franchises to supply natural gas in the said villages. On November 4, 1964, Citizens was merged into Applicant and the franchises with the Villages of Metcalf and Sidell now belong to it. On May 5, 1965, the Illinois Commerce Commission in its Docket No. 51309 granted Applicant a certificate to construct and operate the necessary facilities and to sell gas to the public in the above-mentioned villages.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G-254 (4 FPC 1081).

(2) Applicant, Central Illinois Electric and Gas Company, an Illinois corporation having its principal place of business in Rockford, Illinois, is a corporation legally authorized to engage in the local distribution of natural gas to the public.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, up to 502 Mcf per day of natural gas for distribution and resale as hereinbefore described.

(4) The requirement that Respondent serve Applicant, as hereinafter ordered, will not impair Respondent's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Respondent for distribution in Metcalf and Sidell, Illinois, and environs within one year from the date of the issuance of this order.

The Commission orders:

(A) Panhandle Eastern Pipe Line Company is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, Central Illinois Electric and Gas Company as herein described, and to sell and deliver up to 502 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, for transportation, distribution and resale as hereinbefore described. Such service shall be rendered pursuant to Panhandle Eastern's presently filed appropriate rate schedule.

(B) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CENTRAL ILLINOIS PUBLIC SERVICE COMPANY AND NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP65-303

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued September 24, 1965)

On March 25, 1965, Central Illinois Public Service Company (Applicant), filed in Docket No. CP65-303 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Natural Gas Pipeline Company of America (Respondent) to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver natural gas to Applicant for resale and distribution in Gorham, Jackson County, Illinois, and environs, all as more fully set forth in the application.

Applicant seeks physical connection of its proposed lateral transmission facilities with Respondent's pipeline at a point approximately 1.7 miles northeast of Gorham, Illinois, and the sale and delivery of the third year maximum day requirements of Applicant for Gorham of 107 Mcf at such connection.

Total estimated volumes of natural gas involved to meet Applicant's annual and peak day requirements for the initial three-year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	4,475	7,625	10,500
Peak day (Mcf)	47	78	107

Total estimated cost of Applicant's proposed construction, including transmission facilities and distribution system, is $51,914, and will be financed with internally generated funds. The data reflected in the application indicates the proposals with reference to Gorham are economically feasible.

On April 8, 1965, Respondent filed an answer to the application in the proceeding stating it had no unallocated capacity available for the service requested by the Applicant, but would be able and willing to render the requested service should the Commission approve its application in Docket No. CP65-404. Respondent was authorized to construct and operate the said facilities proposed in Docket No. CP65-404 on August 24, 1965, 34 FPC 568.

The Illinois Commerce Commission has approved the proposals of the Applicant made in the instant application.

Due notice of the filing of the subject application and opportunity for hearing thereon have been given by publication in the Federal Register on April 7, 1965 (30 F.R. 4509). No protest, petition to intervene, notice of intervention or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) Applicant, Central Illinois Public Service Company, having its principal place of business in Springfield, Illinois, is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations up to 107 Mcf per day of natural gas for distribution and resale as hereinbefore described and as more fully described in the application in this proceeding.

(4) Applicant should be prepared to receive natural gas from Respondent for distribution in Gorham, Illinois and environs, within one year from the date of the issuance of this order.

(5) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon it nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Natural Gas Pipeline Company of America, Respondent, is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as herein described, and to sell and deliver up to 107 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations for distribution and resale as hereinbefore described and as more fully described in the application in this proceeding. Such service shall be rendered pursuant to Respondent's presently filed appropriate rate schedule.

(B) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

THE DETROIT EDISON COMPANY AND CONSUMERS POWER COMPANY, DOCKET NO. E-7206; THE DETROIT EDISON COMPANY, DOCKET NO. E-7207

ORDER DISMISSING APPLICATION

(Issued September 24, 1965)

Applicants have heretofore sought to withdraw their applications concerning construction of facilities at the international boundary and transmission of electric energy to Canada. Subsequently, Applicants failed to attend scheduled prehearing conferences and Detroit Edison, by letter of August 4, has indicated its unwillingness to follow the special procedures authorized in the Commission's order of July 20, 1965, 34 FPC 80; see also p. 83. By letter of August 26, 1965, Detroit Edison stated its unwillingness to go forward on any basis which would require a public hearing responsive to the Commission's order of February 4, 1965, 33 FPC 177, even under the expedited schedule referred to in the Commission's letter of August 10, 1965.

We have no alternative but to terminate this proceeding for want of prosecution.

The Commission orders:

The applications in the above entitled dockets are hereby dismissed without prejudice to their reinstatement at any time.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP66-6

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 24, 1965)

On July 9, 1965, El Paso Natural Gas Company (Applicant) filed in Docket No. CP66-6 an application as supplemented on August 2, 1965, and September 7, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the sale and delivery of natural gas for resale, as hereinbefore described and as more fully described in the application as supplemented.

Applicant proposes to modify its existing Kellogg-Wardner meter station and to sell and deliver natural gas through said facilities to The Washington Water Power Company (Water Power) for resale and distribution in Big Creek, Elk Creek, Osburn, Polaris, Silverton, and Wallace, Idaho, and environs. The estimated cost of the modification of the meter station is $3,000, to be financed from funds on hand.

Applicant proposes to sell and deliver natural gas to Intermountain Gas Company (Intermountain) through Applicant's existing Idaho Falls meter station for resale and distribution in Rexburg and Rigby, Idaho. Applicant also proposes to sell and deliver natural gas to Intermountain through Applicant's existing Gooding meter station for resale and distribution in Bellvue, Hailey, Ketchum, Shoshone, and Sun Valley, Idaho.

Water Power and Intermountain propose to construct and operate distribution systems in the various communities at a cost of $4,749,981. They have received authorization from the Idaho Public Utilities Commission to construct and operate distribution systems in the areas proposed to be served and have received franchises from all of the incorporated communities except Wallace and Ketchum. Water Power and Intermountain do not propose to initiate service to Wallace and Ketchum, respectively, until 1966 and franchises to serve those communities will not be available until that time.

Sales will be made pursuant to Applicant's Rate Schedules DI-1, DS-1, C-1 and I-1. Estimated peak day and annual natural gas requirements in Mcf at 14.73 psia for the first three full years of operation are as follows:

Year of service	Peak day		Annual	
	Water power	Intermountain	Water power	Intermountain
1	988	5,643	169,346	833,544
2	1,581	6,778	262,638	1,038,628
3	1,958	7,726	301,672	1,126,255

Based on third year estimates, Applicant will receive total revenues of $559,186 per year. Purchased gas costs are estimated to be $229,896, and other incremental costs are *de minimis*. Therefore, Applicant's proposal appears to be economically feasible.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been received.

At a hearing held on September 23, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, as supplemented, and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G–288 (4 FPC 486).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, will be used for the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the sale and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed construction and operation of facilities and the sale and delivery of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The construction authorized in paragraph (A) above shall be completed and the sale and delivery of natural gas shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months of the date on which this order issues.

(D) Authorization granted herein to sell and deliver natural gas to Water Power and Intermountain for resale and distribution in Wallace and Ketchum, Idaho, is conditioned upon the receipt of appropriate local authorization by Water Power and Intermountain to engage in such activities.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. CP66-53

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 24, 1965)

On August 16, 1965, Florida Gas Transmission Company (Applicant) filed in Docket No. CP66-53 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of the facilities necessary to sell and deliver natural gas to the Ocean Highway and Port Authority (Authority) for resale in and around Fernandina Beach and Yulee, in Nassau County, and Oceanway, Garden City, Dinsmore and Marietta, in Duval County, Florida, all as more fully set forth in the application.

Applicant proposes to construct and operate a line tap and meter station, and appurtenances, for the sale and delivery of natural gas to the Authority. The facilities are to be located at a point on Applicant's existing 16-inch Jacksonville lateral pipeline approximately 2.5 miles south of the community of Marietta, Florida, near the point of intersection of Normandy Boulevard (State Road 228) and Hammond Boulevard.

The Authority is a Political Subdivision created by the Legislature of the State of Florida. In addition to its proposed natural gas system, the Authority will operate an extensive water and sanitary sewer system. The cost of gas facilities of the Authority is $1,885,000. The debt service ratio based on third year leveling of sales is 1.60. The project will be financed by the sale of revenue bonds; a buyer's commitment has been made.

Authority proposes to construct and operate an integrated pipeline system, consisting of approximately 12.90 miles of 8-inch and 30.58 miles of 6-inch pipe, to transport the gas from the proposed delivery point to the various distribution systems as well as for resale to various customers along the route of its proposed pipeline system. The proposed distribution systems in Fernandina Beach, Yulee, Oceanway, Garden City, Dinsmore and Marietta also will be owned and operated by the Authority.

The estimated third year annual and peak day requirements of natural gas for the proposal are 207,710 Mcf and 3,031 Mcf, respectively.

The total estimated cost of the facilities to be constructed by Applicant is $32,500, which will be paid for out of cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 23, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization, and upon consideration of the record,

The Commission finds:

(1) Applicant, Florida Gas Transmission Company, a Delaware corporation having its principal place of business in Winter Park, Florida, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued July 3, 1963, in Docket No. CP63-277 (30 FPC 27).

(2) The proposed construction and operation of facilities and sale of natural gas, as hereinbefore described and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and sale of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Florida Gas Transmission Company, authorizing the construction and operation of facilities and the sale of natural gas as more fully described in the application in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the sale of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64-255 (PHASE II)

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 24, 1965)

On August 6, 1965, Northern Natural Gas Company (Petitioner) filed in Docket No. CP64-255 (Phase II) a petition to amend the order accompanying Opinion No. 463 issued by the Commission in said docket on June 2, 1965, 33 FPC 1163, by deleting the authorized 3,400 horsepower compressor unit at the Mullinville, Kansas, compressor station, as more fully described in the petition to amend.

On June 15, 1965, 33 FPC 1264, the Commission issued an order in Docket Nos. CP64-255 (Phase I) and CP65-188 authorizing Petitioner to construct and operate a 12,500 horsepower turbine compressor unit at the Mullinville compressor station in lieu of two 3,400 horsepower reciprocating units previously authorized.[1]

[1] Each of the Commission's orders in Docket Nos. CP64-255 (Phase I) and CP65-188 issued on December 21, 1964, 32 FPC 1491, and March 31, 1965, 33 FPC 659, respectively, authorized Petitioner, among other things, to construct and operate a 3,400 horsepower reciprocating compressor unit at Petitioner's Mullinville compressor station.

In the petition to amend which was filed in those dockets on April 28, 1965, Petitioner stated that if the Commission authorized the 12,500 horsepower turbine unit in lieu of the two 3,400 horsepower units, there would be an excess of 5,700 horsepower of compression and it would, subsequent to approval of the Phase II portion of CP64–255, petition to delete the third 3,400 horsepower unit.

Due notice of the filing of the petition to amend was published in the Federal Register on August 21, 1965 (30 F.R. 10922). No protest, petition to intervene, notice of intervention, or request for hearing has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate of public convenience and necessity accompanying Opinion No. 463 issued in Docket No. CP64–255 (Phase II) on June 2, 1965, be amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity accompanying Opinion No. 463 issued in Docket No. CP64–255 (Phase II) on June 2, 1965, is amended by deleting therefrom the authorization to construct and operate the 3,400 horsepower compressor unit for the Mullinville, Kansas, compressor station, which is more fully described in the petition to amend.

(B) In all other respects the order in Docket No. CP64–255 (Phase II) shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP65–403

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 24, 1965)

On June 16, 1965, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP65–403 an application, as supplemented on August 23, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a tap and sales metering station near Belle Mead, Somerset County, New Jersey, and the delivery of a heretofore allocated supply of natural gas to Public Service Electric and Gas Company (Public Service) for resale, all as more fully set forth in the application as supplemented.

Public Service has requested Applicant to establish the new delivery point so that Public Service may sell and deliver natural gas to Minnesota Mining and Manufacturing Company for process drying and space heating. The estimated third year annual gas requirement is 87,600 Mcf.

The subject facilities are estimated to cost $34,000 and will be financed from cash on hand. Public Service will reimburse Applicant for this amount.

At a hearing held on September 23, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, as supplemented, and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G–1143 (7 FPC 145).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, will be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and delivery of natural gas by Applicant are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the delivery of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Transcontinental Gas Pipe Line Corporation, to construct and operate the proposed facilities and to deliver natural gas, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within three months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ATLANTIC SEABOARD CORPORATION, ET AL., DOCKET NO. RP65–49, ET AL.

ORDER DENYING RECONSIDERATION

(Issued September 27, 1965)

Atlantic Seaboard Corporation (Seaboard) on September 9, 1965, filed an "Application for Rehearing"[1] of the order issued herein August 26, 1965, 34

[1] An application for rehearing of an interlocutory order, such as herein involved, may not properly be filed (Section 1.30(e) of the Commission's Rules of Practice and Procedure [18 CFR 1.30(e)]). The subject tender has been considered as a motion for reconsideration pursuant to Section 1.12 of the Rules.

FPC 593, which permitted intervention by the Coal Interests and also by Appalachian Power Company (Appalachian), Seaboard requests reconsideration of the order insofar as it grants intervention to Appalachian and requests that such intervention be denied, or alternatively, that a preliminary hearing be held to require Appalachian to present evidence in support of its allegations that it would be injured or aggrieved by a final order approving Seaboard's proposed restructured tariff.

Seaboard contends that the Commission misconstrued its opposition to Appalachian's intervention in stating that Seaboard had not challenged Appalachian's claims that it might in fact be competitively injured by a determination permitting the proposed rates to go into effect. Seaboard further urges that Appalachian has not alleged facts sufficient to indicate (a) that it is a competitor of Seaboard, or (b) that it would suffer any competitive injury from the proposed rates.

We do not find that Appalachian's petition is fatally defective for failing to allege, as Seaboard claims it does, that the retail rates of Seaboard's customers, Lynchburg Gas Company and Roanoke Gas Company, will be directly or immediately affected by the proposed tariff in a manner so as to lower the gas charges for space heating service in those cities. For the purposes of determining whether to permit Appalachian to intervene in the exercise of our discretion pursuant to Section 15 of the Natural Gas Act, we do not need to decide whether it is in a strict sense a "competitor" of Seaboard. However, in a similar competitive situation, the court held that retailers of oil were in direct competition with *both* the gas distributor and its supplier-pipeline company, the same Respondent as in this proceeding, Seaboard.[2] With respect to the cities of Lynchburg and Roanoke, Virginia, Appalachian competes for the space heating market with gas distributors who are supplied by Seaboard.

We conclude, therefore, that Appalachian has alleged facts to show that for the purposes of these proceedings it is a "competitor" of Seaboard. On the basis of the pleadings before us, Seaboard has not demonstrated either that a preliminary hearing upon Appalachian's intervention is warranted or that the petition for intervention should be denied.

The Commission finds:

Seaboard's motion for reconsideration sets forth no new facts or new principles of law which were either not fully considered by the Commission when it issued its order of August 26, 1965, or which now having been considered warrant any change or modification of said order.

The Commission orders:

Seaboard's motion for reconsideration filed on September 9, 1965, is hereby denied.

[2] *Virginia Petroleum Jobbers* v. *F.P.C.*, 259 F. 2d 921, 926 (CADC–1958).

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ALABAMA POWER COMPANY, PROJECT NO. 2165

ORDER FIXING ANNUAL CHARGES FOR USE OF GOVERNMENT DAM

(Issued September 28, 1965)*

On September 12, 1957, 18 FPC 327, the Commission issued a license under the Federal Power Act for a period of 50 years, effective as of September 1, 1957, to

*See order issued November 26, 1965 dismissing application for rehearing, etc., 34 FPC 1370.

Alabama Power Company for the then proposed Project No. 2165 located within the State of Alabama. The project, which is now constructed, consists of: (1) the Lewis Smith Development on the Simpsey Fork of the Black Warrior River comprising principally a dam, a reservoir with power storage of 400,000 acre-feet, controlled flood storage of 293,000 acre-feet, and surcharge flood storage of 517,000 acre-feet, and a powerhouse having an installed capacity of 157,500 kw; and (2) the John Hollis Bankhead powerhouse development downstream on the Black Warrior River located at and affecting the U.S. John Hollis Bankhead Dam (U.S. Lock and Dam No. 17) with an installed capacity of 45,000 kw.

In addition to fixing the annual charges for the purpose of reimbursing the United States for the costs of administration of Part I of the Act, the license provides in subparagraph (iii) of Article 42 thereof for a determination of the amount of annual charges to be fixed for the purpose of recompensing the United States for the use by licensee of the John Hollis Bankhead Dam.

Pursuant to this provision of the license, the Commission staff prepared an analysis respecting Alabama Power Company's use of the John Hollis Bankhead Dam for power purposes. The staff has concluded as a result of this analysis that the annual charge to be paid by Alabama Power for its use of the Government Dam should be fixed at $92,000.

This figure was arrived at through a method of computation whereby the annual costs of the joint facilities[1] of the Government were allocated between the Government and the licensee in direct proportion to the net annual benefits which each derives from the use of the joint facilities. The Corps of Engineers agrees that the value of the net annual navigation benefits created by the project are equal to the annual costs of the lock, dam and land. The net annual benefits attributable to power were assumed to be equal to the cost that the Company would have to pay for the same amount of power if produced by a steam electric plant as an alternative source.

By letter of December 10, 1964, the Corps of Engineers commented that while the basic cost and benefits data relating to the Government dam are considered adequate for the present, modernization of the existing lock and spillway is being studied and the additional cost of such improvements could well change the amount of the annual charge in the future.

The Alabama Power Company, by letter of November 15, 1956, expressed the view that in determining annual charges for the use of the Government dam, consideration should be given to flood control, navigation, water supply, pollution abatement, and recreation benefits provided to the public by Alabama Power's upstream Lewis Smith Development. However, the grant to a licensee of the privilege of exploiting the hydroelectric potential of one of the nation's streams can only be justified on the theory of a resulting benefit to the public (See *Alabama Power Company* v. *F.P.C.*, 128 F. 2d 280, 288–89, (D.C. Cir., 1942) cited with approval in *California* v. *F.P.C.*, 345 F. 2d 917, (CA9–1966)). Thus the fact that the licensee's upstream use of the Black Warrior River may be beneficial to the public cannot be utilized as an offset to the statutory requirement that licensees pay for the use of government dams. See, *South Carolina Electric & Gas Company* v. *F.P.C.*, 338 F. 2d 898, 903–904 (4th Cir. 1964).

The Commission finds:

The annual charge for the purpose of recompensing the United States for the use by the licensee of the U.S. John Hollis Bankhead Dam in the amount of $92,000 is reasonable and proper.

---

[1] The joint facilities of the John Hollis Bankhead project consist of the project land and the dam but do not include the locks.

The Commission orders:

(A) The license for Project No. 2165 is hereby amended, effective as of July 12, 1963, the date of commencement of commercial operation of Licensee's generating unit at the U.S. John Hollis Bankhead dam, by modifying subparagraph (iii) of Article 42 to read as follows:

(iii) The annual charge for the purpose of recompensing the United States for the use of the John Hollis Bankhead Dam shall be $92,000, which charge may be readjusted in the future pursuant to the provisions of Section 10(e) of the Federal Power Act.

(B) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. It shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

OPINION NO. 477

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NOS. RP61–19 AND RP62–7; NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. RP63–6

OPINION AND ORDER DETERMINING RATES

(Issued September 28, 1965)*

Syllabus

1. Commission is not bound by *Atlantic Seaboard* as evidenced by its readiness to make substantial adjustments from straight *Seaboard* rates where warranted, particularly where such adjustments have been necessary to meet competitive circumstances. PP. 981, 982.
2. Until alternative methods of rate design are devised to overcome *Seaboard* infirmities, Commission will continue to look to that formula as at least a starting point while continuing to search for better method. P. 982.
3. While Coal Interest may have standing to participate in proceedings on rate design, mere fact that a particular rate may result in loss of a market to them does not in itself make rate invalid. P. 983.
4. Although Commission has no authority to order rate increases, it is empowered to determine appropriate differentials in rates and authorize pipeline to balance its revenues. P. 984.
5. Commission *concludes* no finding can be made here that Midwestern's existing rates are unjust, unreasonable, unduly discriminatory or preferential. P. 984.
6. No revision in Natural's rate design will be made here for reason that evidence adduced does not support a change at this time. P. 984.
7. In a proceeding under Section 5(a) of the Natural Gas Act, Commission *allows* pipelines to continue existing rates and rate design.

George R. Perrine, Harry S. Littman, Jack Werner and *Melvin Richter* for Midwestern Gas Transmission Company.

Clarence H. Ross, Charles C. McDugald and *William W. Brackett* for Natural Gas Pipeline Company of America.

Charles V. Shannon, Louis Flax and *Paul S. Davis* for Michigan Wisconsin Pipe Line Company.

John J. Melaniphy and *J. J. Danaher* for City of Chicago.

---

*Rehearing denied by order issued November 16, 1965, 34 FPC 1327. Affirmed, *Fuels Research Council, Inc.* v. *F.P.C.*, 374 F. 2d 842 (CA7–1967).

Jerome J. McGrath, and *Thomas C. Williams* for Fuels Research Council, Inc., National Coal Association, United Mine Workers of America, Mid-West Coal Producers Institute, Inc., Upper Lake Docks Coal Bureau, Inc.

W. F. Spurrier for North Central Public Service Company.

Mark W. Putney for Iowa Power and Light Company.

A. R. Renquist for Northern States Power Company (Minnesota) and Northern States Power Company (Wisconsin).

Edward J. Hartman for Iowa-Illinois Gas and Electric Company.

Glen H. Bell for Wisconsin Southern Gas Company, Inc. and Wisconsin Fuel & Light Company.

Justin A. Stanley and *Robert A. Helman* for Northern Illinois Gas Company.

John F. Gaston for Iowa Electric Light and Power Company.

Robert S. Hunt and *James Van Vliet* for Illinois Power Company.

Joseph T. Morrow and *Edmund A. Schroer* for Northern Indiana Public Service Company.

Charles R. S. Anderson for Iowa Southern Utilities Company.

Barnabas F. Sears and *Hamilton K. Beebe* for Midwestern Coal Producers Institute.

Julius Meier and *Milton Grossman* for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

BAGGE, *Commissioner:*

These consolidated proceedings involve, at present, investigations by the Commission, pursuant to Section 5(a) of the Natural Gas Act, to determine whether the rates, charges and classifications of Midwestern Gas Transmission Company (Midwestern) for sales of natural gas from its systems are just and reasonable. Also under investigation herein are the rates of Natural Gas Pipeline Company of America (Natural) to determine whether its rate design is just and reasonable and not unduly discriminatory or preferential.

As initially constituted the proceedings included, in addition to the questions now before us, certain cost of service issues with respect to Midwestern. Determination of those issues was the subject of Opinion No. 444, 32 FPC 993, issued October 13, 1964. The matters there involved, except for remand of the question of the depreciation to be used as a deduction in computing the tax allowance,[1] were finally determined by an order issued December 30, 1964, 32 FPC 1548, approving a settlement proposal. As noted in Opinion No. 444, the examiner, in the interest of bringing the Midwestern cost of service issues to the Commission at the earliest possible date, did not prepare an initial decision on the rate design phase of the case. The rate design issue is presently before us by virtue of an order issued in these proceedings on April 21, 1965, 33 FPC 835, waiving an initial decision thereon and directing Chief Examiner Joseph Zwerdling to certify the record without an intermediate decision. Briefs addressed to the rate design issue have been filed by respondents, Midwestern and Natural, Peoples Gas Light and Coke Company (Peoples), Northern Illinois Gas Company (Northern Illinois), Northern Indiana Public Service Company (NIPSCO), Fuels Research Council, Inc., *et al.*[2] (Coal Interests), and the Commission's staff.

---

[1] Hearings on the reserved depreciation issue commenced on July 13, 1965, and were concluded on September 10, 1965.

[2] Fuels Research Council, Inc., National Coal Association, Mid-West Coal Producers Institute, Inc., Upper Lake Docks Coal Bureau, Inc. and United Mine Workers of America.

Background of Proceedings

The original Midwestern certificate applications were adjudged in a comparative hearing in the proceedings *American Louisiana Pipe Line Company, et al.*, Docket No. G–2306, *et al.* In Opinion No. 316 issued October 31, 1958, 20 FPC 575, the Commission concluded:

> * * * we look with favor on the construction of large capacity pipeline facilities for serving the growing needs of this [Midwest] area. Particularly desirable is a well-founded project to serve the seemingly endless requirements of the Chicago market for both industrial and space-heating gas. (20 FPC at p. 585)

Nevertheless, for reasons fully set forth in that decision (*e.g.*, failure to show an adequate firm gas supply and failure to show service to industrial markets in the Chicago area which met the standards of the public convenience and necessity), the Commission denied the applications and established a procedure for the prompt filing of new applications designated to meet the objections raised.

Subsequently, Midwestern and Tennessee Gas Transmission Company (Tennessee), its parent company, filed a new application under Sections 7(c) and 7(e) of the Act for authorization to supply gas to the Chicago-Gary area of northern Illinois and northern Indiana. The certificates were granted by Opinion No. 320, issued May 12, 1959, 21 FPC 653. Under the authorization Tennessee sells and delivers gas to Midwestern near Portland, Tennessee, and Midwestern transports gas via its Southern System to Joliet, Illinois, where it sells the gas to three major distributors, Peoples, Northern Illinois, and NIPSCO. Delivery at Joliet is made to Chicago District Pipeline Company, a Peoples subsidiary, which transports the gas for the account of the various distributors.[3]

In granting the certificate it was necessary that a rate structure be established for sales to the distribution companies. Midwestern proposed a two-part contract demand rate with a monthly demand component of $4.00 per Mcf and a commodity component of 22 cents per Mcf at 14.73 psia. Despite the fact that Midwestern's suggested commodity charge of 22 cents was less than the commodity component of Tennessee's rate to Midwestern of 22.16 cents per Mcf (at 14.73 psia), the certificate was issued at a two-part rate with a $3.85 demand component and a 22-cent commodity component. The rate schedule embodying this commodity charge was accepted "without making a determination of what would constitute proper rate levels." Instead, both because the rate could become discriminatory under changed load factors of the distributors and in order to allow for a period of actual operating experience, it was decided that Midwestern's rate should be reconsidered at a later date. The Commission ordered that "within one month after the end of the first year of operation of its proposed project, Midwestern shall file a new rate schedule which shall contain either a two-part or straight rate and shall be satisfactory to the Commission." (21 FPC at p. 664) The Commission also provided for the scheduling of a Section 5(a) hearing to determine the justness and reasonableness of the rate so filed.

On December 14, 1960, Midwestern filed a statement and supporting data in purported compliance with Opinion No. 320. On February 13, 1961, 25 FPC 275, the Commission ordered institution of a Section 5(a) proceeding in Docket No. RP61–19 to determine whether Midwestern's rates for its Southern System were just and reasonable.

In Opinion No. 331, issued October 31, 1959, 22 FPC 775, the Commission authorized construction and operation of Midwestern's Northern System bringing

[3] Midwestern's Southern System competes principally with Natural.

Canadian gas to Marshfield, Wisconsin, where it is purchased by Michigan Wisconsin Pipe Line Company, Midwestern's largest Northern System customer. Midwestern also sells gas to other buyers in northern Minnesota and Wisconsin. The basic rate for contract demand service was then $4.75 demand and 25.3 cents commodity at 14.73 psia. As with the earlier certification, that order required Midwestern to file revised rate schedules after one year's operation so that the Commission could determine the propriety of the relative levels of Midwestern's demand and commodity components, including an initially permitted 14.4 percent deviation to demand from the *Atlantic Seaboard*[4] cost classification and allocation formula in its two-part rates and also including a lateral line charge imposed for service under one of the schedules.

On December 29, 1961, Midwestern proposed retaining its original rate schedules and filed supporting cost data. On May 28, 1962, 27 FPC 1041, the Commission ordered a Section 5(a) investigation of Midwestern's Northern System rates in Docket No. RP62–7. The two Midwestern investigations subsequently were consolidated.

By Opinion No. 367, issued October 25, 1962, 28 FPC 731, the Commission approved a settlement proposed by Natural which set its basic contract demand rate at a monthly demand component of $2.40 per Mcf and a commodity component of 20.6 cents per Mcf at 14.65 psia. The major reason for setting the commodity component at this level was that Midwestern's commodity component was only 20.642 cents per Mcf to Northern Illinois and 20.829 cents per Mcf to NIPSCO (both were 22 cents per Mcf at 14.73 psia); therefore, a higher rate would give Midwestern a competitive advantage in making sales to the distributors.[5] The Commission noted that it would reopen the question of Natural's rate design pursuant to its powers under Section 5(a) when it reconsidered Midwestern's rate design and stated, "It may be that review will lead us to order an increase in Midwestern's commodity rates, and thus relieve Natural from some of the competitive pressure which justifies the rate design in this settlement." (28 FPC at p. 735).

On February 29, 1963, 29 FPC 399, the Commission, to effectuate the intent of Opinion No. 367, ordered the present Section 5(a) investigation against Natural in Docket No. RP63–6 and consolidated it with the Midwestern dockets.

The Parties and Their Relationships

The Northern and Southern Systems of Midwestern, which are not interconnected at any point, have been described previously. Natural also has two systems. The older system brings Hugoton-Panhandle gas from Kansas, Oklahoma and Texas to the Chicago area where it is delivered, through the Chicago District Pipeline, to Peoples, Northern Illinois and NIPSCO. The newer Natural system, formerly Peoples Gulf Coast Natural Gas Pipeline Company, picks up gas in the Gulf Coast area of Texas and transports it north to Chicago, where it connects with Natural's other system. Natural also serves customers elsewhere in Illinois, Kansas, Nebraska, Missouri, Iowa and Wiconsin. Natural has been owned by Peoples since 1948.

Neither Midwestern nor Natural makes any significant nonjurisdictional sales. Midwestern makes no direct sales, and Natural makes only minor sales, none

[4] *Atlantic Seaboard Corp., et al.*, Opinion No. 225, 11 FPC 43, 52–57 (1952).

[5] The 20.6-cent Natural commodity component is approximately equal to the Midwestern Southern System 22-cent commodity component at equivalent Btu heating values, billings and pressures. The Southern System of Midwestern has a 75 percent minimum bill. On the Northern System the bill on firm sales to Michigan Wisconsin was raised from 75 to 87.5 percent by the order issued in Docket No. RP64–8, 32 FPC 1087, concurrently with Opinion No. 444; otherwise, there is no minimum bill on the system. Natural has no minimum bill applicable to the commodity charge.

in the Chicago area. Peoples and Northern Illinois are Natural's two largest customers; NIPSCO is Natural's fourth largest customer.

Peoples sells gas only within the City of Chicago. Northern Illinois sells and distributes gas throughout northern Illinois, outside the City of Chicago. NIPSCO is a combination gas and electric utility operating only in northwestern Indiana. The Coal Interests are associations of coal producers, distributors and companies which transport coal. Among them are members who allegedly market coal in the area served by Natural and Midwestern.[6] Gas and coal compete vigorously in the Chicago area for the industrial market.

Position of Parties

Numerous interventions were granted in the consolidated proceedings. The only parties actively participating in the rate design phase, in addition to the pipelines themselves and staff, were the three distribution customers and the Coal Interests. Only the Coal Interests have proposed a change in the existing rate design of Midwestern and Natural. They advocate the establishment of a straight, one-part rate for each of Midwestern's systems. It is apparent from the record, however, that the Coal Interests' primary, if not sole, concern is with the 22-cent commodity charge for service from Midwestern's Southern System in the supply of gas to the Chicago market area. They stated that they had no recommendations to offer with regard to the appropriate form or level of rates for Natural.

(A) *Coal Interests*—The basic challenge of the Coal Interests goes to the legality of Midwestern's two-part rate.[7] They allege that the commodity component of the rate expressly has been designed to foster and promote the sales for resale of large quantities of interruptible gas for boiler fuel and other industrial uses.[8] They argue that the commodity component, rather than being based upon the cost of the gas, is predicated upon and is designed to be below the price of coal in order to supplant coal in the industrial markets. The Coal Interests contend further that under the Natural Gas Act, the Commission may not take the existence of competition with other fuels into consideration in fixing a pipeline's rates and that by designing rates pegged at or below the price of coal the "laws against unfair competition" have been violated in that the existing rates foster an unfair advantage in competitive markets. They conclude that the only form of rate which is based upon costs and independent

[6] Although requested to do so during the hearings, the Coal Interests declined to disclose information concerning sales by the members of their associations. There is only the unsupported assertion of a Coal witness that members "market coal in the areas served by Natural and Midwestern." For the purposes of these proceedings the allegation has been accepted.

[7] During the course of the proceedings the examiner excluded testimony and exhibits offered by the Coal Interests relating to such matters as the conservation and end use of natural gas and the effect of pipeline sales and rates on coal as a competing fuel. The examiner concluded that these matters were not proper factors for consideration in a Section 5 rate proceeding. An appeal from the ruling was rejected by Commission order issued September 16, 1963, 30 FPC 698, without our passing on the merits and without prejudice to renewal of the appeal, if warranted, in exceptions to the initial decision. With the waiver of the intermediate decision the procedural step of filing exceptions has been eliminated. Any necessity for renewed consideration of this matter has since been negated, however, by virtue of a filing made by the Coal Interests on May 25, 1965, wherein they waive their objections to the exclusionary ruling in this case. As the subject has thus been mooted, no final ruling will be made herein, and the record stands without the informally proffered evidence and related testimony.

[8] The claim that pipeline and distributor fixed costs are spread over more units of gas, thereby lowering the amount of fixed costs per Mcf which firm users must pay, is both disputed as a fact and, even if accepted, is held to constitute no justification for other than an equal charging of all costs to all consumers.

of the price of competitive fuels is a single-part rate representing the average cost of service per unit.

A witness for the Coal Interests testified that, in his opinion, the commodity component of the rates established in the Midwestern Southern System certificate case and in the last Natural rate case were artifically pegged to the price of coal in the Chicago area interruptible industrial market. He further testified that the trend in gas pricing is to shift more and more of the fixed costs to the small users so that the commodity rate can be depressed to underprice competitive fuels. Citing *Alabama-Tennessee*, Opinion No. 226, as precedent for ordering a one-part rate by the Commission,[9] the witness proposed that Midwestern be required to sell to the Southern System distributors on a one-part rate since "Midwestern sells under only one class of service and all its customers have similar load factors." Such a flat rate, calculated by dividing staff's computed revenue requirement by the estimated test year sales volume, aggregated 33.5 cents per Mcf. The witness stated that he would do the same for Midwestern's Northern System. As to Natural, he assumed that whatever rate is "good" for one company is "good" for the other.

Another witness for the Coal Interests testified that peak-season capacity can be increased with a substantially lower investment in underground storage than it can by increasing pipeline flow capacity. Disagreeing with the the distributors, the witness contended that a one-part rate would not discourage the development and use of underground storage. With the gas valued at its actual cost, he claimed, marginal dump sales of gas would be discouraged and its retention encouraged for the more remunerative sales to firm gas consumers.

Additional evidence submitted by the Coal Interests concerned the generally increasing quantities of gas (about 41 million Mcf annually) sold by the distributors on the interruptible electric utility boiler fuel market. The non-utility industrial interruptible sales by Peoples and NIPSCO (Northern Illinois makes none) were shown as having increased substantially in recent years to a total in excess of 43 million Mcf in 1961, the last year for which figures were available. The Coal Interests also pointed out that the interruptible boiler fuel sales by the distributors, while substantial in absolute quantities, account for only a small percentage of their total gross revenue and that the revenue contributions from these sales have not kept pace over the years with the unit revenues derived from firm sales.

(B) *Staff*—(1) *On Midwestern*—Staff argues that the conventional contract-demand form of rate is appropriate for Midwestern and that the existing commodity level should be retained.[10] They noted that, whereas the commodity rate on sales by Tennessee to Midwestern was in excess of 22 cents at the time the Southern System was certificated, as of March, 1963, Midwestern's purchases had a commodity cost of 21.08 cents.[11] Staff submitted evidence that (1) while the combined peak space-heating load of the distributors had tripled in the years from 1955–56 to 1960–61 and the annual space-heating load had increased 2½

---

[9] 11 FPC 75, affirmed, *Alabama-Tennessee Natural Gas Co. v. F.P.C.*, 203 F. 2d 494 (CA3–1953). As pointed out by Midwestern, a straight volumetric allocation was adopted for Alabama-Tennessee Natural Gas Co. because of a wide differential between system capacity and peak demand. Even so, the rate lasted only slightly over one year, May 1, 1952 to June 25, 1953. It was replaced with a two-part rate by Opinion No. 254, 12 FPC 161. See also conversion from one-part to two-part rate, over objection of Coal Interests, in *Michigan Wisconsin Pipe Line Co.*, Docket No. G–17512, 22 FPC 603.

[10] The Public Service Commission of Wisconsin stated by letter that it supported staff's position on rates.

[11] This has now been reduced to below 21 cents per Mcf (*infra*, p. 983).

times, the annual space-heating load factor was only 22 percent; (2) the combined interruptible sales of the distributors in 1961 were only 10 percent over 1955 sales; (3) Peoples makes no utility boiler fuel sales, Northern's are declining and only NIPSCO had greater interruptible sales in 1961 than in 1955; (4) the distributors had increased their storage capacity by 300 percent in the six years. Based on the foregoing, staff concluded that the industrial valley-filling sales are important to the distributors and that, since their sales growth had not been great under the 22-cent rate, it is not advisable to disturb that rate at present.

Staff's argument is primarily a reply to the Coal Interests' contentions. They disputed the Coal Interests' claim that a two-part wholesale rate, which allows the distributors to employ an incremental pricing approach to the making of industrial sales, is a practice contrary to the policy of the antitrust laws. As Staff stated, if the Commission has valid reasons for employing the demand and commodity form unrelated to the status of gas in the competitive struggle with other fuels, we are not obligated to desist merely because use of the form has the effect of lowering the distributors' incremental costs. Staff noted that the usual differences in service conditions between firm and interruptible customers negate any valid contention of discrimination. They also noted that a necessary element of an antitrust violation—that the price discrimination must be calculated to have a deleterious effect on competition and must be for the predatory purpose of driving competitors out of business—is missing in the industrial gas sales since, as the evidence shows, the distributors have a fully independent purpose for such sales, namely valley-filling and improving their system load factors. Moreover, in actual result over the years, the existing commodity rate has occasioned only a moderate increase in industrial sales, and there are still many markets in which coal underbids gas in the distributors' service areas.

On the lateral line issue staff recommends that we direct the elimination of the 25-cent per Mcf added charge imposed in the demand component of the CRL–2 rate schedule on sales from the Northern System as compensation to Midwestern for the cost of constructing laterals to furnish city-gate service to small customers.[12] While admitting that the $94,719 cost of service for the laterals exceeds the revenues received from the added demand charge, they base their argument on the grounds that, as a matter of principle, they oppose segregating jurisdictional pipeline facilities and that it would simplify the rate structure.

(2) *On Natural*—By letter dated April 11, 1963, addressed to all parties, staff advised that they would not advocate any change in Natural's existing rate design and would offer no evidence in these proceedings on that company.

(C) *Midwestern*—Midwestern opposed the Coal Interests' recommendation of a one-part 33.5-cent rate on the grounds that (1) it would price a large part of Midwestern's gas out of the market because the distributors now sell to industrials at less than 33.5 cents; (2) if the distributors are priced out of the interruptible market, Midwestern's load factor will decline from its present 88 percent, resulting in lower revenues and possibly a need for a rate increase which would cause further sales losses and trigger a still further rate increase, etc.; (3) its valley gas sales are obviously important to the distributors.

Midwestern contends that by its actual operations it has shown that its existing rates and rate structure are not unjust or unreasonable as applied to its customers and that, therefore, there is no valid basis for change. Midwestern's arguments in reply to the Coal Interests are that some fixed costs are recovered

[12] This issue was reserved in the certification decision. 22 FPC at p. 786, 802.

under the commodity charge, that pipeline capacity for off-peak sales is available free of fixed costs, and that a competing fuel interest is not a "person" who must be protected under the Act.

(D) *Natural*—No rate design evidence was adduced by Natural. It noted that its present 20.6-cent commodity charge makes a substantial contribution toward the fixed costs on its system. In most respects its argument duplicates the opposition by the other parties on the position of the Coal Interests. Natural concluded that the Coal Interests' proposal for rate regulation "does not have support in reason, economic theory, Commission policy or ruling law."

(E) *Distributors' Position*—The positions taken and the evidence adduced by the distribution companies can be summarized briefly. NIPSCO showed that a one-part 33.5-cent rate would have resulted in losses of at least 34,344,486 Mcf of interruptible sales in 1962. The sales returned gross revenues of $9.6 million and a net of $2 million;[13] of this amount 9,433,100 Mcf was sold to Commonwealth Edison Company at 23.6 cents for a profit of $142,054.36 (1.51 cents per Mcf). The volume of NIPSCO's interruptible sales for 1963 were estimated to be just short of 40 million Mcf. Its space-heating load, which has a load factor of only 25 percent, is growing at the rate of 20,000 new customers annually, creating an ever-increasing valley during the non-heating season. NIPSCO also showed that its present load factors of 94 percent and 94.5 percent from Midwestern and Natural, respectively, for firm purchases would be reduced to 77.5 percent and 53.7 percent, respectively,[14] under the straight rate proposal.

Northern Illinois and Peoples contended that an increase in the commodity rate can only result in decreasing their storage activities which are of benefit to all their customers, firm and interruptible. Peoples pointed out that its underground storage capacity has increased from zero in 1952 to 30 percent of peak-day contract amounts in 1962 due to the increase in space-heating customers and that its valley gas sales, both in absolute quantity and as a percentage of total sales, decreased in the 10-year period, the latter from 43 percent to 24 percent, under the existing rates of its suppliers. Peoples argues that any increase in the Midwestern and Natural commodity charges can only further injure the competitive position of gas in the Chicago market.

The distributors' main argument for retention of the existing commodity charges is that the local regulatory commissions use "incremental cost" (commodity component plus local transportation costs plus state and local taxes) as the bottom level for their off-peak sales so that with the present close competitive balance between gas and coal, any increase in the commodity rate will drive them out of this market. Despite the small unit revenues from such sales, they are not, they show, a losing proposition and are important in maintaining their load factors. Further, they argue that the present rate structures have induced them to develop and increase their underground storage activities—notably the Herscher project. This incentive, they claim, would be diminished in proportion to a leveling between demand and commodity and would be absolutely eliminated with the adoption of a one-part rate. They contend that prevention of their interruptible sales would not help any class of gas consumers and, to the degree that these sales absorb some fixed costs, would harm every class. They also argue that, to the extent that a rate design changes would occasion sales losses, the need to secure the same revenues would be met by increased charges imposed on a smaller number of customers.

---

[13] Gross revenues less cost of gas purchased, transportation costs and Indiana Gross Tax.

[14] By contract NIPSCO must maintain a 75 percent load factor with Midwestern.

Current Rate Structures[15]

Midwestern—Most, if not all, of the rates referred to in the record, both as then existing and as proposed by staff on the basis of their recommended cost of service, have been rendered obsolete by the changes in the cost of service and rates ordered by Opinion No. 444 and the December 30, 1964, settlement. In that Opinion we adopted the examiner's conclusion to reflect the entire rate reduction stemming from the excess revenues ($2,979,065 as finally determined) in the demand charge, retaining the existing commodity charges on both the Southern and Northern Systems pending determination of the rate design issue.[16] The effective basic rate (since January 1, 1965) for contract demand service, as approved in the settlement and subsequently adjusted, is: for the Southern System, $3.03 demand and 22 cents commodity; for the Northern System, $3.94 demand and 24.92 cents commodity.

Natural—Since the settlement approved October 25, 1962, in Opinion No. 367, *supra*, the demand component of Natural's rates has been lowered to reflect the Federal income tax changes. The present basic rate is $2.28 demand, 20.6 cents commodity. The liberalized depreciation issue reserved therein was the subject of Opinion No. 456 issued March 18, 1965, 33 FPC 574, and was before the Commission until recently on its reconsideration of that Opinion. By Opinion No. 456–A issued June 23, 1965, 33 FPC 1277, we required new rate filings within a stated period after our decision in *Alabama-Tennessee*, Opinion No. 417, 31 FPC 208, becomes final. Whatever rate reductions may be effected as a result of that decision have not yet been determined. Recently, by order issued April 2, 1965,[17] a new Section 5(a) investigation was initiated against Natural which also may result in a rate reduction.

Conclusions by Commission on Rate Design

Since the rate design to be established as a result of these Section 5(a) proceedings will have application prospectively only, it has been necessary to adjust the cost of service contained in the exhibit material and in the appendices to Opinion No. 444 to reflect properly the Commission's decision on the Midwestern cost of service issues and the settlement adjustments effected since that time. The revised cost of service is shown in Appendix A hereto. A revised cost of service for Natural in Docket No. RP61–8, adjusted to reflect the recent Federal income tax reductions, is also included as Appendix D. As can be seen, the total costs for each company have been subclassified (Appendices B and E) to demand and commodity in accordance with the *Atlantic Seaboard* formula. We recognize fully the infirmities in the formula and, as indicated by us on a number of recent occasions, we do not consider ourselves bound thereto, as evidenced by our

[15] While not a part of the formal record, these are matters of which we may take administrative notice.

[16] Ordering paragraph (F) of the Opinion reserved the question of whether Midwestern should be required to file substitute tariff sheets as of January 1, 1965, reflecting the reduction in the Federal income tax rate to 48 percent on that date. The reduction and the new rate filings were agreed to in the settlement, and the appropriate filings were made and have gone into effect. For the Northern System the reduction arising from the lowered Federal income tax rate was apportioned by Commission order 50 percent to demand and 50 percent to commodity. The Southern System reduction was carried through completely in demand. The current rates also reflect a lessening in Southern System purchased gas costs stemming from recent rate reductions by Tennessee Gas Transmission Company, which was also required by the settlement.

[17] "Order Instituting Investigation and Requiring Reporting of Cost and Revenue Data." *Natural Gas Pipeline Company of America*, Docket No. RP65–50, 33 FPC 666. Further orders in the proceeding were issued on April 30, June 3 and July 19, 1965, 33 FPC 929, 1204 and 34 FPC 72.

readiness to make substantial adjustments from straight *Seaboard* rates where warranted. This is particularly so where such adjustments have been necessary to meet competitive circumstances. See *American Louisiana Pipe Line Co.*, Opinion No. 387, 29 FPC 932; *United Gas Pipe Line Co.*, Opinion No. 428, 31 FPC 1180; *United Fuel Gas Co., et al.*, Opinion No. 430, 31 FPC 1342. We have also stated, however, that until alternative methods of rate design are devised to overcome the *Seaboard* infirmities, we will continue to look to the formula as at least a starting point "while we continue to search for a better method." [18] Appendix B shows Midwestern's basic demand-commodity rates compared to the cost of service approved in the December 1964 settlement order. As set out above the current rate for the Northern System, taking into account the decrease stemming from the reduction in the Federal tax rate to 48 percent, is $3.94 demand and 24.92 cents commodity; [19] the deviation to demand from straight *Atlantic Seaboard* costing is only five percent. For the Southern System the approved effective rate is $3.03 demand and 22 cents commodity; [20] the deviation to demand in this instance amounts to 13 percent. The rates on Midwestern's Northern and Southern Systems, the billing determinants and the revenues derived therefrom are in Appendix C.

Comparable cost and rate calculations for Natural are shown in Appendices D and E. The 1962 settlement rates resulted in 27 percent more costs being recovered by the demand charge than would have been the case under *Seaboard*. This is now down to 25 percent due to reductions in the demand component totaling 12 cents per Mcf to reflect the Federal tax reductions.

It appears that, except for the minor issue of the lateral line charge, the entire conflict on rate design relates to the efforts by the Coal Interests to secure an increase in Midwestern's commodity component in order to displace natural gas on interruptible utility and industrial boiler fuel sales by the three distributors in the Chicago area. The Coal Interests contend that the Commission should limit its activities under Section 5(a) "by determining a just and reasonable rate base, arriving at an average price and leaving the regulation of prices beyond the city gate where it belongs, in the local commissions." While the distributors' rates are regulated by the Illinois and Indiana Commissions, the commodity charges of Midwestern and Natural are the responsibility of this Commission. They are important for the reason that the State commissions apply a floor on industrial resale rates at the commodity cost of the gas plus incremental (local out-of-pocket) charges incurred in making deliveries. Thus, an increase ordered in Midwestern's and Natural's commodity components could be expected to be ultimately reflected in increases ordered by the State commissions in the distributors' rates.

Both Midwestern and its customers are satisfied with its current rate structure. The staff finds that the rates are just and reasonable and in the public interest. A competitive balance exists in the Chicago industrial markets between Coal and Natural Gas. Much of the credit for this balance is attributable to the Coal Interests success within recent years in reducing its costs by innovations in production and transportation methods; however, the record shows that coal may be approaching the point where further cost reduction is not possible. If it is to increase its share of the market, it must force an upward revision of the price of gas. The price balance is indeed precarious, particularly as to utility

---

[18] *United Fuel Gas Co., et al.*, Opinion No. 430, 31 FPC 1342, 1348, modified on rehearing, Opinion No. 430–A, 32 FPC 1106.

[19] Filed February 19, 1965, accepted March 12, 1965, to be effective January 1, 1965.

[20] Filed January 22, 1965, accepted March 3, 1965, to be effective Jnauary 1, 1965.

boiler fuel. These gas sales can be diverted almost wholly to coal with the slightest increase in the gas commodity component.

In the *United Fuel* decision, *supra*, we indicated our readiness to receive and review alternative methods of rate design to both overcome the *Seaboard* infirmaties and to give recognition to known industry changes. The Coal Interests' argument in these proceedings for the imposition of a one-part rate (which is, after all, the maximum possible increase in the commodity charge) does not eliminate infirmaties. It creates them. Whatever justification existed for the Commission's allowance of an option to file a straight rate at the time of certification of Midwestern's Southern System has been eliminated by the changed load factors of the distributors. It seems likely that had Midwestern initially elected a one-part rate, ample justification would now exist for ordering a conversion to two-part rates closely approximating, if indeed not equal to, those currently charged.

Insofar as the Coal Interests' claim of "undue disadvantage" from the low commodity rate in violation of Section 4(b) is concerned, staff maintained that sellers of competing fuels are not within the class of "persons" protected by that Section. Since that time the position of the Coal Interests in proceedings of this nature has been thoroughly considered by us. Our conclusions are set forth in *United Fuel*, Opinion No. 430, 31 FPC at pp. 1356–57, that while the Coal interests may have standing to participate in proceedings on rate design, the mere fact that a particular rate may result in the loss of a market to them does not in itself make the rate invalid. Those findings are decisive in this case. The Coal Interests' attempt to distinguish the decision in *F.P.C.* v. *Hope Natural Gas Co.*, 320 U.S. 591, and *Alston Coal Co.* v. *F.P.C.*, 137 F. 2d 740, as "rate base" cases is without merit.

At the present time Tennessee's commodity charge to Midwestern at Portland is 20.84 cents per Mcf at 15.025 psia [21] or 20.43 cents at 14.73 psia. With incremental costs to Midwestern of about 0.2 to 0.4 cent per Mcf, there is approximately one cent per Mcf going toward fixed costs on the Southern System from the commodity charge. Even though this contribution is small it does represent the absorption of that much fixed system costs which would otherwise be borne by firm sales. Nevertheless, if this were the only consideration, we would have serious doubts as to its adequacy. It is not determinative herein for at least two reasons. First, it represents a significant improvement over the situation prevailing at the time of certification of the Southern System when the commodity charge to Midwestern actually exceeded the commodity resale rate. Second, the sales by Midwestern should be viewed within the framework of economic reality. Midwestern is a subsidiary of Tennessee. As such its sales also serve to contribute to the coverage of fixed costs of its parent in supplying the gas for the Southern System. Since Tennessee's own rates are established on almost a straight *Atlantic Seaboard* costs classification,[22] the difference between the price which Tennessee pays for gas in the field, approximately 18.7 cents per Mcf as shown in the record, and the 22-cent Midwestern commodity charge together constitute a substantial contribution to fixed pipeline costs of both companies. To this extent, any loss in sales to the distributors brought on by an increase in the Midwestern commodity charge could result in increased charges to firm consumers not only in the Chicago area but also downstream as well.

---

[21] Tennessee Gas Transmission Co., FPC Gas Tariff, Eighth Revised Volume No. 1, Eighth Revised Sheet No. 8, effective January 1, 1965.

[22] *Tennessee Gas Transmission Company*, 27 FPC 202, 207 (1962).

The distributors, notably Peoples, go to great lengths in attempting to establish the claim that, under the Section 5(a) provision prohibiting the ordering of a rate increase, the commodity charges of Midwestern and Natural cannot be increased in these proceedings. This is the same argument made in the *United* rate case, Docket No. RP63–1, and rejected in Opinion No. 428, 31 FPC at p. 1201. As there stated, while we have no authority to order rate increases, we are empowered to determine appropriate differentials in rates and to authorize the pipeline company "to balance its revenues," citing *Interstate Power Co.* v. *F.P.C.*, 236 F. 2d 372 (CA8), cert. denied 352 U.S. 967.

Midwestern and Michigan Wisconsin Pipe Line Company, the largest customer on the Northern System, oppose staff's suggestion for elimination of the lateral line charge in the CRL–2 schedule. No customer paying the charge has complained in these proceedings. With the cost of service related to the laterals exceeding the revenues received from the additional charge, Midwestern's other customers are already contributing to the cost of lateral line service to the CRL–2 customers. Elimination of the charge would shift $79,000 in costs to other Northern System customers, of which $76,000 would be borne by Michigan Wisconsin. Recently, in Opinion No. 471,[22] we had occasion to consider the lateral line policy of Michigan Wisconsin. We there concluded that a rulemaking proceeding was necessary in regard to the lateral line policies of all natural-gas pipeline companies and stated our intent to initiate such a proceeding. Since that proceeding is pending, we believe that no action should be taken at this time to require modification or elimination of the charge from Midwestern's tariff.

After due consideration of the evidence in these proceedings it is our opinion that a finding cannot be made that the existing rates of Midwestern are unjust, unreasonable, unduly discriminatory or preferential; however, this finding should not be construed as a long-term approval of the rates or rate structure. The contribution toward Midwestern's fixed charges from the commodity component is barely more than marginal and is far from completely satisfactory. We expect that in the future Midwestern will be able to reflect reductions in costs or increased revenues in improved contributions of its commodity charge to the operation of the Southern System. With this in mind, we shall continue to review the changes in Midwestern's costs and revenues reported to us.

As to Natural, no revision in its rate design will be made herein for the reason that the evidence adduced does not support a change at this time. Natural's commodity charge returns a substantial amount, aproximately 6 cents per Mcf, toward the coverage of fixed costs. The issue of its commodity rate involved in Opinion No. 367, 28 FPC 731, related solely to the large deviation from *Seaboard* levels required to maintain a competitive balance with Midwestern if the latter was not to be in a position to destroy Natural's industrial market to the detriment of its other customers. We consolidated the Natural docket into this proceeding so that its commodity rate could be reconsidered in the event that Midwestern's was lower. Since we are not changing Midwestern's commodity rate and continue to adhere to our previous determination that the commodity rates of the two competing pipelines should, if possible, be kept in competitive balance, we shall confirm Natural's existing rates subject to the proceedings recently instituted in Docket No. RP65–50.

---

[22] *Michigan Wisconsin Pipe Line Company*, Docket No. RP60–9, issued August 30, 1965, 34 FPC 621.

The Commission further finds:

(1) Midwestern and Natural are "natural-gas companies" under the Natural Gas Act, and their sales in interstate commerce of natural gas for resale involved in these proceedings are subject to the jurisdiction of the Commission.

(2) Midwestern's just and reasonable rates in Docket Nos. RP61–19 and RP62–7 from and after the date of this Opinion and Order, subject to the adjustment set forth in paragraph (A) below and until changed by further order of the Commission, are as follows:

Rate schedule	Demand charge	Commodity charge
		Cents
Northern system:		
CD-2	$3.94	24.92
CR-2	3.94	24.92
CRL-2	4.19	24.92
SR-2		57.30
I-2		24.92
Southern system:		
CDX-1	3.03	22.00
CD-1	3.03	22.00
SR-1		46.90
SI-1		26.98

(3) Natural's just and reasonable rates in Docket No. RP63–6 from and after the date of this Opinion and Order, subject to the adjustment set forth in paragraph (B) below and until changed by further order of the Commission, are as follows:

Rate schedule	Demand charge	Commodity charge
		Cents
CD-1	$2.28	20.60
CD-2	2.20	20.60
G-1		35.59
G-2		35.07
PL-1	2.28	20.60
I-1		20.60
I-2		25.0

The Commission orders:

(A) Subject to the requirements of the order accompanying Opinion No. 444 and the Order Approving Proposed Settlement issued December 30, 1964, the proceedings in Docket Nos. RP61–19 and RP62–7 are hereby terminated, *provided*, however, that the depreciation issue remanded to the examiner for hearing by ordering paragraph (D) of Opinion No. 444 shall not be terminated but shall proceed to decision in accordance with the order issued in said proceedings on April 21, 1965. The rates herein fixed are subject to change upon further order of the Commission to reflect the Commission's final disposition of this issue.

(B) Subject to the requirements of the orders accompanying Opinion Nos. 367, 456 and 456–A, the proceedings in Docket No. RP63–6 are hereby terminated. The rates herein fixed are subject to change upon further order of the Commission in any proceeding hereafter instituted or now pending against Natural, including but not limited to the proceedings in Docket No. RP65–50.

(C) All rulings by the Presiding Examiner in these proceedings, except as otherwise determined by the Commission, are hereby approved.

APPENDIX A

MIDWESTERN GAS TRANSMISSION CO.

COST OF SERVICE AND CLASSIFICATION OF COSTS—RATES EFFECTIVE JAN. 1, 1965

	Total [1]	Cost classification [2]	
		Fixed	Variable
Northern system:			
Operating expenses:			
Other gas supply expenses	$16,540,047	$5,106,000	$11,434,047
Transmission expenses	761,964	580,831	181,133
Administrative and general expenses	562,071	562,071	
Total operating expenses	17,864,082	6,248,902	11,615,180
Depreciation	1,515,759	1,515,759	
Amortization	21,898	21,898	
Federal income tax	1,202,764	1,202,764	
State income tax	106,093	106,093	
Other taxes	923,936	923,936	
Other gas revenues (credit)	(6,600)	(6,600)	
Return at 6.5 percent	2,773,381	2,773,381	
Subtotal Northern system	24,401,313	12,786,133	11,615,180
Southern system:			
Operating expenses:			
Other gas supply expenses	35,326,448	8,859,767	26,466,681
Transmission expenses	892,908	618,122	274,786
Administrative and general expenses	615,822	615,822	
Total operating expenses	36,835,178	10,093,711	26,741,467
Depreciation	1,526,295	1,526,295	
Amortization	22,101	22,101	
Federal income tax	1,094,919	1,094,919	
State income tax	20,649	20,649	
Other taxes	389,457	389,457	
Other gas revenues (credit)	(4,338)	(4,338)	
Return at 6.5 percent	2,699,649	2,699,649	
Subtotal Southern system	42,583,910	15,842,443	26,741,467
Total cost of service	66,985,223	28,628,576	38,356,647

[1] Settlement costs reflected by rates filed in compliance with Commission order of Dec. 30, 1964.
[2] Any cost which would have been classified 100 percent to commodity under *Seaboard* has been considered "variable." All other costs are classified as "fixed."

APPENDIX B

MIDWESTERN GAS TRANSMISSION CO.

FROM ATLANTIC SEABOARD FORMULA CALCULATION OF RATE DEVIATION

	Total	Classified cost of service [1]	
		Demand	Commodity
Northern system: Settlement cost of service	$24,401,313	$8,894,002	$15,507,311

SETTLEMENT

	Rates [2]	Billing units
Demand	$3.94	2,339,782
Commodity	24.92 cents	60,527,841

$$\text{Deviation to demand} = \frac{\$24,401,313 - (24.92¢ \times 60,527,841)}{\$8,894,002} = 1.048 \text{ or } 5\% \text{ deviation}$$

	Total	Classified cost of service [1]	
		Demand	Commodity
Southern system: Settlement cost of service	$42,583,910	$12,885,912	$29,697,998

SETTLEMENT

	Rates [2]	Billing uni
Demand	$3.03	4,800,000
Commodity	22.0 cents	127,552,500

$$\text{Deviation to demand} = \frac{\$42,583,910 - (22.0¢ \times 127,552,500)}{\$12,885,912} = 1.127 \text{ or } 13\% \text{ deviation}$$

[1] Costs classified in accordance with *Atlantic Seaboard* decision.
[2] Rates effective Jan. 1, 1965.

APPENDIX C

MIDWESTERN GAS TRANSMISSION CO.

RATES EFFECTIVE JAN. 1, 1965 AND REVENUES RESULTING THEREFROM

Rate schedules	Billing determinants		Rates		Revenues	Cost of service
	Demand	Commodity	Demand	Commodity		
Northern system:				*Cents*		
SR-2	20,364	247,767		[1] 57.30	$141,970	
CR-2	51,058	750,470	$3.94	24.92	388,186	
CD-2	1,896,000	53,443,500	3.94	24.92	20,788,360	
I-2		290,856		24.92	72,481	
CRL-2	372,360	5,795,248	4.19	24.92	3,004,364	
Total Northern system	2,339,782	60,527,841			24,395,361	$24,401,313
Southern system:						
CDX-1	3,600,000	95,569,500	3.03	22.0	31,933,290	
CD-1	1,200,000	31,983,000	3.03	22.0	10,672,260	
SR-1 [4]				[2] 46.90		
SI-1 [4]				[3] 26.98		
Total Southern system	4,800,000	127,552,500			42,605,550	42,583,910
Total					67,000,911	66,985,223

[1] Reflects CD-2 rate level at 40 percent load factor.
[2] Reflects CDX-1 and CD-1 rate level at 40 percent load factor.
[3] Reflects CDX-1 and CD-1 rate level at 200 percent load factor.
[4] No sales were made during the test year under these rate schedules. Rates are designed therefor, since sales are now being made. By letter dated June 28, 1963, the Commission accepted SR-1 for filing as an initial rate schedule, but conditioned acceptance to require Midwestern to revise rate to level of CD-1 rate in these proceedings at 40 percent load factor.

APPENDIX D

NATURAL GAS PIPELINE CO. OF AMERICA

COST OF SERVICE AND CLASSIFICATION OF COSTS—RATES EFFECTIVE JAN. 1, 1965

Costs per Opinion No. 367	Total	Cost classification [1]	
		Fixed	Variable
Operating expenses	$14,977,102	$7,422,705	$7,534,397
Other gas supply:			
Purchased gas	59,053,747		59,053,747
Purchased gas expenses	172,832		172,832
Gas used in utility operations (credit)	(3,001,297)		(3,001,297)
Administration and general expense	6,330,940	5,388,263	942,677
Customer accounts and sales	101,291	86,209	15,082
Exploration and development	18,097		18,097
Total operating expenses	77,652,712	12,917,177	64,735,535
Depreciation and depletion	17,115,707	16,061,641	1,054,066

FLORIDA POWER & LIGHT COMPANY, DOCKET NO. E-7210

ORDER AUTHORIZING INTERVENTION ON A LIMITED BASIS AND OUT OF TIME

(Issued September 29, 1965)

Pursuant to authority granted herein, the City of Clewiston, Florida (Clewiston), may participate hereafter as an intervenor in the above-entitled proceeding on condition that the City accepts this proceeding and record as presently constituted. By order issued February 26, 1965, 33 FPC 328, the Commission instituted this hearing on its own motion to determine the "public utility" status of Florida Power & Light Company (FP&L) as defined in Section 201 of the Federal Power Act. Hearing sessions convened initially April 12, 1965. They are currently in progress before a trial examiner of the Commission.

Asserted facts and interests set forth in Clewiston's petition to intervene, filed September 7, 1965 (out of time),[1] bear upon the regulatory jurisdictional questions raised by the Commission's February 26, 1965 order. Clewiston alleges FP&L to be a public utility within the meaning of the Federal Power Act; charges the Company with violations of the Act and the Commission's Regulations thereunder; and states that the Commission's determination of the jurisdictional questions in the above-entitled proceeding alternatively, may foreclose or constitute jurisdictional prerequisites to certain substantive regulatory relief which the City seeks in a related docket from FP&L as a public utility.

Concurrently, with its petition to intervene in this proceeding, Clewiston on September 7, 1965, filed an "Application For Interconnection and Complaint Against Unlawful Actions", *City of Clewiston, Florida* v. *Florida Power & Light Company*, Docket No. E-7243. Clewiston seeks, among other things, a direct interconnection and wholesale electric service from FP&L. That docketed matter is, of course, not here before the Commission.

The Company opposes Clewiston's petition to intervene through answer filed September 20, 1965.

In view of the foregoing circumstances, we are persuaded that Clewiston has an interest in the outcome of this proceeding. We are also mindful that the cross-examination phase of the hearing herein is scheduled to commence on October 4, 1965, and that both FP&L and the staff have filed prepared testimony and trial briefs on dates agreed upon at the prehearing conference held April 12, 1965. Accordingly, we shall permit Clewiston intervention on a limited basis to the extent of affording City an opportunity for an opening statement of position, cross-examination of witnesses, presentation of argument and such other participation as the Presiding Examiner or the Commission may authorize.

The Commission finds:

(1) Good cause exists for acceptance of the petition for leave to intervene filed by Clewiston on September 7, 1965, in the above-entitled proceeding subject to limited participation, as hereinafter provided.

(2) Participation of Clewiston in the above-entitled proceeding may be in the public interest. It is necessary and appropriate for the purposes of the Federal Power Act and the Commission's Rules and Regulations thereunder,

[1] The Commission's February 26, 1965 Order Initiating Investigation and Hearing directed that notices and petitions for intervention be filed with the Commission on or before March 23, 1965.

particularly Section 1.8 of the Rules of Practice and Procedure, to order as hereinafter provided.

The Commission orders:

(A) Clewiston is hereby permitted to intervene in the above-entitled proceeding subject to the rules and regulations of the Commission: *Provided, however,* that the participation of such intervenor shall be limited to matters affecting asserted rights and interests as specifically set forth in its petition for leave to intervene and to the record in this proceeding as it now stands: *Provided, further,* that the participation of such intervenor shall be limited to affording City an opportunity for an opening statement of position, cross-examination of witnesses, presentation of argument and such other participation as the Presiding Examiner or Commission may authorize; and *Provided, further,* that the admission of such intervenor shall not be construed as recognition by the Commission that such intervenor might be aggrieved by any order or orders of the Commission issued in this proceeding.

(B) Nothing contained herein shall be construed as justification for delay in the commencement or conduct of the hearing.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

ANNUAL REPORT FORMS PRESCRIBED FOR CLASSES A AND B ELECTRIC UTILITIES, LICENSEES AND OTHERS AND FOR CLASSES A AND B NATURAL GAS COMPANIES, DOCKET NO. R-285

ORDER NO. 305

ELIMINATING THE OPTIONAL 30-DAY EXTENSION OF TIME FOR FILING CERTAIN SCHEDULES IN ANNUAL REPORT FORMS NOS. 1 AND 2

(Issued September 29, 1965)*

Section 141.1 of the Regulations under the Federal Power Act and section 260.1 of the Regulations under the Natural Gas Act presently provide that with the exception of certain designated schedules, the filing of the complete report may be postponed for 30 days beyond the established filing date (the last day of the third month after the close of the calendar year or other established fiscal year) without further authorization from the Commission. This order eliminates this optional 30-day extension of the time for filing the complete Annual Reports of Classes A and B electric utilities, licensees, and others and natural gas companies as provided in §§ 141.1(b) (1), (c) (1) and 260.1, respectively, of the Commission's Regulations.

The elimination of this optional period will make Commission analyses of company earnings and other studies more nearly current, and will expedite the compilation of industry-wide statistics for the information of the public and the industry.

Seventy-one percent of the 270 reporting Classes A and B companies filed their complete annual reports for the 1964 report year before the beginning of the optional period. In view of the recent advances in the art of keeping records through the use of electronic techniques, there appears to be no reason why the other 29 percent cannot do likewise without undue hardship. Furthermore,

---

*Published in the Federal Register on October 6, 1965 (30 F.R. 12727).

§ 1.13 of the Rules of Practice and Procedure, which provides that extensions of time may be granted for cause, still remains in effect.

The Commission finds:

(1) The amendments herein adopted are necessary and appropriate for the administration of the Federal Power Act and the Natural Gas Act.

(2) Notice of rulemaking is not required herein by section 4 of the Administrative Procedure Act, because the change makes an amendment to a rule of agency procedure.

The Commission, acting pursuant to the provisions of the Federal Power Act, as amended, particularly sections 304, 309 and 311 thereof (49 Stat. 855, 858, 859, 16 U.S.C. 825c, 825h, 825j) and the Natural Gas Act, as amended, particularly sections 10 and 16 thereof (52 Stat. 826, 830, 15 U.S.C. 717i, 717o), *orders:*

(A) Part 141, Subchapter D, and Part 260, Subchapter G, Chapter I, Title 18 of the Code of Federal Regulations, are amended as follows:

(1) Paragraphs (b)(1) and (c)(1) of § 141.1 are amended by deleting the proviso in the first sentence of each so that the paragraphs read as follows:

§ 141.1 Form No. 1, Annual report for electric utilities, licensees and others (Class A and Class B).

* * * * * * *

(b)(1) Each Class A electric utility, licensee, and other, *i.e.*, each corporation, person, or licensee as defined in section 3 of the Federal Power Act, including any agency, authority or other legal entity or instrumentality and any agency, authority or instrumentality of the United States engaged in generation, transmission, distribution, or sale of electric energy, however produced, throughout the United States and its possessions, having annual electric operating revenues of $2,500,000 or more, whether or not the jurisdiction of the Commission is otherwise involved, shall prepare and file with the Commission for the year beginning January 1, 1961, or subsequently during the calendar year 1961 if its established fiscal year is other than the calendar year, and for each year thereafter, on or before the last day of the third month following the close of the calendar year or other established fiscal year, an original and such number of conformed copies of the above-designated F.P.C. Form No. 1 as are indicated in the General Instructions set out in that form, all properly filled out and verified. One copy of said report should be retained by the correspondent in its files. The conformed copies may be carbon copies, if legible.

* * * * * * *

(c)(1) Each Class B electric utility, licensee, and others; *i.e.*, each corporation, person, or licensee as defined in section 3 of the Federal Power Act, including any agency, authority or other legal entity or instrumentality and any agency, authority or instrumentality of the United States engaged in generation, transmission, distribution, or sale of electric energy, however produced, throughout the United States and its possessions, having annual electric operating revenues of more than $1,000,000 but less than $2,500,000, whether or not the jurisdiction of the Commission is otherwise involved shall prepare and file with the Commission for the year beginning January 1, 1961, or subsequently during the calendar year 1961 if its established fiscal year is other than the calendar year, and for each year thereafter, on or before the last day of the third month following the close of the calendar year or other established fiscal year, an original

and such number of conformed copies of the above-designated F.P.C. Form No. 1 as are indicated in the General Instructions set out in that form, all properly filled out and verified. One copy of said report should be retained by the correspondent in its files. The conformed copies may be carbon copies, if legible.

(2) Paragraph (b) of § 260.1 is amended by deleting the proviso in the first sentence, so that the paragraph reads:

§ 260.1 Form No. 2, Annual report for natural gas companies (Class A and Class B).

* * * * * * *

(b) Each natural gas company, as defined in the Natural Gas Act (52 Stat. 821) which is included in Classes A or B as defined in the Commission's Uniform System of Accounts Prescribed for Natural Gas Companies Subject to the Provisions of the Natural Gas Act, shall prepare and file with the Commission for the year beginning January 1, 1961, or subsequently during the calendar year 1961, if its established fiscal year is other than the calendar year, and for each year thereafter, on or before the last day of the third month following the close of the calendar year or other established fiscal year an original and such number of conformed copies of the above-designated F.P.C. Form No. 2 as are indicated in the General Instructions set out in that Form, all properly filled out and verified. One copy of said report should be retained by the correspondent in its files. The conformed copies may be carbon copies if legible."

(B) The amendments herein made to Parts 141 and 260 shall be effective October 29, 1965.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7238

SUPPLEMENTAL ORDER AUTHORIZING ISSUANCE OF FIRST MORTGAGE BONDS

(Issued September 29, 1965)

By order issued September 16, 1965, *supra*, p. 866, in the above-entitled matter, the Commission authorized Pacific Power & Light Company, (Applicant), to issue and sell at competitive bidding $30,000,000, principal amount of First Mortgage Bonds, due 1995, subject, among other, to the provisions set forth in paragraph (B) of that order as follows:

> (B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:
>
> (i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of those Regulations relating to affiliation, and shall have advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.
>
> (ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

Applicant, on September 29, 1965, filed an amendment, pursuant to the requirements of the afore-mentioned Commission order, setting forth, among other

things, that it proposes to accept as providing the lowest annual cost of money to it, the bid of Eastman Dillon, Union Securities & Co., Kidder, Peabody & Co., Stone & Webster Securities Corporation, to purchase the proposed issuance of $30,000,000, principal amount of Bonds for the price of 99.419% of principal amount, with an interest rate of 5%.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements of paragraph (B) of the Commission's order issued September 16, 1965, in the above docket, and under the bid it proposes to accept for the Bonds, the price to be received by Applicant therefor and the interest rate thereof are reasonable.

(2) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof under the bid referred to above, are approved as reasonable.

(B) The proposed issuance and sale of Bonds referred to above upon the terms and conditions and for the purposes specified in the application, as supplemented by the amendment referred to above, are authorized, subject only to the provisions of paragraphs (A), (C), (D), and (E) of the Commission's order issued September 16, 1965, in the above docket.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

BRIGHT & SCHIFF

ORDER REJECTING RATE FILING

(Issued September 30, 1965)

On August 9, 1965, Bright & Schiff tendered for filing a proposed notice of change in rate, as amended,[1] under its FPC Gas Rate Schedule No. 7, proposing a periodic rate increase from 18.0¢ to 19.0¢ per Mcf at a pressure base of 14.65 psia, amounting to $4,890 annually, for its jurisdictional sale of natural gas to South Texas Natural Gas Gathering Company from the NE Thompsonville Field in Webb and Jim Hogg Counties, Texas (Texas Railroad District No. 4). The proposed effective date is October 1, 1965, the contractually provided effective date.

The Commission on September 30, 1965, in Opinion No. 478, *Turnbull & Zoch Drilling Co. (Operator), et al.*, Docket No. G–17960, *et al.*, *infra*, p. 1001, issued a permanent certificate to Bright & Schiff (Docket No. CI61–1541), among others, authorizing it to make the subject sale under its FPC Gas Rate Schedule No. 7. Sales under that rate schedule had previously been made pursuant to an unconditioned temporary certificate issued May 26, 1961. The 19¢ per Mcf increased rate proposed here by Bright & Schiff exceeds the moratorium level of

[1] Amended by tender submitted August 27, 1965, to reflect the correct Btu content of the gas involved.

18¢ per Mcf imposed by the Commission in granting a permanent certificate to Bright & Schiff. Accordingly, Bright & Schiff's proposed rate filing shall be rejected.

The Commission orders:

For the reasons set forth above, the proposed increased rate of 19¢ per Mcf tendered by Bright & Schiff on August 9, 1965, for sales under its FPC Gas Rate Schedule No. 7 is rejected.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. RP66-4

ORDER PROVIDING FOR HEARING, SUSPENDING PROPOSED REVISED TARIFF SHEETS ALLOWING PROPOSED REVISED TARIFF SHEETS TO BECOME EFFECTIVE SUBJECT TO REFUND, AND GRANTING MOTION FOR SHORTENED SUSPENSION PERIOD

(Issued September 30, 1965)

Florida Gas Transmission Company (Florida Gas), on August 16, 1965, tendered for filing First Revised Sheets Nos. 27 and 63, to its FPC Gas Tariff, Original Volume No. 2, to become effective October 1, 1965, proposing an increase in its transportation rates and charges of approximately $1,732,000 annually over the rates currently in effect, based on data for the year ended May 31, 1965, as adjusted.

In support of the proposed increase, Florida Gas states that the changes relate solely to the transportation rates (Rate Schedules T-1 and T-2) and are necessitated to recover increased costs related to such services. Additionally, Florida Gas states that its present transportation rates were established as a result of a settlement in the rate proceeding in Docket No. RP61-3, *et al.*, approved by Commission order issued June 8, 1962, 27 FPC 1123, and that the transportation rates established therein did not include, among other things, an allowance for federal income taxes. Florida Gas states that the consolidated operating tax loss carry forwards of its parent and the subsidiary companies have been exhausted, and that the consolidated group is now in a tax-paying position. The amount of the proposed rate increase which is alleged to be caused by federal income tax liability is $1,665,000, or 96 percent of the total proposed increase.

Florida Gas, on August 30, 1965, filed a motion herein, requesting that if its proposed increased rates were to be suspended, that the suspension period be shortened to thirty days rather than the five-month statutory maximum. In support of its motion, Florida Gas states that its proposed increase in rates is applicable directly to only two of its ultimate users, Florida Power Corporation (Florida Power) and Florida Power & Light Company. Furthermore, Florida Gas states that, under the gas purchase contracts of those power companies, Sun Oil Company (Sun), the producer of the gas in the field, will be required to absorb more than 80 percent of this rate increase. Thus, Florida Gas argues, the shortened suspension period would be a more reasonable balance of equities, in that Florida Gas will be permitted to collect its additional costs through the proposed increased rates, while the electric utility companies and Sun will be protected through the refund provision provided in the suspension order.

Sun filed an answer and objection, on September 10, 1965, to Florida Gas' motion for a shortened suspension period, wherein Sun contends that Florida

Gas has not proved that it will have to pay any income taxes or that an allowance for such taxes is required. Florida Power, in its petition to intervene herein filed on September 13, 1965, included a response to Florida Gas' motion for a shortened suspension period, wherein it stated that it will have to pay approximately $300,000 of the proposed increase requested by Florida Gas, that it will pass this additional cost along to its customers through its fuel adjustment clause, and that a shortened suspension period would complicate its problem of making refunds, if any, to its customers. Florida Power also alleges that Florida Gas has been accruing federal income taxes on its books, even though such taxes were not, in fact, paid and the Commission found such accruals to be an improper accounting practice in Docket No. RP61-3, *et al.* Florida Power, however, acknowledges the fact that that issue has not been finally adjudicated and is now pending on appeal.

We believe that a shortened suspension period would be proper and Florida Gas' motion to that effect should be granted. If Florida Gas should sustain its burden of proving the lawfulness of its proposed rates, it will have been irreparably harmed for the period of suspension. If, on the other hand, Sun or Florida Power should be successful in controverting Florida Gas' allegation, Florida Gas' obligations as to refunds and interest provided herein will serve as sufficient protection for them. Admittedly a refund obligation is not complete protection to ultimate consumers with respect to the usual application for a rate increase (see *F.P.C.* v. *Tennessee Gas Transmission Co.*, 371 U.S. 145, 154–155), but this case is not the usual one. There are no ultimate consumers of gas involved in this proceeding, for whom a refund obligation would be "somewhat illusory." (371 U.S. 145, 154.) As heretofore noted, approximately 82 percent of the proposed increase will be borne by Sun. It will be the beneficiary to the same extent of any refunds that may result from this proceeding, and such refunds would not be "trickling down" to ultimate consumers. Further, Florida Power's contention that a shortened suspension would complicate the application of its fuel clause adjustment, and the relatively minor percentage of refunds it may receive, do not warrant suspension of the total increase proposed for the full five-month statutory period.

In addition to the question of Florida Gas' income tax liability, there are other issues raised by the data submitted in justification of the proposed rate increase, including, but not limited to, allocation of costs, rate base, and depreciation.

The Commission finds:

(1) The rate increase contained in the revised tariff sheets tendered for filing by Florida Gas on August 16, 1965, has not been shown to be justified, and may be unjust, unreasonable, unduly discriminatory, preferential, or otherwise unlawful.

(2) It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the Commission enter upon a hearing concerning the lawfulness of the rates, charges, classifications and services contained in Florida Gas' FPC Gas Tariff, and that proposed First Revised Sheets Nos. 27 and 63 to Original Volume No. 2 be suspended and the use thereof deferred as hereinafter provided.

(3) It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the increase in transportation rates contained in Revised Sheets Nos. 27 and 63 to Florida Gas' FPC Gas Tariff, Original Volume No. 2, be made effective as hereinafter provided and that Florida Gas be required to file a motion and an undertaking as hereinafter ordered.

(4) The motion by Florida Gas for a shortened suspension period should be granted as hereinafter provided.

The Commission orders:

(A) Pursuant to the authority of the Natural Gas Act, particularly Sections 4 and 15 thereof, the Commission's Rules of Practice and Procedure and the Regulations under the Natural Gas Act (18 CFR, Chapter I), a public hearing shall be held on a date fixed by notice from the Presiding Examiner as hereinafter provided, concerning the lawfulness of the rates, charges, classifications and services contained in Florida Gas' FPC Gas Tariff, as proposed to be amended by First Revised Sheets Nos. 27 and 63 to Original Volume No. 2.

(B) Pending such hearing and decision thereon, Florida Gas' proposed revised tariff sheets, identified in Paragraph (A) above, are suspended and their use deferred until November 1, 1965; *Provided, however*, that, within 20 days from the date of this order, Florida Gas shall file a motion as required by Section 4(e) of the Natural Gas Act and concurrently execute and file with the Secretary of the Commission the agreement and undertaking described in Paragraph (D) below. Unless Florida Gas is advised to the contrary within 15 days after the date of filing such agreement and undertaking, the agreement and undertaking shall be deemed to have been accepted.

(C) Florida Gas shall refund at such times and in such amount to persons entitled thereto, and in such manner as may be required by final order of the Commission, the portion of rates and charges found by the Commission in this proceeding not justified, together with interest thereon at the rate of 7 percent per annum from the date of payment to Florida Gas until refunded; shall bear all costs of any such refunding; shall keep accurate accounts in detail of all amounts received by reason of the tariff sheets made effective as of November 1, 1965, for each billing period, specifying by whom and in whose behalf such amounts were paid; and shall report in writing (original and four copies) and under oath to the Commission monthly, for each billing period and for each customer, the amount charged to such customer for transportation of natural gas as computed under the tariff sheets in effect immediately prior to November 1, 1965, and under the tariff sheets allowed herein to become effective, together with the differences in the revenues so computed.

(D) As a condition of this order, Florida Gas shall execute and file in triplicate with the Secretary of this Commission, its written agreement and undertaking to comply with the terms of paragraph (C) hereof, signed by a responsible officer of the corporation, evidenced by proper authority from the Board of Directors, and accompanied by a certificate showing service of copies thereof upon all customers under the tariff sheets involved as follows: [Agreement Form omitted in printing]

(E) If Florida Gas shall, in conformity with the terms and conditions of its agreement and undertaking, make the refunds as may be required by order of the Commission in this proceeding, the undertaking shall be discharged; otherwise, it shall remain in full force and effect.

(F) The dates for service of testimony by the Commission staff and interveners, the date for a prehearing conference and the designation of the Presiding Examiner will be specified by a future order of the Commission.

(G) The motion by Florida Gas for a shortened suspension period is granted to the extent provided in paragraph (B) above.

Commissioner Ross *dissenting*.

Ross, *Commissioner, dissenting:*

I dissent to the shortened suspension period provided in the order. In my opinion, the Natural Gas Act contemplates that only those rates found to be just and reasonable by the Commission should be charged by natural gas companies. This policy is explicitly set forth in Section 4(a) of the Act which states: "All rates and charges made, demanded, or received by any natural-gas company * * * shall be just and reasonable. * * *" However, in order to preclude an arbitrary Commission from unjustifiably delaying action on possibly meritorious rate increase filings, a provision was included in Section 4(e) allowing increased rate filings to become effective, subject to refund, after they had been on file for a period of five months without a Commission determination of their justness. While, under current procedure, it is seldom possible to complete consideration of rate increase filings within that period of time, the overriding intent of Section 4(a) remains true. This background, I think, explains why the Commission generally suspends rate increases that may be unjust or unreasonable for the full period of time provided by the statute.

In this case, the rate increase proposed by Florida Gas has not been shown to be just and reasonable. Obviously, the mere fact that Florida Gas may incur, or may have incurred, additional costs in but one category, *i.e.*, federal income taxes, far from establishes the need of the company for additional revenues. To the contrary, a consideration of all of the costs of Florida Gas is required, as the majority implies on page 996 of the order. For all the Commission knows at this point pending determination of the overall cost of service of Florida Gas, a rate decrease rather than an increase may be the proper remedy in this proceeding. Indeed, the Commission order itself clearly finds that the proposed rate increase "has not been shown to be justified, and may be unjust, unreasonable, unduly discriminatory, preferential, or otherwise unlawful."

Thus, this situation differs essentially from, for example, the rate filing by Utah Power & Light Company (Docket No. E-7127) which the Commission suspended for a period of only one day in view of information showing a reasonable likelihood that the proposed increase was required. Ultimately, that rate increase was found to be just and reasonable and the proceeding was terminated. Yet, in that case, two members of the present majority dissented to the shortened suspension period.

The majority recites two reasons why it thinks that this is not the usual case, but these "reasons" are not convincing. First, the majority states that Florida Gas may be irreparably harmed if it should sustain its burden of proving the lawfulness of its proposed rates. However, this much is true in every case and hardly constitutes a basis for granting Florida Gas special treatment. Moreover, this suggestion directly conflicts with the majority's above-cited finding that the proposed rate has not been shown to be justified and may be unreasonable.

Secondly, the majority indicates that we are not faced with the usual problem with respect to the flow-through of any refunds that may be ordered since a relatively small amount of the refunds would be borne by ultimate consumers by operation of Florida Power's automatic fuel adjustment clause. The proposed rate increase raises Florida Power's rates approximately $300,000 annually. In my opinion, it is bad policy to base a suspension period on the dollars involved. If the rate increase had been $600,000, would the majority have suspended for two months? In any event, this approach ignores the basic policy of Section 4(a) of the Act upon which Sun Oil Company, which will bear the brunt of this increase, as well as "ultimate consumers" has a right to rely.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

APPLICATION FOR EXEMPTION FROM THE PROVISIONS OF THE NATURAL GAS ACT PURSUANT TO SECTION 1(C), DOCKET NO. R-286

ORDER NO. 306

AMENDING PART 152 OF REGULATIONS UNDER THE NATURAL GAS ACT

(Issued September 30, 1965)*

Certain persons, otherwise subject to the provisions of the Natural Gas Act, are exempt from its provisions by section 1(c) under stated conditions and "* * * provided that the rates and service of such person and facilities be subject to regulation by a State Commission." We are in this order amending §§ 152.1, 152.2, 152.4, and 152.5 of the Regulations under the Natural Gas Act to interpret the meaning of "rates" as used in the above-quoted proviso and to prescribe additional procedural requirements.

Experience has indicated that confusion can arise in situations where a State Commission cannot or does not regulate the wholesale rates of an applicant for exemption. It is clear from the legislative history of section 1(c) that Congress did not intend any aspect of natural gas transportation and sale to be free of regulation, but rather to eliminate some duplications of regulation where both the Commission and a state agency had jurisdiction. Hence any exemption pursuant to section 1(c) can be granted only if and to the extent that all rates, *including wholesale rates*, service and facilities are subject to State regulation. The amendments to §§ 152.1 and 152.4 will definitively construe "rates" as used in section 1(c).

The amendments to §§ 152.2 and 152.5 are matters of practice and procedure designed to insure that both the State Commission and this Commission are continuously informed of all matters of fact and law relevant to exemption under section 1(c) of the Natural Gas Act.

The Commission finds:

(1) The notice provisions of section 4 of the Administrative Procedure Act are not applicable since the amendments herein adopted are either interpretative in that they make explicit in the Regulations the proper meaning of a statutory term, or else prescribe rules of agency practice and procedure.

(2) The amendments adopted herein are necessary and appropriate for the purposes of administration of the Natural Gas Act.

The Commission, acting pursuant to the authority granted by the Natural Gas Act, as amended, particularly sections 1(c) and 16 thereof (68 Stat. 36, 52 Stat. 830; 15 U.S. 717(c), 717(o)) *orders:*

(A) Part 152, Subchapter E of Chapter I, Title 18 of the Code of Federal Regulations, is amended as follows:

1. In § 152.1 insert after the word "rates" in the proviso the following:

"(including rates for sales for resale)"

2. In § 152.2 add to the title the following:

"service",

and add at the end of the section:

"A copy of the application shall be served on the State Commission which has jurisdiction over the applicant and upon each wholesale customer of the applicant."

---

*Published in the Federal Register on October 6, 1965 (30 F.R. 12728).

3. In § 152.4 insert after the word "rates" the following:
"(including rates for sales for resale)".

4. In § 152.5 add at the end the following:
"The exempted person shall also be responsible for calling to the attention of the Federal Power Commission any change, amendment, or judicial or administrative interpretation of the State law pursuant to which it is regulated by the State Commission, which may make the exemption inapplicable to it."

As thus amended, these sections will read as follows:

§ 152.1 Who may apply.

Application for exemption from the provisions of the Natural Gas Act and the rules and regulations of the Commission issued pursuant thereto may be made by any person as defined in the Natural Gas Act engaged in, or authorized to engage in the transportation in interstate commerce or the sale in interstate commerce for resale, of natural gas received by such applicant from another person within or at the boundary of a State, if all of the natural gas so received is ultimately consumed in such State: *Provided*, That the natural-gas rates (including rates for sales for resale) and service of the applicant and its natural-gas facilities are subject to regulation by a State commission, as defined in the Natural Gas Act, and that such State commission is exercising that jurisdiction.

§ 152.2 Form of application; number of copies; service.

An original and 7 conformed copies of an application under this part shall be furnished to the Commission and shall conform in all other respects with §§ 1.15 and 1.16 of this chapter. The Commission reserves the right to request additional copies. A copy of the application shall be served on the State Commission which has jurisdiction over the applicant and upon each wholesale customer of the applicant.

* * * * * * *

§ 152.4 Certificate from State Commission.

Applications for exemption under § 152.3 shall contain, or there shall be separately filed, a certificate from the appropriate State Commission that the natural-gas (a) rates (including rates for sales for resale), (b) service, and (c) facilities of the applicant are subject to the regulatory jurisdiction of the State Commission and that the State Commission is exercising such jurisdiction.

§ 152.5 Applicability of exemption.

Nothing in this part shall be construed to relieve any person exempted from the provisions of the Natural Gas Act by section 1(c) thereof from compliance with valid State regulatory requirements. If an exemption from the provisions of the Natural Gas Act is effective pursuant to section 1(c), the exempted person shall be responsible for calling to the attention of the State Commission by which it is regulated and of the Federal Power Commission any future operations in which it may engage which may make the exemption inapplicable to it. The exempted person shall also be responsible for calling to the attention of the Federal Power Commission any changes, amendment, or judicial or administrative interpretation of the State law pursuant to which it is regulated, which may make the exemption inapplicable to it.

[Sections 1(c), 68 Stat. 36, 16, 52 Stat. 830; 15 U.S.C. § 717(c), 717o]

(B) The amendments prescribed herein shall become effective on November 1, 1965.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

OPINION AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued September 30, 1965)*

Syllabus

1. In-line price for Railroad District No. 4 sales found to be 15 cents per Mcf for pre-Policy Statement contracts and 16 cents for those executed after September 28, 1960. P. 1005.
2. In past and present proceedings District No. 4 has been shown to be a gas producing area of substantial similarity throughout its constituent coun-

*Initial decision appears on p. 1014. See order issued November 24, 1965, denying rehearing and granting stay, 34 FPC 1367. See Opinion No. 499 on refund issued July 25, 1966, 36 FPC 164. Affirmed, *Continental Oil Co., et al.* v. *F.P.C.*, 378 F. 2d 510 (CA5–1967); Cert. denied 391 U.S. 919 (1968).

ties sufficiently identifiable as to constitute a unit for regulatory purposes under the Natural Gas Act. P. 1005.

3. Area boundaries as now defined are not fixed and immutable; Policy Statement itself indicates that these may be altered from time to time to eliminate inequities. P. 1005.
4. Pending accumulation of additional information being developed in area rate proceedings, carving out of separate fields or counties, or groups thereof, for special treatment should be limited to situations of a distinctly compelling nature—evidence here is unconvincing that District No. 4 cannot continue to be used as a unified pricing area. P. 1005.
5. Since Policy Statement played a part in effecting change in area in-line price, it is appropriate to use issuance date thereof in looking to comparability of area contracts. PP. 1005, 1006.
6. Evidence is too fragmentary to support inference urged by producers that increased intrastate deliveries have been due to low interstate prices. PP. 1006; 1023.
7. Commission *reaffirms Hawkins* holding that "the issue of public need properly belongs in pipeline certificate cases, not producer applications." P. 1006.
8. Commission *finds* that the flexible take provision is not unusual in the area and *disallows* premium allowance therefor. P. 1006.
9. Judgment as to uniqueness of an exceptional benefit allegedly deserving separate allowance is not linked to specific pricing period in which contract was made—this prerequisite requires only a determination of whether feature is in fact unusual for the area. PP. 1006, 1007.
10. For purposes of issuing certificate, Commission accepts date that "meeting of minds" occurred as execution date of contract, in lieu of contract's earlier effective date. PP. 1007; 1039.
11. Citing *Sinclair*, Commission *rejects* producers' argument of entitlement to higher price on ground that from same fields, and in some cases, same wells, sales have been permanently certificated at higher amounts. P. 1007.
12. Commission *prescribes* moratorium, for specified period, on rate increase filings in excess of 18 cents per Mcf. P. 1007.
13. Commission *provides* for refunds with respect to those temporary authorizations having refund conditions but *requires* producers to hold amounts pending determination of entitlement thereto. P. 1008.
14. In a proceeding under Section 7 of the Natural Gas Act, Commission *issues* certificates of public convenience and necessity; *determines* in-line price and *requires* refunds.

Jesse H. Foster, Jr. and *Albert C. McClain* for Humble Oil & Refining Company.

Robert B. Payne for Bright & Schiff.

Kent H. Brown for Public Service Commission of the State of New York.

James R. Lacey, J. Harry Mulhern and *Edward S. Kirby* for Public Service Electric & Gas Company.

John A. Glendening for Berkshire Gas Company.

Edwin F. Russell, Harry G. Hill, Jr., and *Barbara M. Suchow* for The Brooklyn Union Gas Company.

William T. Coleman, Jr. and *Robert W. Maris* for Philadelphia Gas Works Division of the United Gas Improvement Company.

Morton L. Simons, Edward M. Barrett and *Bertram D. Moll* for Long Island Lighting Company.

Charles McDugald, Philip A. McKinsey and *Paul E. Goldstein* for Natural Gas Pipeline Company of America.

Alan R. Squires, Herbert E. Squires and *Joseph C. Bruno* for Pennsylvania Public Utility Commission.

Ronald D. Jones and *E. B. Thomas, Jr.* for Consolidated Edison Company of New York, Inc.

W. H. Drushel, Jr. and *J. Evans Attwell* for K. D. Owen, *et al.*, d/b/a Owen and Moss and Appell Petroleum Corporation.

Richard J. Dent for Getty Oil Company.

David B. Ward for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SWIDLER, *Chairman:*

This proceeding, the third in a recent series of south Texas "in-line" pricing cases,[1] involves 67 applications for permanent certificates of public convenience and necessity under Section 7 of the Natural Gas Act for sales of gas by producers in Texas Railroad Commission District No. 4. The buyers are Florida Gas Transmission Company, South Texas Natural Gas Gathering Company, Tennessee Gas Transmission Company, Natural Gas Pipeline Company of America and Valley Gas Transmission Company. The sales are proposed under contracts executed between August 8, 1956, and March 25, 1964, at prices ranging from 14.5 cents to 20.045 cents per Mcf (at 14.65 psia). Temporary authorizations have been granted in all dockets but one at prices up to 18 cents per Mcf; four

[1] See *Sinclair Oil & Gas Company, et al.*, Opinion No. 476, issued September 22, 1965, *supra*, p. 930; *Hawkins & Hawkins, et al.*, Opinion No. 475, issued September 22, 1965, *supra*, p. 897. These cases involved certification of producer sales in Texas Railroad Commission Districts No. 2 and 3, respectively.

specify a rate for the period of the temporary which is less than the contract rate while two others have express refund conditions for amounts collected in excess of 15 cents per Mcf. The record does not establish whether service has ever commenced under four of the temporary authorizations.

The principal issue concerns the initial price or prices required in the public interest for certification of these sales. The case is before us at this time on exceptions to the initial decision of Presiding Examiner Dyer Justice Taylor, issued June 22, 1965, which recommends that certificates be issued conditioned to a price of 15 cents per Mcf for gas sold under contracts executed on or before September 28, 1960, the date of the Commission's Statement of General Policy No. 61–1 (24 FPC 818), and to 16 cents per Mcf for contracts executed after that date. The Examiner also recommended that 0.5 cent per Mcf be added to the basic 15-cent price allowed three producers as compensation for a particular premium feature provided in their contracts.

The exceptions have been filed by a number of producers,[2] a group of eastern distributors,[3] and the staff. Answers have been submitted by the producers and staff. The producers argue primarily (1) that the Examiner's price conditions are erroneous for some of their sales; (2) that he improperly excluded evidence and testimony relating to costs, financial requirements, economics and prices paid under intrastate and nonjurisdictional sales; and (3) that certain other conditions, particularly one involving the take-or-pay requirements in their contracts, are unsupported by the evidence and are illegal. Other exceptions not generally common to a large number of producers are discussed subsequently. The distributors object to the 16-cent per Mcf price for contracts executed after the Policy Statement. They also oppose the premium allowances granted by the Examiner. They argue that there is no evidence of need for the gas here involved at a price over 15 cents per Mcf and ask that refunds be required on all amounts collected in excess thereof. The staff is in agreement with the 15-cent and 16-cent price determinations made in the initial decision. It excepts to the premium allowances and to the 16-cent initial price for the sale in Docket No. CI61–1514.

The facts are set out in detail in the initial decision of the Examiner and need not be repeated. They will be referred to here to the extent necessary to explain the reasons for our findings and conclusions.

In-Line Prices

First and foremost, in the matter of the basic in-line prices for the periods before and after the Policy Statement, we agree with the Examiner's decision.[4]

---

[2] H. J. Mosser, Pan American Petroleum Corporation, Continental Oil Company, Shell Oil Company, Mayfair Minerals, Inc., Jonnell Gas, Incorporated and J. C. Trahan, American Petrofina Company of Texas, Texaco Inc., Sun Oil Company, McCurdy & McCurdy, Phillips Petroleum Company, Blanco Oil Co. (Operator), *et al.* and Killam & Hurd, Humble Oil & Refining Company, Appell Petroleum Corporation, *et al.* and K. D. Owen, *et al.*, d/b/a Owen and Moss, Austral Oil Company.

[3] The Brooklyn Union Gas Company, Long Island Lighting Company and Philadelphia Gas Works Division of The United Gas Improvement Company. The Public Service Commission of the State of New York stated that it concurs in and adopts the distributors' exceptions.

[4] We approve specifically the exclusion of cost and related evidence and the inclusion of sales under 14 cents per Mcf in finding the in-line prices. The treatment of the sales to gatherers and use of the estimated first month's delivery volumes also is approved. The Examiner's refusal to follow the Fifth Circuit's decision in *Callery Properties, Inc.* v. *F.P.C.*, 335 F. 2d 1004, pending its review by the Supreme Court (cert. granted, October Term, 1964, Nos. 671, *et al.*) accords with our decisions in *Union Texas*, Opinion No. 436–A, 32 FPC 952, and *Sun Oil*, Opinion No. 445, 32 FPC 1183, wherein we declined in the interim to accept that decision as binding on us. The appeals taken by Continental and others from the Examiner's ruling excluding the cost evidence will be denied.

The pertinent cases regarding the requirements applicable to the issuance of certificates under Section 7 have been considered, the relevant data was weighed and properly applied and, in our opinion, the correct in-line price found. The 15-cent per Mcf pre-Policy Statement rate is the same as the in-line price found for the same period for District No. 4 sales in *Skelly*, Opinion No. 362, 28 FPC 401; *Texaco Seaboard, Inc.*, Opinion No. 383, 29 FPC 593; *Jake L. Hamon, et al.*, 29 FPC 784, and *Hassie Hunt Trust*, Opinion No. 412, 30 FPC 1438. Both this price and the 16-cent in-line price for post-Policy Statement contracts were found appropriate in the *Amerada* case, Opinion No. 422, 31 FPC 623. The *Hassie Hunt Trust* and *Amerada* decisions are presently under judicial review[5] and the objections to the price determinations made in this proceeding are substantially the same as the objections to our similar determinations in those cases. The issue will be settled by the courts' decisions. On our part we are convinced now, as we were then, that no other prices are required by the public convenience and necessity or would be in keeping with the public interest.

The producers excepting to the initial decision claim that District No. 4 is not an appropriate pricing area, that the grouping of contracts on the basis of whether they were executed before or after the Policy Statement is arbitrary, and that the Examiner mistakenly refused to consider intrastate prices. As to the possibility that District No. 4 is not a proper pricing area the Examiner held that any inequity was provided for in the premium benefits allowances. We do not subscribe to this panacea. In our opinion District No. 4, in past proceedings and herein, has been shown to be a gas producing area of substantial similarity throughout its constituent counties sufficiently identifiable as to constitute a unit for regulatory purposes under the Natural Gas Act. This same finding, we may add, holds true for the other Texas Districts for which guideline prices were set in the Policy Statement. This is not to say that the area boundaries as now defined are fixed and immutable; the Policy Statement itself indicates that these may be altered from time to time to eliminate inequities.[6] Pending the accumulation of additional information currently being developed in the area rate proceedings, however, we believe that any carving out of separate fields or counties, or groups thereof, for special treatment should be limited to situations of a distinctly compelling nature. The evidence in this proceeding is unconvincing that District No. 4 cannot continue to be used as a unified pricing area.

The reason that the contracts are grouped on the basis of whether executed before or after the Policy Statement is explained in the *Skelly* and *Hassie Hunt Trust* Opinions. In both those cases we determined that it was necessary that evidence be adduced for evaluating changes which might have occurred after September 28, 1960, including (but not limited to) the effect, if any, of our announcement of the original 18-cent guideline ceiling for this area. Subsequently, in *Amerada*, we found that the producers and pipelines had acted in reliance on our guideline price and by their actions had changed the in-line price for the area for the period after the Policy Statement. This new price line, as we find herein, has now held constant through at least March 25, 1964. Since our Policy Statement played a part in effecting the change, it is appropriate to

[5] *Margaret Hunt Hill, Trustee for H. L. Hunt, et al.* v. *F.P.C.*, CA5, No. 21286; *U.G.I., et al.* v. *F.P.C.*, CADC, No. 18660, *et al.* Other appeals from the *Amerada* decision are pending in the Third, Fifth, Sixth and Tenth Circuits.

[6] See also "Order Deferring Further Consideration of Proposed Changes in Pricing Area Boundaries Fixed Under Statement of General Policy, No. 61–1," issued November 27, 1963, 30 FPC 1374, particularly the proposals regarding the possible consolidation of Texas Districts 2, 3 and 4.

use the date of issuance thereof in looking to the comparability of the contracts executed in this area.

The exceptions involving the failure to give weight to intrastate sales and intrastate prices is answered adequately in the initial decision in the Examiner's finding that the evidence was too fragmentary to support the inference urged by the producers. We may note that this is the same finding made by us, for the same reason, in the *Hawkins* case, Opinion No. 475. The distributors' contention that the producers are deficient in their presentations in not having shown a public need for the gas (although limiting their exception to only those sales where a certificate would be issued at prices over 15 cents per Mcf), is also answered in *Hawkins* where we held that "the issue of public need properly belongs in pipeline certificate cases, not producer applications."

Other Exceptions

Issues raised in the exceptions not directly related to the in-line pricing question and requiring comment involve the premium allowance, the date of the Bright & Schiff sale, claims by Shell and others that they will be discriminated against unless they are given certificates at their initial contract prices, and the take-or-pay condition. We consider these seriatim.

Premium allowance—The particular feature for which the Examiner would allow an additional 0.5 cent per Mcf is a provision permitting the pipeline buyer to vary its daily takes from zero to the maximum quantity of gas which the wells are capable of delivering under prudent operation and not in violation of law. As noted, the allowance is opposed in exceptions by the distributors and staff. The producers receiving the increment contend that the amount is too low and ask a minimum of 2 cents per Mcf over the price line.

The Examiner found that the feature is exceptional in the District No. 4 area, is for the sole benefit of the pipeline and is objectively measurable to the extent of being worth the added amount. He based his conclusion largely on an analysis made by the producers showing that many contracts in the area do not have the feature. We find that the provision is not unusual and, therefore, that the premium allowance is not in order.

A review of Exhibit No. 7[7] shows that there are a substantial number of contracts for sales from District No. 4 to the same buyer having exactly the same flexible take provision as the contracts herein. Some have been permanently certified while others still await issuance of the final certificate. In none of the certificated cases, however, has any extra allowance been granted over the in-line price. Moreover, the feature is present in all but two contracts executed by the pipeline or its predecessor, Peoples Gulf Coast Natural Gas Pipeline Company, for purchases in District No. 4 since September 1960. This is not surprising for, as stated by the Examiner, Peoples, in referring to the provision in 1960, said that it could not prudently make additions to its gas supply under contracts obligating it to take a constant or nearly constant quantity. Since, as we find, the feature is not unusual for this area and is common for purchases by this pipeline, indeed, was apparently a necessary condition to its agreement to accept the sale, no premium allowance is warranted.[8]

The producers point out that the flexible take provision is unusual for contracts executed in the area before the Policy Statement, contemporaneous

[7] The exhibit shows the pertinent provisions of all jurisdictional gas sales contracts made in District No. 4 between June 7, 1954 and March 1, 1964.

[8] Accord; *Amerada, supra; Superior Oil Co.*, Opinion No. 437, 32 FPC 241; *Edwin L. Cox*, Opinion No. 446, 32 FPC 1301. See also *California Oil Co., Western Div.* v. *F.P.C.*, 312 F. 2d 652 (CA10-1963).

with their own. In our opinion, judgment as to the uniqueness of an exceptional benefit allegedly deserving of a separate allowance is not limited to the specific pricing period in which the contract was made. For this prerequisite it requires only a determination whether the feature is in fact unusual for the area. Having found to the contrary we deny the premium allowances.

Bright & Schiff sale—The Examiner concluded that the necessary "meeting of the minds" for the effectuation of this sale occurred in February 1961. The fact that the parties chose at that time to make the contract effective "as of" September 15, 1960, he would dismiss as immaterial. Staff, which accepting February 1961 as the time of physical signing, argues that the earlier date should control in this case and that the producer is entitled to only a 15-cent per Mcf initial price. While the matter is not entirely free from doubt we are inclined to accept the Examiner's determination of February 10, 1961, as the date of execution of the contract in this case for the purpose of issuing the certificate. We may caution all parties to Commission proceedings that when, as here, the existence of a mistake in a filing comes to their attention they inform us of that fact immediately so that we may not be led into mistaken action on the basis of erroneous information.

Shell, et al.—Shell, Phillips, Appell and *Owen* each have contracts executed before the Policy Statement for which the Examiner would allow an initial price of 15 cents per Mcf. They seek a higher price on the ground that other producers have received permanent certificates for sales from the same field, and in some cases from the same wells, at more than this amount. This is the identical argument made before us and rejected on a number of past occasions, most recently in regard to the Sinclair sale, Docket No. G–16760, certificated in the *Sinclair* decision. As we there stated:

> * * * Exceptions to the in-line price require a compelling justification. There is little more justification for equalizing all well prices at the highest level applicable to any owner than for a similar equalization for all producers in the field.

The sales referred to for comparison are either being made under a contract executed after the Policy Statement when the in-line price had changed, or is one of the earlier higher priced sales to Coastal when that company was a "paper pipeline," or were certificated in a settlement. In each case the circumstances so differed from those prevailing here as to render it non-comparable. The exceptions will be denied.

Take-or-pay condition—A large number of producers, including some to whom the Examiner recommended that certificates be granted at their initial contract prices, except to the take-or-pay condition included in the initial decision. The condition has been standard in all consolidated in-line certificate decisions issued by us since the *Panhandle* case, Opinion No. 350, 27 FPC 35, and has been upheld on judicial review.[9] The condition will be continued pending the final determination in the Docket No. R–199 proceeding.

Price Increases

As in previous proceedings we shall prescribe a moratorium on rate increase filings above a certain level. As explained *supra*, footnote 4, we realize that the *Callery* case has held that practice improper, but we adhere to the practice pending review of that decision by the Supreme Court, which has granted certiorari. In order to protect the public we think the appropriate level is 18.0 cents per

[9] *Public Service Comm. of the State of New York, et al. v. F.P.C.*, 329 F. 2d 242; cert. denied *sub nom.*, 377 U.S. 963.

Mcf until January 1, 1968, or until issuance of a final decision in the Texas Gulf Area Proceedings, Docket No. AR64–2, whichever is earlier. The level at which prices will be triggered or redetermined is apparently at the 18-cent price level, which reflects other prices now in effect in the area (although subject to refund) and represents the highest increased price which we have previously permitted to be filed without ordering an immediate hearing. We note that this triggering level is consistent with our Order No. 296 issued April 5, 1965, 33 FPC 682, which, of course, related only to applications filed after April 15, 1965. The in-line moratorium level must be based on the triggering level; therefore, if any of the producers involved here have a factual basis for taking a contrary view of the establishment of a moratorium at this level, they have opportunity so to state in applications for rehearing. As herein prescribed the moratorium will be applicable to the filing of any rate increase above 18 cents per Mcf, which rate is to be effective on or after the issuance of this decision.

Refunds

In the present proceeding there are only two applications involving temporary authorization with refund conditions and prices above the in-line price here determined. They are the applications of Ramada Oil & Gas Company in Docket No. CI63–304 and Tenneco Oil Company in Docket No. CI63–334. In these cases we shall provide for refunds but require that the producers hold the amounts involved until it is determined who is entitled to them. The distributors' request for an order directing refunds in all dockets, including those where the temporary authorization does not contain an express refund condition, is at variance with our order issued in this proceeding on October 5, 1964, deferring such consideration until our further order. We abide by that determination.

The exceptions by Austral,[10] Jonnell and Trahan,[11] and others not discussed herein are either sufficiently answered by the Examiner or are without substantial support or reasonable basis in law and should be denied. The Examiner's decision, to the extent not inconsistent herewith, should be approved and adopted as part of this Opinion and order.

are now, or upon commencement of the sales proposed will be, engaged in the sale of natural gas in interstate commerce for ultimate public consumption and each is, or will be, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The sales of natural gas hereinbefore described, as more fully described in the applications, are or will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Subject to the requirements of the order herein and the conditions attached to the certificates herein issued, the applicants referred to in paragraph (1), with the possible exception of those listed in ordering paragraph (D) below, are able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sales of natural gas by the independent producers referred to in paragraph (1) above, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) The application in Docket No. CI61–631 should be dismissed.

(7) Except as herein granted, the exceptions to the examiner's decision should be denied.

The Commission orders:

(A) Certificates of public convenience and necessity are hereby issued to each of the applicants named in paragraph (1) above for the sale of natural gas in interstate commerce for resale as proposed in their respective applications, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, upon the terms and conditions hereinafter set out in this order.

(B) As to those sales where the contract or supplement was executed on or before September 28, 1960, the certificate is conditioned to prohibit any total initial price, including all reimbursements and charges, greater than 15.0 cents per Mcf at 14.65 psia; where the contract or supplement was executed after September 28, 1960, the certificate is conditioned to prohibit any total initial price, including all reimbursements and charges, greater than 16.0 cents per Mcf at 14.65 psia; all such conditioned prices are effective from the date of issuance of this order and until such prices may be lawfully changed in the manner provided by the Natural Gas Act.

(C) Notwithstanding the conditions of paragraph (B) above, certificates are required and are issued at the initial prices listed in the following dockets: Roy A. Lamb & A. G. Galt, Docket No. CI62–21, 16.5 cents; Shell Oil Co., Docket No. CI61–783, 16.0 cents.

(D) In addition to other applicable conditions imposed herein, the certificates issued above in Docket Nos. G–20458, CI60–506, CI62–21, and CI64–908, are subject to the following additional conditions:

(i) Each applicant shall notify the Commission, in writing, within 10 days whether or not service has ever commenced, and if so, when.

(ii) If service has never commenced, the certificate herein issued is void and the application is dismissed.

(iii) If service has ever commenced, the certificate issued herein is fully effective and subject to all conditions imposed herein.

(E) Within 30 days from the date of issuance of this order each of the applicants receiving certificates or grants of amendments in paragraph (A) hereof, whose proposed total initial price exceeds the applicable price listed in paragraphs (B) or (C) hereof, shall file a supplement to its presently filed rate schedule related to its respective applications, reflecting the conditioned price as the total initial price in lieu of the higher initial price provided in the contract or amendment; provided that with respect to the reduction in rates hereby ordered, applicants need not comply with the notice provisions of Section 154.94(b) and the detailed submittal provisions of Section 154.94(f) of the Regulations under the Natural Gas Act.

(F) Each certificate issued in paragraph (A) is further conditioned to provide for a moratorium until January 1, 1968, or until issuance of a final decision in Docket No. AR64–2, whichever is earlier, on the filing of any increased rate in excess of 18 cents per Mcf at 14.65 psia, inclusive of tax reimbursement, which rate is to be effective on or after the date of issuance of this order.

(G) Ramada Oil & Gas Company in Docket No. CI63–304 and Tenneco Oil Company in Docket No. CI63–334 shall compute amounts to be refunded to their respective pipeline purchasers. The refund shall include the difference between the amount charged and collected and 16 cents per Mcf applied to all volumes paid for by the purchaser from the date of the first delivery of natural gas under temporary authorization until the date of this order. Interest shall be included at a rate of 7 percent per annum to the date of this order. Within 90 days from the date of this order Ramada and Tenneco shall submit a report to the Commission, and serve a copy on the purchaser, setting forth the amount of refund related to each subject rate schedule (showing separately the principal and applicable interest), the basis used for such determination, the period covered, and a letter from the purchaser agreeing to the correctness of the amounts.

(H) Ramada and Tenneco shall retain the amounts shown in the report required under paragraph (G) above, subject to further order of the Commission directing the disposition of those amounts.

(I) If Ramada and Tenneco elect to commingle these retained refunds with their general assets and use them for their corporate purposes, they shall pay interest thereon at the rate of 4½ percent per annum on all funds thus available from the date of this order to the date on which they are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission.

(J) If Ramada or Tenneco elect to deposit the retained refunds in a special escrow account, it shall each tender for filing within 90 days of the issuance of this order an executed Escrow Agreement, conditioned as set out below, accompanied by certificate showing service of a copy thereof upon the purchaser. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between each producer and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(i) The producer, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the

Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(ii) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(iii) Such bank or trust company shall be liable only for such interest as the invested funds described in paragraph (ii) above will earn and no other interest may be collected from it.

(iv) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(v) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the bank or trust company for the quarterly period.

(K) With respect to the applications of all producers listed in ordering paragraph (A) except Ramada Oil & Gas Co., Docket No. CI63–304, Tenneco Oil Company, Docket No. CI63–334, and Sun Oil Company, Docket No. CI64–470, the decision whether refunds should be ordered as a condition to the permanent certificates is deferred for subsequent determination. Within 30 days from the date of issuance of this order the parties to this proceeding, to the extent desired, may file briefs directed to the issue whether refund should be ordered in any or all of the dockets and the extent of such refunds, if any. Replies may be filed within 10 days of service of the briefs. Any party who wishes to introduce into the record evidence as to additional facts which might bear upon the ultimate determination of this matter shall file with its brief, within 30 days from the date of issuance of this order, a statement of such additional facts and of the evidence by which it is proposed to establish such facts.

(L) The certificate herein issued to Sun Oil Company in Docket No. CI64–470 is conditioned upon its being accepted in writing by the applicant within 30 days of the issuance of this order.

(M) The certificates herein issued, and the amendments herein granted, are upon the express condition that the allowance of the take-or-pay provisions in the applicant's contract or amendment is subject to the Commission's ultimate disposition with respect to such provisions in the rule-making proceeding in Docket No. R–199. Upon the establishment, by regulation or policy statement, of a general policy governing such provisions in producer contracts, each applicant shall, within 30 days, file its amended rate schedule in conformity therewith, acceptable to the Commission, provided that the applicant shall not be required to file a take-or-pay provision for less than 80 percent of the annual contract quantity and, provided further, that any rate schedule changes or modifications to be made in accordance with this paragraph shall be prospective only.

(N) The certificates issued by paragraph (A) hereof are not transferable and shall be effective only so long as each respective applicant continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations, and orders of the Commission.

(O) The grant of the certificates and amendments herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or of Part 154 of the Regulations thereunder. Such grant is without prejudice to any

findings or order which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants or any one of them. Further, the action in this proceeding shall not foreclose or prejudice any further proceedings or objections by the Commission relating to the operation of any price or related provision in the gas purchase contracts or amendments here involved.

(P) The application in Docket No. CI61–631 is hereby dismissed.

(Q) The appeals taken by Continental, *et al.* from the examiner's September 2, 1964 ruling excluding non-in-line price evidence are denied.

(R) Except as herein granted, the exceptions to the examiner's decision are denied.

(S) The examiner's decision, to the extent not inconsistent herewith, is hereby adopted as part of this Opinion and Order.

Commissioner Black *concurring* in the result.

Commissioner Bagge *concurring* for the reasons set forth in his concurring statement accompanying Opinion No. 475 issued September 22, 1965, in Docket No. G–18077, *et al., H. L. Hawkins & H. L. Hawkins, Jr., Operator, et al., supra*, p. 908.

Commissioner Ross *dissenting.*

BLACK, *Commissioner, concurring in the result:*

The results here reached by the Commission confirm and in fact stabilize the pricing levels established by the Commission in the *Amerada* proceeding. Although I joined with the majority in the opinion in that case, I subsequently indicated dissatisfaction with the standards there employed by the Commission (*H. L. Hawkins & H. L. Hawkins, Jr., Operator, et al.*, Docket No. G–18077, *et al., supra*, p. 897). However, as the main opinion notes those standards are presently before the courts for final resolution. Reversal of these holdings prior to final action by the courts would merely undermine the price stability which we seek. I therefore concur with Commission results in this proceeding.

ROSS, *Commissioner, dissenting:*

I dissent to the Order granting permanent certificates at prices above 15¢/Mcf for the reasons set forth in my dissent in *Amerada Petroleum Corp.*, et al., Opinion No. 422, 31 FPC 623, 642 (1964).

I also disagree with the majority's acceptance of the Examiner's finding that the Bright & Schiff contract dated September 15, 1960, should be attributed an effective date of February 10, 1961, and thus entitled to the higher "in line" price of 16¢/Mcf. The Examiner's finding rested on the testimony of Mr. H. G. Schiff that neither he nor his three partners had signed the contract until February 10, 1961 (*infra*, p. 1039, Examiner's Decision).

The fact of the matter is that on September 26, 1960, Coastal States filed an application for a certificate to sell gas to South Texas. Underlying that application is a contract including Coastal States *and* Bright & Schiff as indivisible one-half owners of certain acreage, which is exactly the same acreage forming the subject of the Bright & Schiff contract involved in this proceeding. The Coastal States/Bright & Schiff contract was temporarily certificated and sales of gas from the acreage were begun in November, 1960 and have continued since that time. Subsequently Coastal States and Bright & Schiff received a permanent certificate to make this sale in the *Skelly* proceeding, *Skelly Oil Co.*, Opinion No. 362, 28 FPC 401, aff'd. in part and reversed in part and remanded *sub nom.*

With the artificial distinction between contracts dated before and after September 28, 1960, it is not difficult to understand the effort by Bright & Schiff to establish a later effective date. In view of this background, the testimony is far from

compelling that the February date should be controlling assuming *arguendo* that such testimony should have been received in evidence in the first place.

Moreover, it is elementary hornbook law that a formal written contract is governed by the intent expressed in the contract and not by unexpressed intentions, "Contracts," *C.J.S.*, Sec. 296(2). The majority ignores this fundamental principle to the detriment of gas purchasers and orderly administrative procedure. Thus, this decision will have the undesirable effect of permitting producers to impeach their own filings to obtain a higher price with the attendant, unnecessary and costly delay involved in considering such evidence in certificate proceedings.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATIONS PURSUANT TO SECTION 7 OF THE NATURAL GAS ACT

(Issued June 22, 1965)

TAYLOR, *Presiding Examiner:* This is a consolidated proceeding under the certificate provision of Section 7 of the Natural Gas Act (52 Stat. 824 (1938), 15 U.S.C. Sec. 717(f)). Sixty-seven applicants, individually or as operator, seek certificates of public convenience and necessity under Sections 7(c) and (e) of the Act authorizing them to sell natural gas to five pipe line companies for resale in interstate commerce from fields in Texas Railroad Commission District No. 4 (Texas District No. 4), an area consisting of fifteen counties in the southern tip of the State of Texas. The pipeline companies and the sales to each are as follows: Florida Gas Transmission Company (17 sales), South Texas Natural Gas Gathering Company (15 sales), Tennessee Gas Transmission Company (18 sales), Natural Gas Pipeline Company of America (16 sales), Valley Gas Transmission, Inc. (1 sale). The most important issue is the determination of the maximum initial price appropriate in the interest of the public convenience and necessity for new jurisdictional sales of gas from the area.

The sales are made under long term contracts (18–20 years), or amendments of earlier contracts, dated from August 8, 1956 to March 25, 1964. One contract in 1956, one contract in 1957 and three in 1964, and the remaining 62 contracts between January 1, 1958 and December 31, 1963. The proposed total initial prices range from 14.5 cents per Mcf to 20.045 cents per Mcf.[1] Upon application the Commission has granted temporary authorization to commence deliveries in each docket except Docket No. CI64–470. Four of the temporary authorizations require a rate for the period of temporary authorization which is less than the contract rate; two contain express refund conditions. Most of the sixty-seven applications involve initial sales of gas. Certain of the applications involve successions to sellers' interest and acreage additions. Details of the numerous applications, contracts, temporary certificates, and prices certificated by the Presiding Examiner, are shown in Appendix A hereto which is incorporated herein by reference. The Presiding Examiner finds, based upon a consideration of the whole record and as supported by and in accordance with the reliable, probative, and substantial evidence, and for the reasons expressed herein, that the prices shown in the last column of Appendix A hereto are required in the public convenience and necessity.

Procedural Matters

This proceeding was instituted by order of the Commission issued May 28, 1964 under the lead docket, *Turnbull & Zoch Drilling Co. (Operator), et al.*, Docket No. G–17960, *et al.*, which consolidated 67 pending applications for hear-

[1] Unless otherwise stated, all rates are expressed inclusive of applicable tax reimbursement. All volumes are at 14.65 psia.

ing. Subsequent orders and notices severed and consolidated applications so that at present there are 67 applications to be acted upon.[2]

On June 30, 1964, a prehearing conference was held in accordance with the Commission's May 28, 1964 order.[3] The Staff mailed its comparative price exhibit (now Hearing Exhibit No. 7) on July 6, 1964 to all participants.

A second prehearing conference was held on September 2, 1964. The prepared testimony and supporting exhibits of all participants, except for the refund issue, were mailed on or before September 11, 1964. On July 27, 1964, between the first and second prehearing conferences, the Commission issued its order permitting the intervention in this proceeding of Florida Gas Transmission Company (Florida Gas), Natural Gas Pipeline Company of America (Natural), and 29 eastern gas distributors. The Public Service Commission of New York and the Pennsylvania Public Utility Commission filed timely notices of intervention. The hearing commenced on September 29, 1964, and was concluded on October 9, 1964 after eight actual hearing days.

Thirteen initial briefs were filed on behalf of 20 applicants in 33 dockets. Answering briefs were filed by Staff and two interveners. On or before December 18, 1964 nine reply briefs were filed on behalf of 12 applicants.[4] Insofar as the briefs concern matters of general application, they will be considered as having been filed for the benefit of all to whom they might apply and will not be identified separately. A number of dockets present special problems which are not of general application. These will be considered separately.

Stipulations

In reaching a decision concerning the applications filed herein the Presiding Examiner is required by Section 7(e) of the Act to determine whether or not the applicants have established (1) that they are able and willing to do the acts and perform the services proposed in their applications; (2) that they are able and willing properly to conform to the provisions in the Act and the requirements,

---

[2] *Further consolidations:* Docket No. CI62–1074 by Notice herein on June 25, 1964; Docket Nos. CI64–1307, CI64–1310, and CI64–1311 by Notice herein on October 27, 1964. *Severances:* Docket No. CI64–1277, by Notice herein on July 22, 1964; Docket No. CI61–158 by Orders of July 8 and August 7, 1964, under lead dockets, *Humble Oil & Refining Company,* Docket Nos. G–9287 and G–9288, *et al.,* 32 FPC 49, 542; Docket No. CI61–482 by Order of October 8, 1964, under lead dockets, *The Atlantic Refining Company,* Docket Nos. G–9283 and G–9284, *et al.,* 32 FPC 933; and Docket No. G–19052, *et al.,* by Order of April 7, 1965, under lead dockets, *Sunray DX Oil Company, et al.,* Docket No. G–4281, *et al.* (Docket No. CI62–1074 presents a special situation. See footnote "m" to Appendix A attached hereto.)

[3] Although the Commission had not yet acted on petitions to intervene, the Presiding Examiner allowed the participation pursuant to Section 1.8(f)(2) of the Rules of Practice and Procedure.

[4] Applicants: Appell Petroleum Corporation, *et al.;* Clark Fuel Producing Company (Operator) and K. D. Owen, *et al.,* d/b/a Owen and Moss; Austral Oil Company, Incorporated; Blanco Oil Co. (Operator), *et al.,* and Killam & Hurd; Bright & Schiff; Continental Oil Company; Gulf Oil Corporation; Jonnell Gas, Incorporated (Operator), *et al.* and J. C. Trahan Drilling Contractor, Inc.; H. J. Mosser; Pan American Petroleum Corporation; Phillips Petroleum Company; Shell Oil Company; Sun Oil Company; Tenneco Oil Company (Operator), *et al.,* Texaco Inc., and Humble Oil & Refining Company adopted the brief of Continental Oil Company. *Interveners:* The Brooklyn Union Gas Company and Long Island Lighting Company; The Philadelphia Gas Works, Division of United Gas Improvement Company adopted The Brooklyn Union Gas Company's brief. *Replies:* Appell Petroleum Corporation, *et al.,* Clark Fuel Producing Company (Operator) and K. D. Owen, *et al.,* d/b/a Owen and Moss; Austral Oil Company, Incorporated; Blanco Oil Co. (Operator), *et al.,* and Killam & Hurd; Bright & Schiff; Continental Oil Company and Gulf Oil Corporation; Pan American Petroleum Corporation; Shell Oil Company; Sun Oil Company; Texaco Inc. adopted Continental's brief.

rules, and regulations of the Commission thereunder; and (3) that the proposed services and sales are or will be required by the present or future public convenience and necessity.

As a result of stipulations and orders of the Commission, certain of the ultimate and subsidiary determinations required by Section 7(e) of the Act have been removed from consideration herein.

In prehearing conferences, and during the hearings, the participants stipulated that for the purposes of this consolidated proceeding all of the contracts underlying the certificate applications in this proceeding were entered into after arm's-length negotiations. They also stipulated that the contract and certificate filings by seventeen applicants[5] established, in the language of Section 7(e) of the Act, that such applicants were "able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Act and the requirements, rules, and regulations of the Commission thereunder. * * *" The latter stipulation usually is entered into as a routine matter on behalf of all applicants, regardless of whether or not all applicants appear at the hearing. Long Island Lighting Company, however, refused to stipulate that the twenty-eight applicants who did not appear at the hearing[6] were able and willing to conform to the provisions of the Act and the Commission's valid promulgations thereunder. Its refusal was based upon a recent experience wherein two producers, not parties to this case, took the position that they were mere conduits for revenues and therefore had no monies with which to make refunds required by Commission orders. In addition, six applicants[7] viewed the stipulation as an agreement by them to accept a permanent certificate at a price lower than the contract price, or an agreement to comply with any valid refund order of the Commission, or both, even though they might not be (1) willing to accept a price-conditioned permanent certificate (assuming a legal right to refuse a certificate where gas is flowing under a temporary certificate), or (2) able to comply with a refund order if one were issued. In short, they want to see the permanent certificate before deciding whether or not they were able and willing to comply with its terms. (The fact that the refund issue was severed from this phase of the proceeding by order of the Commission on October 5, 1964, did not change the position of any participant.) Out of an abundance of caution therefore, they refused to enter into the full stipulation. It was stipulated, however, that the six applicants were able and willing properly to do the acts and to perform the service proposed in their applications.

No similar stipulation was entered into concerning those applicants who failed to appear at the hearing and who are listed in Part II of Appendix B hereof. The evidence of record,[8] however, supports a finding, which is hereby made, that all such applicants who have commenced deliveries under their temporary certificates are able and willing properly to do the acts and to perform the service purposed in their applications. (Insofar as shown by this record, five of such applicants have not commenced service under their temporary cer-

---

[5] Listed in Appendix B hereto, Part I.

[6] Listed in Appendix B hereto, Part II.

[7] McCurdy & McCurdy (G–18434); Jonnell Gas, Incorporated (Operator), *et al.* (CI60–323, CI63–925); J. C. Trahan Drilling Contractor, Inc. (CI62–123); Blanco Oil Co. (Operator), *et al.* (CI61–618); Killam & Hurd (CI61–626); and Bright & Schiff (CI61–1541).

[8] The applications and related rate schedules of all applicants were admitted into evidence by stipulation as items by reference. There is sufficient evidence, presented by other participants, to find the prices required by the public convenience and necessity for all applicants. Service has commenced under the temporary certificates issued to most of the absent applicants.

tificates.[9] As set forth subsequently herein, the Katz Oil Company application should be dismissed and the applications of the other four applicants should be conditioned as set forth hereinbelow.)

There remains to be made a finding that the six applicants referred to previously, and also the absent applicants listed in Part II of Appendix B, are able and willing to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder. At the hearing the Presiding Examiner stated that this finding could be based upon a statement by each of such applicants indicating its ability and willingness in the language of the Act, and that each certificate should be conditoned to require such a statement. In its brief, Staff contends that the Presiding Examiner can also make this finding on the basis of the fact that service has already commenced. Staff states that no one "who has committed himself to regulation by a lawful authority can be heard to say that he will not comply with its valid laws, orders, rules and regulations." (Br., p. 33). The Presiding Examiner agrees and finds that all of such applicants who have commenced deliveries under their temporary certificates are able and willing properly to conform to the provisions of the Act and the requirements, rules and regulations of the Commission thereunder.[10]

As previously shown, the record does not reflect whether or not service has commenced under the temporary certificates issued in the five dockets listed in footnote 9, below. The applicant in Docket No. CI61-631, Katz Oil Company, has indicated by letter that it does not intend to produce gas from its lease (Item TTT). Since this applicant has not shown good cause for its failure to appear and prosecute its application, this application will be dismissed and its proceeding terminated. (*Cf.*, Section 157.12 of the Commission's Regulations (18 CFR 157.12)).

The four other applicants who have not commenced service should be issued certificates containing the following conditions, among others: each must notify the Commission in writing within 10 days whether or not service has ever commenced, and if so, when; if the service has never commenced, then the certificate issued herein is void and the application will be dismissed and the proceeding terminated for failure to prosecute; if service has ever commenced, then the certificate issued herein is fully effective and subject to all conditions imposed herein.

Severance and Refund Issues

On July 15, 1964, the Presiding Examiner referred a petition and several severance motions to the Commission for ultimate determination pursuant to Section 1.12(d) of the Rules of Practice and Procedure. Two of the motions by Bright & Schiff requested rehearing of the May 28, 1964 order which initiated this consolidated proceeding and, in the alternative, severance of Bright & Schiff's Docket No. CI61-1541. These motions were denied by order of the Commission dated September 11, 1964. Except for a matter subsequently discussed in the in-line price section herein, the remaining pleadings related to whether or not there should be in this proceeding any consideration of refunds in cases where the temporary certificate does not contain an express refund condition.

---

[9] Diversa, Inc., *et al.*, Docket No. G-20458, *et al.*; Joseph E. Seagram & Sons, Inc., Docket No. CI60-506; Roy A. Lamb & A. G. Galt, d/b/a Pan American Engineering Company, Docket No. CI62-21; L. B. Horn (Operator), *et al.*, Docket No. CI64-908; and Katz Oil Company, Docket No. CI61-631.

[10] The questions as to what should be done if a producer fails to comply with valid Commission orders or seeks to abandon its sale are not now presented.

By order issued October 5, 1964, 32 FPC 914, the Commission deferred such consideration until its further order.

At the September 30, 1964 hearing, counsel for Bright & Schiff made an oral motion to sever its docket from this proceeding. The Presiding Examiner ruled that he had no authority to dispose of the motion prior to his initial decision. He declined to find that extraordinary circumstances existed for the purposes of an appeal pursuant to Rule 1.28(a). In view of the Commission's October 5, 1964 order previously referred to, this matter is moot.

Exclusion of Cost and Economic Evidence

At the first prehearing conference on June 3, 1964 the Presiding Examiner ruled that he would sustain an objection to the introduction of evidence concerning costs, financial and revenue requirements, geological information, supply and demand relationships, and trends and economic evidence, if such evidence were offered.[11] This ruling was based primarily upon the position taken by the Commission in the *Skelly* case,[12] and in *Texaco Seaboard, Inc.*, Opinion No. 383, 29 FPC 593, rehearing denied, Opinion 383–A, 30 FPC 613; and its affirmance by the courts in *California Oil Co.* v. *F.P.C.*, 315 F. 2d 652, 660 (CA10), and *The Atlantic Refining Co.* v. *F.P.C.*, 316 F. 2d 677, 680 (CADC). The Presiding Examiner indicated that parties desiring to adduce such evidence would be permitted to make offers of proof. Subsequent to the first prehearing conference, and prior to the date set for the commencement of the hearing, the Fifth Circuit issued its opinion in *Callery Properties, Inc.* v. *F.P.C.*, 335 F. 2d 1004 (CA5). Continental Oil Company and various other applicants then requested that the Presiding Examiner convene a second prehearing conference to consider further the issues upon which evidence should be offered in these proceedings. A second prehearing conference was held on September 2, 1964. After extensive argument he ruled again that such evidence would not be permitted in this proceeding. He relied primarily upon the *Skelly* case principle and specifically refused to follow the holding in the *Callery* case, which states that such evidence should be admitted in a Section 7 initial price proceeding. *Cf.*, *Sun Oil Company, et al.*, Docket No. G–8592, *et al.*, Opinion No. 445, 32 FPC 1183, issued October 26, 1964. Humble Oil & Refining Company, joined in by Continental Oil Company, Shell Oil Company, Getty Oil Company, and Bright & Schiff, requested the Presiding Examiner to certify an appeal from his ruling to the Commission. The Presiding Examiner denied such request because the record did not support a finding that extraordinary circumstances existed. On September 21, 1964, Continental filed with the Commission an appeal from the aforesaid September 2, 1964, ruling excluding non-in-line price evidence. Similar appeals were taken by various other parties. Copies of the various appeals were transmitted to the Presiding Examiner. The Presiding Examiner has taken no action on such appeals and is unaware of any action having been taken by the Commission.

Numerous applicants in their briefs have urged with vigor that the Presiding Examiner erred in excluding the cost, financial, geological, and economic evidence offered in this proceeding and request that he reverse his ruling and reopen the proceeding for its admission. They particularly urge that the Presiding Examiner should have followed the *Callery* case, *supra*. The Presiding Examiner has

[11] The ruling was made in order to obviate the necessity of the parties bringing in witnesses and detailed evidence, and was made in response to a request by one of the applicants (Tr. 59–63).

[12] *Skelly Oil Company*, Opinion No. 362, 28 FPC 401, modified on rehearing, Opinion No. 362–A, 28 FPC 1065, affirmed in part and remanded, *sub nom. Public Service Commission of State of N.Y.* v. *Federal Power Commission*, 329 F. 2d 242 (CADC), certiorari denied, *sub nom. Prado Oil & Gas Co.* v. *F.P.C.*, 377 U.S. 963, *Skelly Oil Co.* v. *F.P.C.*, 377 U.S. 963.

reviewed carefully the excluded evidence, which is in the record as offers of proof, and finds that the admission of such evidence would accomplish the very thing the United States Supreme Court sought to avoid when it enunciated the hold-the-line principle in *Atlantic Rfg. Co.* v. *Public Service Commission*, 360 U.S. 378, 392 (1959), hereinafter referred to as the *Catco* case.

That case held, among other things, that where a proposed price is not in keeping with the public interest because it is out of line, the Commission may attach conditions to a certificate in order to afford standby protection to the "consuming public * * * while the justness and reasonableness of the price fixed by the parties is being determined under other sections of the Act."[13] Such procedure is a "stopgap" device which permits "the Commission to act upon certificate applications with reasonable dispatch."[14] The producer applicants are protected in the event the Commission errs on the low side in conditioning a certificate because the company under Section 4 of the Act can increase the price up to the contract price, assuming that the contract price is not at a triggering level, subject to disallowance by the Commission after a full rate proceeding, the public being protected with reference to refunds in the interim. The Presiding Examiner finds that the "hold the line" principle renders immaterial and irrelevant in this proceeding the cost, financial, geological and economic evidence sought to be introduced herein.

Markets and Present Public Need for Gas

In order to meet the public convenience and necessity test prescribed by Section 7 of the Act, a producer-applicant must show that there is a market for the natural gas it intends to sell in interstate commerce. At a prehearing conference held on September 2, 1964, the Presiding Examiner ruled that in this proceeding the long-term contracts entered into by each applicant with a pipeline company constituted proof of a market; that there was no market issue in this proceeding; and that such issue is one to be considered in acting on each pipeline's request for a permanent certificate. These ruling were excepted to but no appeal to the Commission was requested.[15]

The Long Island Lighting Company (Long Island Lighting) and the Brooklyn Union Gas Company (Brooklyn Union)[16] contend that the Presiding Examiner

---

[13] A proceeding designed to determine the "just and reasonable" rate for the sales proposed herein, among others, was instituted by the Commission by order dated November 27, 1963, 30 FPC 1354, in Docket No. AR64–2, Area Rate Proceeding, *et al.*, (Texas Gulf Coast Area). By order issued November 27, 1964, 32 FPC 1373, the Commission prescribed certain procedures and appointed a Presiding Examiner. Since then five prehearing conferences have been held and the direct evidence of a non-cost nature has been placed in the record.

[14] *United Gas Improvement Co.* v. *Federal Power Commission*, 283 F. 2d 817, 822–823 (CA9), certiorari denied, *sub nom. Superior Oil Company* v. *United Gas Improvement Co.*, 365 U.S. 879.

[15] An appeal was taken from a related ruling of the Presiding Examiner. In its order of September 29, 1964, 32 FPC 877, herein, the Commission granted the appeal and ruled that in a case where the pipeline purchaser did not have a permanent certificate for the facilities required to receive the producer's gas, the certificate could still be issued to the producer but the producer would be on notice that if the pipeline does not receive certification this market will be gone In this proceeding the issuance of a certificate pursuant to this order is no longer necessary because all the pipelines purchasing gas from the applicants herein under the respective dockets now have been issued permanent certificates. See order issuing certificate, *Natural Gas Pipeline Company of America*, Docket No. CP61–96, November 23, 1964, 32 FPC 1354. (The fact that two transporters of gas (Docket No. CI61–282) to one of the pipeline companies have only temporary certificates is immaterial to this matter.)

[16] The latter's position on this matter, and others, was adopted by The Philadelphia Gas Works, Division of The United Gas Improvement Company. Hereinafter reference will be made only to Brooklyn Union.

erred in excluding from this proceeding the issue of the present public need for the gas. Brooklyn Union contends that at this period of time there is an "over-abundance of pipeline supply and the related serious take-or-pay position of many major pipelines is as much a matter of common knowledge as the former undersupply situation." (Br. p. 4) [17] Brooklyn Union contends that the issuance of a certificate to the pipeline purchaser cannot fill the evidentiary gap in this proceeding as to the present need for the gas.

As previously shown, all of the pipeline purchasers of natural gas from the applicants herein have been issued permanent certificates to construct the necessary facilities required to receive and transport the natural gas. These certificates could not have been issued unless there existed in the territory proposed to be served customers who could reasonably be expected to use such natural-gas service. *Kansas Pipe Line & Gas Company, et al.*, 2 FPC 29, 45. In this proceeding, therefore, the distributor interveners want a reappraisal of whether there now exist pipeline customers who can reasonably be expected to use the natural gas which will be purchased from the producers herein. Such a reappraisal is not required by the Natural Gas Act and, in view of the proceedings in Docket No. R–199 referred to hereinabove, is not required in the public interest.

One further matter: Long Island Lighting invited the Presiding Examiner's attention to the *Catco* case, *supra*, where the Court, in finding that there was insufficient evidence to support a finding of public convenience and necessity, stated as follows:

> Nor do we find any support whatever in the record for the conclusory finding on which the order was based that "the public served through the Tennessee Gas system is greatly in need of increased supplies of natural gas." 17 F.P.C. 880, 881. Admittedly, any such need was wrapped up in the Commission's action in Docket G–11107, where Tennessee was asking for permission to enlarge its facilities. However, the two dockets were not consolidated and the Presiding Examiner conditioned his approval here on the granting of the application in Docket G–11107, no part of which record is here. (360 U.S. at 393.)

It is apparent that the Court in the *Catco* case was referring to need as being synonymous with whether or not there were customers who could reasonably be expected ot use the natural gas. In the instant case there are no pipeline purchasers without permanent certificates and, therefore, the question posed by Long Island Lighting's reference to the *Catco* case is moot.

The In-Line Price

The United States Supreme Court in the *Catco* case, *supra*,[18] stated that "Section 7 procedures * * * act to hold the line awaiting adjudication of a just and reasonable rate." The Court also stated that where the "proposed price is not in keeping with the public interest because it is out of line * * * the Commission" might attach conditions to a certificate (360 U.S. at 391). Whether a proposed price is out of line requires a determination of what price is in-line. The Commission in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, Opinion No. 436, 32 FPC 254, decided July 23, 1964, defined the in-line price as follows:

---

[17] The Commission in Docket No. R–199 has under consideration proposed rules relating to take-or-pay-for provisions in producer contracts. On March 16, 1965 the Commission issued revised proposals which would permit provisions requiring pipeline customers to take or pay for 100 percent of their annual contract quantities of gas but would allow the companies five years to take gas previously paid for.

[18] 360 U.S. at 392

> The in-line price is not a mechanical reflection of certificated prices or of the market. It is, rather, the Commission's considered judgment as to the maximum initial price appropriate in the interest of the public convenience and necessity reflecting the current conditions in the industry. Further, it is our view that once an in-line price has been established for an area, it shall be presumed to continue until sufficient evidence is presented that there has been a change. (p. 260)

In the Presiding Examiner's considered judgment the maximum initial price appropriate in the interest of the public convenience and necessity reflecting current conditions in the industry is (a) 15 cents per Mcf at 14.65 psia for contracts executed during the period January 1, 1958 through September 27, 1960; (b) 16 cents per Mcf at 14.65 psia for contracts executed during the period September 28, 1960 through August 29, 1962, and (c) 16 cents per Mcf at 14.65 psia for contracts executed during the period August 30, 1962 through March 25, 1964.

Prior to the initiation of this consolidated proceeding on May 28, 1964 the Commission had issued certain policy statements, opinions and orders applicable to the pricing area here involved.[19]

Guideline prices for natural gas sold by independent producers in Texas District No. 4 were established by the Commission in Statement of General Policy No. 61–1, issued and effective on September 28, 1960 (18 CFR 2.56), at 18 cents per Mcf at 14.65 psia, for initial sales of natural gas, inclusive of all taxes. On August 30, 1962, 28 FPC 441, the Commission issued its Fifth Amendment to the Policy Statement (18 CFR, Supp. 1964, 2.56). It provided that effective on August 30, 1962 the ceiling price level for initial sales in Texas District No. 4, inclusive of state taxes, would be 16 cents per Mcf at 14.65 psia.

In its opinion in the *Skelly* case, *supra* at pages 408, 409, which involved sales to South Texas Natural Gas Gathering Company, the Commission found an in-line level of 15 cents per Mcf for the period immediately prior to September 28, 1960. The same in-line price for the same area and period was found in the following cases: *Jake L. Hamon*[20] involving sales to *United Gas Pipe Line Company; Texaco Seaboard, Inc., supra* at page 600, involving sales to Natural Gas Pipeline Company of America (Natural Gas Pipeline); and *Hassie Hunt Trust*,[21] also involving sales to Natural Gas Pipeline. In the *Amerada* case,[22] which involved sales to South Texas Natural Gas Gathering Co., Tennessee Gas Transmission Co., Ben Bolt Gathering Co., and Natural Gas Pipeline in Texas District No. 4, the Commission found an in-line price for the period September 28, 1960 to August 30, 1962 of 16 cents per Mcf.

---

[19] Austral Oil Company, Blanco Oil Co. and Killam & Hurd contend that Texas District No. 4 is not a proper pricing area because "it is an artificially-drawn area which supports no inference of similarity among the wells, fields or counties therein. * * *" (Blanco Oil, Br. p. 40). Any inequities which may appear to exist in this proceeding because of the use of the area in question are considered and provided for in the premium benefits section of this decision.

[20] *Jake L. Hamon*, 29 FPC 784, rehearing denied, 29 FPC 1152, affirmed in part and remanded, *sub nom. Public Service Commission of New York* v. *F.P.C.* (CADC), No. 10852, issued February 11, 1964, 329 F. 2d 242 certiorari denied, *sub nom. Hamon* v. *F.P.C.*, 377 U.S. 963.

[21] *Hassie Hunt Trust, et al.*, Opinion No. 412, 30 FPC 1438, rehearing denied, but order stayed, in part, Opinion No. 412–A, 31 FPC 181, appeal pending, *Hill* v. *F.P.C.* (CA5), No. 21286.

[22] *Amerada Petroleum Corporation, et al.*, Opinion No. 422, 31 FPC 623, affirmed on rehearing, but stay order granted, in part, Opinion No. 422–A, 31 FPC 1315, appeals pending, *Long Island Lighting Co.* v. *F.P.C.* (CADC), No. 18790 and *Sunray DX Oil Co.* v. *F.P.C.* (CA10), No. 7781.

Bright & Schiff, an applicant herein in Docket No. CI61–1541, requested the Commission to rule that the decisions of the Commission in the *Skelly* and *Amerada* proceedings, *supra*, shall have no effect whatsoever upon the hearing and decision of this consolidated proceeding. By its order issued herein on October 5, 1964, 32 FPC 914, the Commission denied the request as premature. The precedential value of the above-mentioned Commission opinions, other Commission opinions, Commission orders, and court decisions relied upon by the participants is shown in the context of this initial decision.

The Staff witnesses in this proceeding presented in-line price evidence for the period prior to the issuance of the Policy Statement and also the two periods subsequent to its issuance. A witness sponsored by most of the active producer applicants who participated in the hearing (the producer witness) presented evidence for the two periods subsequent to the Policy Statement.[23] Although both Staff's and producer witness' methods of determining the in-line price differ in some respects, their conclusions are identical.

The Producer Witness

The producer witness presented information and conclusions concerning contract prices and certificated prices (Exhibits 1 and 2). She first presented information on market prices for recent interstate natural-gas sales in Texas District No. 4, together with related market data and, on the basis of this information, reached the conclusion "as a matter of judgment that if [market value] is given consideration the appropriate limiting price for Texas District No. 4 is at least 18 cents." (Tr. 443.)

Next she presented data concerning the prices at which recent sales had been certificated by this Commission in Texas District No. 4 and concluded that the in-line price for this area, in accordance with the considerations which guided the Commission in its previous in-line determinations for the District, was at least 16 cents for the two periods subsequent to the Policy Statement. She stated that she did not consider, and had no opinion, in regard to the in-line price prior to September 28, 1960. She testified that with respect to such first period the distribution of certificated prices was dominated by the sales authorized in the *Skelly* case.[24]

It was her further view that the two alternative approaches set forth above are not mutually exclusive; in other words, if the determination in the proceeding were made with reference to the current economic conditions affecting the gas producing industry, then past regulatory action (past certificated prices) would be of lesser significance. However, if the determination were made on the basis of the in-line price, the contract prices should still be considered because "it has never been suggested that the in-line price determination should be divorced from economic reality or made without respect to the market price." (Tr. 426). Her opinion that market value should be given consideration was based, except for cost and economic evidence which has been found to be

---

[23] Humble Oil & Refining Company, Pan American Petroleum Corporation, M. W. Crockett, Gulf Oil Corporation, Tenneco Oil Co., Texaco Inc., Cities Service Oil Company, Shell Oil Company, Blanco Oil Company, Killam & Hurd, Jonnell Gas, Inc., J. C. Trahan Drilling Contractor, Inc., Continental Oil Company, Harry J. Mosser, Atlantic Refining Company, Sun Oil Company, Bright & Schiff and Phillips Petroleum Company.

[24] The producers who sponsored this testimony do not agree with the standards used by the Commission in determining the in-line price in the *Skelly* case and subsequent opinions. While not acquiescing in the standards used in those opinions, and while reserving the right to urge that the standards used are in error, for the purpose of this proceeding the producers who executed contracts subsequent to September 28, 1960, at 16.0 cents per Mcf assume that the opinions are not in error. This was done because, even under those standards, they contend that they are entitled to unconditioned certificates.

inadmissible in this proceeding, upon her unsupported opinion that there is "workable competition in the gas producers market." (Tr. 443).

In reaching her opinion that the appropriate limiting price for Texas District No. 4 is at least 18 cents per Mcf, the producer witness took into account certain facts and inferences concerning intrastate deliveries in Texas Districts No. 2, 3 and 4 (the Texas Gulf Coast area). Her testimony and related exhibits show a decline in new interstate commitments in Texas District No. 4[25] and an increase in intrastate deliveries in Texas Districts No. 2, 3 and 4.[26] (No information was available on gas commitments under intrastate producer contracts in Texas District No. 4 and no separate intrastate delivery figures were available for such District.) On the basis of this comparison of new interstate commitments with non-jurisdictional deliveries, she concluded that "sellers have found it advantageous to market an increased proportion of their supplies under non-jurisdictional contracts." (Tr. 439). But the real question is why?

The producer witness stated that an "important reason for the decline in interstate commitments appears to be the fact that the interstate market must compete with the large and growing intrastate market on the Texas Gulf Coast." (Tr. 437). The witness did not support this conclusion with any comparison of intrastate prices with interstate prices because the intrastate prices were unavailable, except for the testimony presented by Pan American Petroleum Corporation's (Pan American) witness. His testimony shows that Pan American is currently selling gas in Texas District No. 4 under nine contracts where the monthly quantities equal or exceed 10,000 Mcf (excluding two sales consolidated herein), four of which are jurisdictional and five of which are non-jurisdictional. The daily quantity of gas sold under the four jurisdictional contracts is approximately 15.9 Mmcf per day and that under the five non-jurisdictional contracts is approximately 46.4 Mmcf per day. He also testified that the weighted average price by volume under the four jurisdictional contracts is 14.9 cents per Mcf (prices not subject to refund) or 15.07 cents per Mcf (prices collected subject to refund). The weighted average price for gas sold under the five non-jurisdictional contracts is 17.4 cents per Mcf.

The use of testimony by one witness concerning nine sales is insufficient to provide a basis for finding that intrastate prices make it advantageous for sellers to market their supplies under non-jurisdictional contracts. The producers, however, would have the Presiding Examiner infer that the increased intrastate deliveries have been due to low interstate prices. Although one of the functions of the Commission is "to appraise the facts and to draw inferences from them,"[27] this record does not permit the Presiding Examiner to draw the inference urged by the producers as a basis for decision herein because it is not the only inference which might with equal propriety be drawn from the same facts. In short, the inference is no more than the assertion of one of two possibilities. The other permissible inference is as follows: that pipelines are

---

[25] The new contract volume, expressed in terms of annual deliveries, declined from an average of 59 million Mcf in 1958–1960 to an average of 25 million Mcf during 1961–1963.

[26] Exhibit 12 sponsored by the producer witness, as revised during the hearing (Tr. 1180–1185), shows that during the period 1958–1963 total intrastate use increased from 1,047,470 Mmcf to 1,525,169 Mmcf. For the same period it shows that there was an increase in sales to interstate pipeline companies under independent producer rate schedules from 1,278,212 Mmcf in 1958 to 1,341,631 Mmcf in 1963, amounting to about a five percent increase. The total intrastate figure is a derived figure in that, to the best of the witness' knowledge, there is neither a published nor unpublished report which would show the comparable figure. In other words, the witness obtained the total marketed production figures of the Texas Railroad Commission and, after certain adjustments, deducted sales to interstate pipeline companies.

[27] *F.P.C. v. Transcontinental Gas Corp.*, 365 U.S. 1, 7.

cutting back on older Texas Gulf Coast contracts because of take-or-pay problems under later contracts in other areas. In fact, the producer witness recognizes that competition between the interstate market and intrastate market is not the exclusive reason for the decline in commitments (Tr. 835).

The Presiding Examiner finds that this record does not support the inference of fact urged by the producers.

The Staff Witness

The Staff witness presented Exhibits 7, 8 and 9 pertaining to contracts in Texas District No. 4 (Tr. 612).[28] The information in Exhibits 7 and 8 was taken from producer rate schedules and related certificate applications on file with this Commission. Schedule 1 of Exhibit 7 sets forth significant contract provisions of the sales proposed herein. Schedules 2–A through 2–L set forth similar data for sales under contracts in this same area executed on June 7, 1954 through December 31, 1963, and permanently certificated as of March 1, 1964.[29] Schedule 3 shows temporarily certificated sales that are not in Schedule 1, for contracts dated June 7, 1954 through March 1, 1964. The provisions include date of contract, term, location, delivery point, maximum delivery pressure, heating value, allowed sulphur, rates and price provisions and estimated first-month's production volumes.

Column 17 of each Schedule of Exhibit 7 shows the basic certificated price including tax and other reimbursements. Column 18 shows the current certificated price, which in some cases is higher than the basic certificated price due to rate settlements and permitted price escalations. The original price set forth in a contract filed as rate schedule was not shown on Exhibit 7 where it was higher than the basic certificated price. The charts attached to Staff's Exhibit 9, and also to its brief, used the prices in column 17 as their foundation.

The Staff witness set out the results of his in-line price studies in Charts 1 through 4 of Exhibit 9.[30] Because he wanted to see what impact the issuance of the Commission's Policy Statement and amendments thereto had on the pattern of permanently certificated prices in the area, and in keeping with the Commission's past pronouncements regarding time periods for determining in-line prices, he divided the Schedules 2–E through 2–L price and volume data into three time periods: January 1, 1958 through September 27, 1960 (Chart No. 1), September 28, 1960, through August 29, 1962 (Chart No. 3), and August 31, 1962 through December 31, 1963 (Chart No. 4), and finally, a composite of Charts Nos. 3 and 4 (Chart No. 2). He then compared the contract quality specifications of the contracts underlying the application herein (Table 1, Exhibit No. 9), with those of the contracts in Schedules 2–E through 2–L of Exhibit No. 7 (Table 2, Exhibit No. 9), and found that they are generally comparable (Tr. 615, 618). (The producer witness had a similar opinion.)[31] He concluded that the in-line

---

[28] Exhibit No. 8 consists of errata to Exhibit No. 7.

[29] This latter date was subsequently revised to read "some time" after March 22, 1964—the date of the *Amerada* opinion, *supra* (Tr. 1782–83).

[30] The sales from Schedules No. 2–E through 2–L of Exhibit No. 7, which were used to construct these charts, included all sales by producers except a few sales found to be short term sales and sales of purchased gas. These charts include sales to gatherers, including Valley Gas Transmission Inc., and sales at rates less than 14 cents per Mcf. As subsequently shown, however, the Staff attached to its brief similar charts which eliminated all such sales in order to avoid needless argument.

[31] The Presiding Examiner has considered the evidence of record, and the contentions to the contrary, and finds that the contracts in Schedules 2–E through 2–L of Exhibit No. 7 are fairly comparable to the contracts in issue herein insofar as quality provisions are concerned. The matter of comparability of quantity provisions is discussed in the "Premium Benefits" section of this initial decision.

price for the first period should be 15 cents per Mcf and for the period of time encompassed by the last two periods 16 cents per Mcf.

As previously shown, the producer witness used the latter two time periods in her consideration of certificated prices. She testified that she did so as a result of Commission precedent and because the regulatory actions taken on September 28, 1960 and August 30, 1962 affected the subsequent contract prices, that is, the contract prices negotiated by producers were lower following the issuance of the Policy Statement and the Fifth Amendment. (This record contains the testimony of two producer parties who voluntarily reduced the initial price of a contract in order to obtain a permanent certificate without undue delay (Tr. 584, 592); and the testimony of one producer party who relied upon the Policy Statement before beginning deliveries of gas under a temporary certificate (Tr. 558)).[22] Several of the producers herein object to the use of the three time periods. Most of them have contracts dated several weeks prior to the issuance of the Policy Statement.[23] These applicants vigorously urge that the time periods used by the Staff witness be disregarded because they have no economic reality and result in a determination based upon Commission proceedings in which certain of the applicants were not parties.

The evidence herein shows that the issuance of the Policy Statement and the Fifth Amendment thereto were events which caused a change in the level of contract prices. As a result, before September 28, 1960, the parties were guided by one set of circumstances; after that date the parties also had the Policy Statement and later the Fifth Amendment as sources of reference in entering into their contracts. A comparison of prices both before and after September 28, 1960 would, therefore, be a comparison of prices based upon dissimilar circumstances, and would not reflect the current conditions in the industry. The Presiding Examiner finds that the public convenience and necessity require the use of the three separate time periods.

In preparing the tables set out below, which set forth relevant producer prices for comparative purposes, the Presiding Examiner (1) has included sales under 14 cents per Mcf; (2) has excluded sales to gatherers and to Valley Gas Transmission, Inc.; and (3) has used estimated first-month's volumes.

Inclusion of Sales Under 14 Cents

In its opinions concerning the in-line price for this area, as set forth at page 1021, *supra*, the Commission did not base its determination on certificates issued at prices under 14 cents.

Long Island Lighting, Brooklyn Union, and Staff, contend that the only reason for not doing so was because evidence as to such sales had not been placed into the record. They now contend that the record herein does contain a list of sales in the area under 14 cents per Mcf (Exhibit 7), and that no reason has been

---

[22] This testimony is supported by Exhibit 2, Chart 1, and Schedule 1, which show that from January 1, 1958 to September 28, 1960 there were nine (9) sales in District No. 4 at prices ranging from 19.5 cents to 20 cents per Mcf at 14.65 psia. For the period September 28, 1960 to August 30, 1962 (Fifth Amendment to the Policy Statement), there was only one (1) sale above the 18 cents per Mcf guideline price. For the same period of time, however, there were twenty-two (22) sales concentrated in the 17-cent and 18-cent per Mcf price levels. Subsequent to August 30, 1962 there was only one (1) sale above the 16 cent per Mcf guideline price.

[23] Such as, Blanco Oil Co., Killam & Hurd, Austral Oil Company Incorporated, Appell Petroleum Corporation, *et al.*, and K. D. Owen, *et al.*, d/b/a Owen and Moss.

presented in this proceeding for not using them as an aid in finding the in-line price.[34]

The producer witness included sales under 14 cents per Mcf in her Exhibit 2 in those schedules wherein she was using initial contract prices, as distinguished from certificated prices, in order to establish a market value price. However, in those schedules of her exhibit which related solely to establishing an in-line price by use of sales certificated by the Commission, she excluded sales under 14 cents, stating that in such instances it was appropriate to proceed in the same way that the Commission did in its prior determination in this area.

As previously shown, the records in the prior cases contained no evidence of sales below 14 cents per Mcf. This record does contain evidence of such sales and the Presiding Examiner finds that where such sales are not excluded for other reasons, such as sales to gatherers, they should be used in order that the in-line price determination herein might be based on a complete range of relevant price data.

Sales to and by Gatherers

Sales to eleven buyers who are classified as gatherers have been eliminated by the Presiding Examiner in arriving at an in-line price in this proceeding.[35] In addition, 34 sales *to* Valley Gas Transmission, Inc. (Valley Gas) at 14 cents per Mcf, and one at 15 cents per Mcf, have also been excluded.[36] Schedules 2 and 3 of Exhibit 7 do not show any sales *by* Valley Gas, South Texas Natural Gas Co. (South Texas) or Ben Bolt Gathering Co. (Ben Bolt).

The gatherers referred to herein generally purchase gas from several locations at low prices and then resell the collected gas to major pipeline companies at prices typical of those paid to producers by such pipelines. The Presiding Examiner finds that such sales are not generally comparable to the producer sales in this proceeding.

Valley Gas, South Texas, and Ben Bolt require separate discussion. Sales to the latter two have not been excluded, whereas sales to Valley Gas have been excluded even though it is technically classified as a pipeline company (Tr. 1214).

In its brief Staff contends that the Commission has never outlawed consideration of sales to gatherers or Valley Gas. Long Island Lighting contends that the sales to Valley Gas should be included in arriving at an in-line price in this proceeding. It points to testimony of the witness for Pan American to the effect that Pan American has an application in this proceeding (Docket No. CI63-1263, Item SS-1) to sell natural gas to Valley Gas under a contract dated March 8, 1963. The witness for Pan American testified that the gas being sold was of pipeline quality and that after Valley Gas purchases it, it will be resold to Tennessee Gas Transmission Company and to Iroquois Gas Corporation. Prior to such sale Valley Gas transports the gas about 18 miles. Long Island Lighting

---

[34] Although its presentation at the hearing specifically included sales under 14 cents, the Staff, in "an attempt to cut out needless argument," attached to its brief additional charts based upon the record herein and "upon the assumption *arguendo*, that the applicants are correct in their contentions." (Br. p. 47). In other words, the Staff position as to the in-line price is the same regardless of the exclusion or inclusion of sales under 14 cents per Mcf. (The new charts exclude sales under 14.0 cents per Mcf, sales to gathering companies, and sales to Valley Gas. Sales under temporary certificates were added.)

[35] W. J. Riley, d/b/a Banquete Gas Co.; Coastal States Gas Producing Co.; Engeo Gathering Co.; Orange Grove Gas Gathering Co.; The Altex Corp.; Valley Gas Transmission, Inc.; Banquete Gas Co.; Hydrocarbon Transmission Co.; J. C. Adair; Trans Pipeline Corporation, and Alfred Production Company.

[36] See Exhibit 7, Schedule 2-F, Sheets 3 and 4; Schedule 2-G, Sheet 2, Schedule 2-H, Sheet 1, Schedule 2-I, Sheet 2, Schedule 2-J, Sheet 1, and Schedule 2-L, Sheets 1 and 2

contends that on this record no finding can be made that sales to Valley Gas differ in any material way from sales to other pipeline companies.

The main producer witness testified that Valley Gas operates a number of small gathering systems, collecting gas produced in locations which in most instances are not accessible to the pipelines and usually reselling to the interstate pipeline companies at prices comparable to those in the typical producer pipeline sale (Tr. 438, 1213). She also stated that there might be situations where the sale to Valley Gas would be similar to regular pipeline sales (Tr. 1215). This testimony is supported by the fact that of the 35 sales shown on Exhibit 7 to Valley Gas, all were at 14 cents except one.

The Presiding Examiner finds that sales by producers to Valley Gas are not generally comparable to the normal producer-pipeline sales and should not be considered in establishing the in-line price in this proceeding.[37]

Sales to South Texas and Ben Bolt are not the same as sales to Valley Gas. Both of these companies engage in performing a transportation function as distinguished from a mere gathering function.[38]

Use of Estimated First Month's Delivery Volumes

In her exhibits the producer witness used actual annual delivery volumes (Mmcf) for contracts dated 1958 through 1961 as they were reported by the purchasers in their Form 2 reports. Where reported volumes were not available for the contracts during such period, estimated volumes for the first month were used, projected to an annual basis. For contracts dated 1962–64, the volumes used were estimated volumes for the first month of the contract as reported by the sellers with the rate schedule filing, or certificate applications, projected to an annual basis.

The Staff in-line witness used estimated first-month deliveries (Mcf) in his exhibits. Several applicants also used estimated first-month's volumes (Mcf) in appendices attached to their briefs.

The estimated first-month's delivery volume is required by the Commission's Regulations (Section 154.92(b)) to be set forth in a statement attached to the basic contract between the seller and the buyer which is filed with the Commission as the rate schedule pursuant to Section 154.93. This represents the best-judgment figure at the point in time closest to the parties' negotiations. If there were some indication that the estimated figure was unreasonably low or high, a case might be made for using the subsequently reported actual deliveries for the first month. This record does not support such a view. In fact, the producer witness testified that taken "in the aggregate by parts of a market and years, the price information is not significantly different, whether first month volumes or reported volumes are used." (Tr. 1205). The Presiding Examiner finds that for the purposes of determining an in-line price in this proceeding the use of estimated first month's delivery volumes provides a proper basis for decision.

In-Line Price for the Period January 1, 1958 Through September 27, 1960

The Staff witness concluded that the exhibits sponsored by him, which included sales under 14 cents per Mcf and sales to gatherers and to Valley Gas, clearly show that for this period the in-line price should be 15 cents per Mcf. With reference to this period the producer witness testified that "the distribution of certificated prices are dominated by the sales authorized [in the *Skelly* case], and I have not considered this time period further." (Tr. 445).

---

[37] *Cf. Amerada Petroleum Corporation, supra*, 31 FPC at 635, fn. 33.

[38] *Cf., Skelly Oil Company, supra*, 28 FPC at 414.

Set forth hereinbelow is a tabulation of relevant data taken from the record in this case for this first time period: [39]

CONTRACTS DATED JAN. 1, 1958 THROUGH SEPT. 27, 1960

Number of sales	Permanent certificate price	Temporary certificate price	Estimated first month's volumes (Mcf)
1	10.0		30,000
2	10.5		60,000
1	12.1152		80,000
15	12.1227		2,377,403
2	12.1536		99,000
1	13.0		30,000
1	13.1250		281
2	13.1664		60,000
3	13.5		63,500
10	14.0		748,000
16	14.5		1,424,675
5	14.6		266,180
1	14.7		15,000
1	14.8		40,000
40	15.0		4,814,767
1	15.5		45,000
3	16.0		736,500
1	17.24		15,000
1	18.0		23,250
107		Total permanent	10,922,556
1		14.5	62,000
15		16.0	400,491
7		16.5	391,495
1		17.0	67,500
9		17.24	1,183,540
6		18.0	1,127,100
39		Total temporary	3,232,126
146		Total permanent and temporary	14,154,682

The table shows that for the period January 1, 1958 through September 27, 1960, there were 107 sales permanently certificated accounting for an estimated first month's volume of 10,922,556 Mcf. The volume at 15.0 cents per Mcf accounts for 44.08 percent of the total volume of gas flowing under permanent certificates issued during this period and 37.4 percent of the 107 sales.

The table also shows, for this same period, prices at which 39 temporary certificates were issued for sales of natural gas, accounting for an estimated first month's volume of 3,232,126 Mcf.

If permanent and temporary volumes of gas shown in the above table are added to the volumes of gas excluded from consideration herein, the total estimated first month's volume of *all* gas moving in interstate commerce during this period is found to be 17,000,535 Mcf.[40] The total volume of the 107 sales permanently certificated is 10,922,556 Mcf; or 64.25 percent of the total of *all* gas flowing in interstate commerce.

The numerically weighted average price for the 107 permanently certificated sales is 14.16 cents per Mcf. The volumetrically weighted average price for the same 107 sales is 14.20 cents per Mcf.

[39] This table, and all subsequent tables set out herein by the Presiding Examiner, includes sales under 14 cents per Mcf, and excludes sales to gatherers, sales of purchased gas and those under short term contracts, and sales to Valley Gas. Sales to South Texas and Ben Bolt are included. The volumes in all tables are estimated first month's volumes.

[40] See Exhibit 7, Schedules 1 and 3, and Exhibit 9, Chart 1, as revised during the hearing.

Long Island Lighting and Brooklyn Union contend that the in-line price should be no more than 14.5 cents per Mcf for the period now under consideration.

The Commission in the *Amerada* case, *supra*, stated that the beginning point in a determination of the in-line price "must be the contract price at which substantial volumes of gas were sold during the period."[41] During this first time period 39 contracts were entered into at prices from 14.5 to 20.045 cents per Mcf. Four of the 39 contracts were at 20.045 cents per Mcf. All except those four contracts were issued temporary certificates at their contract prices. The 20.045 cent sales were temporarily certificated at 18.0 cents per Mcf. (As shown subsequently, these sales involve certain premium benefits.) A more limited degree of consideration will be given to these temporary prices in determining the in-line price for this period than will be given to prices under permanent certificates.

Another aid which may be used in the determination of an in-line price was set forth by the Commission in the *Hassie Hunt Trust* case, *supra*. In that case, it was stated "* * * as brought out in CATCO and * * * in *Texaco Seaboard*, the price line does not accord with the highest price or prices permanently authorized but falls between the highest group of prices and the median price." (31 FPC at 1445). When this test is applied to the data in the table set forth hereinabove it shows a median price of 14.20 cents per Mcf (volumetrically weighted average) which, when averaged with the highest group of permanent prices weighted by volume (16.0, 17.24, and 18.0 cents per Mcf), would produce an in-line price of 15.14 cents per Mcf.

To recapitulate: The average of all the permanently certificated sales weighted by volume is 14.20 cents per Mcf; 38 of 39 temporary certificates were issued at prices between 16.0 cents per Mcf and 18.0 cents per Mcf; the largest number of contracts and the largest volumes were at 15.0 cents per Mcf; and the average between the median price and the highest group of prices is 15.14 cents. In the Presiding Examiner's judgment, based upon all the considerations expressed herein, the maximum initial price appropriate in the interest of the public convenience and necessity reflecting the current conditions in the industry is 15.0 cents per Mcf for this period.

The permanent sales at 15.0 cents per Mcf referred to above were the result of this Commission's past action in conditioning the initial prices of sales certificated in the *Skelly*, *Texaco Seaboard* and *Hassie Hunt Trust* cases, *supra*, Blanco Oil Co., Killam & Hurd, Austral Oil Company, Appell Petroleum Corporation, Clark Fuel Producing Company and K. D. Owen, d/b/a Owen and Moss, contend that if such 15.0 cent prices are used to establish an in-line price in this proceeding they will be denied a due process hearing because they were not parties to such cases. In the Presiding Examiner's judgment the *Catco* case, *supra*, and a balancing of all the factors pertaining to the public convenience and necessity, require that he consider prices which are the result of past Commission action along with all the other evidence of record. If the applicants' arguments were carried to their logical conclusion there would be no prices in the area which could be used to "hold the line" referred to in the *Catco* case unless each applicant had been a party to the prior Commission action issuing a permanent or temporary certificate.

[41] 31 FPC at 633.

In-Line Price for the Period September 28, 1960 Through August 29, 1962

The relevant producer prices for this period, except as stated below, are reflected in Chart 2 attached to the Staff's brief. It excludes sales to gathering companies and to Valley Gas, certain short term sales, and sales of purchased gas. It includes sales under temporary certificates. Staff's tabulation is shown hereinbelow in slightly revised form, and includes sales under 14.0 cents not otherwise excluded herein.

CONTRACTS DATED SEPT. 28, 1960 THROUGH AUG. 29, 1962

Number of sales	Permanent certificate price	Temporary certificate price	Estimated first month's volumes (Mcf)
0	Under 14.0		None
1	14.0		30,000
1	14.5		36,000
2	14.6		17,200
1	14.7		17,280
8	15.0		130,146
34	16.0		2,549,320
1	17.24		25,950
48		Total permanent	2,805,896
1	(CI62-274—Sch. 3)	11.00	30,000
1	(CI62-63—Sch. 3)	15.00	6,000
1	(In this case: CI63-334)	17.00	9,000
1	(In this case: CI63-304)	17.24	31,000
1	(CI62-1004—Sch. 3)	17.24	15,000
5		Total temporary	91,000
53	Total permanent and temporary		2,896,896
	All other sales, including those under 14.0 cents per Mcf and other excluded sales.		1,573,900
	Total volumes of gas flowing		4,470,796

The above table shows for the period September 28, 1960 through August 29, 1962 a total of 34 sales permanently certificated at a conditioned price of 16 cents per Mcf accounting for an estimated first month's volume of 2,549,320 Mcf. The numerically weighted average for the 48 permanently certificated sales is 15.70 cents per Mcf. The volumetrically weighted average for the same 48 sales is 15.91 cents per Mcf.

There are only two applications consolidated herein relating to contracts which were executed during this second period. One is at a contract price of 17.24 cents per Mcf (Docket No. CI63-304) and the other is at 17.0 cents per Mcf (Docket No. CI63-334). Their estimated first month's volumes are 31,000 Mcf and 9,000 Mcf, respectively. (The record does not show the volumes relating to the four contract supplements entered into during this period.)

The estimated first month's volume of gas involved in the 48 permanently certificated sales in the above tabulation accounts for 2,805,896 Mcf. The estimated first month's volume of gas flowing under all permanently and temporarily certificated sales, including those to Valley Gas and all other excluded sales, is 4,470,796 Mcf. Stated differently, 62.76 percent of all gas flowing in interstate commerce during this period is flowing pursuant to permanent certificates. Long Island Lighting, however, contends that the 34 permanently certificated contracts at 16.0 cents are suspect because they are presently involved in litigation.[42]

[42] These 34 contracts were all permanently certificated in the *Amerada* case, *supra*. In its Opinion and Order on Rehearing (31 FPC 1315) the Commission, among other things,

Staff contends that although the *Amerada* sales are subject to review by the Court of Appeals, the prices enunciated by the Commission are not "suspect" in the traditional meaning of the word because the Commission did exercise its proper discretion to condition the prices and because "the parties that contend that the prices are too high, contend that they are only 1¢ per Mcf too high." (Staff Br., p. 51).

The basic reason for excluding sales subject to review is stated in *United Gas Improvement Co.* v. *Federal Power Commission*, 283 F. 2d 817 (CA9), as follows at page 824:

> In the event the existing rate is later modified or conditioned as a result of the pending proceedings the foundation of the line derived therefrom would be undermined. Moreover, the acceptance of questioned existing prices as a guide in setting the line might itself have the anomalous effect of creating a standard by which the questioned rates would then be judged.

The Presiding Examiner finds that the 34 sales at 16.0 cents per Mcf shown in the above tabulation are "suspect." Nevertheless, the Presiding Examiner "should not entirely overlook the economic tendencies which they represent." In the *Texaco Seaboard* case, *supra*, the Commission held that

> * * * in such cases the [suspect] prices cannot be taken at face value as reflecting firm prices in the area at the time, and can only be given substantial weight where (as here is *not* the case), the parties wishing to rely upon them have made a record showing of their actual effect upon the price line for other sales. (Emphasis in the original.) (29 FPC at 599)

In this proceeding the parties have made a record showing that the Fifth Amendment to the Policy Statement had an actual effect upon the price line for their contract prices. Such prices were then conditioned to temporary levels of from 16.0 cents to 18.0 cents per Mcf. During this period other parties were negotiating contracts and relied upon the same prices. The Presiding Examiner finds (1) that those prices, which were subsequently conditioned to 16.0 cents per Mcf in the *Amerada* case, had an effect upon the price line for other sales during the period in question; and (2) that the 34 permanently certificated prices at 16.0 cents per Mcf should be considered in establishing a "line" for this period. Based upon a consideration of all the relevant facts, the Presiding Examiner finds 16.0 cents per Mcf to be the maximum initial price appropriate in the interest of the public convenience and necessity reflecting the current conditions in the industry for this period.

The Presiding Examiner's latter finding is independently supported by a consideration of the temporary prices at which natural gas is still being sold by most of the 34 producers pursuant to the temporary certificates which were considered in the *Amerada* case.[48] The temporary prices range from 16.0 cents to 18.0 cents per Mcf. As previously shown, the total estimated first month's volume of gas in the two contracts, and four supplements, for which the prices are to be set in this proceeding is 40,000 Mcf. The estimated first month's volume of gas supplied under all non-suspect permanently certificated sales during

---

stayed for a period of 30 days after the conclusion of judicial review of its original order, that portion of its order which required the filing of supplemental rate schedules reflecting the conditioned price of 16.0 cents per Mcf. It permitted the continued collection of temporary prices, subject to refund of all amounts over 16.0 cents per Mcf. The judicial proceedings have not been terminated at this writing.

[48] The producer witness in her Exhibit 1, Schedule 1, shows only 30 of the 34 *Amerada* sales as now having gas flowing in interstate commerce.

the period in question is 256,576 Mcf. The estimated first month's volume of gas for temporarily certificated sales during this period over 14 cents is 61,000 Mcf. If the *Amerada* sales are included with the other temporarily certificated sales the total is 2,610,320 Mcf. The total estimated volume of all gas flowing in interstate commerce during this period, including all excluded sales, is 4,470,796 Mcf.

The Court of Appeals in *United Gas Improvement Co., supra*, stated in relevant part as follows:

> * * * the price line is intended to reflect current conditions in the industry. Therefore comparative prices on which it is based must be prices under which a substantial amount of natural gas presently moves in interstate commerce. The limitation urged by *UGI* could well defeat this objective by restricting the comparison to a small number of contracts under which little gas moves today could, in fact, require a rollback to prices having no current relevancy. (283 F. 2d at 824).

The 256,576 Mcf of gas flowing under all the non-suspect permanently certificated sales in this period is considerably in excess of the 40,000 Mcf for which prices are to be established in this proceeding. However, this 256,576 Mcf of permanent volumes is less than 10 percent of the gas which is moving in interstate commerce under the temporary certificates issued to the producers in the *Amerada* case. To completely exclude from consideration such volumes would be unrealistic and would not meet the test established by the Court.

The following statement by this Commission when faced with a very similar problem in the *Amerada* case is apropos of this proceeding and is adopted, *mutatis mutandis*, by the Presiding Examiner:

> We believe that the fact that the great bulk of the gas moving in interstate commerce in the area during this period was contracted for and temporarily authorized at initial rates between 16 and 18 cents per Mcf must be considered in fixing the "in-line" price for this period. Refusal to consider the temporarily authorized prices, in the circumstances of this proceeding, and reliance only on the few permanently certificated prices can only result in a complete stagnation of prices at the "in-line" level initially determined for this District, a level based on prices being paid for gas under contracts drawn up long before these contracts were executed.

In-Line Price for the Period August 30, 1962 Through March 25, 1964

The tabulation set out below shows the composite of total initial prices presented in this record, based upon estimated first month's volumes, for permanently and temporarily certificated sales for contracts dated August 31, 1962 through March 25, 1964, as shown on Exhibit 7.[4] Sales under 14.0 cents per Mcf are included.

---

[4] Staff Exhibits 7 and 9 showed contracts executed June 7, 1954, through December 31, 1963, and permanently certificated as of "some time" after March 22, 1964 (Tr. 1782–83). The producer exhibit is for the period January 1, 1958 through June 30, 1964. Neither, however, contains any permanent certificated prices for contracts dated subsequent to December 31, 1963. Sixteen of the 26 temporarily certificated sales at 16.0 cents per Mcf were certificated in the last six months of 1964. There have been consolidated into this proceeding three dockets with contract, or supplement, dates subsequent to December 31, 1963; namely, Docket No. CI61–783, with supplement date January 15, 1964, Docket No. CI62–1074, with supplement date March 6, 1964, and Docket No. CI64–1244, contract date March 25, 1964. The volumes involved in the latter contract are quite substantial, being estimated first month's volumes of 2,100,000 Mcf. The Presiding Examiner finds that the three 1964 contract dates referred to are close enough in point of time to the December 31, 1963, date to be considered as reasonably contemporaneous with the contracts relied upon herein.

CONTRACTS DATED AUG. 30, 1962 THROUGH MAR. 25, 1964

Number of sales	Permanent certificate price	Temporary certificate price	Estimated first month's volumes (Mcf)
0	Under 14.0		None
2	14.6		175,000
1	15.0		60,000
7	16.0		675,691
10		Total permanent	910,691
1	(CI64-962: Sch. 3)	12.0	60,000
1		15.5	90,000
26		16.0	5,379,168
28		Total temporary	5,529,168
38		Total volume of gas flowing	6,439,859

The table shows that for the period August 30, 1962 through March 25, 1964 there were 10 sales permanently certificated during this period, for a total estimated first month's volume of 910,691 Mcf. Seven of the ten sales were at a conditioned price of 16 cents for a total of 675,691 Mcf. These sales constitute 74.20 percent of the total volume, 910,691 Mcf. The volumetrically weighted average price is 15.67 cents per Mcf. The numerically weighted average price is 15.62 cents per Mcf.

Staff's Exhibit 9, Chart 4, which includes sales to gatherers and certain other sales excluded from the above table, shows that the total volume of all certificated permanent sales for contracts dated August 30, 1962 through December 31, 1963 was 1,711,191 Mcf. The Staff witness testified that the sales at 16 cents constituted a substantial volume with respect to the total volume of 1,711,191 Mcf, and that the seven sales at 16 cents constituted a preponderance of sales as related to that particular chart. He did not rely upon any temporarily certificated prices. (As noted previously, Chart 3 of Attachment B to the Staff's brief includes temporary certificated prices.) He testified that the 16 month time period was not broad enough; that he did not consider ten sales to be an adequate basis upon which to base a determination; and that as a result he considered a time period from September 28, 1960 to December 31, 1963. He concluded that on such facts an in-line price of 16.0 cents per Mcf was proper.

The producer witness also considered the ten permanently certificated sales to be an insufficient number, and to involve an insufficient volume, to provide a basis for an in-line price determination. She then looked to the prices at which temporary certificates were issued during this period and concluded that the in-line price was at least 16.0 per Mcf.

The Presiding Examiner's above tabulation shows that the estimated first month's volume of all gas flowing during this period is 6,439,859 Mcf, of which the permanent sales accounted for only 910,691 Mcf. The 26 temporary sales at 16 cents per Mcf are all related to the contracts in issue herein. The Presiding Examiner finds that for this period the 910,691 Mcf of permanently certificated sales do not provide a sufficient number or volume upon which to base an in-line price determination. In accordance with the precedent established by the Commission in the *Amerada* case, *supra*, and previously discussed herein, some weight should be given to the temporarily certificated sales.[48]

Twenty-eight contracts were entered into by the parties herein during this latter period. No temporary certificate was issued in one case (Docket No. CI64-

[48] *Cf., Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.*, Opinion No. 436, 32 FPC 254 at p. 262, decided July 23, 1964.

470). The remaining 27 contracts were at prices from 15.5 cents per Mcf to 17.24 cents per Mcf. One contract was at 15.5 cents per Mcf. The other 26 contracts were conditioned to 16 cents per Mcf and temporary certificates issued. The numerically weighted average for both temporary and permanent sales is 15.88 cents per Mcf. The volumetric weighted average is 15.95 cents per Mcf.

The large number of contracts entered into at 16 cents per Mcf reflects the effect of the Fifth Amendment to the Policy Statement. As previously shown, some weight should be given to this regulatory action by the Commission.

The Presiding Examiner finds, based upon a consideration of all the relevant facts, 16.0 cents per Mcf to be the maximum initial price appropriate in the interest of the public convenience and necessity reflecting the current conditions in the industry for this period.

Premium Features

In two cases the Commission has granted an increment above the in-line price for a premium feature.[46] In other cases the Commission has refused to grant such an increment.[47] However, the principle that under certain circumstances a premium price may be granted has not been repudiated. A study of all the applicable cases shows that an increment above the in-line price is warranted where the premium services are proved to be (1) unusual for the area; (2) performed for the benefit of the pipeline, and not merely to make the gas marketable; and (3) of objectively measurable value.

Austral Oil Company, Incorporated (Austral), Blanco Oil Co., and Killam & Hurd, in Docket Nos. CI61–427, CI61–618, and CI61–626, respectively, propose sales to Natural Gas Pipeline Company (Natural) from the Northeast Thompsonville Field, located in Webb and Jim Hogg Counties, Texas District No. 4.[48] They contend that their sales meet the above tests and that they should receive certificates allowing at least 2 cents per Mcf over the otherwise applicable in-line price because of "premium features" of their sales.[49]

The premium features are asserted to be (1) the contract provision which permits a 50 percent degree of "swing" (or the difference between the Daily Contract Quantity (DCQ) and the maximum which the pipeline may demand); (2) the total services performed beyond the wellhead, including delivery to a

---

[46] *Panhandle Eastern Pipe Line Company*, Opinion No. 350, 27 FPC 35, 44–45, rehearing denied, 77 FPC 491 (1962); *Medina Gathering Corporation, et al.*, Opinion No. 397, 30 FPC 227.

[47] *Texaco Seaboard, Inc.*, Opinion No. 383, 29 FPC 593, 598; *Hassie Hunt Trust, et al.*, Opinion No. 412, 30 FPC 1438, 1445; *Skelly Oil Company*, Opinion No. 362–A, 28 FPC 1065, 1067; *Amerada Petroleum Corporation, et al.*, Opinion No. 422–A, 31 FPC 1315; *Standard Oil Company of California*, Opinion No. 395, 27 FPC 1153, 1158–60, affirmed *sub nom. California Oil Co.* v. *F.P.C.*, 315 F. 2d 652 (CA10); *Superior Oil Company*, Docket No. G–10078, *et al.*, Opinion No. 437, decided July 23, 1964, 32 FPC 241; and *Edwin L. Cox, et al.*, Docket No. CI61–153, *et al.*, Opinion No. 446, decided November 17, 1964, 32 FPC 1301.

[48] The order of May 28, 1964, instituting this proceeding included two other sales from this field to Natural, Katz Oil Company (Katz), Docket No. CI61–631 and The Atlantic Refining Company (Atlantic), Docket No. CI61–482. Katz did not appear in this proceeding, and the record indicates that its acreage is nonproductive. Its application will be dismissed. Atlantic settled its sale at an initial price of 15 cents per Mcf (see footnote 3, *supra*). It had previously introduced evidence through the witness Echols. The latter witness was also sponsored by Austral, Blanco Oil and Killam & Hurd. The latter two producers also introduced evidence through witness Kendall. The testimony of the two witnesses is substantially the same in regard to premium features.

[49] At pages 15 and 42 of its initial brief, Austral states that its sale should be "certified at a price of not less than 18 cents per Mcf." Blanco Oil and Killam & Hurd specifically urge certification at the contract price of 20.045 cents per Mcf (Blanco Oil Br. pp. 6, 60).

central point in the field; and (3) the contract provision which allows Natural to vary its takes, from day to day, from zero Mcf of gas to the maximum which the wells are capable of delivering under prudent operation and not in violation of law.

The Staff contends, and the Presiding Examiner finds, that the 50 percent "swing" provision is not so unusual as to be classified as a premium feature. According to this record, all the sales from the Northeast Thompsonville Field have it. Also, the two Northeast Thompsonville Field sales involved in the *Skelly* case had it.

The gathering facilities and other delivery features incident to the sales are jointly owned by the four producers, including Atlantic, and provide for delivery at a central point in the field. The plant referred to below is located nearly in the center of the field, which is roughly five or six miles in area. The furthermost well from the plant is about three to four miles. There are about 10 to 12 miles of pipe involved.

From the wellhead the gas goes in full well stream to a stage separator where a small amount of condensate is recovered. The gas from this separation process is passed through a dry-desiccant recovery unit for removal of water vapor down to contract specifications, as well as a certain amount of liquefiable hydrocarbons. It is then delivered to Natural at their meter.

The contract provision (subsequently set forth) which permits Natural to take, on any one day, from zero Mcf of gas to the maximum deliverability of the wells is in excess of the usual 50 percent "swing" provision. In order to handle the extra "swing" provided in the contract the four producers installed oversized tubing, gathering lines and separation equipment. For this oversized gathering system the four producers estimate the additional investment and operating cost to be in the neighborhood of $400,000 (Tr. 463). The amount of operating costs was not separately stated. The four producers contend that large costs will be incurred in the future for the drilling of additional wells and reworking existing wells in order to maintain high deliverability.

Prior to entering into the contract under which they were required to construct the above gathering facilities, the four producers discussed with Natural's representatives a price of 18.5 cents per Mcf for wellhead delivery, including tax reimbursement and the performance of all dehydration and separation at the expense of the buyer, as against 20.045 cents per Mcf for delivery at a central point in the field. The parties discussed this matter for some time. It was finally decided that the producers would provide delivery at a central point in the field "because Natural did not want to get into the business of gathering and dehydrating and treating gas, because to my knowledge Natural does not perform those services. Natural * * * insists, normally, on a central point, dehydrated, pipeline quality gas." (Tr. 888).

The Presiding Examiner finds that the cost assigned by the parties for construction of the facilities required to effectuate a central point delivery, including the extra costs related to the increased flexibility features, was and will be incurred by the four producers solely in order to sell the gas. As a result, no increment above the in-line price may be allowed for such present or future expenditures. *Amerada Petroleum Corporation, et al.*, 31 FPC 1315, 1318–1319.

The four producers' main argument in support of their contention that a 2 cents per Mcf addition to the in-line price is warranted was directed to the contract clause which allows Natural to vary its takes, from day to day, from zero Mcf of gas to the maximum which the wells are capable of delivering under prudent operation and not in violation of law. After establishing the DCQ as a quantity equal to 1000 Mcf of gas for each 8,000,000 Mcf of recoverable reserves.

and after providing that the DCQ shall never exceed 66⅔ percent of total deliverability for a period of 30 consecutive days, the contract states as follows:

> 3. To meet the exigencies of its operations, Pipeline may vary its receipts of gas hereunder and shall be entitled on each and every day to receive the maximum quantity of gas which Seller's wells, under prudent methods of operation and applicable rules and regulations of regulatory bodies having jurisdiction are capable of delivering, but shall receive each month not less than twenty-five percent (25%) of the daily contract quantity multiplied by the number of days in said month.

Staff contends that the record does not sustain the contention that the above provision is so unusual as to be classified as a premium feature. Staff's view appears to be based primarily upon the fact that no witness at the hearing made a comparison to see whether other relevant contracts in Exhibit 7 (the Staff's price-line exhibit) had this provision.

In their joint brief at pages 10 to 13, Blanco Oil and Killam & Hurd make this comparison. They analyzed 57 contracts. Twenty-six were chosen from the contracts in issue herein which were shown as having been executed during the period August 28, 1956 to September 28, 1960.[50] Thirty-one were chosen from Schedules 2–E, 2–F, and 2–G of Exhibit 7, which schedules show the contracts relating to permanently certificated sales for the same period in the same District.[51] In the case of each schedule, the contracts analyzed were selected so as to provide several examples of each pipeline-buyer's contracts.

Staff contends that the contracts relating to the permanent sales shown in Exhibit 7, Schedules 2–E, 2–F, and 2–G are not in the record and that the contract provisions relating to quantity cannot be used to make a comparison with the subject contracts in Schedule 1 of Exhibit 7, which are in evidence. The contracts relating to all the contracts referred to in Exhibit 7 are in the public files of this Commission. The Presiding Examiner takes official notice of these contracts pursuant to Section 7(d) of the Administrative Procedure Act (60 Stat. 241, 5 USCA Sec. 1006(d)).

Staff also contends that the comparison should not be made because all the contracts shown in Schedule 1 and Schedules 2–E, 2–F and 2–G were not used. As stated above, several examples of each pipeline-buyer's contracts were analyzed. The Presiding Examiner finds that the analysis is based on a representative selection and may be properly used herein.

An inspection of the contracts analyzed in the joint briefs of Blanco Oil and Killam & Hurd shows that out of the 57 contracts analyzed none contains a quantity provision similar to that quoted above from the contracts of the four producers. None permits the pipeline to take the total capacity of seller's wells on any day of the year, without limitation either by way of a percentage of daily contract quantity, maximum take, or other level-take provision.

Exhibit 3 describes the wide variation in takes by Natural from the Northeast Thompsonville Field as a whole. Among other things, it shows actual variations in takes ranging from approximately 12.5 million cubic feet per day in August,

---

[50] Schedule 1 of Exhibit 7 for this period lists 37 contracts (Clark Fuel Producing Co., Docket No. G–19052, *et al.*, was severed by order of April 7, 1965. (See footnote 3, *supra*.) 11 contracts were not analyzed. Four of the 11 concerned the contracts which are asserted to have premium features. Two relate to Continental Oil Company's purchase of one-half interest of an existing contract (see footnote 3, *supra*). An inspection of the remaining contracts shows they all have level-take type provisions.

[51] The producers' analysis shows 35 contracts. The contracts of George H. Coates, Rate Schedule No. 2; Roy H. Bettis, *et al.*, Rate Schedule No. 4; Hunt Oil Company, Rate Schedule No. 2; and Sunray DX Oil Company No. 119, were not executed during the period under consideration. They all have level-take type provisions.

1961, to approximately 73 million cubic feet per day in December, 1961, and from 12.5 million cubic feet per day in August, 1962, to 79 million cubic feet per day in December, 1962. The said exhibit, and related testimony, shows that these wells are capable of going from a completely shut-in condition to producing substantial quantities of gas within a short period of time. This deliverability characteristic has permitted Natural to use the wells as a small "flywheel" and, to the extent of the "swing" provision, as a storage facility for its system.

The Presiding Examiner finds that the feature which permits Natural to vary its takes, from day to day, from zero Mcf of gas to the maximum which the wells are capable of delivering under prudent operation and not in violation of law is an unusual one in the Texas District No. 4 area and is for the benefit of the pipeline and has no connection with any operation required to make the gas marketable.

Staff and the interveners in opposition contend that the premium feature discussed above is not objectively measurable.

In determining an "objectively measurable value" the *Medina* case, *supra*, requires that there be ascertained the "additional market value [which the premium features] gives these contracts over and above the prevailing forms of contract in the area." [52]

The market value of the gas to Natural is objectively measurable. Witness Echols, for Atlantic, Blanco Oil, Killam & Hurd and Austral, testified that Natural considered the extra benefits of the contract "as being worth at least 2¢ per Mcf." (T. 460). Witness Kendall for Blanco Oil and Killam & Hurd stated that it was apparent that Natural "was very interested in obtaining the gas from this field because of the ability the field would have to give it a wide flexibility in takes." (T. 532). He stated further:

> We were advised at one point that Natural Gas Pipeline Company of America valued the flexibility of deliveries and the services which we now perform after the wellhead as being worth at least 2¢ more than other available gas in the vicinity. In fact they stated that the flexibility feature alone was worth the 2¢ to them. (T. 532–33).

Neither Staff nor the interveners contend that the above representations were not made to the witness. Nevertheless, they contend that this hearsay testimony should be given no weight because no witness for Natural was available for cross-examination. The Presiding Examiner will give substantial weight to that part of the testimony which has been corroborated by other evidence herein.[53]

In part, the corroborating evidence consists of a statement which was made as part of a public record several years before this proceeding was initiated. In Docket No. CP61–96, Natural's predecessor, Peoples Gulf Coast Natural Gas Pipeline Company (Gulf Coast), applied for a certificate of public convenience and necessity on September 30, 1960. In its "Supplement to Request for Temporary Authorization" filed on October 7, 1960, the pipeline stated in Section III thereof as follows:

> The gas purchase contracts of Gulf Coast with each of Producers* provide that (Article Sixth, paragraph 3) Gulf Coast, to meet the exigencies of its operations, may vary its takes of gas on each and every day. This per-

---

[52] *Medina Gathering Corporation, et al.*, 30 FPC at 232. In that case the contract permitted the pipeline to completely eliminate summer takes of gas. This six-months peaking service was held to have an additional market value which would be amply compensated by permitting the producers to maintain three existing-fixed escalations of 1 cent per Mcf each which were to take place at early dates.

[53] The record does not support a finding that Natural considered the flexibility feature alone worth 2¢ per Mcf to it.

*The producers referred to are: The Atlantic Refining Company, Austral Oil Company, Blanco Oil Co., Katz Oil Company and Killam & Hurd.

missible variation in takes, as provided in Gulf Coast's contracts with Producers, permits immediate and efficient utilization of the reserves by Gulf Coast as here proposed. Gulf Coast cannot prudently make substantial additions to its gas supply under gas purchase contracts obligating it to take a constant, or nearly constant daily quantity. Permissible variations in takes is therefore of great value to Gulf Coast and to its customers, and such added value necessarily is reflected in the prices stipulated in its gas purchase contracts. (Item by reference VVV, p. 4)

The market value for this flexibility service is established primarily by the Texas District No. 4 contract prices in evidence herein. The highest total initial contract prices shown are prices of 20.05 cents per Mcf (the prices are actually 20.045). Of the seven such contracts listed, four are the subject contracts of Atlantic, Austral, Blanco and Killam & Hurd, and two are identical contracts for sales of gas from the Northeast Thompsonville Field to Natural by Katz Oil Company (Docket No. CI61–631 herein) and Texaco Inc.[54] Only one contract, between Standard Oil Co. of Texas and South Texas Natural Gas Gathering Company, dated March 14, 1961,[55] does not contain the special provisions discussed above. (This producer received an initial conditioned price of 16.00 cents per Mcf in the *Amerada* proceeding.) Comparison of the aforementioned six contracts, all of which contain identical special flexibility provisions, with the contracts covering the three sales from the Northeast Thompsonville Field which lack these special flexibility provisions, shows that the latter provided for a total initial price of 18 cents per Mcf, exactly 2.045 cents per Mcf lower than the subject contracts.[56]

As previously shown, Natural stated during the negotiations that a contract price of 18.5 cents was acceptable for wellhead delivery and that 20.045 cents was acceptable for field delivery. The difference between the 18.5 and 20.045 cents per Mcf was, therefore, solely assignable to the gathering and treating functions and, as such, may not be allowed as a premium feature. The difference between the 18.5 cents per Mcf wellhead offer, and the price of 18.0 cents in the contracts of Bright & Schiff and two others from this same field that do not have the flexibility feature, shows the "additional market value [which the premium feature] gives these contracts over and above the prevailing forms of contract in the area." *Medina Gathering Corporation, et al., supra*, 30 FPC at 732. The Presiding Examiner finds the public convenience and necessity requires that 0.5 cents per Mcf be added to the 15.0 cent per Mcf in-line price found herein for the sales by Austral, Blanco Oil, Killam & Hurd which are the subject of this proceeding. (Katz Oil Company's application is to be dismissed.)

---

[54] Texaco Inc., Docket No. CI61–677, Rate Schedule No. 228 (Exhibit 1, Schedule 1, Sheet 3 of 9, Line 18.) This contract was dated September 1, 1960 and was approved on December 30, 1963. The initial price was conditioned to 15.0 cents per Mcf, including tax reimbursement, with a moratorium on increased filing until March 1, 1966.

[55] Standard Oil Co. of Texas, Docket No. CI61–1377, Rate Schedule No. 43.

[56] Jake L. Hamon, *et al.*, Docket No. CI61–1745, Rate Schedule No. 31, and George H. Coates, Docket No. CI62–355, Rate Schedule No. 8. The initial prices were conditioned to 16.0¢ per Mcf in Opinion No. 422. Bright & Schiff, Docket No. CI61–1514, Rate Schedule No. 7, a subject contract.

The three applicants also cite the *Medina* case, *supra*, as authority for considering the unusually wide variations in permissible daily swing as storage, or peaking service performed by the producer for the pipeline. There is evidence in this record that the nationwide-average cost of storing natural gas underground in 1962 and 1963 by interstate pipelines was 15.60 and 15.14 cents per Mcf, respectively. During the same periods Natural's average storage cost was 40.06 and 28.10 cents per Mcf, respectively. This evidence does not provide an adequate basis for measuring the value of the flexibility provision in question.

Other Premium Features

The following parties contend that an additional allowance over the in-line price should be allowed for gathering, compression and dehydration performed by them pursuant to their contracts: Jonnell Gas, Incorporated (Jonnell Gas), J. C. Trahan, Drilling Contractor, Inc. (J. C. Trahan), and Appell Petroleum Corporation (Appell). K. D. Owen, d/b/a Owen and Moss, and Appell transport, or pay for the transportation of, their gas from the wellhead to the buyers' pipeline and contend that this feature is a premium benefit. Jonnell Gas makes a similar contention in regard to its delivery to a central point in the field. Most of the contracts in Exhibit 7 have such provisions. The Presiding Examiner finds the costs assigned by the parties to the functions specified above were incurred by the named producers solely in order to sell the gas. Accordingly, no increment above the in-line price may be allowed. *Amerada Petroleum Corporation, et al.*, 31 FPC 1315, 1318–1319.

Special Situations

1. Bright & Schiff, Docket No. CP61–1541.

The contract between Bright & Schiff and South Texas Natural Gas Gathering Company (South Texas) in Docket No. CI61–1541 was executed by the parties on February 10, 1961, with the understanding between them, however, that it would constitute an effective contract "as of" September 15, 1960. Long Island Lighting contends that the September 15, 1960 date should be used as the contract date in applying the in-line prices found for the three time periods herein, thereby resulting in a conditioned price of 15.0 cents per Mcf, instead of 16.0 cents per Mcf.[57] It contends that to do otherwise would permit an applicant to impeach, to its advantage, the date contained in its verified application to the Commission, and would "make a mockery of the Commission's regulations." (Br. p. 18)

On April 20, 1961, Bright & Schiff filed its application for a certificate of public convenience and necessity for the sale of gas in the Northwest Thompsonville Field, Jim Hogg County, Texas, to South Texas at an initial price of 18.0 cents per Mcf. On the same date it filed as its Rate Schedule No. 7 a conformed copy of the contract with South Texas. It shows no date of "execution." It states, however, that it is to be an effective contract between the buyer and seller "as of" Sepember 15, 1960. In its Exhibit A attached to its abbreviated application filed on April 20, Bright & Schiff shows September 15, 1960, in the space provided for "date of contract."

Mr. H. G. Schiff appeared and testified that the contract was not signed by him or any of his three partners until February 10, 1961. He stated that the contract had not been finalized until then. Exhibits 13 and 14 received in evidence substantiate this testimony. Exhibit 13 is a copy of a letter from Coastal States Gas Producing Company (Coastal),[58] to Bright & Schiff, dated February 7, 1961. By this letter Coastal transmitted two original counterparts of the contract proposed between Bright & Schiff and South Texas, stating that they had been executed by South Texas and requesting that one of the copies be returned after execution by Bright & Schiff. Exhibit 14 is a letter from South Texas dated February 14, 1961, and signed by the same party who signed the Coastal letter, transmitting to Bright & Schiff one fully executed copy of the contract for the Bright & Schiff files.

---

[57] Staff "has no reason to doubt that the contract was not physically signed on February 10, 1961. * * *" (Br. p. 28).

[58] South Texas is a subsidiary of Coastal.

The effect to be given to a contract dated on one date but executed on a different date was considered by the Commission in the *Skelly* case, *supra*, on rehearing.

In that case the Commission stated the matter as follows:

> In this connection Jake L. Hamon contends that his contract in Docket No. CI61-930, while dated September 25, 1960, before the Policy Statement, was really executed December 1, 1960, the same date as two letter amendments. While the course of regulation should not depend on such technicalities as the parol evidence rule, Hamon has done nothing, beyond an assertion in his application for rehearing, to show the alleged date of execution. The application for a certificate, filed December 19, 1960, repeats the September 25, 1960 date of contract; a paragraph in the contract permits termination if a certificate is not issued by December 31, 1960, an entirely unreasonable provision for a contract executed December 1, 1960, because of notice requirements. (28 FPC at 1066).[20]

In the *Hassie Hunt Trust* case, *supra*, the Commission held that the date on which a meeting of the minds for the sale of the gas took place is the controlling date. In that case one of the sellers in Docket No. G-19116 could no longer perform. A different producer then came forward and agreed on February 15, 1961, to furnish from different acreage that share of the production which the original co-seller was unable to supply. The parties chose to make the sale by adopting the provisions of the original contract, except for acreage, which was dated prior to the Policy Statement of September 28, 1960. The earlier contract was at a higher price. The Commission held that the parties "cannot make the agreement retroactive to the earlier contract date or erase events which occurred between May 15, 1959 and February 15, 1961, and which may have led to the decision to use the earlier, high priced contract." (30 FPC at 1444). The Commission then severed the four sales in question and consolidated them for further hearing with other dockets involving applications for certificates under contracts executed after the Policy Statement was issued.

The Presiding Examiner finds that a meeting of the minds between Bright & Schiff and South Texas did not occur until February 10, 1961, and that such date should be used for purposes of this Initial Decision.

Assuming that the Bright & Schiff contract was not executed until February 10, 1961, Staff and Long Island Lighting contend that Bright & Schiff is estopped by its conduct, detailed hereinbelow, from receiving the benefit of the February 10, 1961 date.

The reserves dedicated to the contract between Bright & Schiff and South Texas included Bright & Schiff's interest in all of the north one-half of 640 acres and an undivided one-half interest in the south one-half. The other undivided one-half was owned by Coastal, its co-tenant. Coastal entered into a contract "as of" September 15, 1960, with South Texas, its subsidiary, for the sale of its interest and also the acreage owned by Bright & Schiff. On September 26, 1960, Coastal filed with the Commission an application for a certificate of public convenience and necessity for authority to make the sale and on the same date filed the contract as its Rate Schedule No. 38.

The contract shows the "conformed" signature of the Vice President of South Texas and the conformed signatures of H. R. Bright, H. G. Schiff, John A. Myers and Ellis Chaney, Jr., all partners in Bright & Schiff. Temporary authority for the sale was issued on November 15, 1960, to "Coastal States Gas Producing Co. (Operator), *et al.*," in Docket No. CI61-472. The contract contained an

[20] The Bright & Schiff contract provides that the seller will proceed with due diligence in the prosecution of its application.

initial price of 16 cents per Mcf. In the *Skelly* case, *supra*, the initial price was conditioned to 15 cents per Mcf. Ordering paragraph G of that Opinion shows that the order was directed to "Coastal States Gas Producing Co., Docket Nos. CI61–471 and CI61–472." Coastal accepted the condition by letter dated November 5, 1963. Mr. H. G. Schiff testified that neither he nor any of his three partners signed the aforesaid contract,[60] and that the inclusion of their names in the contract was a mistake on Coastal's part. He further testified that in February or March of 1961 Coastal advised him that a mistake had been made in the contract filed as its Rate Schedule No. 38 and in its application for a certificate of public convenience and necessity. He was also advised by Coastal that they had advised the Commission of the mistake (Tr. 988). In addition, a Vice President of Coastal, on April 5, 1961, gave Mr. Schiff a copy of a letter dated April 5, 1961, from Coastal to its counsel in Washington, D.C. A copy of this letter is in evidence as Exhibit 15. In pertinent part it is as follows:

> In order to clarify the mixup that has heretofore existed, with reference to the Bright & Schiff, Northeast Thompsonville acreage, I will hereinafter set out in detail the facts as they transpired.
>
> You will recall that in September of 1960, Oscar brought to Washington, personally, the conformed copies which you used for filing purposes on behalf of Coastal States covering the acreage we own in Northeast Thompsonville. Through a mixup in the office, the contract purportedly had been signed by Bright & Schiff, when, in fact, it had not. Bright & Schiff actually signed a contract of their own, which was dated the same date as the conformed contract which you filed. Also, the conformed contract purportedly covered the entire 640 acres, when, in truth, the contract executed by Coastal States only covered its interest in the South 320 acres, which interest is an undivided 50 per cent. The balance of the acreage (that is, the entire North 320 and an undivided 50% interest in the South 320) is owned by Bright & Schiff, and is covered by the contract executed by them.
>
> All of this confusion resulted from the fact that we were in a hurry to get this contract on file, in order to take advantage of the reserves dedicated in our then pending hearing on the Transco phase of the South Texas System.

There is no evidence in this record, other than the fact that the order in the *Skelly* case, *supra*, did not refer to the *Coastal* docket as involving "*et al.*" parties, that the Commission was ever notified of the mistake. Mr. Schiff did not do so. He presumed that the correction had been made. The Presiding Examiner finds, contrary to the contentions of Staff and Long Island Lighting, that the failure of Bright & Schiff to take any action to correct the Commission's files was justified under the circumstances of record herein.

Mr. Schiff also testified that prior to September 15, 1960, Coastal discussed with Bright & Schiff the joint sale of the production from the well. (The well was not completed until October 22 or 23, 1960.) He stated that Coastal advised him that since it needed money in 1960 it was going to file its contract immediately in order to begin selling gas when the well was completed. Bright & Schiff told Coastal that Bright & Schiff wanted to continue their negotiations with South Texas. They felt that their negotiating position would be much better if they waited until it was known how many cubic feet of gas reserves were present. Bright & Schiff and Coastal orally agreed, however, that Coastal could take all the gas they wanted from the well until such time as Bright & Schiff obtained a contract and a certificate for public convenience and necessity. At that time, Bright & Schiff would then take out "gas equal to the amount of money that

[60] Based upon his observation of the witness' demeanor while testifying, the Presiding Examiner finds that neither Mr. Schiff nor any of his partners signed the Coastal contract.

[Coastal had] taken from the well insofar as [Bright & Schiff's] interest is concerned." (Tr. 992). In effect, Bright & Schiff and Coastal had entered into a loan agreement. The effect of such action from a dollar and cents standpoint for Bright & Schiff, of course, was exactly the same as though from the time of first delivery the sales had been made on a 50/50 basis by Bright & Schiff and by Coastal.

Staff contends that the above agreement between co-tenants requires the Presiding Examiner to ignore the date of execution and find that Bright & Schiff's agreement to sell gas to South Texas took place on September 15, 1960. The fact remains, however, that the meeting of the minds between Bright & Schiff and South Texas occurred on February 10, 1961, and no enforceable contract between them existed before that date. The Presiding Examiner finds that the controlling date herein is February 10, 1961.

2. Jonnell Gas, Incorporated (Operator), *et al.*, Docket No. CI60-323; J. C. Trahan, Drilling Contractor, Inc., Docket No. CI62-123.

The initial sale of gas under Docket No. CI60-323 was pursuant to a contract entered in as of February 5, 1960, between Jonnell Gas Co., a partnership, with Tennessee Gas Transmission Company. Under date of November 1, 1961, the partnership conveyed all its properties, subject to its liabilities, to Jonnell Gas, Incorporated (Jonnell).

The initial sale of gas under Docket No. CI62-123 was pursuant to a contract between Jones O'Brien, Incorporated (Jones O'Brien) and Tennessee Gas Transmission Company (Tennessee) entered into as of February 5, 1960. Jones O'Brien, in Docket No. CI61-71, filed an application for authority to make the sale. J. C. Trahan, Drilling Contractor, Inc. (J. C. Trahan), acquired the properties covered by the Jones O'Brien sale effective July 1, 1961. By an agreement dated August 21, 1961, executed by J. C. Trahan and Tennessee, the former expressly ratified the February 5, 1960 contract. By letter-order of September 18, 1961, the temporary authorization previously issued to Jones O'Brien in Docket No. CI61-71 was terminated and temporary authorization to continue the sale was issued to J. C. Trahan in Docket No. CI62-123. Docket No. CI61-71 was cancelled by the May 28, 1964 order which commenced the instant proceeding.

The contention is now made by Jonnell and J. C. Trahan that the applicable dates to use in applying in-line prices herein are November 1, 1961 and August 21, 1961, respectively. This record shows that the above transfers do not involve a material change of circumstances. They are, therefore, totally different from the situation presented in the *Hassie Hunt Trust* case, *supra*, discussed herein at page 1040.

The Presiding Examiner finds on the basis of the record herein that the above transfers involve a succession of interest pursuant to the principle established in the *Graridge* case,[61] and that the controlling dates are February 5, 1960, in both instances.

3. Shell Oil Company, Docket No. G-18439.

On April 28, 1959 in Docket No. G-18439, Shell Oil Company (Shell) applied for authority to make a sale to Coastal Transmission Corporation (Coastal) pursuant to a contract executed on March 20, 1959 at an initial price of 16.5 cents per Mcf. This proposed sale involves gas from the same field, to the same purchasers, and at the same price as the 1955 sale permanently certificated in Gulf Oil Corporation, Docket No. G-10127, pursuant to a settlement agreement dated April 25, 1963. Shell contends it is entitled to equal treatment.

---

[61] *Graridge Corporation (Operator), et al.*, 30 FPC 1156, rehearing denied, 30 FPC 1524.

In addition, Shell shows that the reserves covered by its sale were among those used to support a major expansion of Coastal's system, which expansion was being contested. Accordingly, Shell argues that it was assuming the risk that the pipeline expansion might not be certificated, plus the further risk of substantial delays before deliveries could be commenced after the certificate was issued.

Shell also shows that sales by other producers to Coastal under 1955, 1956, and 1957 contracts were considered by the Commission to involve the same risks and as a result "may have resulted in higher prices than would have resulted from contracts with an established pipeline." [62]

Shell contends that since "the Commission has already found [the Coastal] sales to be different and [to] involve special circumstances, * * * that these same special circumstances and differences should entitle other sales to Coastal to the same treatment." (Initial Br. p. 21.) The Presiding Examiner finds that the risks assumed by Shell in its sale to Coastal were necessary in order to make the gas marketable and that no sum in excess of the in-line price is warranted for the sale by the facts in this record.

4. Shell Oil Company, Docket No. CI61–783.

Shell Oil Company's (Shell) application for a certificate of public convenience and necessity in Docket No. CI61–783 involves an assignment of certain acreage previously covered by the permanent certificate issued to Delhi Taylor Oil Corporation (Delhi Taylor) on December 28, 1956 in Docket No. G–10263.[63] To the extent that Shell is a successor in interest to Delhi Taylor, as shown hereinbelow, the principle of the *Graridge* case, *supra*, applies and Shell is entitled to receive the contract price of 16 cents per Mcf.

The facts concerning this matter are set forth in detail at pages 603–608 of the transcript of record herein and are not in dispute. In summary, they show that Delhi Taylor filed an application in Docket No. G–10263 for authority to sell natural gas to Coastal Gas Transmission Corporation (now Florida Gas Transmission Company) from the Yzaguirre Field, Starr County, Texas, together with gas from seven other fields. The contract was executed December 30, 1955. It was filed as Delhi Taylor's Rate Schedule No. 26. On December 28, 1956, this Commission issued a permanent certificate to Delhi Taylor and deliveries commenced and have continued since that date without interruption.

In 1959 Shell began negotiations with Delhi Taylor to purchase its leases in the Yzaguirre Field. In order to facilitate this sale, Shell, Delhi Taylor, and Coastal decided that allocations and other problems would be avoided if a separate contract containing the same terms and provisions were entered into covering only the Yzaguirre Field. As all of the negotiations had not been completed, and to facilitate the sale, Delhi Taylor and Coastal entered into a gas purchase contract on May 15, 1959, containing substantially the same terms and provisions, except for routine changes, as the December 30, 1955 contract. On September 11, 1959, Delhi Taylor filed an application to amend its certificate in Docket No. G–10263 to delete the Yzaguirre Field, and at the same time filed an application for a certificate covering separately the Yzaguirre Field. This application was designated at Docket No. G–19464 and consolidated with the

[62] *Skelly Oil Co., supra*, 28 FPC at 410, fn. 20. The Commission held that such sales were subject to the same infirmities as other sales found to be suspect.

[63] On February 28, 1964, Shell filed a Supplemental Certificate Application in Docket No. CI61–783 relating to a contract dated January 15, 1964. It added additional acreage and was designated as Supplement No. 6 to Shell's Rate Schedule No. 271. The contract price was 16 cents per Mcf. No price condition is required.

proceedings in what is now *Florida Gas Transmission Company, et al.*, Docket No. G–18338, *et al.*

On July 1, 1960, Delhi Taylor assigned its interests in the Yzaguirre Field to Shell. On November 15, 1960 Shell filed its application in Docket No. CI61–783. By letter-order of January 4, 1963, Shell, as successor in interest to Delhi Taylor, was issued a temporary certificate to continue the sale covered by Docket No. G–19464. In its May 28, 1964 order initiating the instant proceeding the Commission, after severing Docket No. G–19464 from the proceedings in Docket No. G–18338, *et al.*, ordered that the proceeding in Docket No. G–19464 be terminated and the docket number cancelled. The Presiding Examiner finds that Shell is a successor in interest to Delhi Taylor leases in the Yzaguirre Field and that a permanent certificate should be issued to Shell in Docket No. CI61–783, to the extent of this interest, at the contract price of 16 cents per Mcf.

5. Roy A. Lamb and A. G. Galt, d/b/a Pan American Engineering Company, Docket No. CI62–21.

The above applicants in Docket No. CI62–21 did not appear or file a brief. The date of their contract with Florida Gas Transmission Company is August 26, 1956. The public records of this Commission show that a permanent certificate of public convenience and necessity was issued to the Applicant's predecessors in interest authorizing this same sale in Docket No. G–11062 on December 28, 1956.[64] The principle of the *Graridge* case, *supra*, applies. The Presiding Examiner finds that a price condition is not required and that a permanent certificate should be issued to applicants at the contract price of 16.5 cents per Mcf. (As previously shown at page 1017, *supra*, applicants must comply with certain conditions necessitated by their failure to appear in this proceeding.)

Take or Pay Condition

In numerous cases this Commission has attached a condition to the certificates issued by it which requires the applicants to conform to the final order in the rule making proceeding in Docket No. R–199. Staff contends the certificates issued herein should be so conditioned. Sun Oil Company contends that the imposition of this uncertain condition would be invalid, citing *Sunray Mid-Continent Oil Co.* v. *Federal Power Commission*, 270 F. 2d 404, 409 (CA10). It also contends there is no evidence of record herein upon which the Presiding Examiner could base the imposition of such a condition.

Similar contentions were considered and rejected by this Commission in its Memorandum Opinion and Order on rehearing in the *Amerada* case, *supra*. The Presiding Examiner finds, for the reasons stated by the Commission therein, that the protection of the public interest represented by the condition is necessary.

Rate Increase Filings

In certain of its six rate schedules relating to dockets consolidated in this proceeding, Shell Oil Company (Shell) has filed for rate increases under Section 4(e) of the Act. These rate increases were suspended and permitted to go into effect subject to Shell refunding all amounts in excess of the just and reasonable rates, to be found in a separate proceeding. All participants stipulated that rate increases under Section 4 are not an issue in this case.

In its reply brief Shell states that Staff in Paragraph (B) of its proposed order advocates a condition which might be construed as preventing the collection

---

[64] 16 FPC 1475. The lead docket in the order issuing this certificate was *The Superior Oil Company, et al.*, Docket No. G–10078, *et al.*

of the rate increases previously filed. Shell believes that such a result was not intended in view of the stipulation referred to above. It requests that the Presiding Examiner make clear that the previously filed rate increases are unaffected by any order in this proceeding. The Presiding Examiner finds the increased rates previously filed by Shell, and any other applicant herein, under Section 4 of the Act are not at issue in this proceeding.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the whole record, and as supported by and in accordance with the reliable, probative and substantial evidence, it is further found and concluded that:

(1) Applicants herein listed in Appendix A, except for Docket No. CI61–631 are, or upon commencement of services proposed will be, engaged in the sale of natural gas in interstate commerce for ultimate public consumption and each is, or will be, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The sales of natural gas hereinbefore described, as more fully described in the applications, are made in or will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Subject to the requirements of the order herein and the conditions attached to the certificates herein issued, the applicants, except the applicants in Docket No. CI61–631 and those listed in ordering paragraph (C) below, are able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sales of natural gas by the independent producers referred to in paragraph (1) above, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, and at the prices listed in Appendix A hereto under the column entitled "Price Certificated," are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

ORDER

WHEREFORE, *It is ordered*, subject to review by the Commission on appeal, or upon its own motion as provided in the Commission's Rules of Practice and Procedure, that:

(A) Certificates of public convenience and necessity, and amendments to orders issuing certificates of public convenience and necessity, are hereby issued to the several applicants listed in Appendix A hereto, except for Docket No. CI61–631, for the sale of natural gas in interstate commerce for resale as proposed in the applications, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, upon the terms and conditions set forth below.

(B) Where the "Contract Total Price" shown in Appendix A hereto for each docket is greater than the price found to be required by the public convenience and necessity in paragraph (4) of the Additional Findings and Conclusions herein, each certificate issued, and amendment granted, as provided in paragraph

(A) above, is hereby conditioned to prohibit a total initial price, including all reimbursements and charges, greater than the price listed in Appendix A hereto under the column entitled "Price Certificated," from the date of issuance of this order until such prices may be lawfully changed in the manner provided by the Natural Gas Act.

(C) In addition to other applicable conditions imposed below, the certificates issued above in Docket Nos. G–20458, CI60–506, CI62–21, and CI64–908, are subject to the following additional conditions:

(1) Each applicant shall notify the Commission, in writing within 10 days whether or not service has ever commenced, and if so, when.

(2) If service has never commenced, then the certificate herein issued is void and the application is dismissed.

(3) If service has ever commenced, then the certificate issued herein is fully effective and subject to all conditions imposed herein.

(D) Within 30 days from the date of issuance of this order each of the applicants receiving certificates or grants of amendments in paragraph (A) hereof, whose proposed total initial price exceeds the applicable price listed in Appendix A hereto under the column entitled "Price Certificate," shall file a supplement to its presently filed rate schedule, related to its respective application, reflecting the conditioned price as the total initial price in lieu of the higher initial price provided in the contract or amendment; provided that with respect to the reduction in rates hereby ordered, applicants need not comply with the notice provisions of Section 154.94(b) and the detailed submittal provisions of Section 154.94(f) of the Regulations under the Natural Gas Act.

(E) Within 60 days from the date of issuance of this order the applicants in Docket Nos. CI63–334 and CI63–304 shall make refunds to their respective pipeline purchasers with interest at 7 percent per annum in accordance with the conditions in the temporary certificates heretofore issued to each.

(F) Within 10 days of the date of refunds provided for in paragraph (E) hereof, each of the applicants shall file with the Commission its statement showing the amount of refund, its manner of computation, and the interest payments related thereto, and a statement from the purchaser acknowledging receipt thereof.

(G) The certificates herein issued, and the amendments herein granted, are upon the express condition that the allowance of the take-or-pay provisions in the applicant's contract or amendment is subject to the Commission's ultimate disposition with respect to such provisions in the rulemaking proceeding in Docket No. R–199. Upon the establishment, by regulation or policy statement, of a general policy governing such provisions in producer contracts, each applicant shall, within 30 days, file its amended rate schedule in conformity therewith, acceptable to the Commission, provided that the applicant shall not be required to file a take-or-pay provision for less than 80 percent of the annual contract quantity and, provided further, that any rate schedule changes or modifications to be made in accordance with this paragraph shall be prospective only.

(H) The certificates issued by paragraph (A) hereof are not transferable and shall be effective only so long as each respective applicant continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations, and orders of the Commission.

(I) The grant of the certificates and amendments shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or of Part 154 of the Regulations thereunder. Such grant is without prejudice to any findings or order which have been or may hereafter be made by the Commission

in any proceeding now pending or hereafter instituted by or against the applicants or any one of them. Further, the action in this proceeding shall not foreclose or prejudice any further proceedings or objections by the Commission relating to the operation of any price or related provision in the gas purchase contracts or amendments here involved.

(J) The certificate herein issued to Sun Oil Company in Docket No. CI64–470 is conditioned upon its being accepted in writing by the applicant within 30 days of the issuance of this order.

(K) The application in Docket No. CI61–631 is hereby dismissed.

DYER JUSTICE TAYLOR,
Presiding Examiner.

[a] Cents per Mcf at 14.65 p.s.i.a.

[b] "FN" refers to a favored-nation clause which is operative throughout the life of the contract; "O" refers to any other type of adjustment clause which is operative throughout the life of the contract; and "R" refers to a clause which provides for redetermination of the price only after a specified period of years. One contract may contain clauses of more than one type.

[c] The "Estimated first month's volumes" are the estimated volumes for the first month as reported by the sellers with the rate schedule filing or certificate applications.

[d] Permanent certificates of public convenience and necessity were issued to these applicants by order issued Sept. 19, 1960, in The Ohio Oil Co., et al., docket No. G-17896, et al. This order contained no conditions as to initial prices proposed. Order issued Aug. 9, 1961, in Coastal Transmission Corp., docket No. G-18338, et al., reconsolidated previously severed contracts, and new permanent certificates were issued. Order issued Nov. 2, 1961, in Coastal Transmission Corp., docket No. G-18338, et al., modified the order of Aug. 9, 1961 by withdrawing permanent certificates previously issued, and issued temporary certificates to make sales pending determination of proper initial prices before permanent certificates are granted.

[e] Successor to holder of permanent certificate. Price not to be conditioned.

[f] An application to abandon service was filed on June 15, 1964.

[g] Includes payment of 0.25 cents per Mcf for dehydration, in addition to tax and other reimbursements.

[h] Application will be dismissed by Presiding Examiner.

[a] Application herein relates to acreage dedicated under supplements 4, 5 and 6 to rate schedule No. 2. Applicant's pending certificate applications in docket Nos. CI61-839 and CI62-703 covering sales under the basic contract, as supplemented, are consolidated in Amerada Pertroleum Corp., et al., docket No. CI62-1544, et al.

[b] With respect to gas produced in Texas District No. 4 only. Rate schedule covers gas produced in Texas districts Nos. 1 and 4.

[k] No temporary certificate issued.

[l] On Aug. 27, 1964 Applicant submitted to the Commission an Oil and Gas Lease Agreement dated Sept. 3, 1963, a Partial Assignment dated Sept. 5, 1963 and a revised billing statement. The Sept. 3 Agreement and the Sept. 5 Assignment have been designated as Supplement Nos. 2 and 3, respectively, to the Applicant's FPC gas rate schedule No. 5.

[m] On Jan. 7, 1965 an Application for Abandonment of Service was filed relating to rate schedule No. 3 and all supplements thereto. It was assigned docket No. CI65-648. By order issued and effective on Apr. 22, 1965 in docket No. G-6352, et al., the Commission granted the application for abandonment of service but stated as follows: "the application filed in docket No. CI62-1074 on Apr. 13, 1964 for authorization to sell gas from additional acreage will remain consolidated with the pending certificate proceeding in docket No. G-17960, et al., for determination for the refund question only."

APPENDIX B

TURNBULL & ZOCH DRILLING CO., ET AL.,

DOCKET NO. G-17960, ET AL.

Part I

All participants stipulated that each of the following applicants is "ready, willing and able to perform under its respective [contract or] contracts and to comply with the Natural Gas Act and all valid Commission rules and regulations promulgated thereunder."

Applicants	*Docket No.*
1. Appell Petroleum Corporation (Operator), *et al.*	CI61-1591.
2. The Atlantic Refining Company	CI64-837.
3. Austral Oil Company Incorporated	CI61-427.
4. Cities Service Oil Company (Operator), *et al.*	CI64-211.
5. Clark Fuel Producing Company (Operator), *et al.*	CI63-1495.
6. Continental Oil Company	CI64-1307; CI64-1310; CI64-1311.
7. Gulf Oil Corporation	CI64-883.
8. Humble Oil & Refining Company	CI64-1244; CI64-297; CI64-298; CI64-299.
9. Investors Syndicate of the Southwest, Inc.	G-18590.
10. H. J. Mosser	CI64-694.
11. K. D. Owen, *et al.*, d/b/a Owen and Moss	CI61-1579.
12. Pan American Petroleum Corporation	CI63-1263; CI64-377.
13. Phillips Petroleum Company	G-19498.
14. Shell Oil Company	CI64-655; CI64-703; CI64-310; CI63-1509; G-18439; CI61-783.
15. Sohio Petroleum Company (Operator), *et al.*	CI62-826.
16. Sun Oil Company	CI63-989; CI64-470.
17. Tenneco Oil Company (Operator), *et al.*	CI63-334; G-18223, CI60-325; CI63-1513.

Part II

The following applicants made no appearance at any stage of the hearing in this proceeding and, except as shown herein, have not filed briefs or any other statements pertaining to the issues herein, except their applications and related rate schedules, which were received in evidence by stipulation as items by reference. All except those preceded by an "asterisk" have commenced service under their temporary certificates.

Applicants	*Docket No.*
1. American Petrofina Company of Texas	CI60-134.
2. Breuer & Curran Oil Co	CI60-581.
3. Herman Brown Estate	G-18479.
4. George H. Coates	CI60-591.
5. M. W. Crocket, *et al.*[a]	G-18522.
6. *Diversa, Inc., *et al*	G-20458.
7. Getty Oil Company (Operator), *et al*	G-18378.

[a] Applicant adopted the testimony of the main producer witness (see footnote 23 to the Initial Decision herein).

	Applicants	*Docket No.*
8.	Ginther, Warren & Company	CI64-916.
9.	*L. B. Horn (Operator), *et al*	CI64-908.
10.	W. H. Hudson (Operator), *et al*	CI62-1074.
11.	Katz Oil Company	CI61-631.
12.	*Roy A. Lamb & A. G. Gault, d/b/a Pan American Engineering Company.	CI62-21.
13.	Livingston Oil Company	CI60-508.
14.	Lundells, Inc. (Operator), *et al*	CI64-810.
15.	Russell Maguire, *et al*	CI64-933.
16.	Mayfair Minerals, Inc	CI61-1661.
17.	McWood Corporation	CI63-751.
18.	V. F. Neuhaus	G-18861.
19.	Ramada Oil & Gas Company	CI63-304.
20.	*Joseph E. Seagram & Sons, Inc., d/b/a Frankfort Oil Co.	CI60-506.
21.	Susanoil, Inc	G-18212.
22.	Texaco Inc.[b]	CI64-375.
23.	George K. Taggert, Jr., Operator	G-18796.
24.	Turnbull & Zoch Drilling Co. (Operator), *et al*	G-17960.
25.	R. C. Turner (Operator), *et al*	CI64-439.
26.	G. H. Vaughn, Jr., *et al*	G-18678.
27.	James A. Wood Trustee (Operator), *et al*	CI60-383.
28.	Zimet Brothers, Inc., Agent (Operator), *et al*	G-18987.

[b] Applicant adopted the testimony of the main producer witness. It also adopted, *mutatis mutandis*, the briefs filed by Continental Oil Company.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

NEW LONDON GAS COMPANY AND MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP63-20

ORDER AMENDING OPINION NO. 386 AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued October 1, 1965)

On August 12, 1965, Morning Sun Gas Company (Petitioner) filed in Docket No. CP63-20 a petition on behalf of the Town of Morning Sun, Iowa (Morning Sun) to amend the Commission's order issued on April 17, 1963, in Docket Nos. CP62-303, CP63-20 and CP63-21 (Opinion No. 386, 29 FPC 754), as more fully set forth in the petition to amend.

By said Opinion No. 386 and the accompanying order, Michigan Wisconsin Pipe Line Company (Respondent) was directed, among other things, to establish physical connection of its natural gas transportation facilities with the facilities proposed to be constructed by New London Gas Company (Applicant), and to sell and deliver up to 468 Mcf per day of natural gas to Applicant for resale and distribution in Morning Sun. On March 30, 1964, 31 FPC 730, the Commission granted Applicant's petition to amend the original order and opinion by substituting Petitioner in Applicant's place as the recipient of the natural gas from Respondent.

The citizens of Morning Sun approved the purchase by Morning Sun of Petitioner's established property and gas distribution facilities, for a sum not to exceed $205,000, by a special election held on July 17, 1965. Petitioner therefore requests that Morning Sun be substituted for it as the recipient of natural gas from Respondent.

Due notice of the filing of the petition to amend was published in the Federal Register on August 28, 1965 (30 F.R. 11155). No protest, petition to intervene, or notice of intervention has been filed.

At a hearing held on September 29, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the petition to amend and exhibits submitted in support of the substitution of parties sought herein, and upon consideration of the record,

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued April 17, 1963, and amended on March 30, 1964, in Docket No. CP63-20 (Opinion No. 386, 29 FPC 754) be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued April 17, 1963, and amended on March 30, 1964 (Opinion No. 386, 29 FPC 754) is further amended by substituting the name of the Town of Morning Sun, Iowa, for that of Morning Sun Gas Company as purchaser in Docket No. CP63-20, all as more fully set forth in the petition to amend.

(B) In all other respects said opinion and order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TENNESSEE GAS TRANSMISSION COMPANY AND UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP64-92

ORDER AMENDING ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 1, 1965)

On June 22, 1965, as amended on August 2, 1965, Tennessee Gas Transmission Company and United Gas Pipe Line Company (Applicants) filed in Docket No. CP64-92, a joint application to amend the order of the Commission issued in said docket on December 19, 1963, 30 FPC 1557, authorizing the construction and operation of certain facilities and the transportation and delivery of natural gas by Tennessee for United. Applicants propose by the amendment to establish an additional point of delivery of gas by United to Tennessee for the authorized transportation service currently being rendered under Tennessee's existing transportation Rate Schedule T-6, all as more fully set forth in the joint application to amend.

In the Commission order of December 19, 1963, Applicants received authorization for the transportation of gas by Tennessee for United, a distance of 92 miles, and the facilities required to effectuate such service. The agreement, designated as Tennessee's Rate Schedule T-6, under which the service is performed, provides for the delivery of gas by United to Tennessee in Iberia and Plaquemines Parishes, Louisiana, for transportation and redelivery of the same at the interconnection of the two systems near Iowa, in Jefferson Davis Parish, Louisiana. This service enables United to augment its supply of firm gas in the Lake Charles area of Louisiana with maximum daily deliveries increasing over the four year term of the agreement, that commenced with the 1963-64 winter season, as follows: first year—73,146 Mcf; second year—93,032 Mcf; third year—106,384 Mcf; and fourth year—122,983 Mcf. United pays Tennessee a charge of 45¢ per month multiplied by the daily quantity applicable during the month.

The facilities proposed to be constructed and operated are described as follows:

United Gas Pipe Line Company

Construct approximately 0.15 mile of 8-inch pipeline, orifice meter station and appurtenant facilities, beginning at a point on the North Leroy Field Gathering System (installed under FPC Docket No. G-12270) and extending in a generally southerly direction to the Tennessee Gas Transmission Company's existing 24-inch Muskrat Line in Section 2, Township 11 South, Range 2 East, Vermilion Parish, Louisiana.

Tennessee Gas Transmission Company

Install tap valve and 6" side valve on its Muskrat Line near Valve No. 511, located in Section 2, Township 11 South, Range 2 East, Vermilion Parish, Louisiana.

The total cost of the facilities proposed by United is estimated to be $60,218. The total cost of the facilities proposed by Tennessee is estimated to be $5,700. Financing of the proposed facilities will be from Applicant's general funds.

The subject delivery point will allow United to deliver gas to Tennessee from another of United's sources of supply and thereby permit greater flexibility in the operation of the transportation agreement. Tennessee will make the necessary filing to include the requested interconnection as an additional delivery point

under its T–6 Rate Schedule. No other changes in Rate Schedule T–6 are proposed.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on July 7, 1965 (30 F.R. 8598). No protest or petition to intervene or notice of intervention has been filed in the proceeding concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order of the Commission issued in said docket on December 19, 1963 be amended so as to authorize the Applicants to construct and operate their respective proposed facilities described hereinabove and to operate the same for the purpose of transporting natural gas through the proposed additional delivery point on Tennessee's existing "24" inch Muskrat Line in Vermilion Parish, Louisiana, near the North Leroy and Ridge Fields.

The Commission orders:

(A) The order of the Commission issued on December 19, 1963, in Docket No. CP64–92 be amended so as to authorize Tennessee Gas Transmission Company and United Gas Pipe Line Company to construct and operate their respective proposed facilities described herein, and to transport natural gas as proposed by means of the proposed additional delivery point on Tennessee's existing 24-inch Muskrat Line in Vermilion Parish, Louisiana, near the North Leroy and Ridge Fields.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP66–20

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 1, 1965)

On July 19, 1965, Tennessee Gas Transmission Company (Applicant) filed in Docket No. CP66–20 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale of natural gas to two of its existing General Service Customers and one of its existing Contracted Demand Customers, as more fully set forth in the application.

Applicant proposes to serve the estimated additional natural gas requirements of three existing customers as follows:

Type of service	Volumes (Mcf at 14.73 psia)		
	Proposed additional maximum daily volumes	Present authorization	Total
General Service Customers—			
Hartford Electric Light Co. (Stamford)	216	12,288	12,504
Tennessee Natural Gas Lines, Inc. (Nashville)	6,671	128,821	135,492
Contracted Demand Customer—			
T. W. Phillips Gas & Oil Co.	510	2,040	2,550
Total	7,397	143,149	150,546

These increased requirements arise from recent market studies made by the customers subsequent to the issuance of the Commission's order of March 30, 1965, 33 FPC 657, issued in Docket No. CP65–120, which order authorized Applicant to serve additional natural gas requirements of its existing customers commencing with the 1965–1966 winter heating season and to construct and operate the additional pipeline facilities necessary to render such service. The market studies indicated a need for minor volumes of additional gas, other than the incremental volumes authorized in Docket No. CP65–120. The proposal appears to be economically feasible.

The ability to render the proposed service will be provided from facilities to be constructed pursuant to authorization in Docket No. CP66–54, for which a temporary certificate was issued August 25, 1965, and a permanent certificate is being issued concurrently with the authorization hereinafter issued, *infra*, p. 1060.

Due notice of the filing of the application was published in the Federal Register on July 30, 1965 (30 F.R. 9560). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

At a hearing held on September 29, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of July 15, 1947, in Docket No. G–910 (6 FPC 777).

(2) The proposed sales hereinbefore described, as more fully described in the application in this proceeding, are sales for resale in interstate commerce subject to the jurisdiction of the Commission and are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sales of natural gas, as proposed in the application, are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Tennessee Gas Transmission Company, authorizing the sales of natural gas, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(C) The sales of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP66-54

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 1, 1965)

On August 18, 1965, Tennessee Gas Transmission Company (Applicant) filed in Docket No. CP66-54 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of 17.07 miles of 36-inch O.D. pipeline loop on the Delta-Portland portion of its mainline system from MLV No. 555 to MLV No. 556, as more fully set forth in the application.

Following the pipeline failure which occurred on March 4, 1965, Applicant reduced the maximum operating pressure on its Natchitoches-Portland portion of its mainline system. The reduction in pressure caused a decrease of approximately 23,000 Mcf per day in the daily volume which could be transported to Station No. 87 through that portion of its system during the 1965–1966 winter heating season. The proposed facilities will enable Applicant to deliver 20,000 Mcf per day through the Delta-Portland portion of its system and will thus more than compensate for the daily volumes lost as a result of the reduction in pressure.

Applicant states that in addition to the pipeline rupture, delays in construction, excessive outages of compressor units and pipeline flow restriction (Lake Borgne Crossing) have reduced the effective capacity of its authorized pipeline facilities during the current period of injection of gas into underground storage. The resulting decrease of capacity, combined with the fact that deliveries to Applicant's customers have exceeded previously estimated delivery requirements, will prevent Applicant from filling its gas storage facilities to a level Applicant deems prudent and will result in an estimated negative top storage inventory upon completion of the 1965–1966 winter heating season. Applicant further states that without the capacity of the pipeline facilities sought by the filing of the instant application, its ability to render adequate service to its customers during the 1965–1966 heating season will be jeopardized.

The estimated cost of construction is $3,139,000, which will be financed from Applicant's existing $50,000,000 revolving credit and later permanently financed through the issuance of first mortgage pipeline bonds or debentures, or both. The proposal appears to be economically feasible.

A temporary certificate of public convenience and necessity for the construction and operation of the proposed facilities was issued by the Commission on August 25, 1965.

Due notice of the filing of the application was published in the Federal Register on September 1, 1965 (30 F.R. 11263). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

At a hearing held on September 29, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including

the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of July 15, 1947, in Docket No. G–910 (6 FPC 777).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Tennessee Gas Transmission Company, authorizing the construction and operation of the facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TENNESSEE NATURAL GAS LINES, INC., DOCKET NO. CP66–4

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 1, 1965)

On July 6, 1965, Tennessee Natural Gas Lines, Inc. (Applicant), filed in Docket No. CP66–4 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the transportion of natural gas (an increase in volumes of natural gas to be transported under Applicant's presently authorized firm service to the Nashville Glass

Plant of Ford Motor Company (Ford) from 8,300 Mcf per day to 14,300 Mcf per day), all as more fully set forth in the application.

Applicant was authorized to deliver up to a maximum of 20,800 Mcf of interruptible gas to Ford in Docket No. CP61–197. Firm service to Ford was authorized in Docket Nos. G–19302 and CP61–27. The subject application proposes to shift 6,000 Mcfd from interruptible to firm service.

The Nashville Glass Plant uses firm gas in sheet glass furnaces, bending lehrs and related equipment. Interruptible volumes have been used in plate glass furnaces, for heating and for steam generation. According to the application, the additional firm volume of natural gas will be used to fuel the plate glass furnaces in order to maintain quality and quantity of plate glass production. The additional firm volume will eliminate the requirement for switchovers between interruptible natural gas and propane.

Applicant states that it will not require additional facilities to render the proposed service.

Applicant obtains its entire supply of natural gas from Tennesseee Gas Transmission Company (TGT). It sells and delivers natural gas to its subsidiary, Nashville Gas Company, for resale in the Nashville area and to three direct sale nonjurisdictional customers for their own use.

Applicant's contract demand with TGT is 128,821 Mcf per day. Its 1965–1966 peak day requirements are estimated at 135,492 Mcf. Consequently, Tennessee Natural requires an additional 6,671 Mcf on the peak day. Included in this amount is the 6,000 Mcf of firm gas to Ford proposed herein. TGT has requested authorization to deliver an additional 6,671 Mcf per day to Tennessee Natural in Docket No. CP66–20.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 29, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record,

The Commission finds:

(1) Applicant, Tennessee Natural Gas Lines, Inc., a Tennessee corporation having its principal place of business in Nashville, Tennessee, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–575 (4 FPC 1127).

(2) The proposed operation of existing facilities and transportation and delivery of up to 14,300 Mcf daily of natural gas on a firm basis by Applicant to Ford as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed operation of existing facilities and transportation and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding, authorizing the proposed operation of existing facilities and transportation and delivery of up to 14,300 Mcf of natural gas on a firm basis to Ford as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) The certificate issued shall not entitle the industrial customer to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP65-405

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 1, 1965)

On June 17, 1965, United Gas Pipe Line Company (Applicant) filed in Docket No. CP65-405 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities for the delivery of natural gas to an industrial customer, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately 2.9 miles of 20-inch pipeline, an orifice meter station and appurtenant facilities in Warren County, Mississippi, for the purpose of delivering natural gas to Mississippi Power & Light Company (Mississippi) for use as boiler fuel in Mississippi's electric generating plant currently under construction near Vicksburg, Mississippi.

Estimated annual and peak day requirements for each of the first three years of service are 32,120,000 Mcf and 110,000 Mcf respectively. Total estimated cost of Applicant's proposed construction is $435,912, and will be financed with current working funds.

Applicant, an existing pipeline, has in recent years lost several substantial non-jurisdictional customers to intrastate sellers of natural gas. Thus, the effect has been to tend to increase costs which are allocated to jurisdictional customers. This sale, although being made for boiler fuel purposes, would serve to recover to some degree the lost sales of a similar nature. By its resultant contribution to fixed costs and by its use of existing excess capacity, this sale will substantially benefit Applicant's jurisdictional customers. In addition, it appears that Mississippi's large summer air conditioning load will result in greater takes by Mississippi in the summer than in the winter, thus tending to give Applicant better seasonal balance in the utilization of its system.

We note further that in recent years, natural gas has been the predominant source of energy used for steam generation of electricity by Mississippi and other companies in the State of Mississippi, averaging for the past several years

well over 90% usage. It would appear, therefore, that were applicant not to make this sale to Mississippi, alternative local sources may be employed. Therefore, the effect would be that the same fuel, natural gas, would be used whether or not we certificate this sale. Finally, we are aware that United has made prepayments for gas in excess of $21,000,000 as of the end of 1964. The instant sale will help to some degree in the relief of this otherwise undesirable condition. For all of these reasons it would appear that the instant proposed sale will be in the public interest.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 29, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) The proposed construction and operation of facilities by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements of the Commission's Rules and Regulations thereunder.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, United Gas Pipe Line Company, authorizing construction and operation of the facilities hereinbefore described, as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within one year from the date on which this order issues.

(D) Deliveries of natural gas by Applicant to Mississippi are limited to 110,000 Mcf per day and 32,120,000 Mcf annually.

(E) The certificate issued above shall not entitle Mississippi to any priorities to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increase in their requirements.

(F) Should Applicant fail to receive an adequate return or to recover out-of-pocket costs incurred in providing the direct sale of natural gas authorized by this order, it shall not recover any part of the deficiency from jurisdictional sales customers.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP66-52

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 1, 1965)

On August 13, 1965, United Gas Pipe Line Company (Applicant) filed in Docket No. CP66-52 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(c) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during a 12-month period commencing November 1, 1965, and the operation of natural gas facilities for the sale of natural gas to existing distributors for resale and to direct consumers, all as more fully set forth in the application on file with the Commission.

For the sale to direct customers, Applicant proposes to construct a maximum of 40 facilities with each facility consisting of a tap, meter, regulators, station site, rights of way and such length of 1-inch to 4-inch pipe as may be necessary. For the sale to distributors, Applicant proposes to construct a maximum of 40 facilities with each facility consisting of the necessary tap and regulating equipment.

The proposed facilities will be utilized for the transportation and sale of volumes of natural gas previously authorized under certificates for transportation or sale to existing distributors at rates on file with the Commission, for resale in existing market areas, and for direct sales of natural gas to consumers located in areas outside the franchise area of any local distributor. Such proposals are in conformity with Sections 157.7(c)(1)(i) and 157.7(c)(1)(ii) of the Commission's Regulations under the Natural Gas Act.

The total cost of the facilities proposed under this application will not exceed a maximum of $300,000 and the total deliveries to any customer will not exceed a maximum of 100,000 Mcf of natural gas per year. No gas will be used as boiler fuel.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on September 29, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 20, 1942, in Docket No. G-216 (3 FPC 3).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and/or sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The authorization hereinafter granted should be limited to construction during the 12-month period commencing on November 1, 1965, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $300,000, with the total deliveries to any one customer not to exceed a maximum of 100,000 Mcf of natural gas per year.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(8) The certificate issued hereinafter should be conditioned upon Applicant's compliance with the provisions of Section 157.7(c)(7) of the aforesaid Regulations.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, United Gas Pipe Line Company, to construct during the 12-month period commencing November 1, 1965, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities to sell natural gas to direct customers and to distributors for resale as hereinafter provided.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The authorization granted in paragraph (A) above is limited to construction during the 12-month period commencing on November 1, 1965, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $300,000, with the total deliveries to any one customer limited to a maximum of 100,000 Mcf of natural gas per year.

(D) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(E) The certificate issued by paragraph (A) above is expressly conditioned upon Applicant's compliance with the provisions of Section 157.7(c)(7) of the aforesaid Regulations and, further, shall not entitle any industrial customer to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in their requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

WISCONSIN POWER & LIGHT COMPANY AND MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP66-2

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued October 1, 1965)

On July 2, 1965, Wisconsin Power & Light Company (Applicant) filed in Docket No. CP66-2 an application, as supplemented on July 29, 1965, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Respondent) to extend its gas transportation facilities near the City of Marion, Wisconsin, to establish physical connection of such extended facilities with the proposed facilities of Applicant and to sell natural gas to Applicant for resale and distribution in Marion, and the adjacent Towns of Dupont, Larrabee and Grant, Wisconsin, all as more fully set forth in the application, as supplemented.

Applicant requests that Respondent construct and operate approximately four miles of 4-inch lateral and a gate station for the delivery of gas to Applicant near Marion. The lateral would extend from Respondent's Weyauwega-Marinette transmission line. Applicant proposes to construct and operate a regulator station, 4.4 miles of 4-inch lateral extending from the requested gate station to Marion and the necessary distribution facilities. Applicant proposes to distribute natural gas in Marion and to serve customers in the Towns of Grant, Dupont and Larrabee which are adjacent to the city limits of Marion and the line running from the gate station to Marion.

The application shows the estimated third year annual and peak day natural gas requirements for the proposed project to be 118,677 Mcf and 625 Mcf, respectively.

The total estimated cost of Applicant's proposed facilities is $263,710, which cost will be financed from funds on hand or funds made available from the sale of securities as may be necessary as part of Applicant's overall construction program. Exhibit N of the application indicates that in the third year of service a 6.5 per cent return will be realized on the project.

The application indicates that Applicant has received the necessary state and local authorizations for the proposed project.

On August 16, 1965, Respondent filed an answer to the subject application, as supplemented, stating that it does not object to the granting of the requested order.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on July 20, 1965 (30 F.R. 9077). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Respondent, Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 14, 1950, in Docket No. G-1302 (9 FPC 167).

(2) Applicant, Wisconsin Power & Light Company, is a corporation duly organized and existing under the laws of the State of Wisconsin and is authorized to engage in the business of distributing and selling natural gas within said State.

(3) It is necessary and desirable in the public interest that Respondent be directed to extend its gas transportation facilities, to establish physical connection of such extended facilities with the proposed facilities of Applicant and to sell and deliver up to 625 Mcf of natural gas per day to Applicant, as set forth in the application, as supplemented, and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Respondent within one year from the date of issuance of this order.

(5) The requirement that Respondent serve Applicant, as proposed, will not place any undue burden upon Respondent nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Michigan Wisconsin Pipe Line Company is directed to extend its gas transportation facilities, to establish physical connection of such extended facilities with the proposed facilities of Applicant and to sell and deliver up to 625 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully set forth in the application, as supplemented.

(B) Applicant shall be prepared to receive natural gas from Respondent within one year from the date of issuance of this order.

(C) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

OPINION NO. 468–A

AREA RATE PROCEEDING, DOCKET NO. AR61–1; CLAUDE E. AIKMAN, ET AL., DOCKET NO. G–18466, ET AL.; NORTH CENTRAL OIL CORPORATION (OPERATOR), ET AL., DOCKET NO. CI60–435, ET AL.

OPINION AND ORDER DENYING APPLICATIONS FOR REHEARING

(Issued October 4, 1965)*

Syllabus

1. Attempted disqualification of two Commissioners on grounds of bias and prejudgment is rejected. P. 1069.
2. Pressure standard for pipeline quality gas is changed from 800 psi to 500 psi as more nearly reflecting pressure at which gas is delivered in area. P. 1070.
3. Producer's delivery pressure for purposes of quality adjustments shall be that at which producer-seller is ready and able to deliver gas into pipeline's facilities without further compression. P. 1070.
4. Btu quality adjustment standards prescribed in prior opinion for new gas-well gas, should apply equally to flowing gas. P. 1070.
5. Btu adjustment will apply to area base rate before price adjustments for quality. P. 1070.
6. Where gas-well gas contract provides that purchaser pay for extracted liquids, Btu content should be measured after such extraction. P. 1070.
7. Commission spells out procedures with respect to carbon dioxide adjustments. P. 1071.

---

*Modified by order issued November 12, 1965, 34 FPC 1286; See orders granting partial stay issued November 12, 1965 and February 11, 1966, 34 FPC 1288 and 35 FPC 211.

8. Commission will approve agreements between producers and pipelines on quality price differentials which reflect good faith efforts to approximate processing costs and will accept, for pipeline rate purposes, adjustments computed thereunder. P. 1071.
9. Issue of whether new gas-well gas ceiling is needed for gas from committed acreage is discussed. P. 1072.
10. Argument that overall revenues do not match costs is rejected. PP. 1072–1074.
11. Record does not support argument that residue gas derived from casinghead gas should be priced above 14.5 cents per Mcf. P. 1074.
12. Differing base rates in Texas and New Mexico explained. P. 1074.
13. Contract date, rather than date gas was committed to interstate commerce, controls classification as new or flowing gas. P. 1075.
14. Proper rate to be charged by producer is his contract price or applicable area rate, whichever is lower. P. 1075.
15. Producers have made no showing of irreparable injury required to warrant stay of ordered rate reductions and moratorium—even that showing would not normally be sufficient when outweighed by detriment to public. P. 1076.
16. Producers' contentions based on individual circumstances state no grounds for revision of area rate order. P. 1077.
17. Commission *modifies* and *clarifies* prior opinion and *denies* applications for rehearing and stay.

Commissioner O'Connor *concurring.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SWIDLER, *Chairman:*

On August 5, 1965, the Commission issued its Opinion No. 468, 34 FPC 159, in the above-entitled proceeding. Applications for rehearing have been filed by various parties. The applications in part consist of a repetition of contentions which were fully considered in the course of reaching the determinations embodied in Opinion No. 468. However, the applications have persuaded us that certain modifications are required in the quality standards prescribed in Opinion No. 468. In addition we wish to clarify certain findings in the opinion with respect to which questions have been raised and to respond to certain contentions not previously advanced.

Initially we note and reject the contention by the respondent Phillips Petroleum Company and by Independent Petroleum Association of America that the participation of Commissioner Black and the Chairman in the Opinion and Order herein was improper because they had demonstrated bias and prejudgment on the issue whether competition among producers can be relied upon to justify their contract prices as just and reasonable under the standards of the Natural Gas Act. Nothing which has transpired since the release of Opinion No. 447, 33 FPC 43, in which we rejected an earlier motion to disqualify Commissioner Black, leads us to doubt the correctness of our conclusion there. The views expressed therein are equally applicable to the attempt, belatedly and retroactively, to disqualify the Chairman on the basis of his speech of September 22, 1964, to the Independent Natural Gas Association of America of which we take notice.[1]

[1] Speaking personally, I am unaware of any bias or prejudgment on the issue of competition or any other issue in this proceeding. It would have been impossible for me to have worked four years as a member and Chairman of the Commission without acquiring some knowledge of the economic forces which affect natural gas pricing and forming opinions on how they operate. I have formed and expressed some opinions on the questions raised

Footnote continued on following page.

Quality Standards

We shall now discuss three changes and clarifications which we are making in the quality standards:

PRESSURE

Several producer-applicants argue that the standard of 800 pounds pressure for pipeline quality gas is not realistic, pointing out that most of the gas delivered in the Permian Basin in 1960 was delivered below that pressure. We agree. While the record supports our conclusion that 800 pounds is the pressure generally employed in the principal mainline segment of the pipelines in the Permian Basin, our conclusion did not give sufficient weight to the pipeline systems operated in the Permian Basin at much lower pressure and to the actual delivery standards in the area. Upon further consideration we believe that a pressure standard of 500 pounds would more nearly reflect the pressure at which gas is delivered to the pipeline systems in the Permian Basin.

Shell Oil Company (Shell) posed the problem of the unfairness of a quality deduction for sales of gas which the producer is ready and able to deliver at pressures higher than those at which the buyer can accept gas. We think that this point is also well taken. The delivery pressure for purposes of quality adjustments shall be the pressure at which the seller is ready and able to deliver gas into the buyers' facilities without further compression, even if such pressure must be reduced so that it can be conveniently accepted by the buyers' established facilities at the point of delivery. Our previous order will be modified in this respect.

BTU ADJUSTMENT FOR FLOWING GAS

In Opinion No. 468 we specified a Btu adjustment for new gas-well gas but did not do so for flowing gas. Upon reconsideration we are persuaded by the producers' argument that there is no adequate justification for this difference in treatment, and we agree that the price for both new gas-well gas and flowing gas should be related to its energy content. The producers correctly point out that otherwise the quality adjustments on flowing gas would operate in only one direction. There would be no upward adjustment for gas rich in energy, but which would nevertheless be subject to a downward adjustment because of excessive sulphur or low pressure. We believe the reasons stated for applying the Btu content standard to new gas-well gas apply equally to flowing gas and our previous order will be modified accordingly.

The Btu adjustment will be applied to the area base rate before price adjustments for quality. In view of the fact that a majority of contracts for gas-well gas provide for a payment for liquids removed by the purchaser, Btu content should be measured after the removal of such liquids where such payment is made.[2] To measure Btu's prior to extraction of the liquids and then pay a bonus for high Btu content in the form of liquids would be a double payment.

---

by proposed legislation to repeal FPC regulation over sales by gas producers in interstate commerce. My speech to INGAA expressed my belief that the Natural Gas Act as interpreted by the Supreme Court to apply to gas producers is necessary to protect the interests of the consuming public and made clear that on this legislative question I had not been persuaded by the arguments that competition between producers was an adequate substitute for regulation. These views on the need for producer regulation, however, did not prevent me from fairly evaluating the evidence in this proceeding bearing on the weight to be given to competition in determining the standards for fixing just and reasonable area rates.—JCS

[2] The same principle would also apply in the case of similar contracts for residue or casinghead gas.

CARBON DIOXIDE ADJUSTMENTS

Under Opinion No. 468 a producer with gas containing excessive amounts of carbon dioxide is paid on the basis of the volume of gas remaining after deduction of the above standard volumes of carbon dioxide. The application of the Btu adjustment provision to flowing gas makes possible a somewhat simpler handling of rates in contracts containing a high percentage of carbon dioxide. In addition to the method described above, we can now provide the producers with the alternative of pricing their gas on the basis of the volume actually delivered to the pipeline which still contains the carbon dioxide provided that the Btu content of the gas is also measured at that time. In these circumstances gas consumers will not be paying for carbon dioxide because the Btu content will be considerably below the minimum 1,000 Btu content established as an area standard in this proceeding and the price will be reduced accordingly.

Under either alternative the pipelines' cost of processing actually incurred to remove the carbon dioxide should be deducted from the area base rate to determine the applicable ceiling price. If the producer prefers to price his gas on the basis of the volume remaining after the carbon dioxide is removed, the Btu content for purposes of the adjustment provided herein shall be measured on the basis of the volume of gas after such removal and the total amount to be paid for gas should also be computed on the volume of gas remaining after the carbon dioxide has been removed.

Recovery of Processing Costs by the Pipelines

In setting forth the procedures in Opinion No. 468 for determining the amount of the reductions from the base price to reflect processing costs to bring the gas up to our quality standards, we provided that we would accept agreements between the producer and the pipeline as to the extent of the processing costs involved. It has been suggested that the likelihood of reaching agreement in most cases has been impaired by an indication in the opinion that if a pipeline agreed with producers upon the amounts of processing costs it could not thereafter claim more as part of its cost of service. We did not intend such an arbitrary rule. We recognize, of course, that no negotiated cost can be expected to be absolutely accurate, that costs may vary over the years, that legitimate processing costs may be incurred to bring the gas up to a quality standard higher than we are prescribing for rate adjustment purposes, that some processing facilities must incorporate reserve capacity for use in pipeline operations, and that there are other legitimate processing costs that may be incurred by a pipeline not accounted for in the negotiated price.

We emphasize our desire to encourage agreement between the parties as to the proper amounts to be paid or deducted for quality adjustments. While we do not intend to permit the agreements between producers and pipelines to be used for the purpose of establishing artificially low processing costs, with the pipeline and ultimately the consumer making up the difference, we will approve all such agreements which reflect a good faith effort to approximate the processing costs involved, and accept for the pipelines' rate purposes the adjustments computed thereunder. In reaching such agreements the parties may utilize average processing costs where cost data for individual contracts are not readily available. No pipeline need fear that any such agreement will prejudice its claims to its legitimate costs not covered by the agreement.

New Gas-Well Gas From Committed Acreage

The producers contend that frequently there may prove to be extensive gas deposits at horizons below those already tapped by oil or gas wells. They strongly argue that the development of acreage now committed under old gas

contracts may be inhibited if future discoveries of gas-well gas from such acreage do not command the higher ceiling for new gas-well gas. We believe this point deserves further consideration.

There is merit to the contention that the basis for classifying additional discoveries of gas-well gas from deeper reservoirs should not depend solely on whether there has been prior dedication but rather on whether such classification will encourage the directional search for gas. The issue is thus whether the new gas-well gas ceiling is needed in the public interest for gas from committed acreage. One factor to be considered is that lease acquisition costs have already been incurred in connection with committed acreage. Another relevant question is how much information as to the existence of gas at lower levels is provided by wells that have already been drilled.

On a full record, the producers may well be able to demonstrate that gas discovered in new reservoirs separate from existing reservoirs and at lower depths should command the new gas ceiling irrespective of prior dedications. On this record, however, the issue was not developed by the parties sufficiently to serve as a basis for departing from our past policy of applying the new gas price only to gas that has not yet been committed to the interstate market.

We believe the issue should be fully developed in the *Hugoton-Anadarko* case, Docket No. AR64–1, and any change in policy will be applied prospectively to the Permian Basin.

Revenues v. *Costs*

A major argument presented in the several producer applications for rehearing is that, because of the quality adjustments (presumably even as we are modifying them herein), the Commission has not fixed area rates at a level high enough to produce overall revenues which would in the aggregate match producer "costs." The argument fails to take account of the fact that the cost of gas-well gas that served as a yardstick for establishing the area rate includes a twelve percent rate of return (amounting to about 5 cents per Mcf) which the Commission expressly indicated was set at this figure in part (and in the case of flowing gas, where the problem of low-quality gas is more pronounced, in large part) in order to compensate for the risk of finding gas of less than pipeline quality.

The producer's "revenue deficiency" argument is also in error in assuming that the flowing gas costs 14.5 cents per Mcf, or that the Commission so found. The Commission used the cost of flowing gas-well gas as the basic yardstick for fixing the price of all flowing gas (for the reasons stated in Opinion No. 468, pp. 208–212). While the cost of residue gas cannot be found with the precision requisite to serve as a basis for fixing ceiling prices, the evidence in the record makes clear that with respect to casinghead gas and residue gas derived therefrom (which together make up by far the largest share of the Permian gas subject to quality adjustments) the costs are substantially below the 14.5 cents per Mcf ceiling price. For one thing the price includes a 4.08 cents allowance for exploration and development expense even though such gas was largely found as a by-product of the search for oil. For another, there would be no reason to allow producers a 12 percent rate of return on their investment for processing residue gas since the investment in processing plants and equipment is subject to few of the special risks incurred by those who explore for and develop reserves of gas.

We do not mean to suggest that the E&D allowance and the profit which we have provided for flowing gas is not fully justified, but we believe it is relevant to point out that these two items, which account for 9.0 cents of the 14.5 cents

price for flowing gas, are based in part on justifications other than cost, and provide ample allowance for the risk that low-quality gas in the area may not command the full area price.

It is relevant also in any comparison of revenues and costs in the Permian Basin to consider the additional producer revenues under the *Spraberry* contracts which govern the sale of approximately 20 percent of the gas sold in the Permian Basin. Under these contracts the producers will receive, in addition to the ceiling price for residue gas, substantial payments for the liquids which the pipelines extract from the unprocessed gas. The record does not reveal the precise amount of such revenue but the contracts and billing statements on file with the Commission confirm that they are substantial.

The producers' comparison of revenues and costs also fails to reflect a substantial amount of revenue which we did not take into account in any way in computing the cost of old gas-well gas, and which we may have underestimated in determining the new gas-well gas price. We refer to the payments received by the sellers of gas-well gas for liquid hydrocarbons extracted from the gas by the pipelines. El Paso points out in its application for clarification that these liquid credits approximate on the average 0.6 cents to 0.8 cents per Mcf in the Permian Basin. This may be contrasted with the plant liquid credit of 0.2 cents based on nationwide statistics used in computing the cost of new gas-well gas and the absence of any such credit against costs in the flowing gas computation.

The precise amount of the plant liquid credit which El Paso states it pays to the producers is not verified by evidence in the record although the contracts for the sale of gas-well gas in the area reveal that such payments are generally made. In these circumstances we do not believe it appropriate to adjust the cost to reflect this undetermined amount of additional producer revenue. However, it is clear that this revenue, which is separate and apart from payments for excess Btu's in the gas after removal of liquids, tends to offset any reduction in aggregate revenues due to downward quality adjustments.

The application by the Major Producers refers to "the Commission's finding that jurisdictional revenues will equate to jurisdictional costs." The Commission made no such finding. Obviously the Commission cannot allow higher rates to offset "revenue deficiencies" resulting from producer contract prices below the area ceiling. The Major Producers' own petition states that the "revenue deficiencies" resulting from these contractual limitations amounts to 0.76 cents per Mcf. It would be contrary to all regulatory principles to permit prices in excess of an otherwise just and reasonable rate for certain purchases merely because other sales had been voluntarily made at below full cost as herein determined.

It is argued that because it is impossible to quantify exactly the extent of quality discounts there can be no basis for determining the validity of the Commission's rate of return determination either as a whole or to the extent that it purports to reflect the risk of quality deficiency. The record does not leave us as much in the dark in this matter as the producers would have us believe. As Commissioner O'Connor stated in his concurring opinion, the record indicates that for gas-well gas under Opinion No. 468 "the reasonable amount of the average adjustment will be in a range of from 1.0 cents to 1.7 cents." With the changes we have here made with respect to quality standards, the average adjustments for gas-well gas will range from 0.7 cent to 1.5 cents, reduced by the additional revenue for plant liquids and the effect of the Btu adjustment.

As to the flowing gas, the additional upward adjustment for gas with a Btu content of more than 1,050 Btu, coupled with the change in pressure standards

substantially reduces the amount of downward adjustments. We have already noted the offsetting revenues to the producers from liquid credits and the fact that the cost of residue and casinghead (the bulk of the gas in the area) is substantially lower than the 14.5 cents price.

While it is true that neither the amount of the downward quality adjustments or the offsetting sources of additional revenue can be determined precisely, we are convinced that the record fully justifies the Commission's judgment that the ceiling prices we have fixed "provide a fair relationship between the aggregate price the consumer pays and the aggregate costs that the producers incur" in the Permian Basin.

Flowing Residue Gas-Cost and Price

It has been stated in the applications of several producer-respondents that the price of residue gas derived from casinghead gas should be fixed at a higher price because the record contains evidence which would establish this cost at a level above the 14.5 cents per Mcf based on gas-well gas costs. The record does not support this argument. On the contrary, while a precise cost computation of residue gas cannot be made with sufficient assurance of accuracy to serve as a basis for fixing prices, the evidence demonstrates that the cost of residue gas is lower than the cost of flowing gas-well gas. The defects in the evidence which the producers cite were pointed out by the examiner. (Initial Decision, pp. 344–347.) The staff in its exceptions agreed with the examiner's downward adjustment of its figures. Without passing on the merits of the evidence it certainly does not support a higher price for residue gas.

The Differing Base Rates in Texas and New Mexico

Some of the applicants appear to have misunderstood the nature of our determination in fixing base rates for Texas production inclusive of production taxes, while fixing base rates for New Mexico to which present New Mexico taxes may be added. At the present time taxes in New Mexico are not uniform, and different sales of natural gas within that state may be subject to quite different taxes. In the State of Texas, on the other hand, a production tax of 7 percent applies uniformly to all sales. It is possible, therefore, to compute base rates including taxes which would be applicable to all Permian Basin production within the State of Texas. Since this is not possible with respect to New Mexico production, a different formula is used. The net result, however, is precisely the same for the two states—in each case the present taxes are included in computing the total prices which may be charged. This is not a determination that any and all taxes which the State of New Mexico may choose to impose in the future may be added to New Mexico base prices.

In its petition for rehearing El Paso requests the Commission to clarify whether in computing the applicable state and local production taxes for New Mexico there should be included the New Mexico Oil and Gas Ad Valorem Production Tax. The records of this proceeding show that such a tax is a property tax, not a production tax, and as such was included in our computation of the cost of finding and producing gas. Accordingly such tax shall not be included in computing the applicable New Mexico production taxes.

Refund Below the Last Clean Rate

First raised by Skelly, and repeated in other applications, is the contention that "the Commission's refund order exceeds its refund authority under Section 4(e) which is limited to the increased increment in the rate between the time the suspended increased rate is made effective and the date of the Commission's final order in the suspension proceeding." With this contention we need not deal at this time, since no such situation has been presented as resulting

from our order herein. It will be time enough to deal with this issue when and if it is established that any refunds below the last clean rate are required.

Classification of Gas on Basis of Contract Date

It has also been contended that contracts should not be classified as contracts for new or old gas by reason of the date of the contract, but rather on the basis of the date the gas was first committed to interstate commerce, assuming commitment occurred at a later date. We have chosen the date set forth in the contract because that date is precise, definite and certain, whereas the date of commitment of gas to interstate commerce is less easy of ascertainment. We therefore do not believe any change in our decision on this issue is warranted.

Refunds—Pipeline Verification

We agree with El Paso that a condition should be attached to the refund requirement that it should be required that the purchaser verify the refund calculations, and the order accompanying this opinion will so provide.

Method of Rate Determination

Some confusion apparently exists with respect to the method of determining the proper price under a given contract. If a producer has a contract calling for a stated price with specified increases for additional Btu content or specified deductions for certain quality deficiencies, the contract price is to be computed as though no price regulation existed. As a second step it will be necessary to compute the applicable area rate for the gas sold under the contract, without regard to the contract price provisions. The area rate will be the applicable base rate plus or minus the quality adjustments allowed or required by our decision and order. The proper rate to be charged and collected under the contract will be the contract price if it does not exceed the applicable area rate. If it exceeds the applicable area rate the latter will apply.[3]

Rates Involved in Application of Order to Unconsolidated Section 4(e) Proceedings

In the Addendum to its Supplemental Application for Rehearing Shell inquires whether ordering paragraph (E) of Opinion No. 468 applies to pending Section 4(e) proceedings not consolidated herein but which are subject to the Order to Show Cause, 34 FPC 424, issued in conjunction with Opinion No. 468. Paragraph (E) as previously modified requires that a supplement be filed by November 15, 1965, to each filed rate schedule in excess of the area base rate reflecting reductions to conform the filed rate to the area base rate. Pursuant to Section 5(a) of the Act we have ordered all rate schedules of respondents which are in excess of area base rates to be reduced in conformity with paragraph (E). The fact that a respondent's rate schedule may be subject to an unconsolidated Section 4(e) proceeding for a past period does not relieve respondent of filing a supplement in conformity with paragraph (E). The only remaining function of the unconsolidated Section 4(e) proceeding is with respect to refunds for past periods to which the Section 5(a) proceedings do not apply.

---

[3] For example, if a contract for new gas-well gas provides for a price of 16.0 cents with a proportionate upward Btu adjustment for Btu's in excess of 1,000 per Mcf, and the gas contains 1,030 Btu's per Mcf, the contract price would be 16.48 cents, assuming there are no other adjustments called for under the contract. The applicable area rate in Texas would be 16.5 cents per Mcf—the area base price with no upward or downward Btu adjustment, since 1,030 Btu's is in the range between 1,000 and 1,050. The proper rate chargeable under the contract would be 16.48 cents. If the same contract were for old gas-well gas produced in Texas the proper rate would be 14.5 cents since the applicable area rate would be lower than the contract rate.

Requests for Stay of Order

A number of the producers have requested a stay of all or some of the ordering paragraphs of Opinion No. 468, until after completion of contemplated judicial review proceedings, Section 19(c) of the Natural Gas Act makes it clear a stay is not warranted for the sole reason that judicial review is to be sought. At a minimum, parties seeking a stay should demonstrate that any injuries they suffer, absent a stay, would be irreparable and would outweigh the irreparable injury to the public from granting the stay. See, *e.g., Virginia Petroleum Jobbers Association* v. *F.P.C.*, 259 F. 2d 921 (CADC); *Associated Securities Corp.* v. *S.E.C.*, 283 F. 2d 773 (CA10); *Tennessee Gas Transmission Co.* v. *F.P.C.*, 283 F. 2d 729 (CA5).

The producers failed to make such a showing. If the order were set aside, the producers would not be precluded from recovering the difference between the rates collected and the rate which the producers should have been permitted to collect.[4] The Commission, in the event of judicial reversal, would have adequate authority, including power to fix future rates, to take any necessary corrective action to protect not only the producers but also the pipeline purchasers.

In any event, even a showing of irreparable injury would normally not be sufficient in itself to warrant a stay of a rate reduction or moratorium order when it is outweighed by the detriment to the public. As the courts have held (*e.g., Virginia Petroleum Jobbers Association* v. *F.P.C.*, 259 F. 2d 921 (CADC), the effect of a stay on other interested parties and the public interest are of at least equal significance to the impact on private parties of its denial. In this case, grant of stay would mean the continued collection of rates which we have found, after careful consideration, to be excessive. Even if all such amounts were subject to refund requirements, it is well recognized that the protection afforded through the refund procedure will not give full protection to the ultimate consumers. *F.P.C.* v. *Tennessee Gas Transmission Co.*, 371 U.S. 145, 154–155; *F.P.C.* v. *Hunt*, 376 U.S. 515, 524–525. We need not repeat the discussion set forth in Opinion No. 468 of why the moratorium of rate increases above the ceiling prices is essential. A stay of the moratorium would mean its elimination. As we observed "Without a moratorium, the conclusion of one area proceeding would only signal the beginning of the next, and just and reasonable rates for consumers would always be one area proceeding away." [Opinion No. 468, p. 228]

Delay in giving effect to the ordered rate reduction in this case will be doubly injurious to the California consumer to whom most of the Permian gas is delivered, because it is our understanding that the Southern California distributing companies which purchase gas from El Paso and Transwestern also purchase substantial quantities of gas from California producers under long-term contracts in which the price is geared to the weighted average California border price for wholesale gas and is adjusted to reflect the border price in effect January 1 of each year. See *Re Pacific Lighting Gas Supply Co.*, 44 PUR 3d 177, 184 (Calif. P.U.C., 1962). Thus, a stay of the ordered rate reductions and the consequent delay in pipeline rate reductions would result in unrecoverable losses to the California distributing companies and presumably their customers. The Court of Appeals for the Fifth Circuit expressly took this factor into account in denying

[4] *Hunt Oil Company, et al.*, in their motion for stay, recognize this in their alternative suggestion that some of the ordering paragraphs, including paragraph (H), imposing the rate increase moratorium, be made effective "upon the express condition that to the extent that they are not judicially affirmed, if judicial review is sought thereon, they will be null and void *ab initio* and appropriate redress procedures would be adopted by the Commission to rectify any detriment which the Movants might suffer as a result of compliance with the Ordering Paragraphs which are subsequently reversed or modified."

El Paso's request to stay the rate reductions ordered by us in October 1962. *El Paso Natural Gas Co.* v. *F.P.C.*, CA5, No. 20180, December 21, 1962 (unreported).

Several producers also base their request in part on the assertion that, absent a stay, complex problems relating to royalty payments and state tax payments will have been created. It is not shown that such problems would cause irreparable harm. Moreover, as applicants recognize, any stay that might be issued should be on condition that all rates required to be reduced under Opinion No. 468 be collected subject to refund obligations at least for the period starting September 1, 1965, the effective date of Opinion No. 468. In view of this, it would not appear that an immediate rate reduction, with the opportunity for recoupment of undercharges in the event of judicial modification or reversal of our order, would create more complex problems with respect to royalty and tax payments than would exist with respect to the collection of rates subject to refund, pursuant to either a stay condition or existing requirements.

In these circumstances, the requested stay of the ordered rate reductions and the moratorium on increased rates would be totally unwarranted.

Even though the Opinion No. 468 does not require refunds to be made for rates collected prior to September 1, 1965, until further Commission action is taken, it is appropriate to indicate now that we will not take such further action until at least after the decision by the Court of Appeals which reviews Opinion No. 468. We recognize that with respect to rates collected subject to refund for as much as 8 years prior to Opinion No. 468, the various inadequacies of the refund procedure as they relate to this case cannot be avoided even by immediate refunds. The prompt effectuation of just and reasonable rates for the future is of primary importance and the deferral of refunds due will provide additional insurance that our order in this respect cannot result in irreparable injury to the producers. Postponement of further Commission action requiring refunds is therefore deemed appropriate.

Other Matters

Certain producers presented contentions which related to their individual circumstances. Without suggesting that these contentions stated adequate grounds for special relief under Opinion No. 468 it is clear that they do not state any basis for modification of our area rate order which is of general application.

Numerous other arguments were advanced by producers in their application for rehearing but they have all been adequately disposed of by the full discussions supporting our findings and order in Opinion No. 468. The applications, therefore, should be denied except insofar as we have modified our order as provided herein.

The Commission further finds:

(1) The quality standards and adjustments to the base area rates set forth in Opinion No. 468 and accompanying order should be modified as provided in the ordering provisions hereinafter set forth.

(2) The applications for rehearing and accompanying motions set forth no new facts or principles of law which either were not fully considered by the Commission when it adopted Opinion No. 468 and its accompanying order, or which now being considered warrant any change in, vacation or modification of such order, except as set forth herein.

(3) Good cause has not been shown for reopening this proceeding for receipt of additional evidence.

The Commission orders:

(A) Each and every reference in Opinion No. 468 or its accompanying order, or in Opinion No. 468–A or this accompanying order, to Texas Railroad District No. 8 shall be considered to include both the present Texas Railroad Districts 8 and 8–A.

(B) Paragraph (B) of the order issued together with Opinion No. 468 shall be amended to read as follows:

(B) *Quality Standards and Adjustments to the Base Area Rates*

(1) The base area rates fixed in ordering paragraph (A) herein shall be adjusted for any deviations from the standards for pipeline quality gas in Texas Railroad District Nos. 7–c and 8, and in the New Mexico counties of Lea, Eddy and Chaves, which are hereby established as follows:

a. *Carbon Dioxide:* Pipeline quality gas shall contain not more than 3 percent carbon dioxide by volume.

b. *Hydrogen Sulphide:* Pipeline quality gas shall contain not more than 10 grains of hydrogen sulphide per Mcf of natural gas at 14.73 psia and 60° F.

c. *Total Sulphur:* Pipeline quality gas shall contain not more than 200 grains of total sulphur per Mcf of natural gas at 14.73 psia and 60° F.

d. H_2O: Pipeline quality gas shall contain not more than .009 pound of H_2O per Mcf of natural gas at 14.73 psia.

e. *Other Impurities:* Pipeline quality gas shall contain no oxygen, dirt, dust, gum, or other impurity in sufficient amounts to require the buyer to incur processing costs to eliminate such impurities in order for the gas to meet either customary commercial standards or the customary requirements of any of the interstate pipelines in the area.

f. *Pressure:* Pipeline quality gas shall be delivered at a pressure of not less than 500 pounds per square inch gauge.

g. *Btu Adjustment:* The maximum standard will be 1,050 btu's per cubic foot at 14.73 psia and 60° F. and the minimum standard will be 1,000 Btu's per cubic foot at 14.73 psia and 60° F. Upward and downward adjustments of the base area rates will be on a proportional basis as specified at pp. 223, 224 of Opinion No. 468 if the Btu content exceeds the maximum standard or is below the minimum standard.

(2) When a purchaser buys gas which deviates from the quality standards established in subparagraph (1) above, the base area rate fixed in ordering paragraph (A) shall be adjusted for any deviations from such standards as follows:

a. The applicable base area rate shall be adjusted downward by the net cost, actually incurred prior to ultimate consumption, of processing the gas to bring it up to standard.

(i) If the processing is performed by the purchaser, a reasonable return upon the net investment should be included as part of the processing cost incurred in bringing the gas up to pipeline quality.

(ii) If such processing reduces the volume of the gas, the purchaser shall pay for only the volume remaining after processing.

(iii) If the seller is ready and able to deliver natural gas into buyers' facilities without further compression, at pressures higher than the pressure at which the buyers' facilities available at the point of delivery can accept such gas, any downward adjustment for the cost of compression shall be limited to the cost of such compression as is incurred to raise the pressure of the gas from the pressure at which the seller is ready and able to deliver it up to the pressure standard of 500 psig.

b. The applicable base area rate shall be adjusted downward or upward by the amount of any applicable Btu adjustment.

c. In the case of delivery by seller of gas containing carbon dioxide in excess of the standards herein permitted, notwithstanding anything to the contrary in subparagraph (2) (ii) of this paragraph, the producers shall have the alternative of receiving payment for the total volume of gas delivered, including the carbon dioxide, provided that the Btu content of the gas is measured before removal of the carbon dioxide for the purposes of the Btu adjustments specified in this order, or receiving payment for the volumes exclusive of the carbon dioxide with the Btu content measured by the volumes of gas only.

(C) Ordering paragraph (F) (1) of the order accompanying Opinion No. 468 is hereby amended by deleting "for new gas-well gas" from lines 12, 13 of said ordering paragraph.

(D) Ordering paragraph (I) of the order accompanying Opinion No. 468, designated "Refund Reports", is hereby amended by inserting after the first sentence of said ordering paragraph, the following:

Within 10 days from the filing of the refund report the buyer shall file its written concurrence or disagreement with such report.

(E) Ordering paragraph (J) of the order accompanying Opinion No. 468 is hereby amended by changing "(E)" to "(I)" in line 2 thereof.

(F) Appendix A, Part III to Opinion No. 468 and its accompanying order is hereby amended as follows:

(a) Page 286, with reference to "Robertson, French, M. & J. P. Bryan (formerly G. Stratton, Jr. (Operator), *et al.*,)" insert a "**" after Docket No. G–16535.

(b) Page 288, delete "Sun Oil Company" and the related Docket No. "RI60–123."

(c) Page 288, delete "Sun Oil Company (Operator), *et al.*" and related Docket No. "RI60–124."

(d) Page 282, with reference to "Aikman, Claude E.", delete Docket No. "G–18466."

(e) Page 288, with reference to "Superior Oil Company, The" delete Docket Nos. "G–18771" and "G–20075."

(G) Appendix D to Opinion No. 468 and its accompanying order is amended to conform to the form of Appendix D to Opinion No. 468–A and this accompanying order.

(H) The applications for rehearing of Opinion No. 468 and accompanying order, and the motion of Hunt Oil Company, *et al.*, to reopen this proceeding for receipt of additional evidence, are hereby denied.

(I) The motions for stay of Opinion No. 468 and accompanying order, except to the extent granted by the Order Granting Time Extension issued September 28, 1965, in this proceeding, are hereby denied.

Commissioner O'Connor *concurring*.

APPENDIX D

Docket No. AR61-1, *et al.* (As amended by Opinion No. 468-A)

RATE SCHEDULE-QUALITY STATEMENT	1. Applicable section 4(e) Docket No (s). (If any) (Use space below if needed)
2. Producer name	3. Rate schedule No.

4. Type of gas (check one)
A. ☐ New gas-well gas
B. ☐ Residue gas derived from new gas-well gas
C. ☐ Residue gas not derived from new gas-well gas
D. ☐ Old gas-well gas
E. ☐ Casinghead gas
F. ☐ Mixed gas (give proportion of types A and B)

5. Place of production (give State, county, field, and municipality)

6. Quality of gas	Producer's statement of quality and treating costs		Buyer's statement of quality and treating costs (If same as producer, indicate by check mark)	
	Content or pressure	Cost per MCF of treating gas to pipeline standards	Content or pressure	Cost per MCF of treating gas to pipeline standards
A. Hydrogen sulphide content (in grains per Mcf)				
B. Total sulphur content (in grains per Mcf)				
C. CO_2 content (percentage of volume sold)				
D. H_2O content (in pounds per Mcf)				
E. Content of other impurities (indicate whether above or below customary commercial and pipeline standards)				
F. Actual delivery pressure (pounds per square inch)				
G. Total				
H. Btu content per MCF				

7. Applicable area ceiling rate	8. Btu price adjustment (state whether plus or minus)
cents per Mcf	cents per Mcf
9. Applicable rate (ceiling rate less treating costs, with Btu adjustments if any)	10. Rate here established (not above applicable ceiling rate as adjusted)
cents per Mcf	cents per Mcf

SAMPLE COPY

Nothing herein shall prevent the seller from filing for any increased rate permitted both by the contract (in the absence of this statement) and by applicable order of the Federal Power Commission.

	12. Signature of seller, agent or operator
11. Date of statement	13. Signature of buyer

NOTE:
The terms herein are those used in the opinion of the Federal Power Commission in Permian Basin area rate proceeding, AR61-1. New gas-well gas is natural gas derived from gas wells moving under contracts dated on or after January 1, 1961. The burden is upon a producer to establish that particular gas is new gas-well gas or residue gas derived therefrom, and also to establish the percentage of such gas present in a sale of mixed gas.

O'CONNOR, *Commissioner, concurring:*

Though concurring in the result reached by the majority, I do not rely upon their reasons, and I specifically re-emphasize my position in regards to the 50-Btu gap. It is apparent from the petitions for rehearing of our Opinion No. 468 that a strong possibility exists producers will not be in a position to realize aggregate revenues which reasonably approximate their aggregate costs. Since the specific problem is that of rate design for quality deviations, the impact of which cannot be determined on the record before us, rehearing is properly denied; nevertheless, once the impact is made clear by the quality adjustment determinations, it is entirely likely that rate revisions will be required.

It must be emphasized that, while the specific problem is that of proper quality adjustments, the impact of the overall adjustments can be burdensome to the extent the entire regulatory method is vulnerable. Clearly the impact of a regulatory rate must be considered *F.P.C.* v. *Hope Natural Gas Co.*, 320 U.S. 591, 602 (1944), and, in the event the order does not permit the regulated enterprise an opportunity to recover its costs, then it must fall, *Natural Gas Pipeline Co.* v. *F.P.C.*, 315 U.S. 575, 590 (1942). This rule is applicable as well to group cost regulation. *Cf.*, *Bowles* v. *Willingham*, 321 U.S. 503, 517–519 (1943). Inherent in the majority opinion is an acknowledgement of this state of the law, and presumably a clear showing of an adverse impact will command revision. It is my position that further revisions will commend themselves to us once the quality impact is clarified.

The record does not permit a meaningful determination of the impact. As discussed in my separate opinion, the probable range will be 1.0 to 1.7 cents. This range is based upon various allegations of a general nature at the hearing and upon the ascertainable costs of processing out the deficiencies. The modified standard for pressure, and the general application of the upward Btu adjustment further alleviates the downward impact. In my opinion the upward adjustment from 1000 Btu's would represent a proper accommodation of costs to quality, and it should be adopted as a proper measure of quality standards. This is all the more compelling in light of the comprehensive study by Shell Oil Company in their Supplemental Petition for Rehearing. According to their figures the maximum downward impact could be in a range from 1.86 to 2.27 cents. Adjusted for the revised quality standards adopted today, this range could be 1.6 to 2.0 cents. If the quality impact is of these proportions modification may be required.

I reject the broad generalities relied upon by the majority for rejecting the cost-revenue argument. Their broad conclusion that producers realize sufficient revenues in any event must be rejected. Federal regulation extends only to natural gas, and producers cannot be compelled to offset a deficit from the commodity with revenues from non-jurisdictional petroleum sales. *Cf.*, *Baltimore & Ohio R.R.* v. *U.S.*, 345 U.S. 143 (1953). It is my position that where the public demands the creation of fettered enclaves of business enterprise, fundamental fairness requires that this same public shoulder the financial requirements of that enterprise. Further contradicting the majority position, it is far from clear that residue costs are less than gas-well costs. At the hearing and in argument before the Examiner, Staff initially took the position that residue costs were probably higher. To bury the quality impact in our rate of return determination is to overlook the basis for the 12 per cent allowance: comparable return on equity of 10–12 per cent by the far less risky operations of transmission companies. Finally, as regards self-imposed revenue deficiencies, many of the lower contracts apparently reflect quality deductions so that revenues realized under those contracts may remain below cost even under the quality standards we have prescribed.

The only proper basis for rejecting the quality impact argument is that the impact cannot be established. The actual conditions of delivery cannot be accurately determined from the record. Furthermore, the quality standards we prescribe may result in less onerous adjustments than the contracts require. We are thus left in the position of being unable to determine the impact. It is my position that with the elimination of the Btu gap, any present doubts would disappear, and it is probable that no further adjustments would be required.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

AREA RATE PROCEEDING, AR61–1, ET AL.; NORTH CENTRAL OIL CORPORATION (OPERATOR), ET AL., CI60–435; SOCONY MOBIL OIL COMPANY, INC., CI61–34; ROBERT T. BROWN (OPERATOR), ET AL., CI61–733; TEXACO INC., CI61–879

ORDER DENYING REHEARING AND MODIFYING ORDER WITH RESPECT TO ISSUING CERTIFICATES

(Issued October 4, 1965)

On August 5, 1965, 34 FPC 418, this Commission issued its order in this proceeding granting certificates of public convenience and necessity to four producers upon stated conditions, among which were included price conditions to the applicable area rates as established by Opinion No. 468, 34 FPC 159, and accompanying order issued the same day. Applications for rehearing of Opinion No. 468 and the Order Issuing Certificates were filed by *North Central Oil Corporation, (Operator), et al.*, (North Central) and *Texaco Inc.*, two of the producers to whom certificates were issued, and the applications of others for rehearing of Opinion No. 468 were also addressed to the Order Issuing Certificates. By Opinion No. 468–A and accompanying order issued this day, *supra*, p. 1068, we have denied the applications for rehearing of Opinion No. 468 and its accompanying order while modifying that opinion and order in certain respects.

North Central, in its application for rehearing states that its original contract was dated in 1960 but that the Supplemental Gas Purchase Agreement which was the subject of the same filing was dated March 9, 1961. It is North Central's contention that the gas dedicated under the supplemental agreement of March 9, 1961, is entitled to the new gas-well gas price of 16.5 cents per Mcf, since the supplemental agreement was dated after January 1, 1961, the dividing date between old and new gas-well gas. North Central argues that it would be pure formalism to require a new and separate contract instead of a supplemental agreement in order to allow a producer to charge and collect the applicable area rate for new gas-well gas. We agree. Accordingly, our Order Issuing Certificates of August 5, 1965, will be modified to provide that the price condition in the certificate to be issued to North Central allow a price of 16.5 cents per Mcf for natural gas moving under the supplemental agreement of March 9, 1961.

One further matter requires clarification. The applications of *Socony Mobil Oil Company, Inc.*, (Docket No. CI61–34) and *Texaco Inc.* (Docket No. CI61–879) involve Spraberry contracts discussed in detail in Opinion No. 468. Consistent with that discussion and the arguments advanced in the applications for rehearing we believe the applicable area rate should be applied to the residue volumes, with no deductions therefrom if the residue volumes meet the pipeline quality standards set forth in Opinion No. 468, as modified by Opinion No. 468–A.

The consumers will thus pay no more for gas under the Spraberry contracts than any other gas of similar quality. As we indicated in Opinion No. 468, if the pipelines' processing costs exceed the liquid revenues the pipeline can petition for relief in the form of "an appropriate reduction in the price the pipeline pays for such residue gas." Our previous discussion in the Order Issuing Certificates herein is so modified. Any deductions required by contract must, of course, be utilized in determining the contract rate.

The applications for rehearing of the Order Issuing Certificates set forth no other facts or arguments which differ from those which were advanced and fully considered prior to our determinations of the issues in Opinion No. 468 and accompanying order and our determinations of the issues in the original Order Issuing Certificates. Accordingly, the applications for rehearing will be denied and the Order Issuing Certificates will be modified as previously stated.

The Commission finds:

(1) The natural gas to be sold by *North Central Oil Corporation (Operator), et al.*, under the Supplemental Gas Purchase Agreement of March 9, 1961, is new gas-well gas as defined in Opinion No. 468 issued August 5, 1965.

(2) Except as stated herein, the arguments and assignments of error presented by the applications for rehearing warrant no change or modification in the Order Issuing Certificates issued August 5, 1965.

The Commission orders:

(A) Paragraph E of the prior Order Issuing Certificates issued August 5, 1965, is amended to read as follows: "The certificate granted to *North Central Oil Corporation (Operator), et al.*, is conditioned upon a total initial price including tax reimbursement of 14.5 cents per Mcf at 14.65 psia for all gas other than that sold pursuant to the Supplemental Gas Purchase Agreement dated March 9, 1961, and upon a total initial price including tax reimbursement of 16.5 cents per Mcf at 14.65 psia for all gas sold pursuant to the Supplemental Gas Purchase Agreement. On or before November 1, 1965, *North Central Oil Corporation (Operator), et al.*, shall file a supplemental or supplements to its presently filed rate schedule reflecting the conditioned prices as the initial prices in lieu of the initial price provided in the rate schedule.

(B) The applications for rehearing of the Order Issuing Certificates of August 5, 1965, are hereby denied.

OPINION NO. 452-B

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC., PROJECT NO. 2338

OPINION AND ORDER ON REMANDED ISSUES REGARDING LOCATION OF PRIMARY LINES AND DESIGN OF FISH PROTECTIVE FACILITIES AND AMENDING LICENSE

(Issued October 4, 1965)

Syllabus

1. Evidence shows that licensee can utilize existing Pleasant Valley corridor for both present and future transmission needs, including complete capability of Cornwall plant. P. 1090.
2. Meeting expanding needs of consumers for electric energy does not necessarily require setting aside land already intensively developed with home sites where long range need for land is doubtful and present inconvenience to land owners would be serious. P. 1092.

3. In circumstances here, it would not be in public interest to permit widening of Pleasant Valley corridor. P. 1092.
4. Further evidence on underground transmission was properly excluded since proceeding on remand, insofar as transmission issue is concerned, involves solely the determination of which route for overhead lines best accords with public interest. P. 1093.
5. Commission *finds* proposed route 3 most in accord with public interest and standard set in Section 10(a) of the Federal Power Act. P. 1093.
6. While record supports finding that fish resources will not be adversely affected provided adequate protective devices are installed, Commission *requires* licensee to undertake further studies. P. 1095.
7. In a proceeding on remanded issues, Commission *amends* prior license with respect to location of primary lines and design of fish facilities.

Commissioner Ross *concurring* subject to his dissent to Opinion No. 452.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SWIDLER, *Chairman:*

INTRODUCTION

This proceeding, which is before the Commission for a second time, has been returned to us on Presiding Examiner Ewing G. Simpson's certification of the record for decision on the best route for the overhead transmission lines and the design of the fish protective facilities to be included in the license heretofore issued to Consolidated Edison Company of New York, Inc. (Con Edison) for construction and operation of the Cornwall Pumped Storage Project, Project No. 2338.[1]

By Opinion No. 452 and order issued March 9, 1965, a license was granted to Con Edison for Project No. 2338 authorizing certain works of the Cornwall project including the reservoir, tunnel, power plant and submarine and underground transmission facilities from the powerhouse to and including the Cornwall East Switching Station at Nelsonville in the Town of Philipstown. A finding was also made that the remainder of the transmission line between Nelsonville and the point of interconnection with Con Edison's existing transmission grid should be by overhead lines and not, as sought by some parties, by additional underground cable installation. Decision was reserved, however, on the location and width of the right-of-way for the overhead portion of the line. The reasons for not deciding the right-of-way question at the time of the initial decision were stated as follows:

> In our opinion the evidence which is presently in the record now before us does not permit the Commission to make the informed determination called for under Section 10(a) in regard to the specification of the route and amount of required right-of-way for the primary transmission lines. Of significant importance, in our opinion, is the absence in the record, or the inadequacy, of information in regard to Con Edison's future interconnection plans; its plans, if any, for upgrading existing transmission lines to higher voltages; and of its existing transmission line grid in this general area and its future plans. Without a thorough knowledge of this material and a more complete development of the various alternative routes for trans-

[1] "Opinion and Order Issuing License and Reopening and Remanding Proceeding For Additional Evidence on the Location of the Primary Lines and Design of Fish Protective Facilities," 33 FPC 428; rehearing, reopening and stay denied, Opinion No. 452–A, issued May 6, 1965, 33 FPC 965.

mitting the Cornwall power, we cannot be certain that any of the present proposals provide the best solution for the transmission problem. Each of the present proposals contain important deficiencies which further study may well alleviate.

A further finding was made in the initial decision that the Cornwall project will not adversely affect the fish resources of the Hudson River provided adequate protective facilities are installed. In furtherance of our continuing authority under the license to require the applicant to take all necessary measures for the protection of fish and in view of the opportunity made available by the limited reopening of the record on the transmission phase of the project, we included within the scope of the remanded hearing the reception of evidence concerning the design of the fish protection devices.

By ordering paragraph (G) of Opinion No. 452 we directed that the further hearing be convened and permitted intervention therein by persons desiring to participate but not theretofore parties to the proceeding. An order establishing the procedure was issued and public notice was given of four potential transmission line routes. (30 Fed. Reg. 4265, April 1, 1965). Hearings were held from May 4 through May 21, 1965. Those actively participating in the transmission line route issue, in addition to Con Edison and our staff, were the Philipstown Citizens Association, Town of Putnam Valley, Town of Cortlandt, Town of Yorktown, Taconic State Park Commission, Town of Carmel, Cortlandt Citizens for the Hudson River, Rock Industries, Inc., and Mr. and Mrs. William A. Perry.[2] Evidence regarding the design of the fish protective facilities, as well as on the general subject of the Hudson River fishery resource, was introduced by the Department of the Interior, Scenic Hudson Preservation Conference and Con Edison. Briefs have been filed by all parties desiring to do so.[3] In compliance with the further direction of the Commission contained in ordering paragraph (G) of the opinion, the examiner did not render an intermediate or recommended decision in the reopened proceeding but, instead, has submitted the record directly to us for the supplemental determinations called for in our licensing decision. The sole issues which are before us for decision at this time are: (1) specification of the route and amount of right-of-way required for the primary transmission lines, and (2) the design of the fish protective devices.

OVERHEAD TRANSMISSION LINES

Description of Routes

As noted above, four potential routes were set out in the March 26, 1965, notice for the double circuit, 345 kilovolt overhead transmission line to be constructed to carry the Cornwall power from the switching station on the east side of the river to a point on Con Edison's existing transmission right-of-way at its Millwood substation in the Town of New Castle.[4] A number of variations on these routes, as well as two more possible routes, were suggested during the hearings.

[2] The last five listed interveners had not participated previously in the case.

[3] Initial briefs were filed by Con Edison, Rock Industries, Inc., Mr. and Mrs. Perry, Philipstown Citizens Association, Putnam Valley, Cortlandt, Yorktown, Scenic Hudson, the Secretary of the Interior and the Commission's staff. The Taconic State Park Commission filed a statement of its position. Reply briefs were submitted by Rock Industries, Inc., Scenic Hudson, Yorktown, Philipstown Citizens Association, Con Edison and staff. A petition by Con Edison filed July 9, 1965, for permission to file a further reply to staff's brief, opposing its recommendation in regard to the transmission line issue, was denied by a letter-order of the Commission dated July 20, 1965, and the tendered brief rejected.

[4] From Millwood south to Con Edison's Sprain Brook substation the project transmission lines would replace a power line on an existing right-of-way without necessity of widening the corridor.

Where new corridor is required, the right-of-way would be 125 feet in width, with somewhat greater width, as needed, at corners, transposition points, access points or points of unusual character. The added width sought by Con Edison to the existing transmission line right-of-way along the Putnam Valley-Carmel town boundary and through the Town of Yorktown (the Pleasant Valley-Millwood corridor),[5] if a route utilizing the corridor is ordered, is 75 feet.[6]

The routes may be described briefly as follows:

Route 1[7] is the route originally proposed by Con Edison running first northeast and then southeast around the southern edge of Clarence Fahnestock Memorial State Park (Fahnestock Park), south through Putnam Valley and Cortlandt to a point of intersection near Woodybrook with the existing Indian Point to Millwood right-of-way, which it would follow without widening the remaining distance of the Millwood substation. A variation of this route, designated route 1A,[8] is favored by Con Edison. Route 1A differs from route 1 in that it utilizes the Catskill Aqueduct, a part of New York City's water supply system, for the entire distance from a point in Philipstown to the Millwood substation, whereas route 1 departs from the Catskill Aqueduct at Crompond Road in Cortlandt.[9] Still another variation, route 1B,[10] was introduced by a witness for Yorktown. This route is the same as route 1 until it departs therefrom at a point in the vicinity of Dickerson Mountain in Cortlandt, thereafter proceeding east of Dickerson Pond and southerly to an intersection with the Indian Point to Millwood corridor a short distance east of the point at which proposed route 1 intersects the same corridor.

Route 2,[11] the northernmost of the various routes, was planned to pass north of the boundary of Fahnestock Park to an intersection with the Pleasant Valley to Millwood corridor and thence south along the corridor to the Millwood substation. A question whether the Cornwall transmission lines should be built within the confines of the existing right-of-way or whether the corridor should be widened to accommodate these lines is an issue which is common to all routes (2, 3 and 4) which would utilize the corridor. Route 2 was not affirmatively recommended by any of the parties to the remanded proceeding.

Route 3[12] bends south and east from the switching station to pass below the southern edge of Fahnestock Park and then proceeds diagonally through Putnam Valley to the Pleasant Valley-Millwood corridor, the point of intersection being near the Carmel substation of New York State Electric and Gas Corporation and some nine miles below that in route 2. The lines would then follow this corridor, with or without widening, to the Millwood substation.

---

[5] A description of this corridor, which is now 200 feet in width, is contained at p. 445 of Opinion No. 452.

[6] In the previous hearings Con Edison estimated that construction of the project facilities adjacent to this corridor from the point of intersection to Millwood would require a widening of 250 feet. At the oral argument counsel stated that the width required could be reduced to approximately 125 feet for new right-of-way parallel to and adjacent to the existing one. At the rehearing, Con Edison's vice president stated that it would be possible to establish the new line by widening this section of the existing corridor by only 75 feet.

[7] The numerical designations herein employed conform to those contained in the March 1965 notice and used as references throughout the rehearing. Route 1 is shown on Exhibit Nos. 99–101. A detailed description also is contained at 33 FPC at 444–445 of Opinion No. 452.

[8] Exhibit Nos. 102–103.

[9] Exhibit Nos. 84; 101, photo 25.

[10] Exhibit No. 168.

[11] Exhibit Nos. 104–106.

[12] Exhibit Nos. 106–108.

Cortlandt, Yorktown, Staff and, to a lesser extent, Philipstown recommend this route without widening of the existing corridor.

Route 4 is the route originally proposed by Staff and is the same as route 3 except for its northern section where it passes diagonally through Fahnestock Park.[13] This is what routes 2 and 3 have been designed to avoid. Route 4 is favored by no one and is strongly opposed by the Taconic State Park Commission, which administers Fahnestock Park.

During the remanded hearings Putnam Valley proposed two routes not in the hearing notice. One of these proposals would place the transmission lines over the New York Central Railroad right-of-way, along the east bank of the river, the entire distance to Indian Point, and there pick up the Indian Point to Millwood corridor; the other would run the lines atop the entire length of the Catskill Aqueduct through Philipstown, Cortlandt and Yorktown to the Millwood substation. Both of these routes would place the lines in full view of traffic along the Hudson River and of visitors to the West Point Military Academy. It appears that the only objective of these proposals is to place the transmission line route completely outside the boundaries of Putnam Valley.

Modifications to one or another of the proposed routes or of the transmission facilities previously licensed were proposed by counsel for Mr. and Mrs. Perry and by Rock Industries, Inc. Their positions are discussed below.

The table on the next page[14] summarizes the costs, route miles, number of towers required and residences directly affected by the major proposed transmission routes between Cornwall East Switching Station and Millwood.

Position of Parties

The positions of the parties may be briefly summarized. Philipstown remains opposed to all suggestions for overhead transmission lines through its area, but otherwise reluctantly agrees with Staff that route 3 should be adopted, including a crossing of the western tip of Fahnestock Park which somewhat shortens the route, avoids certain developed areas and results in less impingement on scenic values in the town. The Taconic State Park Commission opposes the park crossing involved in route 4, but would not oppose the grant of a permanent right-of-way for route 3 through the western tip of the park, provided Con Edison donates comparable land in exchange for the park land taken. Putnam Valley favors either of the two new routes it proposed at the remanded proceeding. Mr. and Mrs. Perry and Rock Industries, Inc. suggest a rerouting of a portion of routes 1 through 4 to avoid a crossing near their properties in Philipstown. Cortlandt favors route 3. Staff advocates route 3 and introduced a study to support its contention that use of this route would be feasible even without widening. Yorktown agrees with Staff that route 3, without widening the Pleasant Valley-Millwood corridor, is the best route (even though this would place the lines within its jurisdiction), but would object if added width is required. In the latter event it favors route 1B. Con Edison prefers its recommended route 1A over the other routes. Its second choice is route 1B. It is strongly opposed to the use of route 3 without the widening.

---

[13] At the time staff's recommendation was made the Park Commission had not yet acquired this land.

[14] The table is a reproduction of Exhibit No. 111–A.

Project No. 2338

CORNWALL TRANSMISSION

CORNWALL EAST SWITCHING STATION TO MILLWOOD

Route No.	Estimated cost $1000	Route miles [15]				Estimated number of towers	Number of residences taken	Number other structures taken	Number residential back-yards encroachments
		Total	New R.O.W.	Widened R.O.W.	Existing R.O.W.				
1	9,684	23.5	13.0	0.9	9.6	155	2	0	0
1A	8,980	22.1	8.7	3.1	10.3	145	0	0	0
2	12,053	30.0	8.2	20.1	1.7	205	11	5	39
3	10,281	24.9	12.4	10.8	1.7	170	9	4	39
4	9,583	23.2	10.7	10.8	1.7	160	9	4	39

[15] It should be noted that the mileage figures for widened right-of-way for routes 2, 3 and 4 include the 75 feet additional width sought by Con Edison along the Pleasant Valley to Millwood corridor. Without the added width these figures are reduced to zero (those for utilization of existing right-of-way being correspondingly increased), as are the figures shown for the number of residences and other structures taken and residential backyard encroachments.

Future Transmission Requirements

In aid of a determination of the best possible route for transmission of the Cornwall power, we required Con Edison in Opinion No. 452 to submit evidence in the remanded proceeding with respect to its complete future transmission plans for this area, including its planned interconnections. At the hearing a witness for Con Edison stated that if Canadian hydroelectric power becomes available on an economical basis, it is Con Edison's intention to use the existing right-of-way of the Harlem Division of the New York Central Railroad for high voltage, direct current transmission lines. This would be some distance to the east of Yorktown and the Pleasant Valley corridor and substantially outside the immediate geographical area here concerned. Because of the still uncertain availability of Canadian power, Con Edison has not yet begun negotiations with the railroad. Since this power will in no event be transmitted through this area and is not an alternate to Cornwall, it would seem that no further attention need be given thereto for the purpose of this decision.

We are advised by Con Edison that the Pennsylvania-New Jersey-Maryland Interconnection group (PJM)[16] presently plans to terminate a single tower, single circuit 500 kilovolt line in the vicinity of Hillburn, New York, near the New Jersey-New York border. Con Edison plans to extend this line 15 miles on a new right-of-way to a point on the west bank of the Hudson opposite its Indian Point nuclear plant. The line would be designed as a single tower, double circuit structure, but only one circuit will be installed initially. A single circuit, 500 kilovolt aerial river crossing will be installed adjacent to an existing 138 kilovolt crossing. Initially, the 500 kilovolt circuit will be stepped down at Indian Point to 345 kilovolts. One 345 kilovolt circuit will be added to the existing towers on the Indian Point-Millwood corridor and terminated at Millwood. In the future, this 345 kilovolt circuit will be used as transmission capacity for future generating units to be installed at Indian Point and the PJM interconnection will be extended to Millwood by placing a new single tower, double circuit 500 kilovolt line on the existing right-of-way.

With regard to the New England interconnection Con Edison reported that the existing right-of-way between Pleasant Valley and the Connecticut line is wide enough to permit the installation of a second tower line.

[16] This is a power pool of 13 independent utility companies (and a large manufacturer) operating in the northeastern United States who have associated themselves for coordinated generation and transmission of electric power.

Con Edison also submitted its long-range (about 1975 and thereafter) plans for transmission capacity in the area north of Millwood. These claimed needs consist of the following: For south transmission capacity on circuits extending north of Millwood—(1) 2,000 megawatts for emergency power transfers with other systems to meet outages; (2) 2,000 megawatts for exchange of firm generating capacity among the systems of southeastern and upstate New York and New England to meet seasonal load diversities; and (3) 3,000 megawatts for Cornwall. The total for southern transmission is 7,000 megawatts. Con Edison does not propose to send any Cornwall power north but in place thereof proposes to wheel an estimated 2,000 megawatts of PJM power. Thus, including the 2,000 megawatts for emergency outages and the 2,000 megawatts for seasonal diversity, the total capacity needed for transmission to the north is 6,000 megawatts. As Con Edison's present plans would provide only 5,200 megawatts of transmission capacity (2,200 megawatts from the present double circuit 345 kilovolt lines on the Pleasant Valley-Millwood corridor and 3,000 megawatts of capacity from the double circuit 345 kilovolt lines it proposes to install to carry the Cornwall power) it foresees an eventual need for about 1,800 to 2,000 megawatts of additional capacity to meet its maximum transmission requirements, north and south. According to Con Edison this would be accomplished by replacing the 138 kilovolt lines now on the right-of-way with 345 kilovolt lines having a capacity of 3,000 to possibly 4,000 megawatts. Under its proposed mode of operation Con Edison would, at certain times of the year, be sending the Cornwall power south while at the same time, and on the same corridor, sending the PJM power north.

Comparison of Alternative Routes

In granting Con Edison a license to construct and operate the Cornwall project, the Commission carefully weighed the aesthetic considerations involved and concluded, on balance, the project would not seriously affect the natural beauty of the area. Recognizing that the general vicinity of the powerhouse was the area of maximum scenic and historic interest, we approved Con Edison's proposal to install submarine transmission cable for the river crossing and underground line as far inland as Nelsonville, thus eliminating any adverse impact of the project's transmission lines on the scenic values in that area. Our opinion also recognized that the problems connected with the remainder of the transmission lines do not involve the same scenic and historical values as were at stake in the vicinity of Storm King Mountain. Therefore, finding that the present state of the art of underground transmission made the cost of additional underground lines prohibitive, we provided that the remainder of the lines would be overhead. We recognized that in this phase of the case our task is to minimize the adverse impact of the lines on the affected communities without destroying the economy of the project.

We have carefully analyzed the evidence submitted by the various parties on the best route for the proposed transmission lines. The routes suggested by Putnam Valley, over the Aqueduct in Philipstown and along the railroad right-of-way on the river bank, we find are particularly unsuitable. As pointed out above, the underwater crossing and underground transmission to the Cornwall East Switching Station was required solely so that these facilities would not be visible from the shoreline and adjacent points. Either of these routes would place the overhead portion of the line directly in sight of the river and West Point and, therefore, defeat a primary scenic consideration which has already added more than $12 million to the cost of the project. Accordingly, these routes must be rejected.

Route 4 would cross diagonally through Fahnestock Park and is strongly opposed by the Park Commission. In Opinion No. 452 we stated that the routes proposed at the remanded hearing should be planned so as to avoid crossing state park lands. While this directive was not absolute, as explained in Opinion No. 452–A, nonetheless, the evidence shows that the remaining alternative routes are at least equally satisfactory and are in the greater public interest from a viewpoint of preserving and promoting public recreational areas. Therefore, route 4 must also be rejected.

Route 1, including its variants 1A and 1B, would pass through Cortlandt and would overlie a part of the Catskill Aqueduct. The evidence shows that any route going through Cortlandt would require conspicious placement of the transmission lines and towers. In fact, Cortlandt's witness testified that the area is one of the most densely populated in the entire town. The Catskill Aqueduct now has the appearance of a well-preserved, scenic woodland path and its use, in whole or in part, for transmission lines is objectionable from a scenic standpoint. Moreover, in many sections the Aqueduct right-of-way is only 50 feet wide and the procurement of additional width, to a minimum of 125 feet, would be necessary to permit its use. There are sections where the Aqueduct has been tunneled to go through hillsides. The Cornwall transmission facilities, however, would pass over the hills on the Aqueduct route and render impossible Con Edison's expressed intent to run the transmission lines at the base of hills in order to minimize scenic impairment. Thus, whatever its status as an existing public utility right-of-way, it is apparent that the presently highly scenic character of the Catskill Aqueduct would be significantly altered by its use as a transmission line corridor. For these reasons route 1 and its variants must be rejected.

Routes 2 and 3 remain to be considered. Both of these routes would utilize the existing Pleasant Valley to Millwood corridor for a portion of the right-of-way. In Opinion No. 452 we expressed our concern with the effect which the allowance of an additional width to the existing right-of-way would have on the inhabitants of Yorktown and upon its plan for future development. If the evidence in the remanded proceeding had established that the corridor could not be used without widening we might have been inclined to favor one of the other routes. In our opinion, the evidence does not establish this to be the fact. Rather, it shows that Con Edison can utilize the existing Pleasant Valley corridor for both its present and future transmission needs, including the complete capability of the Cornwall plant. This may require Con Edison to reconsider its future transmission plans and require it to incur certain expenses earlier than might otherwise have been the case; however, the price is not excessive when compared to the injury which would be inflicted upon the citizens of the area if additional width were allowed.

At the remanded hearing Staff presented a study to show a method of operation which, utilizing the Pleasant Valley-Millwood right-of-way, would both provide transmission capacity for the 2 million kilowatts of power to be initially generated at Cornwall and allow sufficient capacity to take care of Con Edison's asserted needs in 1975 without going outside the confines of the existing corridor. Under Staff's proposal a portion of the existing 138 kilovolt transmission line would be replaced with a new section of 345 kilovolt double circuit transmission line, but one circuit of this new line would be temporarily operated at 138 kilovolts to serve the Carmel and Mohansic substations. The new line circuit operated at 345 kilovolts could be designed to carry 1800 megawatts, and with the excess capacity available in the existing 345 kilovolt double-circuit line, could easily transmit the initial 2000 megawatt output of the Cornwall project. Subsequently, about 1975, in accordance with Con Edison's own plans, the remainder of the 138 kilovolt transmission line between Pleasant Valley and Millwood

would be replaced and operated entirely at 345 kilovolts. If the existing and new lines were to utilize the large conductors presently available the Pleasant Valley-Millwood corridor would be capable of transmitting 7200 megawatts, or 1800 megawatts per circuit. This capacity would even meet the requirements set forth by the Licensee, and each circuit would not exceed the capacity of the 2000 megawatt steam unit which the Licensee anticipates it might construct in the future. A loss of one transmission line circuit would, therefore, not interfere with the reserve capacity requirements of 2000 megawatts suggested by Con Edison.

Con Edison's contention that Staff's mode of operation would create a bottleneck in the Pleasant Valley-Millwood corridor is without merit. Assuming that it would be necessary during certain times of the year to send power north and south in the corridor at the same time, as Con Edison suggests, its contention might have some validity. However, such an operation would not be economic, and hence is not likely. It is only natural that power generated closer to the area where it is needed will be used to displace higher or equal cost power which must be transported longer distances. Staff's method of operation would not result in any less power being available and we believe Con Edison would make the most efficient use of its available resources. This may at times decree sending Cornwall power north for seasonal diversity purposes, thus eliminating the need for large blocks of power transmitted in opposite directions on the same corridor. In any event, we are confident that Con Edison will be able to plan for its loads in such a manner that sufficient power will be available to meet its obligations in both New York City and to the north without overtaxing the capacity of the facilities within the corridor.

Staff's study illustrates how the Cornwall project could supply peak loads in the south during the summer months and in the north during the winter. While the study merely presents a suggested mode of operation and is not intended to dictate Con Edison's future manner of operation it does establish that a practical method exists whereby full utilization can be made of the Cornwall project power and that Con Edison's interconnection plans could go forward without the grant of the additional right-of-way.

Con Edison contends that Staff's proposal to use Cornwall power to meet seasonal peaking needs in the north would contribute to the air pollution problem within New York City, or cause Cornwall to fail to make the contribution to amelioration of the city's air pollution problem which would otherwise result, by requiring it to maintain old and low efficiency units in spinning reserve to meet emergencies. This contention is not supported by the record. First, the Staff showed that Cornwall power would be sent north only a few months of the year, rather than throughout the entire year, and that only during one month, December, would there be substantial amounts of power moving north. In all other months ample spinning reserve would be available at Cornwall to take care of the entire needs of Con Edison. Second, since the PJM group has itself a summer peak, ample spinning reserve would be available during the winter from the interconnected companies in New Jersey and Pennsylvania, including the "mine-mouth" plants. Thus, even at times of the greatest diversion of Cornwall power, Con Edison would have other power sources immediately available to it for its peak requirements. Using Cornwall power to meet the peaking needs in the north would, moreover, help smooth out the peaking operation of the New York City steam plants, thereby further lessening the overall level of pollution within the city.

Aside from the fact that we have found that the existing corridor, without widening, is sufficient to transmit Cornwall power and meet Con Edison's other

present and future transmission needs, there are other persuasive reasons for not granting a widening of the corridor. Without the added width Con Edison is assured of ample transmission capacity until at least 1975. What it asks for here is that right-of-way be set aside now to meet its needs in the long-range future. As stated in the Commission's recently published National Power Survey, the need for long-range planning is growing increasingly important in the electric power industry, and Con Edison's position is understandable when consideration is given to its heavy responsibility to insure continuity of power supply at ever increasing levels in the years ahead. Meeting the expanding needs of the consumers for electric energy does not necessarily require, however, setting aside land which is already intensively developed with home sites where the long-range need for the land is doubtful and the present inconvenience to land owners would be serious.

Transmission technology has made tremendous progress in recent years. The Power Survey recognizes that the industry needs to devote more manpower and money to projects for transmission research and development, but we have every reason to believe that the trend already established will continue and even accelerate in the years to come. Thus, it is possible that advances made in the next decade may reveal practical alternatives, such as long distance underground EHV transmission, further increases in the capacity of overhead EHV transmission lines and nuclear power generation near metropolitan centers, to mention only a few of the possibilities. In the circumstances of this case and considering the effect which widening the corridor would have on Yorktown's development, both proposed and under construction, as well as on a number of present residences, it would not be in the public interest to permit widening of the Pleasant Valley corridor.

In order to utilize the Pleasant Valley corridor it is necessary, of course, to determine the route to the point where the lines from the Cornwall East Switching station meet the corridor. With a choice between route 2 or route 3, we favor the latter. The evidence regarding this route was extensively developed at the remanded proceeding and shows that no existing residences will be taken. The area is rugged, wooded, mountainous and largely undeveloped. While this route as originally proposed included a crossing of the Fahnestock Park which was objectionable to the state authorities, it has now been modified to limit the crossing to the western tip of the Park. The land which would be lost due to the modified crossing is not particularly well suited to park purposes and Con Edison has agreed to donate to the Park other and more suitable lands. The Park Commission will gain from the crossing and has agreed to the granting of the necessary right-of-way. Philipstown endorses the Park crossing since it somewhat shortens the route, avoids certain developed areas and results in less impingement upon scenic values in the town. Route 3 is the preferred route in the considered judgment of four of the parties, whereas no party has expressly favored route 2. While the new right-of-way would be somewhat longer for route 3 than for route 2, the costs are reasonably comparable and some savings would occur due to the lesser amount of initial conversion of the 138 kilovolt lines necessary once the Pleasant Valley corridor is reached.

The modifications sought by the Perry interveners and Rock Industries, Inc. insofar as they relate to route 3 must be rejected. Even with the detailed information regarding the various routes which has already been compiled and which is included in the record in this proceeding, the final placement of the towers is a matter which must await a detailed ground survey over the route finally selected herein. The company has assured the parties and this Commission that, when the survey is completed and as far as practical and economic, the

towers will be so located as to cause the least inconvenience to adjacent homes and property and with the greatest regard for scenic considerations. The Perry interveners, in particular, would lose neither their home nor any part of their land no matter what route is decided upon. Moreover, the costs of making the modifications involved would be far in excess of the estimated value of the entire property. In our opinion, the modifications sought by these parties are not required by the public interest.

During the remanded proceeding both Philipstown and Rock Industries, Inc., attempted to introduce further evidence on the subject of underground transmission. These attempts were halted by the examiner who ruled this material inadmissible under the Commission's Opinion No. 452 and order. In the earlier proceeding we determined that the public interest would not be served by requiring Con Edison to install additional underground transmission facilities. The proceeding, on remand, insofar as the transmission issue is concerned, involves solely the determination of which route for the overhead lines best accords with the public interest. Consequently the examiner's ruling was proper.

Conclusion on Transmission Route Issue

For the reasons herein given it is our conclusion, and we so find, that proposed route 3 is the route most in accord with the public interest and most in accord with the standard set in Section 10(a) of the Federal Power Act. Except where necessary at corners or critical points, the public interest does not require the allowance of additional right-of-way, beyond that presently existing on the Pleasant Valley to Millwood transmission corridor, for the placement of the transmission facilities of the Cornwall Pumped Storage Project. We shall require that the transmission towers exteriors be treated to blend insofar as practical into the landscape and that the right-of-way be replanted after construction with native materials at road crossings and other points of major public view.

DESIGN OF FISH PROTECTIVE DEVICES

During the hearing testimony was received from fish biologists and other fish experts as to the foreseeable effects of the plant operations on the Hudson River's fish resources. Witnesses for Con Edison testified in general that the probability of serious impairment of these resources was remote provided suitable protective devices were installed. Witnesses for the Scenic Hudson Preservation Conference (Scenic Hudson) testified that available evidence indicates striped bass spawn in the general vicinity of the planned powerhouse and that the survival rate of fish, larvae and eggs pulled into the plant can be expected to be small. A witness appearing on behalf of the Department of Interior testified that screening devices presently planned for inclusion in the project would not be adequate for the protection of fish in all their life stages and recommended that screening and fish sampling studies be conducted in the project area.

After the issuance of Opinion No. 452 the State of New York Conservation Department recommended the undertaking of a three-year study of the fish resources of the Hudson River and any possible impact thereon of the Cornwall project. This recommendation was concurred in by the regional office of the Fish & Wildlife Service Bureau of Sport Fisheries and Wildlife, U.S. Department of Interior. Con Edison has agreed to participate in and finance this study at a cost of $150,000. The study as agreed to will be conducted by an outside consulting firm under the specific supervision and direction of the New York Conservation Department acting under the general direction of a policy committee composed of representatives of the Conservation Department, the Fish

and Wildlife Service and Con Edison.[17] If, as a result of the study, a determination is made that fish protection devices beyond those presently planned are desirable, Con Edison has stated on the record that it is prepared to construct an independent structure in front of the project intakes on which any known type of fish protective device could be installed at any time. The incremental cost of such a structure was estimated at $1.5 million.[18] Since this cost would be greatly increased if work on the structure is commenced more than 18 months after the powerhouse construction is begun (apparently this would be the time when the coffer dams erected to allow the riverfront construction will be removed), Con Edison prefers to build the new fish facility within that time if there appeared to be any reasonable chance that it might eventually be found necessary. However, the consulting firm hired to perform the study will also provide interim reports as bases for possible modifications in the design of the fish protective facility during the entire period of the project's construction. Ultimately, a complete report will be submitted and its results utilized in a comprehensive post-construction evaluation of the effects of the plant operations on the fishery resource.

In addition to the study suggested by the New York Conservation Department, the Department of Interior recommends that hydraulic tests be undertaken using a model of the Hudson River estuary which is in existence at the Vicksburg, Mississippi Experimental Station of the U.S. Army Corps of Engineers. A witness for the Department noted that this model is available for this type of testing and stated that it was his belief that such a model study was necessary in order to develop an adequate screening device. The cost of this model study was not ascertained during the hearing.

The positions of the parties participating in the fish protection issue are well stated in their briefs. Briefly, Con Edison maintains that the protective devices currently proposed are adequate but agrees to any modifications necessary as a result of the additional study in which it is participating. It sees no need for the model study suggested by Interior. Scenic Hudson argues that no fish protective device can avoid the threatened loss to the fish resources, and that the Commission should revoke its grant of license and reopen the proceeding to allow reconsideration of possible alternative projects. The brief submitted by the Department of the Interior concludes that the present screen design is inadequate and that the planned study, while good, is too restricted and should be expanded to include the model studies supported by biological research and testing. It recommends that Con Edison be directed to expand its proposed research program to include tagging and model studies. The precise extent of these studies, if they cannot be decided upon by agreement between Con Edison, Interior, the New York Conservation Department and Staff, would under the Department's recommendation be submitted to the Commission for determination. Finally, the Staff agrees with Interior that model studies should be undertaken on the ground that they would both aid the biological studies and be useful in arriving at a final fish screening design. The model could also be used to determine whether the plant tailrace required redesigning to conform with the hydraulic requirements of the screening device ultimately decided upon.

---

[17] The Chairman of the Committee is Dr. Elliott Cheatum, Assistant Commissioner of the New York State Conservation Department, Division of Fish and Game. Early concurrence in the proposed study was requested and given by the three parties in the hope that a start could be made in the spring of the current year. The evidence does not establish whether the study was in fact begun at that time.

[18] Preliminary sketches are included as Exhibit Nos. 75, 77 and 78.

The record supports our finding that the fish resources will not be adversely affected provided adequate protective devices are installed. The additional studies proposed by the New York Conservation Department as supplemented by the studies proposed by the Department of Interior will contribute significantly to the general knowledge of fish problems in the river, and will assure that the Cornwall project will be equipped with appropriate devices necessary to protect these valuable resources. Accordingly, Article 37 of the license will be amended to require undertaking both studies, while reserving to the Commission continuing jurisdiction to require any further changes in the protective devices the studies may demonstrate to be necessary. The decision whether to order the independent fish protection structure will be deferred to await the recommendation of the study committee. A requirement will be included for interim progress reports to the Commission as well as of a definitive report in sufficient time to permit the Commission to make an informed determination whether to require the new fish structure.

The Commission further finds:

(1) Finding paragraphs (1) through (21) and (25) through (31) of Opinion No. 452, *Consolidated Edison Company of New York, Inc.*, Project No. 2338, issued March 9, 1965, 33 FPC 495–6, 497, are applicable to the proceeding on remand.

(2) To transmit the power which will be generated at the Cornwall project. the Licensee shall construct and operate as parts of the project within the meaning of Section 3(11) of the Federal Power Act a 345 kilovolt double circuit overhead transmission line on a right-of-way, the location and width of which is to be as provided in the accompanying Order, which transmission line shall extend from the Cornwall East Switching Station at Nelsonville, New York, to a point of interconnection with applicant's transmission system at or near its Sprain Brook substation in the Town of Yonkers, New York.

(3) The route for the overhead transmission line specified in the accompanying Order is the single route most in accord with the public interest and satisfies the standard embodied in Section 10(a) of the Federal Power Act.

(4) The Cornwall project will not adversely affect the fish resources of the Hudson River provided adequate protective facilities are installed.

(5) Plans of the Licensee for a screen with clear mesh openings of three-quarters inch by one and three-quarter inches may not be adequate to provide the protection required.

(6) The objectives of the Licensee's proposed research project are not sufficiently broad to obtain the information desirable to adequately accomplish the protection of the Hudson River fish resource.

(7) Model studies shall be undertaken to determine the hydraulic conditions and effects created by the project within the estuary and in the tailrace area during both the pumping and generating cycles of the powerhouse's operation.

(8) The following terms and conditions, and amendments to the license issued for Project No. 2338, are desirable and necessary in the public interest; except as otherwise determined, all motions and all objections by parties to the proceeding to the examiner's rulings should be denied.

The Commission orders:

(A) Articles 35 and 37 of the license issued for Project No. 2338 are amended to read as follows:

Article 35.(*A*). The Licensee—

(1) Shall design the overhead transmission facilities to accommodate the initial transmission of 2,000 megawatts of power and the future transmission of at least 3,000 megawatts of power;

(2) Shall locate the overhead transmission facilities between Cornwall East Switching Station and a point on its existing Pleasant Valley-Millwood transmission line right-of-way on a new right-of-way not to exceed 125 feet in width, except at corners, transposition points, access points, or points of unusual character, along the following route:

(a) From Cornwall East Switching Station, at Nelsonville, northeasterly, paralleling New York State Route 301 to a point a short distance west of McKeel Corners in the Town of Philipstown;

(b) Thence southeasterly, crossing Indian Brook Road in the vicinity of Reeves Pond and skirting the northeasterly slopes of Moneyhold Mountain, and thence proceeding in a south-southeasterly direction to a point where the southern boundary of the Fahnestock State Park crosses the Philipstown-Putnam Valley town line and to a point near Gilbert Corners in the Town of Putnam Valley;

(c) Thence northeasterly to a point north of North Shore Road, around the southern border of Fahnestock State Park, around a hill north of this road;

(d) Thence southeasterly, east of Christian Corners and between Prospect Hill and Tinker Hill, across Peekskill Hollow Road, and thence southeasterly across the Taconic State Parkway about one-half mile south of Bryant Pond to a point about one mile south of the Carmel Substation of the New York State Electric & Gas Corporation, where the route would intersect the company's existing right-of-way from Pleasant Valley (Dutchess County) to Millwood (Westchester County).

(3) Shall locate the overhead transmission facilities between the aforementioned point on its existing Pleasant Valley-Millwood transmission line right-of-way to the Millwood Substation on this existing right-of-way by replacing the existing 138 kilovolt double circuit transmission line, where necessary, and widening the right-of-way only where necessary to accommodate corners, transposition points, access points, or points of unusual character, either along the west or east existing boundary so as to cause a minimum interference with the interests of local property owners and local communities in the Towns of Putnam Valley, Carmel, Yorktown, and New Castle;

(4) Shall locate the overhead transmission facilities between Millwood substation and Sprain Brook substation on the right-of-way of an existing transmission line of the Licensee; and

(5) Shall, generally, traverse wooded and sparsely settled areas, and shall cross ridges, where possible, through valleys and draws so as to minimize the silhouette of the transmission line towers against the sky as viewed from highways. The transmission tower exteriors shall be treated to blend insofar as practical into the landscape and the right-of-way replanted after construction with native materials at road crossings and other points of major public view.

(B) This Article shall not restrict the use of the existing Pleasant Valley-Sprain Brook transmission line right-of-way in any manner deemed necessary for the marketing of Cornwall and other power.

Article 37. The Licensee—

(1) Shall with the advice and assistance of the New York State Conservation Department and the United States Fish and Wildlife Service, expand its proposed research program to include adequate sampling studies and tagging studies over a period of at least one year; institute studies of hydraulic conditions and their effect on fish behavior, including striped bass and shad; perform tests to determine swimming tolerances of various sizes of striped bass and shad in various water velocities which might be anticipated to be caused by the operation of the licensed project; and undertake studies concerning the mortality of eggs and larvae of striped bass and shad under pressure, in turbulence, and held against a screen by water pumped at varying velocities;

(2) Shall, after consultation with the United States Fish and Wildlife Service and the Fish and Game Division of the New York Conservation Department make, or pay the cost of making, such studies, including model studies, necessary to determine the location and design of fish protective facilities;

(3) Shall construct, operate and maintain or shall arrange for the construction, operation and maintenance of such fish protective facilities, the functional design of which has been approved by the Commission after considering the recommendations of the U. S. Fish and Wildlife Service and the Fish and Game Division of the New York Conservation Department;

(4) Shall make or pay the cost of making post-construction evaluation studies to determine the extent of any effect of the project on the Hudson River fishery resources;

(5) Shall make any needed modification of the fish protective facilities, as may be ordered by the Commission, after notice and opportunity for hearing, on its own motion or upon recommendations by the United States Fish and Wildlife Service and the Division of Fish and Game of the New York Conservation Department;

(6) Shall file progress reports with the Commission on the results of the studies as required under (1), (2) and (4) of this Article, including a report in sufficient time to permit determination whether to order construction of an independent fish protective structure. If the Licensee, the United States Fish and Wildlife Service, the New York State Conservation Department, and the staff of the Federal Power Commission are unable to agree upon the scope, objectives, timing, and manner of performance of the studies and tests herein ordered, the matter shall be submitted to the Commission for determination. After development of the final fish protective device, or at any earlier feasible time, the Licensee shall institute model studies to determine hydraulic conditions in the tailrace area of the project for the purpose of determining whether or not the works in such area need be redesigned or any conditions therein modified.

(B) Except as otherwise determined, all motions and all objections by parties to the proceeding to the examiner's rulings are denied.

(C) This order shall become final thirty (30) days from the date of its issuance unless application for rehearing shall be filed as provided by Section 313(a) of the Act, and failure by Licensee to file such an application shall constitute acceptance of this license. In acknowledgement of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within sixty (60) days from the date of issuance of this order.

Commissioner Ross *concurs* in this opinion subject to his previous dissent accompanying Opinion No. 452 issued March 9, 1965, 33 FPC at p. 458.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TEXACO INC., ET AL. (FORMERLY SUNRAY DX OIL COMPANY, ET AL., DOCKET NO. G–4281, ET AL.), DOCKET NO. G–8087, ET AL.

SUPPLEMENTAL ORDER IN CLARIFICATION OF OPINION NO. 464

(Issued October 4, 1965)

By our Opinion No. 464, issued June 10, 1965, 33 FPC 1228, we disposed of various issues related to a large number of consolidated producer and pipeline applications. The principal issue there related to the permissibility of upward Btu adjustment clauses. Subsequent to that opinion and order several collateral questions have arisen which we here intend to clarify.

Rate schedule supplements must be filed in compliance with *both* Ordering Paragraphs (C) and (D) of said Opinion, requiring the inclusion of clauses calling for a proportional downward Btu adjustment and measurement of Btu content on a "wet" basis.[1]

Opinion No. 464 is applicable to the following amendments filed subsequent to the institution of these proceedings but prior to the issuance of our Opinion:

Docket No.	*Date Filed*
G–12710	8–26–63
G–13299	2–24–64
G–14953	9–26–63
G–16529	6–21–63
G–16878	8–27–63
G–17791	6–20–63
G–17791	2–27–64
G–17791	2–17–64
G–17791	11–16–64
G–18435	10–23–64
G–18435	6–7–65
G–18977	2–19–64
G–18977	2–24–64
G–18977	6–9–64
G–18977	7–27–64
G–19542	5–27–65
CI60–590	1–18–65
CI60–704	7–17–63
CI60–704	5–14–64
CP60–116	2–10–64
CI61–235	8–10–64
CI61–1642	3–23–64
CI62–1111	1–28–64
CI62–1111	3–9–65
CI63–1337	1–27–64

To avoid any possible inconsistency with our Regulations regarding rate filings, and in order that the rate schedules involved herein reflect the proper rates, all of the producers who had eliminated an upward Btu adjustment provision from their filings during the periods covered by the temporary certificates are hereby required to file a rate schedule supplement as a condition precedent to reinstate-

[1] Said filings may be unilateral.

ment of such adjustment. Such rate filings, if made within 30 days from the issuance of the instant Supplemental Order, will be accepted without suspension and with a waiver of the notice requirements, the effective date of such filings to be June 10, 1965, the date of issuance of Opinion No. 464.

Finally, we note that no time limit was prescribed in our Opinion within which the producers are to submit compliance filings. We shall here order that all such filings be made within 30 days of the issuance of the instant Supplemental Order.

The Commission further orders:

(A) Filings must be made to comply not only with Ordering Paragraph (C) of Opinion No. 464 but also with (D) of said Opinion and may be unilateral.

(B) The certificates issued herein by our Opinion are applicable to the amendments to the applications hereinbefore listed.

(C) Those producers who had eliminated the upward Btu adjustment clause from their rate schedules for the periods covered by their respective temporary certificates are required to file appropriate supplements to their filed rate schedules within 30 days of the issuance of the instant Supplemental Order as a condition precedent to reinstatement of such clause with an effective date of June 10, 1965. The Regulations relating to notice requirements with respect to the effective date of such filings are hereby waived, as are the detailed submittal provisions of Section 154.94(f).

(D) All filings in compliance with our Opinion No. 464, as supplemented, must be submitted within 30 days of the issuance of the instant Supplemental Order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. RP66-12

ORDER SETTING HEARING ON REFUNDS

(Issued October 4, 1965)*

The Commission, by orders issued in various rate proceedings including but not limited to those below[1] has directed the natural gas companies whose rates are the subject matter of those orders, to retain the amounts computed to be due to be refunded on sales to Texas Eastern Transmission Corporation, pending our further order prescribing the disposition of those retained amounts.

Our records indicate that the amounts refundable to Texas Eastern which are being retained pursuant to the referenced orders, aggregate an approximate amount in excess of $8,00,000. Except for a minor portion thereof, those amounts relate to gas purchased and sold by Texas Eastern in the calendar years 1962, 1963 and 1964. Further, of that approximate total, about $7,700,000 is refundable

*Application for rehearing rejected and reconsideration denied by order issued November 30, 1965.

[1] Orders issued on: October 8, 1964, in *Atlantic Refining Company*, Docket No. G-9283, *et al.*, 32 FPC 933; October 5, 1964, in *General Crude Oil Company*, Docket No. G-13941, *et al.*, 32 FPC 912; January 27, 1964, in *Humble Oil & Refining Company*, Docket No. G-13732, *et al.*, 31 FPC 187; July 16, 1963, in *Hunt Oil Company*, Docket No. G-9065, *et al.*, 30 FPC 220; October 5, 1964, in *Southwest Gas Producing, Inc.*, Docket No. RI64-262, *et al.*, 32 FPC 916; December 23, 1964, in *United Gas Pipe Line Company*, Docket Nos. RP61-18, RP63-1, 32 FPC 1515; December 23, 1964, in *Union Producing Company*, Docket No. G-13811, *et al.*, 32 FPC 1506.

to Texas Eastern from United Gas Pipe Line Company in the latter's Docket Nos. RP61–18 and RP63–1.

Texas Eastern has asserted that it has no obligation to flow-through any refunds which result from supplier rate proceedings or new gas purchases subsequent to the settlement agreement in its Docket Nos. G–12706 and G–18841.[3] Texas Eastern has also made manifest its intention to retain such refunds.[5]

In the order issued July 16, 1963, in *Hunt Oil Company*, Docket No. G–9065, *et al.*, 30 FPC 220, we recognized the possibility that some natural gas companies might take the position that they were not under any obligation to flow-through the amounts that might be refundable to them from gas suppliers. We noted further, that in the absence of action by us, those pipelines would be in a position to hold such sums for their own use or distribution to their stockholders, even if they were, in the absence of such refunds, earning a reasonable rate of return on their invested capital during the past periods involved. We indicated that we were disturbed by the possible gap in the refund line and prescribed certain procedures which would aid us in determining whether the natural gas pipeline companies or their jurisdictional customers are entitled to such refunds.

In the order issued July 8, 1964, in *Humble Oil & Refining Company*, Docket No. G–9287, *et al.*, 32 FPC 49, we set out our policy and purpose on this issue in the statement that "in view of our duty to insure that the ultimate consumers of gas actually receive all of the benefits of our rate regulation to which they may be entitled, we shall take action here to assure that, within the limits of our jurisdictional reach, the refunds to be ordered actually flow to those parties legally and equitably entitled thereto. We also pointed to the statutory authority and certain court decisions which bear on this issue, and indicated that in such instances where it became necessary (*i.e.*, upon an asserted claim of a jurisdictional pipeline company to retain substantial refund sums) we would institute further proceedings "for determining the relative rights to such funds of such pipeline or its customers."

In view of Texas Eastern's asserted claim, referred to above, it is necessary and appropriate that these proceedings be instituted to determine the rights of Texas Eastern to the refund sums mentioned above.

We have stated,[4] and here reiterate, that we are not by this order prejudging or determining that a jurisdictional pipeline in the chain of resales between the producer and ultimate consumer is never entitled as a matter of law or equity to retain all or part of the refunds received from a supplier. Specifically, we have not made any determination that Texas Eastern is not entitled to receive and retain such monies. We have determined only that in view of the apparent excess in revenues otherwise enjoyed by Texas Eastern during the years to which these refunds apply, a substantial question arises as to the pipeline's legal and equitable claims to such refunds and that our final decision thereon should be made upon the basis of a full hearing record on all pertinent factual and policy matters.

Commission staff studies of Texas Eastern's actual costs and earnings for calendar years 1962, 1963 and 1964, as reflected in its Form No. 2 annual reports, indicate that without regard to the refund sums in issue herein, the company

[3] Approved by Commission order issued January 25, 1961, 25 FPC 172.

[5] Letter dated January 13, 1965, filed by Texas Eastern in Docket No. RP65–27.

[4] Order issued July 8, 1964, in *Humble Oil & Refining Company*, Docket No. G–9287, *et al.*, *supra*.

earned a jurisdictional return of 6.85 percent in 1962, 7.25 percent in 1963, and 7.18 percent in 1964.[5] If such earned rates of return are measured against the highest overall rates of return ever allowed a major pipeline company by the Commission, *i.e.*, 6½ percent, (without conceding that Texas Eastern is, in fact, entitled to a 6½ percent rate of return for the years listed), the studies indicate that Texas Eastern had excess earnings amounting to $4,954,000 in 1962, $10,490,010 in 1963, and $9,216,000 in 1964, from its jurisdictional operations and sales.

We see no point here in repeating the position outlined in our previous orders setting forth our reasons for believing that under the statutory scheme a pipeline customer may not be entitled automatically to refunds for payments made by it to a supplier whenever it has not tracked the increase with a filing of its own. We point out only that Section 4 of the Act does not in terms provide to whom any refunds we might decide to order should be paid, and that a failure to track a supplier's increase does not necessarily mean that a pipeline has absorbed any cost increase over that upon which its rates were based since it may well be that such increase has been offset by other purchased gas or other cost decreases, or by increased sales having the effect of reducing the unit costs. Insofar as the settlement agreements are concerned, it is sufficient in the absence of a complete hearing record thereon to note that the mere fact that Texas Eastern may not have bound itself to flow-through any refunds resulting from these particular increases (which had not even been filed for at the time of the agreements) regardless of the effect of such increases on its ability to earn a fair return on their investment, does not in itself grant Texas Eastern any rights to secure and retain such refunds.

The award of the refundable amounts at issue herein to Texas Eastern without a requirement that such refunds be flowed-through to jurisdictional customers would only serve to increase Texas Eastern's excess earnings in each of the aforementioned calendar years. Such unconditional release of the refunds to Texas Eastern might result in a permanent and irremediable gap in our authority to require flow-through of refunds to the detriment of the ultimate consumers whom the Natural Gas Act was designed to protect.

In keeping with our purpose heretofore expressed, we should note that upon a proper showing by Texas Eastern that any portion of the refunds being retained by its suppliers is applicable to its non-jurisdictional sales we shall direct the suppliers to release and pay such amounts to Texas Eastern.

The Commission finds:

It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that these proceedings be instituted pursuant to the provisions of Sections 4, 5, 10, 14 and 16 of the Act to determine whether Texas Eastern is legally and equitably entitled to the refundable amounts now being retained, or which may be retained hereafter pursuant to our order, by any supplier of gas to Texas Eastern, which amounts are attributable to gas purchased by Texas Eastern in calendar years 1962, 1963 and 1964.

The Commission orders:

(A) A hearing shall hereinafter be held to determine the extent to which, if any, Texas Eastern is entitled to receive and retain any of the sums of monies

[5] Appendix A hereto. A prospective rate reduction effective as of June 1, 1965, in Docket No. RP65–59 was approved by Commission order issued July 21, 1965, 34 FPC 98.

collected from Texas Eastern by its jurisdictional suppliers which the suppliers have been directed to refund with interest, but which, pursuant to the orders referred to in footnote 1 hereof, they have been directed to hold pending further order of the Commission.

(B) Texas Eastern shall within 45 days from the date of issuance of this order, file a special report in triplicate setting forth in detail its agreement or disagreement with the statement attached hereto as Appendix A indicating, on the basis of the Form No. 2 reports and refund statements filed with the Commission by Texas Eastern [and its suppliers], that Texas Eastern had earnings in excess of a 6½ percent rate of return on its jurisdictional operations amounting to $4,954,000 in 1962, $10,490,000 in 1963, and $9,216,000 in 1964. In making such report, Texas Eastern shall determine and set forth its earnings in each of the calendar years 1962, 1963, and 1964 upon the basis of its actual operations for such years as reflected in its books of accounts (maintained in accordance with our Uniform System of Accounts) and in properly prepared official reports to this Commission, utilizing a 6½ percent rate of return, and without "normalization" of conditions actually in effect during each such calendar year, annualizing adjustments, elimination of non-recurring items, or averaging of recurring items varying in amounts from year-to-year, except that all supplier refunds received by Texas Eastern from producers and pipelines, which are attributable to gas purchases made during each of these three years and have not been passed on to its jurisdictional customers, shall be regarded as a reduction in the reported cost of purchased gas for the calendar year involved. Copies of such report shall be made available upon request to any intervener in this proceeding.

(C) Within 45 days after receipt of Texas Eastern's report referred to in ordering paragraph (B) *supra*, the staff, Texas Eastern and all interveners shall file their direct testimony in writing with respect to all matters of fact or policy which they believe material to a determination of the issues herein. Any rebuttal testimony shall be filed within 30 days from the filing of such direct testimony. No testimony as to issues which raise questions of law only should be adduced,—such questions being deferred for briefs.

(D) Presiding Examiner Alvin A. Kurtz, or any other officer or officers of the Commission designated by it for that purpose, shall preside in the hearing of this matter and over any pre-hearing conferences which may be deemed necessary, pursuant to the Commission's Rules of Practice and Procedure and Section 2.59 of its Statement of General Policy, and as further provided by this order.

(E) Notices of intervention and petitions to intervene may be filed with the Federal Power Commission, Washington, D.C. 20426, in accordance with the Commission's Rules of Practice and Procedure, Sections 1.8 and 1.37(f) [18 CFR 1.8 and 1.37(f)], on or before October 26, 1965.

APPENDIX A

TEXAS EASTERN TRANSMISSION CORPORATION

Comparison of cost of service with revenues for the years 1962, 1963 and 1964 [1]

Line No.	Particulars	Year		
		1962	1963	1964
1	Operating expenses:			
2	Cost of purchased gas [2]	$134,603,752	$146,797,491	$149,643,120
3	Exchange gas	(176,601)	(1,413,019)	(195,893)
4	Purchased gas expense	295,284	301,889	638,302
5	Gas withdrawn from storage—debit	7,149,762	8,738,267	6,993,415
6	Gas delivered to storage—credit	(7,324,740)	(8,900,897)	(7,492,402)
7	Gas used in company operations	(3,975,807)	(4,824,948)	(3,606,161)
8	Other gas supply expenses	406,365	373,846	
9	Total gas supply expenses	130,978,015	141,072,629	145,980,381
10	Production and gathering expenses and products extraction	3,876,678	4,247,350	4,120,138
11	Exploration and development expenses	1,566,914	1,967,393	2,054,611
12	Total production expenses	136,421,607	147,287,372	152,155,130
13	Underground storage expenses	1,370,226	1,535,818	2,335,398
14	Transmission expenses	24,235,424	25,553,463	24,665,548
15	Administrative and general expenses	7,995,984	7,972,117	8,004,344
16	Total operating expenses	170,023,241	182,348,770	187,180,420
17	Depreciation, amortization and depletion expenses	35,590,013	36,619,766	36,787,200
18	Taxes other than income	8,166,576	8,700,647	8,777,236
19	State income taxes	605,700	866,912	743,620
20	Revenues credited to cost of service	(2,058,312)	(1,789,380)	(2,503,704)
21	Subtotal	212,327,218	226,746,715	230,984,772
22	Return at 6.5% [3]	43,859,981	43,812,861	44,191,569
23	Federal income taxes @ 52% and 50%	21,146,415	21,846,198	19,302,397
24	Total cost of service	277,333,614	292,405,774	294,478,738
25	Jurisdictional revenues	282,287,739	302,896,292	303,694,692
26	Revenues in excess of 6.5% return	4,954,125	10,490,518	9,216,224
27	Actual percent rate of return earned	6.85%	7.25%	7.18%

[1] All data based upon Texas Eastern's Form No. 2 Reports and refund statements.
[2] Reflects Form No. 2 cost of purchased gas less refunds received from Texas Gas Transmission Corporation and United Gas Pipe Line Company applicable to each year.
[3] Computed on rate base which excludes Accident Field.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

CENTRAL MAINE POWER COMPANY, PROJECT NO. 2335

ORDER APPROVING REVISED PROJECT EXHIBIT

(Issued October 5, 1965)

On July 21, 1965, Central Maine Power Company filed for Commission approval a revised Exhibit K showing the location of all transmission line facilities found by the Commission to be parts of Project No. 2335 in its license order issued July 24, 1964, 32 FPC 334, which order also, by Article 29 thereof, ordered their inclusion in the license.

Article 29 described the facilities as being the 6.9 kv generator leads, and the 115 kv transmission line from the 6.9/115 kv substation to the Wyman—Gulf Island 115 kv line.

The project, known as the Williams Project, is located on the Kennebec River in towns of Embdem and Solon, in Somerset County, Maine. No lands of the United States are involved.

The Commission finds:

Exhibit K, Sheet 2, Revision I (FPC No. 2335—14) conforms to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

The revised exhibit described in the above finding is hereby approved as part of the license for Project No. 2335.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

POTOMAC LIGHT & POWER COMPANY, PROJECT NO. 2343

ORDER APPROVING REVISED PROJECT EXHIBIT

(Issued October 5, 1965)

On June 11, 1965, Potomac Light & Power Company filed for Commission approval a revised print of Exhibit K (FPC No. 2343–3) showing the location of transmission facilities found by the Commission to be parts of Project No. 2343 in its license order issued August 11, 1964, 32 FPC 584, which order also, by Article 30 thereof, ordered their inclusion in the license.

Article 30 described the facilities as being: (1) the 2.4 kv transmission line from the Millville Hydro Plant to the old Millville Steam Plant; (2) the 34.5 kv transmission line from the Millville Hydro Plant to the old Millville Steam Plant; and (3) the generator leads and appurtenant facilities at the Millville Hydro Plant.

The licensee has requested that the revised print be reflected on Exhibit K (FPC No. 2343–3), on file with the Commission, as a part of the license for the project. The print shows that the transmission facilities involved are located on lands owned by the licensee which lie wholly within the project boundary. The project, known as the Millville Hydro Station, is located on the Shenandoah River, in Jefferson County, West Virginia.

The Commission finds:

Exhibit K (FPC No. 2343–3), revised by the staff to show the transmission facilities described in Article 30 of the license as parts of the project, conforms to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

Exhibit K (FPC No. 2343–3), revised by our staff to reflect thereon the transmission facilities described in Article 30 of the license is hereby approved as part of the license for Project No. 2343.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

SACRAMENTO MUNICIPAL UTILITY DISTRICT, PROJECT NO. 2101

ORDER APPROVING SUPPLEMENTAL PROJECT EXHIBIT L DRAWINGS

(Issued October 5, 1965)

On August 6, 1965, Sacramento Municipal Utility District filed for Commission approval Exhibit L drawings showing construction details for the Slab Creek

dam and White Rock Tunnel intake of its Upper American River Project No. 2101 located on the South Fork American River, California. The drawings supplement Exhibit L drawings filed with the Commission on March 22, 1965, which were approved by the Commission as parts of the license by its order of April 12, 1965, 33 FPC 722.

The construction details shown on the supplemental drawings relate to certain features of the Slab Creek dam and White Rock Tunnel intake, such as: Slab Creek dam excavation, spillway detail, and fishwater outlet, and White Rock Tunnel intake and adit details.

The Commission finds:

The following described supplemental Exhibit L drawings conform to the Commission's rules and regulations and should be approved as part of the license for the project:

Exhibit L–120 (FPC No. 2101–212) showing "Slab Creek Dam Excavation Plan and Sections,"

L–121 (FPC No. 2101–213) showing "Slab Creek Dam Concrete Outline, Spillway and Piers,"

L–122 (FPC No. 2101–214) showing "Slab Creek Dam Fishwater Outlet Works,"

L–123 (FPC No. 2101–215) showing "White Rock Tunnel Intake Structure,"

L–124 (FPC No. 2101–216) showing "White Rock Tunnel Intake Gate Shaft," and

L–125 (FPC No. 2101–217) showing "White Rock Tunnel Intake to Adit No. 3."

The Commission orders:

The supplemental Exhibit L drawings described in the above finding are hereby approved as part of the license for Project No. 2101.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

HUMBLE OIL & REFINING COMPANY (OPERATOR), ET AL., DOCKET NO. G–14604

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 6, 1965)

On May 19, 1965 Humble Oil & Refining Company (Humble) filed in Docket No. G–14604 a petition to amend that portion of the certificate issued in Opinion No. 315, in Docket No. G–13169, *et al.* on September 4, 1958, 20 FPC 264, by including therein the interest of co-owners in the unit established by the Louisiana Conservation Commission, as more fully described in the petition to amend. The unit is located within the area dedicated to Humble's FPC Gas Rate Schedule No. 131 and sales of gas to Transcontinental Gas Pipe Line Corporation from this acreage located in the Rousseau Field, Lafourche Parish, South Louisiana were authorized in the instant docket.[1] No additional gas is being dedicated to the interstate market. Humble previously produced all the gas

[1] Docket No. G–14604 was one of numerous docketed applications included in the designation Docket No. G–13169, *et al.*

underlying the unit and the unit co-owners had no interest in the production until the unit was established. The co-owners have ratified the contract comprising Humble's Rate Schedule No. 131 and have designated Humble as their agent. No affiliation is said to exist between buyer and unit owners. Details of ownership are shown on the petition to amend. The currently effective rate under Humble's Rate Schedule No. 131 is 20.625¢ but since this amendment reflects only a redistribution of revenues resulting from established production, no rate question is presented.

Due notice of the filing of the petition to amend was published in the Federal Register on June 3, 1965 (30 F.R. 7329). The Public Service Commission of the State of New York intervened on June 9, 1965. However, on August 25, 1965 that Commission withdrew its petition to intervene upon learning that the amendment would not increase the buyer's obligation to take gas.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate of public convenience and necessity issued in Docket Nos. G–13169 and G–14604 on September 4, 1958, be amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity issued in G–14604 on September 4, 1958, is amended to reflect Humble as operator of the unit and to include the unit co-owners' interest.

(B) Redesignation of Humble's Rate Schedule No. 131 as Humble Oil & Refining Company (Operator), *et al.*, and accepts the rate filing to be effective on the effective date of establishment of the unit, March 6, 1964.

(C) In all other respects the certificate in Docket No. G–14604 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

SINCLAIR OIL & GAS COMPANY, DOCKET NO. G–13528, ET AL.[1]

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING REFUNDS, SEVERING AND TERMINATING PROCEEDINGS

(Issued October 6, 1965)

On August 13, 1965, Sinclair Oil & Gas Company (Sinclair) submitted an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, and in accordance with the Seventh and Ninth Amendments to the Statement of General Policy No. 61–1 (18 CFR 2.56). The proposed settlement involves a sale of natural gas by Sinclair to Texas Eastern Transmission Corporation (TETCO) in the Greenwood-Waskom Field, Caddo Parish, Louisiana, under Sinclair's FPC Gas Rate Schedule No. 325. Each of the proposed increased rates was suspended by order of the Commission, and with the exception of Supplement No. 12 to said rate schedule, was made effective subject to refund by Sinclair's predecessor, Hiawatha Oil and Gas Company (Hiawatha).

Under the terms of the offer, Sinclair proposes to eliminate the favored-nation and annual periodic escalation provisions from said rate schedule, and to substi-

[1] The additional dockets involved herein are set forth in the appendix hereto.

tute, in lieu thereof, a base rate of 14.6154¢ per Mcf of natural gas at 15.025 psia, exclusive of tax reimbursement, and 1.0¢ periodic increase to occur on November 1, 1968, and November 1, 1973, the latter increase to be effective for the remaining term of contract, which is sometime in 1976. Additionally, Sinclair proposes to reduce the presently effective tax reimbursement, which is being collected subject to refund, from 1.875¢ to 1.75¢ per Mcf, and to refund to TETCO all amounts collected for tax reimbursement in excess of the latter rate since February 1, 1959. The proposed settlement rate, inclusive of tax reimbursement, is thus 16.3654¢ per Mcf. The total refunds, which will include amounts collected by both Sinclair and its predecessor, Hiawatha, will be approximately $725. Sinclair's annual revenues from this sale will be reduced approximately $239 under the terms of its proposal.

TETCO has filed its agreement to the proposal, and comments were filed by Public Service Electric and Gas Company, one of the parties to these proceedings. No protests or objections to the proposal have been filed.

We desire to make it clear that acceptance of Sinclair's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its substituted periodic escalation provisions or its reservation of the right to file increases to cover future tax increases as provided in its offer of settlement, and is without prejudice to any finding or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Sinclair's rate.

The Commission finds:

The proposed settlement of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Sinclair on August 13, 1965, as herein conditioned, is consistent with the Statement of General Policy No. 61–1, as amended, 18 CFR 2.56, and approval thereof as made effective and hereinafter ordered is in the public interest and is appropriate to carry out the provisions of the Natural Gas Act.

The Commission orders:

(A) The offer of settlement filed with the Commission by Sinclair on August 13, 1965, is approved in accordance with the provisions of this order.

(B) Sinclair shall file within 30 days from the issuance of this order, a notice of change in rate providing for the settlement rate of 16.3654¢ per Mcf under its Rate Schedule No. 325.

(C) Sinclair shall file within 30 days from the issuance of this order a contract amendment to its Rate Schedule No. 325 eliminating all the favored-nation and price escalation provisions therefrom and substituting periodic pricing provisions consistent with its settlement proposal.

(D) Sinclair shall compute the difference between the rates collected subject to refund in the above-entitled proceedings and the settlement rate of 16.3654¢ per Mcf for sales to TETCO in accordance with its settlement proposal, with applicable interest to the date of this order, and shall within 45 days from the date of issuance of this order submit a report to the Commission, with a copy to TETCO, setting out the amount of refunds (showing separately the principal and applicable interest) the bases used for such determination, the periods covered, and ten days thereafter file a letter from TETCO agreeing to the correctness of such amounts, and shall ten days from such filing refund such monies to TETCO.

(E) Upon notification by the Secretary of the Commission that Sinclair has complied with the terms and conditions of this order, the rate and charge of

16.3654¢ per Mcf of natural gas under its Rate Schedule No. 325, specified in its offer of settlement shall be effective as of the date of this order and these proceedings shall be deemed severed from the T. L. James, Inc., *et al.*, Docket No. G–16492, *et al.*, proceedings, and shall be deemed terminated, all without further order of the Commission.

(F) The acceptance by the Commission of Sinclair's offer of settlement, as conditioned herein, is without any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Sinclair and is without prejudice to claims or contentions which may be made by Sinclair, the Commission staff, or any affected party hereto, in any proceeding, including area rate or similar proceedings.

[4] Includes 1.875 cents tax reimbursement.
[5] Reflects tax reimbursement increase from 1.0¢ to 1.875¢.
[6] Suspended until Apr. 1, 1965, but not made effective.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ALABAMA POWER COMPANY, PROJECT NO. 2203

ORDER ISSUING LICENSE (MAJOR)

(Issued October 7, 1965)

Application was filed on November 10, 1959, and supplemented on April 17 and June 19, 1961, and December 10, 1964, by Alabama Power Company (Applicant) of Birmingham, Alabama, for a license under Section 4(e) of the Federal Power Act (Act) for proposed Project No. 2203, to be located at the U.S. Government Holt Lock and Dam on the Black Warrior River, Alabama, about five miles upstream from Tuscaloosa, and affecting a navigable water of the United States and lands acquired by the United States in connection with its Holt Lock and Dam.

As described in the application for license and supplements thereto, the project would consist of an intake structure and powerhouse with an installation of 40,000 kw at the Holt Dam. Applicant proposes to construct the power facilities concurrently with construction of the Holt Lock and Dam by the Corps of Engineers, Department of the Army. However, in order to expedite completion of the entire Holt Lock, Dam, and power facilities, Applicant has indicated that it proposes to enter into an arrangement with the Corps of Engineers to construct

that part of the dam and appurtenant facilities between the powerhouse and the right (west) bank.

The Corps of Engineers, through the Secretary of the Army, submitted to Congress by letter of March 12, 1963 [1] a report in regard to potential power development at Holt Lock and Dam in which the Corps concluded that power facilities should be included to assure the full development of the water resources of the Black Warrior River. No recommendation was made by the Corps as to who should construct the power facilities, nor has the Congress authorized the construction of such facilities by the United States.

The Secretary of the Army and the Chief of Engineers have, pursuant to Section 4(e) of the Act, approved the tracings of the project structures covered in the application for license as supplemented through December 10, 1964, insofar as the interests of navigation are concerned. They also made recommendations for inclusion in any license for the project of certain conditions in the interests of the United States which would provide for: (1) repayment by the licensee of the separable costs which would ensure that the total project cost of Holt Lock and Dam to the Government be no greater than the cost of the project which would have been constructed without power included as a function, and reimbursement by the licensee for any work performed by the Corps specifically for the licensee in the design and construction of features of the Holt navigation dam which are solely related to any part of the facilities constructed by the licensee; (2) relief to the Government from payment of any claim for damages resulting from fluctuation in the normal pool elevation; (3) a plan for regulating the reservoir during flood periods based upon studies to be made by the Corps; and (4) for corrective measures by the licensee, if necessary, to eliminate adverse effects on navigation caused by the discharge of the project power installation. In addition, the Corps recommended that any license for the project include the conditions in the interests of navigation set forth in attached Form L–6, *infra*, p. 1114.

In commenting on the Corps' recommendations, Applicant advises that its proposal to construct all facilities between the powerhouse section and the right bank, in addition to the powerhouse and intake section of the dam, has eliminated the need for the Corps' recommended condition requiring reimbursement by the licensee of separable costs. In response the Corps has advised that the proposal would be satisfactory subject to approval by the Corps of plans and specifications and standards of construction and maintenance of such facilities but added that while the licensee's proposed plan of construction would appear to ensure that the total project costs to the Government be no greater than the cost of the project without power facilities, the Corps suggested that its proposed condition respecting separable costs not be eliminated as a license requirement and that the determination of such costs, if any, be left to future consideration after actual construction costs are known. Applicant has advised that it is agreeable to the Corps' requests requiring the Corps' approval of plans and specifications and standards of construction and maintenance of such facilities and that separable costs, if any, be determined after actual construction costs are known. Applicant has stated that if a condition in the interests of navigation is required in the license (Corps' recommended condition (4) above) in addition to those found in Form L–6, such a condition should be modified to provide that the required corrective measures or modifications shall be consistent with the primary purposes of the project, shall not unduly impair the project power value, and shall only be required after notice and opportunity for hearing and upon a Commission finding that such modification is necessary, desirable, and consistent with the

[1] House Document No. 84, 88th Cong., 1st Sess.

provisions of the Federal Power Act. The Corps' recommended license conditions are included herein substantially as set forth as Articles 6, 8, 9 and 10 of attached Form L–6, and Articles 40, 42, 48 and 49.

The Department of the Interior has recommended for inclusion in any license for the project conditions in the interest of fish and wildlife and recreation usually included in licenses for such projects, and certain special conditions in the interests of fish and wildlife and archeological survey and salvage. These conditions are included herein substantially as Articles 15 through 18 of attached Form L–6 and Article 41. The Department also recommended that since there has not been an omnibus River and Harbor Act since the aforementioned March 12, 1963 report by the Corps to the Congress, the Commission should defer action on the application for license until the Congress has had sufficient opportunity to act upon the Corps' report.

The Department of Health, Education, and Welfare has recommended that any license for the project require the licensee to undertake the following measures which the Department believes necessary to avoid adverse effects by the operation of the proposed project on the quality of water below the Holt Dam: (1) installation of the over-flow weir or other device upstream from the intake to assure withdrawal of water from the reservoir into the turbine at the highest possible level; *i.e.*, upper 25 feet; (2) maintenance of a minimum dry weather flow of at least 500 cfs; and (3) clearing of all areas to be flooded and for which the licensee is responsible. By letter dated February 22, 1965, Applicant stated that no such adverse effects from the operation of the Holt powerhouse would occur. In this connection, available information shows that the intake of the existing Bankhead power plant upstream from the proposed Holt project skims the upper layers which usually contain the best quality of water. The Holt reservoir is limited in size, having an area of 3,160 acres at normal depth of 75 feet. Whether or not the Holt reservoir will stratify and thereby cause a deleterious effect on the quality of water flowing through the reservoir cannot presently be predicted. If the reservoir does stratify, oxygen deficient water from the lower depths of the reservoir could be discharged through the turbine during the summer months. However, rather than require now the construction of a skimming weir which may not be necessary, we are by Article 43 herein requiring that the licensee shall cooperate with the Alabama Water Improvement Commission and the U.S. Public Health Service in conducting an evaluation study to determine the dissolved oxygen content of the water just below the Bankhead dam and powerhouse and the Holt dam and powerhouse, and providing for modification of the project operation or project structures should the study show that the operation of the Holt powerhouse has a deleterious effect on the quality of the water downstream therefrom. With respect to the request for provision for minimum flows, the subject project has no conservation storage and, therefore, can pass only such flows as may be received from inflows. Clearing of the reservoir is presently being undertaken by the Corps of Engineers in connection with the latter's construction of the Holt Lock and Dam.

Congress has had before it since March 1963, the Corps of Engineers' recommendation that power generating facilities should be installed at the Holt Lock and Dam, but has taken no action on this recommendation. On July 27, 1965 the Senate passed the 1965 Omnibus River and Harbor Bill. The House passed an amended version of this Bill on September 22, 1965. Neither the Senate nor House versions of this Bill contained any provision for power facilities at the Holt Lock and Dam. Construction of the main dam, the spillway and the lock is approaching completion by the Corps within the cofferdam area. To minimize hazards and costly upkeep of cofferdam and diversion facilities, construc-

tion of power generating facilities should be commenced by the summer of 1966. Immediate steps should be taken to secure access roads and procurement contracts for necessary equipment should be awarded promptly. Since there appears to be no compelling reason for Federal construction of such power generating facilities as opposed to private construction and since there are compelling reasons for authorizing prompt commencement of work on such facilities, we believe it would now be in the public interest to issue a license to Applicant for the construction of power generating facilities at the Holt Lock and Dam.

In order to coordinate the project construction with the construction schedule of the Corps of Engineers, we are by Article 45 herein providing that construction of the project be commenced within one year of the date of issuance of this license and be completed and placed in operation within three years thereafter.

By Article 46 herein we are requiring Applicant to file an Exhibit R within one year from the date of issuance of this license.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Alabama, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The project will utilize surplus water or waterpower from a Government dam, but the issuance of a license therefor, as hereinafter provided, will not affect the development of any water resources for public purposes which should be undertaken by the United States.

(4) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of waterpower development, and for other beneficial public uses, including recreational purposes.

(5) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 53,300 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project for the costs of administration of Part I of the Act is reasonable.

(6) The issuance of a license for the project as hereinafter provided will not interfere or be inconsistent with the purposes of any reservation or withdrawal of public lands.

(7) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of this license.

The Commission orders:

(A) This license is hereby issued to Alabama Power Company (Licensee) of Birmingham, Alabama, under Section 4(e) of the Federal Power Act (Act) for a period of 50 years, effective as of September 1, 1965, for the construction, operation and maintenance of Project No. 2203, affecting a navigable water of the United States and lands acquired by the U.S. Corps of Engineers in connection with its Holt Lock and Dam, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Proposed Project No. 2203 will consist of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purpose of the project, whether such lands or interests therein are owned or held by the applicant or by the United States; such project area and project boundary being more generally shown and described by certain exhibits which formed part of the application for license and which are designed and described as follows:

Exhibit J: (FPC No. 2203–2) General Map of Project Area.

Exhibit K: (FPC No. 2203–13) Project Area Map.

(ii) Project works consisting of a power installation to be constructed concurrently with the proposed United States Holt Lock and Dam, which will create a reservoir of approximately 3,200 acres at elevation 186.5 feet, to include an intake structure located at the right end of the spillway, a power-house containing a 55,200 horsepower turbine operating under a gross head of 60 feet and connected to a 40,000 kilowatt generator, a substation, a tailrace, and a transmission line to the Holt substation; and other appurtenant facilities; the location, nature and character of which are more specifically shown and described by the exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: (FPC No. 2203–14) General Plan. (FPC No. 2203–15) Powerhouse—Transverse section through unit. (FPC No. 2203–16) General Plan—Power Plant. (FPC No. 2203–17) Powerhouse—Substructure floor plans. (FPC No. 2203–18) Powerhouse—Longitudinal Section through unit.

Exhibit M: Two typewritten sheets entitled, "General Description of Mechanical, Electrical and Transmission Equipment," filed April 17, 1961.

(iii) all other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–6 (Revised September 1, 1965) entitled "Terms and Conditions of License for Unconstructed Major Project Affecting Navigable Waters and Lands of the United States" (*infra*, p. 1114), which terms and conditions, designated as Articles 1 through 39, are attached hereto and made a part hereof, except for Articles 4, 7 and 34, and subject to the following special conditions set forth herein as additional articles:

Article 40. The construction, operation, and maintenance of the project and any work incident to additions or alterations shall be subject to the inspection and supervision of the District Engineer, U.S. Army Engineer District, Mobile, Alabama, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall furnish detail plans and specifications to said representative and construction of the project works or any feature thereof shall not be initiated until such plans and specifications have been approved by said representative. The Licensee shall cooperate fully with said representative and shall furnish him a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of the project. Construction of the project works or any feature thereof shall not be initiated until the program of

inspection for the project works or any such feature thereof has been approved by said representative. The Licensee shall also furnish to said representative such further information as he may require concerning the construction, operation, maintenance of the project, and of any alteration thereof, and shall notify him of the date upon which work will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. The Licensee shall allow him and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 41. The Licensee shall consult with the Alabama Museum of Natural History and shall furnish funds in a reasonable amount to be approved by the Commission to survey and/or salvage archeological remains, if any.

Article 42. The Licensee shall reimburse the United States for any work performed specifically for the Licensee on the design of any part of the facilities to be constructed by the Licensee and for the design and construction of features of the Holt navigation dam which are solely related to any part of the facilities to be constructed by Licensee. Arrangements for payment shall be made with the Chief of Engineers, Department of the Army, at the time of commencement of construction of the project.

Article 43. The Licensee shall, in cooperation with the Alabama Water Improvement Commission and the U.S. Public Health Service, conduct an evaluation study for a period of five years to determine the dissolved oxygen content of the water just downstream from the Bankhead dam and powerhouse and the Holt dam and powerhouse. An annual progress report of the evaluation study shall be filed with the Commission. The Licensee shall modify the project operation or project structures as may be prescribed by the Commission, after notice and opportunity for hearing, in the event the operation of Holt powerhouse has a deleterious effect on the quality of the water.

Article 44. The Licensee shall pay to the United States the following annual charge, effective September 1, 1965:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission, in accordance with its regulations, in effect from time to time. The authorized installed capacity for such purposes is 53,300 horsepower.

(ii) For the purpose of recompensing the United States for the utilization of surplus water or water power from the Government dam or lands in connection therewith, an amount to be hereafter determined by the Commission. Such an amount will be based on the sharing of power benefits.

Article 45. Licensee shall commence construction of the powerhouse and intake section at the Holt Lock and Dam within one year from the date of issuance of this license, shall thereafter in good faith and with due diligence prosecute such construction, and shall complete the project facilities and place them in operation within 3 years thereafter.

Article 46. The Licensee shall within one year from the date of issuance of this license submit for Commission approval an Exhibit R, conforming to regulations contained in 18 CFR 4.41.

Article 47. The Licensee shall submit in accordance with the Commission's rules and regulations, Exhibit L drawings for the powerhouse and intake section at the Holt Lock and Dam and the Licensee shall not begin construction of the project works until the Commission approves the exhibits.

Article 48. Upon the petition of the Chief of Engineers, Department of the Army, the Licensee shall reimburse the United States in such amount, to be hereafter determined by the Commission as would ensure that the total project costs to the United States be no greater than the cost would have been if the Holt Lock and Dam had been constructed without power facilities.

Article 49. Licensee shall construct facilities or take other corrective measures to eliminate adverse effects on navigation caused by discharge from the power plant, as may be ordered by the Commission upon its own motion or upon the recommendation of the Chief of Engineers, Department of the Army, after notice and opportunity for hearing and upon findings based on substantial evidence that the construction of such facilities or the taking of other corrective measures are necessary and desirable to eliminate adverse effects on navigation and are otherwise consistent with the provisions of the Act.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgement of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

FORM L–6

(REVISED SEPTEMBER 1, 1965)

TERMS AND CONDITIONS OF LICENSE FOR UNCONSTRUCTED MAJOR PROJECT AFFECTING NAVIGABLE WATERS AND LANDS OF THE UNITED STATES

Article 1. The entire project, as described in the order of the Commission, shall be subject to all the provisions, terms, and conditions of the license.

Article 2. No substantial change shall be made in the maps, plans, specifications, and statements described and designated as exhibits and approved by the Commission in its order as a part of the license until such change shall have been approved by the Commission: Provided, however, that if the Licensee or the Commission deems it necessary or desirable that said approved exhibits, or any of them, be changed, there shall be submitted to the Commission for approval amended, supplemental, or additional exhibit or exhibits covering the proposed changes which, upon approval by the Commission, shall become a part of the license and shall supersede, in whole or in part, such exhibit or exhibits theretofore made a part of the license as may be specified by the Commission.

Article 3. Said project works shall be constructed in substantial conformity with the approved exhibits referred to in Article 2 herein or as changed in accordance with the provisions of said article. Except when emergency shall require for the protection of navigation, life, health, or property, no substantial alteration or addition not in conformity with the approved plans shall be made to any dam or other project works under the license without the prior approval of the Commission; and any emergency alteration or addition so made shall thereafter be subject to such modification and change as the Commission may direct. Minor changes in the project works or divergence from such approved exhibits may be made if such changes will not result in decrease in efficiency, in material increase in cost, or in impairment of the general scheme of development; but any of such minor changes made without the prior approval of the Commission, which in its judgment have produced or will produce any of such results, shall be subject to such alteration as the Commission may direct. The

Licensee shall comply with such rules and regulations of general or special applicability as the Commission may from time to time prescribe for the protection of life, health, or property.

Article 4. The construction, operation, and maintenance of the project and any work incident to additions or alterations shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of the project. Construction of the project works or any feature thereof shall not be initiated until the program of inspection for the project works or any such feature thereof has been approved by said representative. The Licensee shall also furnish to said representative such further information as he may require concerning the construction, operation, and maintenance of the project, and of any alteration thereof, and shall notify him of the date upon which work will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. The Licensee shall allow him and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 5. Insofar as any material is dredged or excavated in the prosecution of any work authorized under the license, or in the maintenance of the project, such material shall be removed and deposited so it will not interfere with navigation, and will be to the satisfaction of the District Engineer, Department of the Army, in charge of the locality.

Article 6. The United States specifically retains and safeguards the right to use water in such amount, to be determined by the Secretary of the Army, as may be necessary for the purposes of navigation on the navigable waterway affected; and the operations of the licensee, so far as they affect the use, storage and discharge from storage of waters affected by the license, shall at all times be controlled by such reasonable rules and regulations as the Secretary of the Army may prescribe in the interest of navigation, and as the Commission may prescribe for the protection of life, health, and property, and in the interest of the fullest practicable conservation and utilization of such waters for power purposes and for other beneficial public uses, including recreational purposes; and the Licensee shall release water from the project reservoir at such rate in cubic feet per second, or such volume in acre-feet per specified period of time, as the Secretary of the Army may prescribe in the interest of navigation, or as the Commission may prescribe for the other purposes hereinbefore mentioned.

Article 7. Whenever the United States shall desire to construct, complete, or improve navigation facilities in connection with the project, the Licensee shall convey to the United States, free of cost, such of its lands and its rights-of-way and such right of passage through its dams or other structures, and permit such control of pools as may be required to complete and maintain such navigation facilities.

Article 8. The Licensee shall furnish free of cost to the United States power for the operation and maintenance of navigation facilities at the voltage and frequency required by such facilities and at a point adjacent thereto whether said facilities are constructed by the Licensee or by the United States.

Article 9. The operation of any navigation facilities which may be constructed as a part of or in connection with any dam or diversion structure constituting a part of the project works shall at all times be controlled by such reasonable rules and regulations in the interest of navigation, including the control of the level of the pool caused by such dam or diversion structure, as may be made from time to time by the Secretary of the Army.

Article 10. The Licensee shall for the protection of navigation, construct, maintain and operate at its own expense such lights and other signals on fixed structures in or over navigable waters of the United States as may be directed by the Secretary of the Department in which the Coast Guard is operating.

Article 11. The actual legitimate original cost of the original project, and of any addition thereto or betterment thereof, shall be determined by the Commission in accordance with the Act and the Commission's rules and regulations thereunder.

Article 12. After the first twenty (20) years of operation of the project under the license, six (6) percent per annum shall be the specified rate of return on the net investment in the project for determining surplus earnings of the project for the establishment and maintenance of amortization reserves, pursuant to Section 10(d) of the Act; one-half of the project surplus earnings, if any, accumulated after the first twenty years of operation under the license, in excess of six (6) percent per annum on the net investment, shall be set aside in a project amortization reserve account as of the end of each fiscal year, provided that, if and to the extent that there is a deficiency of project earnings below six (6) percent per annum for any fiscal year or years after the first twenty years of operation under the license, the amount of such deficiency shall be deducted from the amount of any surplus earnings accumulated thereafter until absorbed, and one-half of the remaining surplus earnings, if any, thus cumulatively computed, shall be set aside in the project amortization reserve account; and the amounts thus established in the project amortization reserve account shall be maintained therein until further order of the Commission.

Article 13. The Licensee shall install additional capacity or make other changes in the project as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing.

Article 14. The Licensee shall, after notice and opportunity for hearing, coordinate the operation of the project, electrically and hydraulically, with such other power systems and in such manner as the Commission may direct in the interest of power and other beneficial public uses of water resources, and on such conditions concerning the equitable sharing of benefits by the Licensee as the Commission may order.

Article 15. The Licensee shall, for the conservation, and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the fish and wildlife agency or agencies of any State in which the project or a part thereof is located, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 16. Whenever the United States shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its own expense, the Licensee shall permit the United

States or its designated agency to use, free of cost, such of Licensee's lands and interest in lands, reservoirs, waterways and project works as may be reasonably required to complete such facilities or such improvements thereof. In addition, after notice and opportunity for hearing, the Licensee shall modify the project operation as may be prescribed by the Commission, reasonably consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United States under the provisions of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish and wildlife facilities or to relieve the Licensee of any obligation under this license.

Article 17. The Licensee shall construct, maintain and operate or shall arrange for the construction, maintenance and operation of such recreational facilities including modifications thereto, such as access roads, wharves, launching ramps, beaches, picnic and camping areas, sanitary facilities and utilities, as may be prescribed hereafter by the Commission during the term of this license upon its own motion or upon the recommendation of the Secretary of the Interior or other interested Federal and State agencies, after notice and opportunity for hearing and upon findings based upon substantial evidence that such facilities are necessary and desirable, and reasonably consistent with the primary purpose of the project.

Article 18. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fish and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its land the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: Provided, that the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property and Provided further, that the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain as required by the license.

Article 19. The Licensee shall be responsible for and shall minimize soil erosion and siltation on lands adjacent to the stream resulting from construction and operation of the project. The Commission upon request, or upon its own motion, may order the Licensee to construct and maintain such preventive works to accomplish this purpose and to revegetate exposed soil surface as the Commission may find to be necessary after notice and opportunity for hearing.

Article 20. No lease of the project or any part thereof whereby the lessee is granted the occupancy, possession, or use of the project, or any part thereof, shall be made without prior written approval of the Commission; and the Commission may, if in its judgment the situation warrants, require that all the conditions of the license, of the Act, and of the rules and regulations of the Commission shall be applicable to such property so leased to the same extent as if the lessee were the Licensee: Provided, that the provisions of this article shall not apply to leases of land or buildings or other property while not required to achieve the purposes of the license.

Article 21. Upon the completion of the project, or at such other time as the Commission may direct, the Licensee shall submit to the Commission for approval revised maps, plans, specifications, and statements insofar as necessary to show any divergence from or variations in the project area and project boundary as finally located or in the project works as actually constructed when compared with the area and boundary shown and the works described in the license or in the maps, plans, specifications, and statements approved by the Commission, together with a statement in writing setting forth the reasons which in the opinion of the Licensee necessitated or justified variations in or divergence from the approved maps, plans, specifications, and statements. Such revised maps, plans, specifications, and statement shall, if and when approved by the Commission, be made a part of the license under the provisions of Article 2 hereof.

Article 22. In the construction and maintenance of the project, the location and standards of roads and trails, and other land uses, including the location and condition of quarries, borrow pits, spoil disposal areas, and sanitary facilities, shall be subject to the approval of the department or agency of the United States having supervision over the lands involved.

Article 23. In the construction and maintenance of the project works, the Licensee shall place and maintain suitable structures and devices to reduce to a reasonable degree the liability of contact between its transmission lines, and telegraph, telephone, and other signal wires or power transmission lines constructed prior to its transmission lines and not owned by the Licensee, and shall also place and maintain suitable structures and devices to reduce to a reasonable degree the liability of any structures or wires falling and obstructing traffic and endangering life on highways, streets, or railroads. None of the provisions of this article is intended to relieve the Licensee from any responsibility or requirement which may be imposed by other lawful authority for avoiding or eliminating inductive interference.

Article 24. The Licensee shall make provision, or shall bear the reasonable cost, as determined by the agency of the United States affected, of making provision for avoiding inductive interference between any project transmission line or other project facility constructed, operated, or maintained under the license, and any radio installation, telephone line, or other communication facility installed or constructed before or after construction of such project transmission line or other project facility and owned, operated, or used by such agency of the United States in administering the lands under its jurisdiction.

Article 25. The Licensee shall clear such portions of transmission line right-of-way across lands of the United States as are designated by the officer of the United States in charge of the lands; shall keep the areas so designated clear of new growth, all refuse, and inflammable material to the satisfaction of such officer; shall trim all branches of trees in contact with or liable to contact the transmission line; shall cut and remove all dead or leaning trees which might fall in contact with the transmission line; and shall take such other precautions against fire as may be required by such officer. No fires for the burning of waste material shall be set except with the prior written consent of the officer of the United States in charge of the lands as to time and place.

Article 26. Timber on lands of the United States, cut, used, or destroyed in the construction and maintenance of the project works or in the clearing of said lands shall be paid for in accordance with the requirements of and at the current stumpage rates applicable to the sale of similar timber by the agency of the United States having jurisdiction over said lands; and all slash and debris resulting from the cutting or destruction of such timber shall be disposed of as the officer of such agency may direct.

Article 27. The Licensee shall do everything reasonably within its power and shall require its employees, contractors, and employees of contractors to do everything reasonably within their power, both independently and upon request of officers of the agency of the United States concerned, to prevent, make advanced preparations for suppression, and suppress fires on lands occupied under the license.

Article 28. The Licensee shall interpose no objection to, and shall in no way prevent, the use by the agency of the United States having jurisdiction over the lands of the United States affected, or by persons or corporations occupying lands of the United States under permit, of water for fire suppression from any stream, conduit or body of water, natural or artificial, used by the Licensee in the operation of the project works covered by the license, or to the use by said parties of water for sanitary and domestic purposes from any stream or body of water, natural or artificial, used by the Licensee in the operation of the project works covered by the license.

Article 29. The Licensee shall be liable for injury to, or destruction of, any buildings, bridges, roads, trails, lands, or other property of the United States, occasioned by the construction, maintenance, or operation of the project works or of the works appurtenant or accessory thereto under the license. Arrangements to meet such liability, either by compensation for such injury or destruction, or by reconstruction or repair of damaged property, or otherwise, shall be made with the appropriate department or agency of the United States.

Article 30. The Licensee shall allow any agency of the United States, without charge, to construct or permit to be constructed on, through, and across the project lands, conduits, chutes, ditches, railroads, roads, trails, telephone and power lines, and other means of transportation and communication not inconsistent with the enjoyment of said lands by the Licensee for the purposes stated in the license. This article shall not be construed as conferring upon the Licensee any right of use, occupancy, or enjoyment of the lands of the United States other than for the construction, operation, and maintenance of the project as stated in the license.

Article 31. There is reserved to the appropriate department or agency of the United States, or of the State or county involved, the right to take over, maintain, and supervise the use of any project road as a public road after construction of the project works is completed.

Article 32. The Licensee, its successors and assigns shall, during the period of the license, retain the possession of all project property covered by the license as issued or as later amended, including the project area, the project works, and all franchises, easements, water rights, and rights of occupancy and use; and none of such properties necessary are useful to the project and to the development, transmission, and distribution of power therefrom will be voluntarily sold, transferred, abandoned, or otherwise disposed of without the approval of the Commission: Provided, that a mortgage or trust deed or judicial sales made thereunder, or tax sales, shall not be deemed voluntary transfers within the meaning of this article. In the event the project is taken over by the United States upon the termination of the license, as provided in Section 14 of the Act, or is transferred to a new licensee under the provisions of Section 15 of the Act, the Licensee, its successors and assigns will be responsible for and will make good any defect of title to or of right of user in any of such project property which is necessary or appropriate or valuable and serviceable in the maintenance and operation of the project, and will pay and discharge, or will assume responsibility for payment and discharge, of all liens or incumbrances upon the project or project property

created by the Licensee or created or incurred after the issuance of the license: Provided, that the provisions of this article are not intended to prevent the abandonment or the retirement from service of structures, equipment, or other project works in connection with replacements thereof when they become obsolete, inadequate, or inefficient for further service due to wear and tear, or to require the Licensee, for the purpose of transferring the project to the United States or to a new Licensee, to acquire any different title to or right of user in any of such project property than was necessary to acquire for its own purposes as Licensee.

Article 33. For the purpose of determining the stage and flow of the stream or streams from which water is diverted for the operation of the project works, the amount of water held in and withdrawn from storage, and the effective head on the turbines, the Licensee shall install and thereafter maintain such gages and stream-gaging stations as the Commission may deem necessary and best adapted to the requirements; and shall provide for the required readings of such gages and for the adequate rating of such stations. The Licensee shall also install and maintain standard meters adequate for the determination of the amount of electric energy generated by said project works. The number, character, and location of gages, meters, or other measuring devices, and the method of operation thereof, shall at all times be satisfactory to the Commission and may be altered from time to time if necessary to secure adequate determinations, but such alteration shall not be made except with the approval of the Commission or upon the specific direction of the Commission. The installation of gages, the ratings of said stream or streams, and the determination of the flow thereof, shall be under the supervision of, or in cooperation with, the District Engineer of the United States Geological Survey having charge of stream-gaging operations in the region of said project, and the Licensee shall advance to the United States Geological Survey the amount of funds estimated to be necessary for such supervision or cooperation for such periods as may be mutually agreed upon. The Licensee shall keep accurate and sufficient record of the foregoing determinations to the satisfaction of the Commission, and shall make return of such records annually at such time and in such form as the Commission may prescribe.

Article 34. On the application of any person, association, corporation, Federal agency, State or municipality, the Licensee shall, after notice and opportunity for hearing, permit such reasonable use of its reservoirs or other project works or parts thereof as may be ordered by the Commission in the interest of comprehensive development of the waterway or waterways involved and the conservation and utilization of water resources of the region for water supply for steam-electric, irrigation, industrial, municipal or similar purposes consistent with the primary objective of the project. The Licensee shall receive such reasonable compensation as may be appropriate for use of its reservoirs or other project works or parts thereof for such purposes, any such compensation to be fixed either by Commission approval of an agreement between the Licensee and the party or parties benefiting or by the Commission in the event the parties are unable to agree. Applications shall contain information in sufficient detail to afford a full understanding of the proposed use, including satisfactory evidence that the applicant possesses necessary water rights pursuant to applicable State law, or a showing of cause why such evidence cannot be submitted, and a statement as to the relationship of the proposed use to any or municipal plans or orders which may have been adopted with respect to the use of such waters.

Article 35. Whenever the Licensee is directly benefited by the construction work of another licensee, a permittee, or of the United States of a storage reservoir or other headwater improvement, the Licensee shall reimburse the owner of the headwater improvement for such part of the annual charges for

interest, maintenance, and depreciation thereon as the Commission shall determine to be equitable, and shall pay to the United States the cost of making such determination as fixed by the Commission. For benefits provided by a storage reservoir or other headwater improvement of the United States the Licensee shall pay to the Commission the amounts for which it is billed from time to time for such headwater benefits and for the costs of making the determinations pursuant to the then current Commission Regulations under the Federal Power Act within 60 days from the date of rendition of a bill therefor and, upon failure to do so, shall thereafter be subject to the payment of the penalties specified in the then current Regulations. The Licensee shall have the right to pay such amounts under protests within the 60-day period and to reconsideration of the amounts billed or a hearing as provided by the then current Regulations under the Act.

Article 36. If the Licensee shall cause or suffer essential project property to be removed or destroyed or to become unfit for use, without replacement, or shall abandon or discontinue good faith operation of the project for a period of three years, or refuse or neglect to comply with the terms of the license and the lawful orders of the Commission mailed to the record address to the Licensee or its agent, the Commission will deem it to be the intent of the Licensee to surrender the license, and not less than 90 days after public notice may in its discretion terminate the license.

Article 37. Upon abandonment of the project the Licensee shall remove all buildings, equipment and power lines from lands of the United States and restore said lands to a condition satisfactory to agency having jurisdiction over the lands and shall fulfill such other obligations under the license as the Commission may prescribe.

Article 38. The right of the Licensee and of its transferees and successors to use or occupy navigable waters or lands of the United States under the license for the purpose of maintaining the project works or otherwise, shall absolutely cease at the end of the license period, unless a new license is issued pursuant to the then existing laws and regulations.

Article 39. The terms and conditions expressly set forth in the license shall not be construed as impairing any terms and conditions of the Federal Power Act which are not expressly set forth herein.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

BATTLE CREEK GAS COMPANY AND PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-70

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued October 7, 1965)

On September 13, 1965, Battle Creek Gas Company (Applicant) filed in Docket No. CP66-70 an application, as supplemented on September 30 and October 1, 1965, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Respondent) to establish a physical connection and point of delivery between its transportation facilities and the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant an additional 1,500 Mcf of natural gas per day for resale and distribution to the Job Corps Training Center to be located at Fort Custer, Michigan, as more fully set forth in the application.

312-270—69——74

Fort Custer, a military establishment owned and operated by the United States, has been designated as a site for a Job Corps Training Center. Applicant serves the adjacent area and has reached a tentative agreement with U. S. Industries, Inc., Educational Science Division, Custer Job Corps Center, Fort Custer, Michigan, to serve the requirements of the Training Center.

The United States will construct a gas distribution system to be owned and operated by it. Gas will be required for cooking, water heating and heating for 114 buildings which will be used for housing, training and servicing an initial component of 1,500 corpsmen and a staff of 300 to be located at the Training Center.

Applicant is an existing customer of Respondent and is presently authorized to receive up to 34,500 Mcf per day of natural gas through an existing delivery point.
